Chapter 4: Software

Chapter 5: Standards and certifications

Chapter 6: Accessories

Chapter 7: Maintenance and service

Appendix A

Chapter 1 General information.....	13
1 Manual history.....	13
2 Safety guidelines.....	15
2.1 Intended use.....	15
2.2 Protection against electrostatic discharge.....	15
2.2.1 Packaging.....	15
2.2.2 Guidelines for proper ESD handling.....	15
2.3 Policies and procedures.....	15
2.4 Transport and storage.....	16
2.5 Installation.....	16
2.6 Operation.....	16
2.6.1 Protection against touching electrical parts.....	16
2.6.2 Environmental conditions - Dust, humidity, aggressive gases.....	16
2.6.3 Viruses and dangerous programs.....	16
2.7 Environmentally friendly disposal.....	17
2.7.1 Separation of materials.....	17
3 Organization of safety notices.....	18
4 Guidelines.....	18
5 Overview.....	19
 Chapter 2 Technical data.....	 23
1 Introduction.....	23
1.1 Features.....	24
1.2 System components / Configuration.....	24
1.3 Configuration - Base system.....	25
1.4 Configuration - Optional components.....	26
2 Complete system.....	27
2.1 Temperature specifications.....	27
2.1.1 Maximum ambient temperature with fan kit.....	28
2.1.2 Minimum ambient temperature.....	29
2.1.3 Temperature monitoring.....	29
2.1.4 Temperature sensor positions.....	29
2.2 Humidity specifications.....	30
2.3 Power management.....	31
2.3.1 Supply voltage block diagram.....	31
2.3.2 Power calculation with 5PC810.SX01-00 revision >= D0.....	32
2.3.3 Power calculation with 5PC810.SX01-00 revision < D0.....	33
2.3.4 Power calculation with 5PC810.SX02-00 revision >= D0.....	34
2.3.5 Power calculation with 5PC810.SX02-00 revision < D0.....	35
2.3.6 Power calculation with 5PC810.SX03-00.....	36
2.3.7 Power calculation with 5PC810.SX05-00.....	37
2.4 Serial number sticker.....	38
2.5 Block diagrams.....	40
2.5.1 5PC810.SX01-00 system unit + 5PC810.BX01-00 bus unit.....	40
2.5.2 5PC810.SX01-00 system unit + 5PC810.BX01-01 bus unit.....	41
2.5.3 5PC810.SX02-00 system unit + 5PC810.BX02-00 bus unit.....	42
2.5.4 5PC810.SX02-00 system unit + 5PC810.BX02-01 bus unit.....	43
2.5.5 5PC810.SX03-00 system unit + 5PC810.BX03-00 bus unit.....	44
2.5.6 5PC810.SX05-00 system unit + 5PC810.BX05-00 bus unit.....	45
2.5.7 5PC810.SX05-00 system unit + 5PC810.BX05-01 bus unit.....	46
2.5.8 5PC810.SX05-00 system unit + 5PC810.BX05-02 bus unit.....	47
2.6 Device interfaces and slots.....	48
2.6.1 +24 VDC power supply.....	48
2.6.2 COM1 serial interface.....	49
2.6.3 COM2 serial interface.....	49
2.6.4 Monitor/Panel interface - SDL (Smart Display Link / DVI).....	50
2.6.5 Ethernet 1 (ETH1).....	52

2.6.6 Ethernet 2 (ETH2).....	53
2.6.7 USB interfaces (USB1, 2, 3, 4, 5).....	54
2.6.8 MIC, Line IN, Line OUT.....	55
2.6.9 Add-on interface slot.....	55
2.6.10 Add-on UPS slot.....	56
2.6.11 AP Link slot.....	56
2.6.12 Card slots (PCI / PCIe).....	57
2.6.13 LED status indicators.....	59
2.6.14 CMOS profile switch.....	59
2.6.15 Power button.....	60
2.6.16 Reset button.....	60
2.6.17 Battery.....	61
2.6.18 Hardware security key (dongle).....	62
2.6.19 CompactFlash Slot 1.....	63
2.6.20 CompactFlash slot 2.....	63
2.6.21 Slide-in slot 1.....	64
2.6.22 Slide-in slot 2.....	64
2.6.23 Slide-in compact slot.....	65
3 Individual components.....	66
3.1 System units.....	66
3.1.1 5PC810.SX01-00.....	66
3.1.2 5PC810.SX02-00.....	73
3.1.3 5PC810.SX03-00.....	80
3.1.4 5PC810.SX05-00.....	87
3.2 Bus units.....	94
3.2.1 General information.....	94
3.2.2 Order data.....	95
3.2.3 Technical data.....	95
3.3 GM45 CPU boards.....	97
3.3.1 General information.....	97
3.3.2 Order data.....	97
3.3.3 Technical data.....	97
3.4 Heat sinks.....	99
3.4.1 5AC801.HS00-01.....	99
3.5 Main memory.....	100
3.5.1 5MMDDR.xxxx-02.....	100
3.6 Drives.....	101
3.6.1 5AC801.HDDI-00.....	101
3.6.2 5AC801.HDDI-02.....	103
3.6.3 5AC801.HDDI-03.....	105
3.6.4 5AC801.HDDI-04.....	107
3.6.5 5AC801.SSDI-00.....	109
3.6.6 5AC801.SSDI-01.....	113
3.6.7 5AC801.SSDI-02.....	116
3.6.8 5AC801.SSDI-03.....	119
3.6.9 5AC801.SSDI-04.....	121
3.6.10 5AC801.SSDI-05.....	124
3.6.11 5AC801.ADAS-00.....	126
3.6.12 5AC801.HDDS-00.....	127
3.6.13 5AC801.DVDS-00.....	129
3.6.14 5AC801.DVRS-00.....	131
3.6.15 5ACPCI.RAIC-03.....	134
3.6.16 5ACPCI.RAIC-04.....	137
3.6.17 5ACPCI.RAIC-05.....	139
3.6.18 5ACPCI.RAIC-06.....	142
3.6.19 5MMHDD.0250-00.....	145
3.6.20 5MMHDD.0500-00.....	147

3.6.21 5MMSSD.0060-00.....	149
3.6.22 5MMSSD.0060-01.....	151
3.6.23 5MMSSD.0128-01.....	153
3.6.24 5MMSSD.0180-00.....	156
3.6.25 5MMSSD.0256-00.....	158
3.7 Fan kit.....	160
3.7.1 5PC810.FA01-00.....	160
3.7.2 5PC810.FA02-01.....	161
3.7.3 5PC810.FA03-00.....	163
3.7.4 5PC810.FA05-00.....	165
3.8 AP Link cards.....	166
3.8.1 5AC801.SDL0-00.....	166
3.8.2 5AC801.RDYR-00.....	169
3.9 Ready relay.....	170
3.9.1 5AC801.RDYR-01.....	170
3.9.2 General information.....	170
3.9.3 Order data.....	170
3.9.4 Pinout.....	170
3.9.5 Contents of delivery.....	171
3.10 Add-on interfaces (IF option).....	172
3.10.1 General information.....	172
3.10.2 5AC600.CANI-00.....	172
3.10.3 5AC600.485I-00.....	175
Chapter 3 Installation.....	178
1 Installation.....	178
1.1 Procedure.....	178
1.2 Important installation information.....	178
1.3 Mounting orientation.....	179
1.3.1 Vertical mounting orientation.....	179
1.3.2 Horizontal mounting orientation.....	179
1.4 Spacing for air circulation.....	180
2 Cable connections.....	181
3 Grounding concept.....	182
4 General instructions for performing temperature testing.....	183
4.1 Procedure.....	183
4.2 Evaluating temperatures in Windows operating systems.....	183
4.2.1 Evaluating with the B&R Control Center.....	183
4.2.2 Evaluating with the BurnInTest tool from Passmark.....	184
4.3 Evaluating temperatures in operating systems other than Windows.....	186
4.4 Evaluating the measurement results.....	186
5 Connection examples.....	187
5.1 Selecting display units.....	187
5.2 One Automation Panel 900 system via onboard DVI.....	188
5.2.1 Base system requirements.....	188
5.2.2 Link modules.....	188
5.2.3 Cables.....	188
5.2.4 Possible Automation Panel devices, resolutions and segment lengths.....	189
5.2.5 BIOS settings.....	189
5.3 One Automation Panel 900 system via onboard SDL.....	190
5.3.1 Base system requirements.....	190
5.3.2 Link modules.....	190
5.3.3 Cables.....	190
5.3.4 Settings in BIOS.....	191
5.4 One Automation Panel 800 system via onboard SDL.....	192
5.4.1 Base system requirements.....	192
5.4.2 Cables.....	192

5.4.3 Settings in BIOS.....	193
5.5 One AP900 and one AP800 via onboard SDL.....	194
5.5.1 Base system requirements.....	194
5.5.2 Link modules.....	194
5.5.3 Cables.....	194
5.5.4 Settings in BIOS.....	194
5.6 Four Automation Panel 900 systems via onboard SDL.....	196
5.6.1 Base system requirements.....	196
5.6.2 Link modules.....	196
5.6.3 Cables.....	196
5.6.4 Settings in BIOS.....	197
5.7 One Automation Panel 900 via SDL AP Link.....	198
5.7.1 Base system requirements.....	198
5.7.2 Link modules.....	198
5.7.3 Cables.....	198
5.7.4 Settings in BIOS.....	199
5.8 Four Automation Panel 900 units via SDL AP Link.....	200
5.8.1 Base system requirements.....	200
5.8.2 Link modules.....	200
5.8.3 Cables.....	200
5.8.4 Settings in BIOS.....	201
5.9 Two Automation Panel 900 systems via onboard SDL and SDL AP Link.....	202
5.9.1 Base system requirements.....	202
5.9.2 Link modules.....	202
5.9.3 Cables.....	202
5.9.4 Settings in BIOS.....	203
5.10 Eight Automation Panel 900 units via onboard SDL and SDL AP Link.....	204
5.10.1 Base system requirements.....	204
5.10.2 Link modules.....	205
5.10.3 Cables.....	205
5.10.4 Settings in BIOS.....	206
5.11 Six AP900 and two AP800 units via onboard SDL and SDL AP Link.....	207
5.11.1 Base system requirements.....	207
5.11.2 Link modules.....	208
5.11.3 Cables.....	208
5.11.4 Settings in BIOS.....	208
6 Connecting peripheral USB devices.....	209
6.1 Locally on the APC810.....	209
6.2 Remote connection to Automation Panel 900 via DVI.....	210
6.3 Remote connection to Automation Panel 800 / 900 via SDL.....	210
7 Configuring a SATA RAID set.....	211
7.1 Create RAID set.....	212
7.2 Create RAID set - Striped.....	212
7.3 Create RAID set - Mirrored.....	213
7.4 Delete RAID set.....	213
7.5 Rebuild mirrored set.....	214
7.6 Resolve conflicts.....	214
7.7 Low level format.....	215
8 Known problems/issues.....	216
8.1 Problems and properties of the first production batch.....	216
8.2 Problems and properties of subsequent production batches.....	216
Chapter 4 Software.....	217
1 BIOS options.....	217
1.1 General information.....	217
1.2 BIOS setup and boot procedure.....	217
1.2.1 BIOS Setup keys.....	219

1.3 Main.....	220
1.4 Advanced.....	221
1.4.1 ACPI configuration.....	222
1.4.2 PCI configuration.....	223
1.4.3 PCI Express configuration.....	226
1.4.4 Graphics configuration.....	228
1.4.5 CPU configuration.....	230
1.4.6 Chipset settings.....	231
1.4.7 I/O interface configuration.....	232
1.4.8 Clock configuration.....	233
1.4.9 IDE configuration.....	233
1.4.10 USB configuration.....	238
1.4.11 Keyboard/Mouse configuration.....	240
1.4.12 CPU board monitor.....	241
1.4.13 Baseboard/Panel features.....	242
1.5 Boot.....	246
1.6 Security.....	247
1.6.1 Hard disk security user password.....	248
1.6.2 Hard disk security master password.....	249
1.7 Power.....	249
1.8 Exit.....	251
1.9 BIOS default settings.....	252
1.9.1 Main.....	252
1.9.2 Advanced.....	252
1.9.3 Boot.....	256
1.9.4 Security.....	256
1.9.5 Power.....	256
1.10 BIOS error signals (beep codes).....	258
1.11 Allocation of resources.....	259
1.11.1 RAM address assignment.....	259
1.11.2 I/O address assignments.....	259
1.11.3 Interrupt assignments in PIC mode.....	260
1.11.4 Interrupt assignments in APIC mode.....	261
2 Upgrade information.....	264
2.1 BIOS upgrade.....	264
2.1.1 Important information.....	264
2.1.2 Procedure with MS-DOS.....	265
2.2 Firmware upgrade.....	267
2.2.1 Procedure.....	267
2.2.2 Possible upgrade problems and software dependencies (for V1.00).....	269
2.3 Creating an MS-DOS boot diskette in Windows XP.....	270
2.4 Creating a bootable USB flash drive for B&R upgrade files.....	272
2.4.1 Requirements.....	272
2.4.2 Procedure.....	272
2.4.3 How to access MS-DOS.....	272
2.5 Creating a bootable CompactFlash card for B&R upgrade files.....	273
2.5.1 Requirements.....	273
2.5.2 Procedure.....	273
2.5.3 How to access MS-DOS.....	273
2.6 Upgrade problems.....	273
3 Microsoft DOS.....	274
3.1 Order data.....	274
3.2 Known problems.....	274
3.3 Resolutions and color depths.....	274
4 Windows XP Professional.....	275
4.1 General information.....	275
4.2 Order data.....	275

4.3 Overview.....	275
4.4 Installation.....	276
4.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03, 5ACPCI.RAIC-05, 5ACPCI.RAIC-06.....	276
4.4.2 For variants with 5 PCI slots.....	276
4.5 Drivers.....	276
5 Windows 7.....	277
5.1 General information.....	277
5.2 Order data.....	277
5.3 Overview.....	277
5.4 Installation.....	278
5.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03, 5ACPCI.RAIC-05, 5ACPCI.RAIC-06.....	278
5.4.2 For variants with 5 PCI slots.....	278
5.5 Special considerations, limitations.....	279
5.6 Drivers.....	279
6 Windows Embedded Standard 2009.....	280
6.1 General information.....	280
6.2 Order data.....	280
6.3 Overview.....	280
6.4 Features with WES2009 (Windows Embedded Standard 2009).....	280
6.5 Installation.....	281
6.6 Drivers.....	281
6.6.1 Touch screen driver.....	281
7 Windows Embedded Standard 7.....	282
7.1 General information.....	282
7.2 Order data.....	282
7.3 Overview.....	282
7.4 Features with WES7 (Windows Embedded Standard 7).....	282
7.5 Installation.....	283
7.6 Drivers.....	283
7.6.1 Touch screen driver.....	283
8 Automation Runtime.....	284
8.1 General information.....	284
8.2 Order data.....	284
8.3 Automation Runtime Windows (ARwin).....	284
8.4 Automation Runtime Embedded (ARemb).....	284
9 B&R Automation Device Interface (ADI) - Control Center.....	285
9.1 Functions.....	285
9.2 Installation.....	286
9.3 SDL Equalizer settings.....	287
9.4 UPS configuration.....	288
9.4.1 Installing the UPS service for the B&R add-on UPS.....	288
9.4.2 Displaying UPS default values.....	288
9.4.3 Changing UPS battery settings.....	289
9.4.4 Updating UPS battery settings.....	290
9.4.5 Saving UPS battery settings.....	291
9.4.6 Configuring UPS system settings.....	291
9.4.7 Changing additional UPS settings.....	292
9.4.8 Procedure following power failure.....	294
10 B&R Automation Device Interface (ADI) Development Kit.....	295
11 B&R Automation Device Interface (ADI) .NET SDK.....	297
12 B&R Key Editor.....	299
Chapter 5 Standards and certifications.....	301
1 Standards and guidelines.....	301
1.1 CE mark.....	301

1.2 EMC directive.....	301
1.3 Low voltage directive.....	301
2 Certifications.....	302
2.1 UL certification.....	302
2.2 Certifications for use in potentially explosive environments.....	302
2.2.1 UL Haz. Loc. Certifications.....	302
2.2.2 ATEX certification.....	302
2.2.3 Requirements for use in potentially explosive environments.....	303
2.3 GOST-R.....	304
Chapter 6 Accessories.....	305
1 Replacement CMOS batteries.....	305
1.1 0AC201.91 / 4A0006.00-000.....	305
1.1.1 General information.....	305
1.1.2 Order data.....	305
1.1.3 Technical data.....	305
2 Power connectors.....	307
2.1 0TB103.9x.....	307
2.1.1 General information.....	307
2.1.2 Order data.....	307
2.1.3 Technical data.....	307
3 Replacement fan.....	308
3.1 General information.....	308
3.2 Order data.....	308
4 DVI/Monitor adapter.....	309
4.1 5AC900.1000-00.....	309
4.2 General information.....	309
4.3 Order data.....	309
5 CompactFlash cards.....	310
5.1 General information.....	310
5.2 General information.....	310
5.2.1 Flash technology.....	310
5.2.2 Wear leveling.....	310
5.2.3 ECC error correction.....	310
5.2.4 S.M.A.R.T. support.....	310
5.2.5 Maximum reliability.....	311
5.3 5CFCRD.xxxx-06.....	312
5.3.1 General information.....	312
5.3.2 Order data.....	312
5.3.3 Technical data.....	312
5.3.4 Temperature humidity diagram.....	314
5.3.5 Dimensions.....	314
5.3.6 Benchmark.....	315
5.4 5CFCRD.xxxx-04.....	316
5.4.1 General information.....	316
5.4.2 Order data.....	316
5.4.3 Technical data.....	316
5.4.4 Temperature humidity diagram.....	318
5.4.5 Dimensions.....	318
5.4.6 Benchmark.....	319
5.5 5CFCRD.xxxx-03.....	320
5.5.1 General information.....	320
5.5.2 Order data.....	320
5.5.3 Technical data.....	320
5.5.4 Temperature humidity diagram.....	322
5.5.5 Dimensions.....	322
5.6 Known problems/issues.....	323

6 USB media drive.....	324
6.1 5MD900.USB2-01.....	324
6.1.1 General information.....	324
6.1.2 Order data.....	324
6.1.3 Interfaces.....	324
6.1.4 Technical data.....	324
6.1.5 Dimensions.....	326
6.1.6 Dimensions with front cover.....	327
6.1.7 Cutout installation.....	327
6.1.8 Contents of delivery.....	327
6.1.9 Installation.....	327
6.2 5MD900.USB2-02.....	329
6.2.1 General information.....	329
6.2.2 Order data.....	329
6.2.3 Interfaces.....	329
6.2.4 Technical data.....	329
6.2.5 Dimensions.....	331
6.2.6 Dimensions with front cover.....	331
6.2.7 Cutout installation.....	332
6.2.8 Contents of delivery.....	332
6.2.9 Installation.....	332
6.3 5A5003.03.....	333
6.3.1 General information.....	333
6.3.2 Order data.....	333
6.3.3 Technical data.....	333
6.3.4 Dimensions.....	333
6.3.5 Contents of delivery.....	333
6.3.6 Installation.....	334
7 USB flash drives.....	335
7.1 5MMUSB.2048-00.....	335
7.1.1 General information.....	335
7.1.2 Order data.....	335
7.1.3 Technical data.....	335
7.1.4 Temperature humidity diagram.....	336
7.2 5MMUSB.xxxx-01.....	337
7.2.1 General information.....	337
7.2.2 Order data.....	337
7.2.3 Technical data.....	337
7.2.4 Temperature humidity diagram.....	338
8 HMI Drivers & Utilities DVD.....	339
8.1 5SWHMI.0000-00.....	339
8.1.1 General information.....	339
8.1.2 Order data.....	339
8.1.3 Contents (V2.20).....	339
9 Uninterruptible power supply.....	342
9.1 Features.....	342
9.2 Requirements.....	342
9.3 5AC600.UPSI-00.....	343
9.3.1 General information.....	343
9.3.2 Order data.....	343
9.3.3 Technical data.....	343
9.3.4 Installation.....	343
9.4 5AC600.UPSB-00.....	345
9.4.1 General information.....	345
9.4.2 Order data.....	345
9.4.3 Technical data.....	345
9.4.4 Temperature/Service life diagram up to 20% battery capacity.....	346

9.4.5 Deep discharge cycles.....	346
9.4.6 Dimensions.....	347
9.4.7 Drilling template.....	347
9.4.8 Installation instructions.....	347
9.5 5CAUPS.00xx-00.....	348
9.5.1 General information.....	348
9.5.2 Order data.....	348

Chapter 1 • General information

1 Manual history

Version	Date	Change
1.00	18-Jan-10	<ul style="list-style-type: none"> First version
1.05	24-Mar-10	<ul style="list-style-type: none"> Renamed documentation "Automation PC 810 with BM45 CPU board" to "Automation PC 810 with GM45 CPU board". Corrected Table 17 "Monitor/Panel interface - RGB, DVI, SDL" on page 50. Corrected Figure 2 "Configuration - Optional components" on page 26. Renamed section "Automation PC 810 with Windows XP Embedded" to "Automation PC 810 with Windows Embedded Standard 2009". See page 280.
1.10	26-Jul-10	<ul style="list-style-type: none"> 5 "Standards and certifications" on page 301 revised. Changed name of CPU board from BM45 to GM45. Updated system unit 5PC810.SX03-00, bus unit 5PC810.BX03-00, fan kit 5PC810.FA03-00 and replacement fan 5AC801.FA03-00. Updated 5PC800.BM45-01 CPU board. Updated 5MMDDR.4096-02 main memory. Added B&R ID codes for system units. Updated technical data "Remanent variables for AR (Automation Runtime) in power fail mode" for APC810 system units. Updated section 9 "B&R Automation Device Interface (ADI) - Control Center" on page 285. Added B&R 16 GB CompactFlash card 5CFCRD.016G-04. Updated section 12 "Cables" on page 358 in chapter 6 "Accessories". Updated B&R USB flash drive in 6 "Accessories" on page 305. Updated section 5 "Windows 7" on page 277 in chapter "Software".
1.11	04-Nov-10	<ul style="list-style-type: none"> Updated 5AC801.RDYR-01 ready relay in chapter 6 "Accessories". Updated section 13 "Installing the ready relay /2 in the add-on UPS slot" on page 409 in chapter 7 "Maintenance and service". "5AC801.HDDI-03" on page 105 updated. "5ACPCI.RAIC-05" on page 139 updated. "5MMHDD.0250-00" on page 145 updated. Revised Figure 2 "Configuration - Optional components" on page 26. Updated 5AC801.HDDI-03, 5ACPCI.RAIC-05 and 5MMHDD.0250-00 in section 2.1.1 "Maximum ambient temperature with fan kit" on page 28 and 2.2 "Humidity specifications" on page 30.
1.12	18-Feb-11	<ul style="list-style-type: none"> Updated BIOS to version 1.13. Updated section 5 "CompactFlash cards" on page 310. Updated section 7 "Windows Embedded Standard 7" on page 282.
1.13	24-May-11	<ul style="list-style-type: none"> Updated sections "Automation Runtime" on page 284, "B&R Automation Runtime dongle" on page 378 and "B&R Automation Device Interface (ADI) .NET SDK" on page 297. Revised sections "B&R Key Editor" on page 299, "B&R Automation Device Interface (ADI) Development Kit" on page 295, "B&R Automation Device Interface (ADI) - Control Center" on page 285 and "HMI Drivers & Utilities DVD" on page 339. Updated 5PC810.BX05-02 bus unit. Revised "Configuration - Optional components" on page 26. Updated 5SWWI7.0900-MUL and 5SWWI7.1000-MUL in section "Windows Embedded Standard 7" on page 282.
1.14	06-Jul-11	<ul style="list-style-type: none"> Updated USB5 in heading ("USB interfaces (USB1, 2, 3, 4, 5)" on page 54). Revised section "Add-on UPS slot" on page 56. Updated 5CFCRD.016G-04 in Table 36 "CompactFlash slot (CF1)" on page 63. Updated 5AC801.HDDI-03 in Table 40 "Slide-in compact slot" on page 65 and corrected description for 5AC801.HDDI-02. Updated table entry "Charge duration when battery low" in Table 273 "5AC600.UPSB-00, 5AC600.UPSB-00 - Technical data" on page 345. Revised sections "B&R Automation Device Interface (ADI) - Control Center" on page 285, "B&R Automation Device Interface (ADI) Development Kit" on page 295 and "B&R Automation Device Interface (ADI) .NET SDK" on page 297. Updated information regarding "Special considerations for the 5PCI slot variant" in "Windows XP Professional" on page 275 and "Windows 7" on page 277. Corrected information on "Windows XP mode" in section "Features with WES7 (Windows Embedded Standard 7)" on page 282. Revised reference to external UPS 24 VDC in section "Uninterruptible power supply" on page 342.

Table 1: Manual history

Version	Date	Change
1.20	23-Apr-12	<ul style="list-style-type: none"> Revised section "CompactFlash cards" on page 310. Moved section "B&R Automation Device Interface (ADI) Development Kit" to chapter "Software". Section "Temperature sensor positions" moved to "Technical data" chapter. Added new CompactFlash cards 5CFCRD.xxxx-06 in 6 "Accessories". Discontinued CompactFlash cards 5CFCRD.xxxx-04. Removed section "B&R Automation Runtime dongle" and updated the order data in section "Automation Runtime" on page 284. Updated BIOS version (1.13 -> 1.15). Updated information about the Automation Device Interface and B&R Key Editor. Revised entire manual according to current formatting standards.
1.21	25-Jun-12	<ul style="list-style-type: none"> Updated section "Card slots (PCI / PCIe)" on page 57 to include information regarding using 64-bit PCI cards. BIOS version updated (1.15 -> 1.17). Updated section "Cable lengths and resolutions for SDL transmission" on page 50. Information regarding "PCI to PCI bridge" added to the "Technical data" on page 95 for the bus units. Updated information regarding "PCIe to SATA bridge" in section 2.6.22 "Slide-in slot 2" on page 64. Moved ready relay 5AC801.RDYR-01 to section "5AC801.RDYR-01".
1.22	04-Jul-12	<ul style="list-style-type: none"> Correct CPU board model numbers in "Maximale Umgebungstemperatur mit Lüfter Kit" on page .
1.25	01-Oct-12	<ul style="list-style-type: none"> Modified "Organization of safety notices" on page 18. Updated descriptions for cautions and warnings. Added SSD drives "5AC801.SSDI-01" on page 113 and "5AC801.SSDI-02" on page 116. Updated section "General instructions for performing temperature testing" on page 183. Updated Windows 7 Service Pack 1 (see "Windows 7" on page 277). Updated Windows Embedded Standard 7 Service Pack 1 (see "Windows Embedded Standard 7" on page 282). Updated "B&R Automation Device Interface (ADI) - Control Center" on page 285. Updated "B&R Automation Device Interface (ADI) Development Kit" on page 295 to version 3.40. Updated "B&R Automation Device Interface (ADI) .NET SDK" on page 297 to version 1.80. Updated "B&R Key Editor" on page 299 to version 3.30. Updated technical data for CPU boards, see "GM45 CPU boards" on page 97.
1.26	21-Nov-12	<ul style="list-style-type: none"> Updated B&R CompactFlash card 5CFCRD.032G-06, see "5CFCRD.xxxx-06" on page 312. Revised technical data for UPS cables, see "5CAUPS.00xx-00" on page 348.
1.27	15-Mar-13	<ul style="list-style-type: none"> Updated the following drives: "5AC801.HDDI-04" on page 107, "5ACPCI.RAIC-06" on page 142, "5MMHDD.0500-00" on page 147. Revised general information for drives "5ACPCI.RAIC-05" on page 139 and "5MMHDD.0250-00" on page 145. Revised order data for system units "5PC810.SX01-00" on page 66, "5PC810.SX02-00" on page 73, "5PC810.SX03-00" on page 80 and "5PC810.SX05-00" on page 87.
1.28	15-May-13	<ul style="list-style-type: none"> 5 "Standards and certifications" on page 301 revised. Revised information regarding certifications in technical data of individual components. Updated line filter "5AC804.MFLT-00" on page 350. Updated add-on fuse kit "5AC600.UPSF-00" on page 349 and replacement fuses "5AC600.UPSF-01" on page 349 for the UPS battery unit. Updated slide-in compact drive "5AC801.SSDI-03" on page 119. Updated replacement SSDs "5MMSSD.0060-00" on page 149, "5MMSSD.0060-01" on page 151 and "5MMSSD.0180-00" on page 156.
1.30	20-Aug-13	<ul style="list-style-type: none"> Updated B&R USB flash drive 5MMUSB.4096-01, see "USB flash drives" on page 335. Updated slide-in compact drive "5AC801.SSDI-04" on page 121. Updated replacement SSD "5MMSSD.0128-01" on page 153. Updated tightening torque of locating screws in section "Cables" on page 358. Updated sections "B&R Automation Device Interface (ADI) Development Kit" on page 295 and "B&R Automation Device Interface (ADI) .NET SDK" on page 297. Revised description of ready relay "5AC801.RDYR-00" on page 169 and "5AC801.RDYR-01" on page 170.
1.35	22-Jan-14	<ul style="list-style-type: none"> Revised description "Installing the UPS module" on page 389. Updated slide-in compact drive "5AC801.SSDI-05" on page 124. Updated replacement SSD "5MMSSD.0256-00" on page 158. Updated technical data and temperature / relative humidity diagrams for the "5AC801.SSDI-04" on page 121 and "5MMSSD.0128-01" on page 153 SSDs. Added information about the discontinuation of support for "Windows XP Professional" on page 275. Updated "B&R Automation Device Interface (ADI) - Control Center" on page 285. Updated "B&R Automation Device Interface (ADI) Development Kit" on page 295. Updated "B&R Automation Device Interface (ADI) .NET SDK" on page 297. Updated "B&R Key Editor" on page 299 to version 3.40. Updated the cable lengths, resolutions and AP Link plug-in card sections, see "Monitor/Panel interface - SDL (Smart Display Link / DVI)" on page 50. "5AC801.SDL0-00" on page 166
1.36	06-Feb-14	<ul style="list-style-type: none"> Updated GOST-R certification information in the technical data. Updated section "GOST-R" on page 304.

Table 1: Manual history

2 Safety guidelines

2.1 Intended use

Programmable logic controllers (PLCs), operating/monitoring devices (industrial PCs, Power Panels, Mobile Panels, etc.), and B&R uninterruptible power supplies have been designed, developed and manufactured for conventional use in industrial environments. They were not designed, developed and manufactured for any use involving serious risks or hazards that could lead to death, injury, serious physical damage or loss of any kind without the implementation of exceptionally stringent safety precautions. In particular, such risks and hazards include the use of these devices to monitor nuclear reactions in nuclear power plants, their use in flight control or flight safety systems as well as in the control of mass transportation systems, medical life support systems or weapons systems.

2.2 Protection against electrostatic discharge

Electrical components that can be damaged by electrostatic discharge (ESD) must be handled accordingly.

2.2.1 Packaging

- **Electrical components with a housing**
...Do not require special ESD packaging but must be handled properly (see "Electrical components with a housing").
- **Electrical components without a housing**
...Must be protected by ESD-suitable packaging.

2.2.2 Guidelines for proper ESD handling

Electrical components with a housing

- Do not touch the connector contacts on connected cables.
- Do not touch the contact tips on circuit boards.

Electrical components without a housing

The following applies in addition to the points listed under "Electrical components with a housing":

- Any persons handling electrical components or devices with installed electrical components must be grounded.
- Components may only be touched on their narrow sides or front plate.
- Components should always be stored in a suitable medium (ESD packaging, conductive foam, etc.). Metallic surfaces are not suitable storage surfaces!
- Components should not be subjected to electrostatic discharge (e.g. through the use of charged plastics).
- Ensure a minimum distance of 10 cm from monitors and TV sets.
- Measurement devices and equipment must be grounded.
- Measurement probes on potential-free measurement devices must be discharged on sufficiently grounded surfaces before taking measurements.

Individual components

- ESD protective measures for individual components are thoroughly integrated at B&R (conductive floors, footwear, arm bands, etc.).
- These increased ESD protective measures for individual components are not necessary for customers handling B&R products.

2.3 Policies and procedures

Electronic devices are never completely failsafe. If the programmable control system, operating/monitoring device or uninterruptible power supply fails, the user is responsible for ensuring that other connected devices, e.g. motors, are brought to a secure state.

When using programmable logic controllers or operating/monitoring devices as control systems together with a Soft PLC (e.g. B&R Automation Runtime or comparable product) or Slot PLC (e.g. B&R LS251 or comparable product), safety precautions relevant to industrial control systems (e.g. the provision of safety devices such as emergency stop circuits, etc.) must be observed in accordance with applicable national and international regulations. The same applies for all other devices connected to the system, such as drives.

All tasks such as the installation, commissioning and servicing of devices are only permitted to be carried out by qualified personnel. Qualified personnel are those familiar with the transport, mounting, installation, commissioning and operation of devices who also have the appropriate qualifications (e.g. IEC 60364). National accident prevention regulations must be observed.

The safety notices, connection descriptions (type plate and documentation) and limit values listed in the technical data are to be read carefully before installation and commissioning and must be observed.

2.4 Transport and storage

During transport and storage, devices must be protected against undue stress (mechanical loads, temperature, humidity, aggressive atmospheres, etc.).

2.5 Installation

- Installation must be performed according to this documentation using suitable equipment and tools.
- Devices may only be installed by qualified personnel without voltage applied. Before installation, voltage to the control cabinet must be switched off and prevented from being switched on again.
- General safety guidelines and national accident prevention regulations must be observed.
- Electrical installation must be carried out according to applicable guidelines (e.g. line cross sections, fuses, protective ground connections).

2.6 Operation

2.6.1 Protection against touching electrical parts

To operate programmable logic controllers, operating/monitoring devices or uninterruptible power supplies, it is necessary for certain parts to carry dangerous voltage levels over 42 VDC. Touching one of these parts can result in a life-threatening electric shock. This could lead to death, severe injury or damage to equipment.

Before turning on the programmable logic controller, operating/monitoring devices or the uninterruptible power supply, the housing must be properly grounded (PE rail). Ground connections must be established even when testing or operating operating/monitoring devices or the uninterruptible power supply for a short time!

Before turning the device on, all parts that carry voltage must be securely covered. During operation, all covers must remain closed.

2.6.2 Environmental conditions - Dust, humidity, aggressive gases

The use of operating/monitoring devices (e.g. industrial PCs, Power Panels, Mobile Panels, etc.) and uninterruptible power supplies in very dusty environments should be avoided. Dust collection on the devices can affect functionality and may prevent sufficient cooling, especially in systems with active cooling systems (fans).

The presence of aggressive gases can also lead to malfunctions. When combined with high temperature and humidity, aggressive gases – e.g. with sulfur, nitrogen and chlorine components – can induce chemical reactions that can damage electronic components very quickly. Signs of the presence of aggressive gases are blackened copper surfaces and cable ends on existing equipment.

For operation in dusty or humid conditions, correctly installed (e.g. cutout installations) operating/monitoring devices like the Automation Panel or Power Panel are protected on the front. The back of all devices must be protected from dust and humidity and cleaned at suitable intervals.

2.6.3 Viruses and dangerous programs

This system is subject to potential risk each time data is exchanged or software is installed from a data medium (e.g. diskette, CD-ROM, USB flash drive, etc.), a network connection or the Internet. The user is responsible for assessing these dangers, implementing preventive measures such as virus protection programs, firewalls, etc. and making sure that software is only obtained from trusted sources.

2.7 Environmentally friendly disposal

All B&R programmable controllers, operating/monitoring devices and uninterruptible power supplies are designed to inflict as little harm as possible on the environment.

2.7.1 Separation of materials

It is necessary to separate different materials so the device can undergo an environmentally friendly recycling process.

Component	Disposal
Programmable logic controllers Operating/monitoring devices Uninterruptible power supply Batteries and rechargeable batteries Cables	Electronics recycling
Cardboard box / paper packaging	Paper / cardboard recycling
Plastic packaging	Plastic recycling

Table 2: Environmentally friendly separation of materials

Disposal must comply with applicable legal regulations.

3 Organization of safety notices

Safety notices in this manual are organized as follows:

Safety notice	Description
Danger!	Disregarding these safety guidelines and notices can be life-threatening.
Warning!	Disregarding these safety guidelines and notices can result in severe injury or substantial damage to equipment.
Caution!	Disregarding these safety guidelines and notices can result in injury or damage to equipment.
Information:	This information is important for preventing errors.

Table 3: Description of the safety notices used in this documentation

4 Guidelines

European dimension standards apply to all dimension diagrams in this document.

All dimensions are specified in mm.

Range of nominal sizes	General tolerance according to DIN ISO 2768 (medium)
Up to 6 mm	± 0.1 mm
For 6 to 30 mm	± 0.2 mm
For 30 to 120 mm	± 0.3 mm
For 120 to 400 mm	± 0.5 mm
For 400 to 1000 mm	± 0.8 mm

Table 4: Range of nominal sizes

5 Overview

Product ID	Short description	on page
Accessories		
5AC801.FA01-00	APC810 replacement fan filter for 5PC810.SX01-00; 5 pcs.	308
5AC801.FA02-00	APC810 replacement fan filter for 5PC810.SX02-00; 5 pcs.	308
5AC801.FA03-00	APC810 replacement fan filter for 5PC810.SX03-00; 5 pcs.	308
5AC801.FA05-00	APC810 replacement fan filter for 5PC810.SX05-00; 5 pcs.	308
5AC801.FRAME-00	APC810 SATA hard disk replacement tray	378
5AC801.RDYR-01	Ready relay for APC810 for installation on an add-on UPS slot	170
5AC804.MFLT-00	Line filter	350
5ACPCI.ETH1-01	PCI Ethernet card 1x 10/100	352
5ACPCI.ETH3-01	PCI Ethernet card 3x 10/100	355
5CAMSC.0001-00	Internal supply cable	377
Automation Panel Link interfaces		
5AC801.RDYR-00	APC810 ready relay	169

Automation Runtime		
1A4600.10	B&R Automation Runtime ARwin, incl. license sticker and copy protection	284
1A4600.10-2	B&R Automation Runtime ARwin, ARNC0	284
1A4600.10-3	B&R Automation Runtime ARwin+PVIControls incl. license sticker and copy protection	284
1A4600.10-4	B&R Automation Runtime ARwin+ARNC0+PVIControls	284
1A4601.06	B&R Automation Runtime AREmb, incl. license sticker and copy protection	284
1A4601.06-2	B&R Automation Runtime AREmb, ARNC0	284
Batteries		
0AC201.91	Lithium batteries 4 pcs., 3 V / 950 mAh button cell We hereby state that the lithium cells contained in this shipment qualify as "partly regulated". Handle with care. If the package is damaged, inspect the cells, repack intact cells and protect the cells against short circuit. For emergency information, call RENATA SA at +41 61 319 28 27.	305
4A0006.00-000	Lithium battery, 3 V / 950 mAh, button cell	305
Bus units		
5PC810.BX01-00	APC810 bus, 1 PCI	95
5PC810.BX01-01	APC810 bus, 1 PCI Express (x4)	95
5PC810.BX02-00	APC810 bus, 2 PCI	95
5PC810.BX02-01	APC810 bus, 1 PCI, 1 PCI Express (x4)	95
5PC810.BX03-00	APC810 bus, 2 PCI, 1 PCI Express (x4)	95
5PC810.BX05-00	APC810 bus, 4 PCI, 1 PCI Express (x1)	95
5PC810.BX05-01	APC810 bus, 2 PCI, 3 PCI Express (x1)	95
5PC810.BX05-02	APC810 bus, 5 PCI	95
CPU boards		
5PC800.BM45-00	Intel Core2 Duo T9400 CPU board, 2.53 GHz, dual core, 1066 MHz FSB, 6 MB L2 cache; GM45 chipset; 2 slots for SO-DIMM DDR3 modules	97
5PC800.BM45-01	Intel Core2 Duo P8400 CPU board, 2.26 GHz, dual core, 1066 MHz FSB, 3 MB L2 cache; GM45 chipset; 2 slots for SO-DIMM DDR3 modules	97
CompactFlash		
5CFCRD.0064-03	CompactFlash 64 MB Western Digital (SLC)	320
5CFCRD.0128-03	CompactFlash 128 MB Western Digital (SLC)	320
5CFCRD.016G-04	CompactFlash 16 GB B&R (SLC)	316

5CASDL.0250-03	SDL flex cable, 25 m	367
5CASDL.0300-03	SDL flex cable, 30 m	367
5CASDL.0300-13	SDL flex cable with extender, 30 m	370
5CASDL.0400-13	SDL flex cable with extender, 40 m	370

Product ID	Short description	on page
5CASDL.0430-13	SDL flex cable with extender, 43 m	370
Serial adapters		
5AC600.485I-00	RS232/422/485 interface, for installation in an APC620, APC810 or PPC700	175
5AC600.CANI-00	CAN interface; for installation in an APC620, APC810 or PPC700	172
System units		
5PC810.SX01-00	APC810 system unit, 1 slot (PCI Express, PCI, depending on bus); 1 compact slide-in slot; Smart Display Link/ DVI/Monitor, 2x RS232, 5x USB 2.0, 2x ETH 10/100/1000, 24 VDC (order 0TB103.9 screw clamp or 0TB103.91 cage clamp terminals separately)	66
5PC810.SX02-00	APC810 system unit, 2 slots (PCI Express, PCI, depending on bus); 1 slot for Automation Panel Link transmitter; 1 slide-in compact and 1 slide-in slot; Smart Display Link/ DVI/Monitor, 2x RS232, 5x USB 2.0, 2x ETH 10/100/1000, 24 VDC (order 0TB103.9 screw clamp or 0TB103.91 cage clamp terminals separately)	73
5PC810.SX03-00	APC810 system unit, 3 slots (PCI Express, PCI, depending on bus); 1 slot for Automation Panel Link transmitter; 1 slide-in compact and 1 slide-in slot; Smart Display Link/ DVI/Monitor, 2x RS232, 5x USB 2.0, 2x ETH 10/100/1000, AC97 sound, 24 VDC (order 0TB103.9 screw clamp or 0TB103.91 cage clamp terminals separately)	80
5PC810.SX05-00	APC810 system unit, 5 slots (PCI Express, PCI, depending on bus); 1 slot for Automation Panel Link transmitter; 1 slide-in compact and 2 slide-in slots; Smart Display Link/ DVI/Monitor, 2x RS232, 5x USB 2.0, 2x ETH 10/100/1000, 24 VDC (order 0TB103.9 screw clamp or 0TB103.91 cage clamp terminals separately)	87
Terminal blocks		
0TB103.9	Connector, 24 VDC, 3-pin female, 3.31 mm ² screw clamp, protected against vibration by the screw flange	307
0TB103.91	Connector, 24 VDC, 3-pin female, 3.31 mm ² cage clamp, protected against vibration by the screw flange	307
USB accessories		
5A5003.03	Front cover, for remote CD-ROM drive 5A5003.02 and USB 2.0 drive combination 5MD900.USB2-00, 5MD900.USB2-01 and 5MD900.USB2-02	333
5MD900.USB2-01	USB 2.0 drive combination, consists of DVD-R/RW DVD+R/RW, FDD, CompactFlash slot (Type II), USB connection (Type A on front, Type B on back); 24 VDC, (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	324
5MD900.USB2-02	USB 2.0 drive combination, consists of DVD-R/RW DVD+R/RW, CompactFlash slot (Type II), USB connection (Type A on the front, Type B on the back); 24V DC (order screw clamp terminal 0TB103.9 or cage clamp terminal 0TB103.91 separately)	329
5MMUSB.2048-00	USB 2.0 flash drive, 2048 MB	335
5MMUSB.2048-01	USB 2.0 flash drive, 2048 MB, B&R	337
5MMUSB.4096-01	USB 2.0 flash drive, 4096 MB, B&R	337
USB cable		
5CAUSB.0018-00	USB 2.0 connection cable type A - type B, 1.8 m	374
5CAUSB.0050-00	USB 2.0 connection cable type A - type B, 5 m	374
Uninterruptible power supplies		
5AC600.UPSB-00	Battery unit 5 Ah; for APC620, APC810 or PPC800 UPS	345
5AC600.UPSF-00	UPS fuse kit for battery unit 5AC600.UPSB-00 up to revision D0.	349
5AC600.UPSF-01	UPS fuse, 5 pcs.	349
5AC600.UPSI-00	UPS module for APC620, APC810, PPC800; for system units 5PC600.SX01-00 (beginning with rev. H0), 5PC600.SX02-00 (beginning with rev. G0), 5PC600.SX02-01 (beginning with rev. H0), 5PC600.SX05-00 (beginning with rev. F0), 5PC600.SX05-01 (beginning with rev. F0), 5PC600.SF03-00 (beginning with rev. A0), 5PC810.SX*. 5PC820.1505-00, 5PC820.1906-00. Order cable (5CAUPS.0005-00 or 5CAUPS.0030-00) and battery unit (5AC600.UPSB-00) separately.	343
5CAUPS.0005-00	UPS cable 0.5 m; for UPS 5AC600.UPSI-00	348
5CAUPS.0030-00	UPS cable 3 m; for UPS 5AC600.UPSI-00	348

5SWWXP.0600-MUL	Microsoft OEM Windows XP Professional Service Pack 3, CD, multilingual. Only available with a new device.	275

Chapter 2 • Technical data

1 Introduction

The APC810 is a logical step forward from the successful APC620 product series. Based on the latest Intel® Core™2 Duo technology, the APC810 offers the highest level of performance for any application that requires maximum computing power.

The APC810 saves space in the control cabinet, with drive bays (DVD, HDD) and two CompactFlash slots protected behind a cover on the front of the device (only one CF slot can be used with the GM45 CPU board). Modular plug-in technology makes it easy for the user to replace drives. All connections and interfaces are located on the top of the housing so that installation depth is not increased by protruding connectors. Different APC810 sizes with one, two, three or five slots for PCI and/or PCI Express cards ensure the optimum design for any type of installation – a perfect fit that doesn't waste valuable space in the control cabinet.

1.1 Features

- Latest processor technology - Core 2 Duo
- Up to 8 GB main memory (dual-channel memory support)
- 1 CompactFlash slot (type I)
- 1, 2, 3 or 5 card slots (for PCI / PCI Express (PCIe) cards)
- SATA drives (slide-in and slide-in compact slots)
- 5x USB 2.0
- 2x Ethernet 10/100/1000 Mbit interfaces
- 2x RS232 interface, modem-compatible
- 24 VDC supply voltage
- BIOS (AMI)
- Real-time clock (RTC, battery-backed)
- 512 kB SRAM (battery-backed)
- Possibility to connect various display devices to the "Monitor/Panel" video output (supports RGB, DVI and SDL - Smart Display Link - signals)
- 2nd graphics line by installing the optional AP Link card
- Easy slide-in drive replacement (SATA hot plugging)
- Optional installation of the add-on UPS module
- Optional CAN interface
- Optional RS232/422/485 interface
- Optional RAID controller (requires an open PCI slot)

1.2 System components / Configuration

The APC810 system can be assembled to meet individual requirements and operating conditions.

The following components are absolutely essential for operation:

- System unit
- Bus unit
- CPU board
- Heat sink
- Main memory
- Fan kit
- Drive (mass storage device such as CompactFlash card or hard disk) for the operating system
- Software

1.3 Configuration - Base system

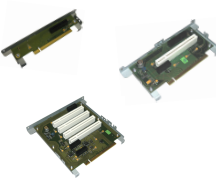

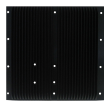

Configuration - Drives, software, accessories				
System unit	Select 1			
 <p>A system unit consists of a housing and mainboard. Variants: Card slots (1, 2, 3 or 5) Slide-in slots (0, 1 or 2) AP Link slot (0 or 1) Example: (2 / 1 / 1) = 2 card slots, 1 slide-in slot, 1 AP Link slot</p>				
	5PC810.SX01-00 (1 / 0 / 0)	5PC810.SX02-00 (2 / 1 / 1)	5PC810.SX03-00 (3 / 1 / 1)	5PC810.SX05-00 (5 / 2 / 1)
Fan kit	Select 1			
	5PC810.FA01-00	5PC810.FA02-01	5PC810.FA03-00	5PC810.FA05-00
Bus unit	Select 1

2 Complete system

2.1 Temperature specifications

CPU boards can be combined with various other components such as drives, main memory, additional plug-in cards, etc. depending on the system unit and fan kit. The many different configurations possible result in varying maximum ambient temperatures, which can be seen in the following tables in this section.

Information:

The maximum specified ambient temperatures for operation with and without a fan kit have been determined under worst-case conditions. Experience has shown that higher ambient temperatures can be reached in typical applications, e.g. those in Microsoft Windows. Testing and evaluation must be performed on-site by the user (temperatures can be read in BIOS or with the B&R Control Center).

Information regarding worst-case conditions

- Thermal Analysis Tool (TAT V3.8.1) from Intel for simulating a 100% processor load
- BurnInTest tool (BurnInTest V4.0 Pro from Passmark Software) for simulating a 100% load on the interface via loop back adapters (serial interfaces, add-on and slide-in drives, USB ports, audio outputs)
- Maximum system expansion and power consumption

What must be considered when determining the maximum ambient temperature?

- Operating the Ethernet interfaces (ETH1/ETH2) in 10/100 Mbit or 1 Gbit mode
- The revision of the heat sink being used

2.1.1 Maximum ambient temperature with fan kit

Information:

- Vertical and horizontal (minus 5°C) mounting orientations are permitted (1.3 "Mounting orientation" on page 179).
- The specifications in the following table are only valid for system units with heat sink 5AC801.HS00-01 ≥ Rev. D0.

All temperature values in degrees Celsius (°C) at 500 m above sea level.		T9400 5PC800.BM45-00	P8400 5PC800.BM45-01	Temperature limits	Location of sensor(s)
The maximum ambient temperature is typically derated by 1°C per 1000 meters (starting at 500 meters above sea level).		50	55

	5ACPCI.RAIC-03 (24 hours / standard)	✓	✓	-	
	5ACPCI.RAIC-05 (24 hours / standard)	✓	50	-	
	5ACPCI.RAIC-06 (24 hours / standard)	✓	50	-	

1) With horizontal mounting, the maximum ambient temperature must be reduced by 5°C!

2) Only possible with a CompactFlash card from B&R that is compatible with the device.

Table 5: Ambient temperature with a fan kit

2.1.1.1 How is the maximum ambient temperature determined?

1. The CPU board is selected (i.e. operation with or without a fan kit).
2. The "Maximum ambient temperature" row shows the maximum ambient temperature for the complete system, including the respective CPU board.

Information:

Maximum temperature data is for operation at 500 meters. The maximum ambient temperature is typically derated by 1°C per 1000 meters (starting at 500 meters above sea level).

3. Incorporating additional drives (add-on, slide-in), main memory, additional plug-in cards, etc. can change the temperature limits of an APC810 system.

If there is a "✓" next to the component, it can be used at the maximum ambient temperature of the complete system without problems.

If there is a specific temperature, for example "35", next to the component, then the ambient temperature of the complete APC810 system cannot exceed this temperature.

2.1.2 Minimum ambient temperature

For systems containing one of the following components, the minimum ambient temperature is +5°C: 5AC801.DVDS-00, 5AC801.DVRS-00. If none of these components are used, then the minimum ambient temperature is 0°C.

2.1.3 Temperature monitoring

Sensors monitor temperature values at various places in the APC810 (CPU, board, board I/O, board ETH2, board power supply, ETH2 controller, power supply and slide-in drives 1/2). The location of these temperature sensors is illustrated in Figure 3 "Temperature sensor locations" on page 29. The values listed in the table represent the defined maximum temperature¹⁾ for the respective measurement point. An alarm is not triggered if this temperature is exceeded. These temperatures can be read in BIOS ("Advanced" - Baseboard/Panel features - Baseboard monitor) or in approved Microsoft operating systems via the B&R Control Center.

In addition, the hard disks for APC810 systems available from B&R are equipped with S.M.A.R.T., or Self-Monitoring, Analysis, and Reporting Technology. This makes it possible to read various parameters, e.g. temperature, using software (such as HDD Thermometer, a freeware program) on approved Microsoft operating systems (except Windows CE).

2.1.4 Temperature sensor positions

Sensors indicate temperature values at different locations in the APC810 (CPU, board I/O, slide-in drive, etc). The temperatures²⁾ can be read in BIOS (Advanced - CPU monitor) or in Microsoft Windows operating systems via the B&R Control Center³⁾.

For applications that don't use Windows, the temperatures can be evaluated using the B&R implementation guide. In addition to the implementation guide, there are also programs available in MS-DOS.

Figure 3: Temperature sensor locations

Position	Measurement point for	Measurement	Max. specified
1	CPU	Ambient temperature of the processor (sensor integrated in the processor)	100°C
2	Board	CPU board temperature (sensor integrated on the CPU board)	85°C
3	Board I/O	Board temperature in the I/O area (sensor on the mainboard)	85°C
4	Board ETH2	Baseboard temperature near the ETH2 controller (sensor on the mainboard)	80°C
5	Board power supply	Board power supply temperature (sensor on the mainboard)	80°C
6	ETH2 controller	ETH2 controller temperature (sensor in the ETH2 controller)	125°C
7	Power supply	Power supply temperature (sensor on the power supply)	80°C
8	Slide-in drive 1	Slide-in drive 1 temperature (sensor integrated in the slide-in slot)	Depends on the drive
8	Slide-in drive 2	Slide-in drive 2 temperature (sensor integrated in the slide-in slot)	Depends on the drive

Table 6: Temperature sensor locations

¹⁾ The temperature measured approximates the immediate ambient temperature but may also be influenced by neighboring components.

²⁾ The temperature measured approximates the immediate ambient temperature but may also be influenced by neighboring components.

³⁾ The ADI driver that includes the B&R Control Center is available in the Downloads section of the B&R website (www.br-automation.com).

2.2 Humidity specifications

The following table lists the minimum and maximum relative humidity values for the individual components that are relevant for the humidity limitations of a complete system. The lowest and highest common values are always used when establishing these limits.

Component		Operation	Storage / Transport
GM45 COM Express CPU boards		10 to 90%	5 to 95%
System units (all models)		5 to 90%	5 to 95%
Main memory for CPU boards		10 to 90%	5 to 95%
Slide-in compact drives	5AC801.HDDI-00	5 to 90%	5 to 95%
	5AC801.HDDI-02	8 to 80%	5 to 95%
	5AC801.HDDI-03	5 to 95%	5 to 95%
	5AC801.HDDI-04	5 to 95%	5 to 95%
	5AC801.SSDI-00	5 to 95%	5 to 95%
	5AC801.SSDI-01	5 to 95%	5 to 95%
	5AC801.SSDI-02	5 to 95%	5 to 95%
	5AC801.SSDI-03	8 to 95%	8 to 95%
	5AC801.SSDI-04	8 to 95%	8 to 95%
	5AC801.SSDI-05	8 to 95%	8 to 95%
Slide-in drives	5AC801.HDDS-00	5 to 90%	5 to 90%
	5AC801.DVDS-00	8 to 90%	5 to 95%
	5AC801.DVRS-00	8 to 90%	5 to 95%
Additional plug-in cards Interfaces AP Link	5AC600.CANI-00	5 to 90%	5 to 95%
	5AC600.485I-00	5 to 90%	5 to 95%
	5AC801.SDL0-00	5 to 90%	5 to 95%
	5AC801.RDYR-00	5 to 90%	5 to 95%
	5ACPCI.RAIC-03 (24 hours / standard)	8 to 90%	5 to 95%
	5ACPCI.RAIC-04 (24 hours / standard)	8 to 90%	5 to 95%
	5ACPCI.RAIC-05 (24 hours / standard)	5 to 95%	5 to 95%
	5ACPCI.RAIC-06 (24 hours / standard)	5 to 95%	5 to 95%
	5MMHDD.0250-00 (24 hours / standard)	5 to 95%	5 to 95%
	5MMHDD.0500-00 (24 hours / standard)	5 to 95%	5 to 95%
Accessories	5CFCRD.xxxx-06 CompactFlash cards	85%	85%
	5CFCRD.xxxx-04 CompactFlash cards	85%	85%
	5CFCRD.xxxx-03 CompactFlash cards	8 to 95%	8 to 95%
	5MMUSB.2048-00 flash drive	10 to 90%	5 to 90%
	5MMUSB.xxxx-01 flash drive	85%	85%
	5MD900.USB2-01 USB media drive	20 to 80%	5 to 90%

Table 7: Overview of humidity specifications for individual components

The specifications listed correspond to the relative humidity at an ambient temperature of 30°C. More detailed information about specific temperature-dependent humidity values can be found in the technical data for the individual components.

2.3 Power management

2.3.1 Supply voltage block diagram

The following block diagram illustrates the simplified structure of the APC810 supply voltage for system units.

Figure 4: Supply voltage for system units

Description

15 V is generated from the supply voltage using a DC-to-DC converter. This electrically isolated 15 V supplies additional DC-to-DC converters that generate the remaining voltage.

After the system is turned on (e.g. using the power button), the 3V3 and 5 V voltages are applied to the bus. At the 5 V output, another DC-to-DC converter generates -12 V and applies this to the bus. An additional DC-to-DC converter generates +12 V.

The optional add-on UPS (with battery unit) is supplied with 15 V and provides an uninterrupted power supply of the 15 V bus during a power failure.

2.3.2 Power calculation with 5PC810.SX01-00 revision >= D0

2.4 Serial number sticker

A unique serial number sticker with a barcode (Code 128) is affixed to each B&R device for identification purposes. This serial number represents all of the individual components built into the system (model number, name, revision, serial number, delivery date and duration of warranty).

Figure 5: Serial number sticker (front)

A sticker with detailed information about the installed components can also be found on the back of the mounting plate.

Figure 6: Serial number sticker (back)

This information can also be found on the B&R website by entering the serial number of the complete system in the search field tab (after selecting the "Serial number" option) at the top of the website www.br-automation.com. The search provides a detailed list of installed components.

The screenshot shows the B&R website interface. At the top, there is a search bar with the serial number "A3C70168444" entered. Below the search bar, there are tabs for "Website", "Materialnummer", and "Serialnummer". The "Serialnummer" tab is selected. On the left side, there is a navigation menu with various product categories. The main content area displays the search results for the serial number "A3C70168444". It includes fields for "Serialnummer:", "Materialnummer:", "Revision:", "Auslieferungsdatum:", and "Gewährleistungsende:". Below these fields, there is a table listing the installed components.

2.5.7 5PC810.SX05-00 system unit + 5PC810.BX05-01 bus unit

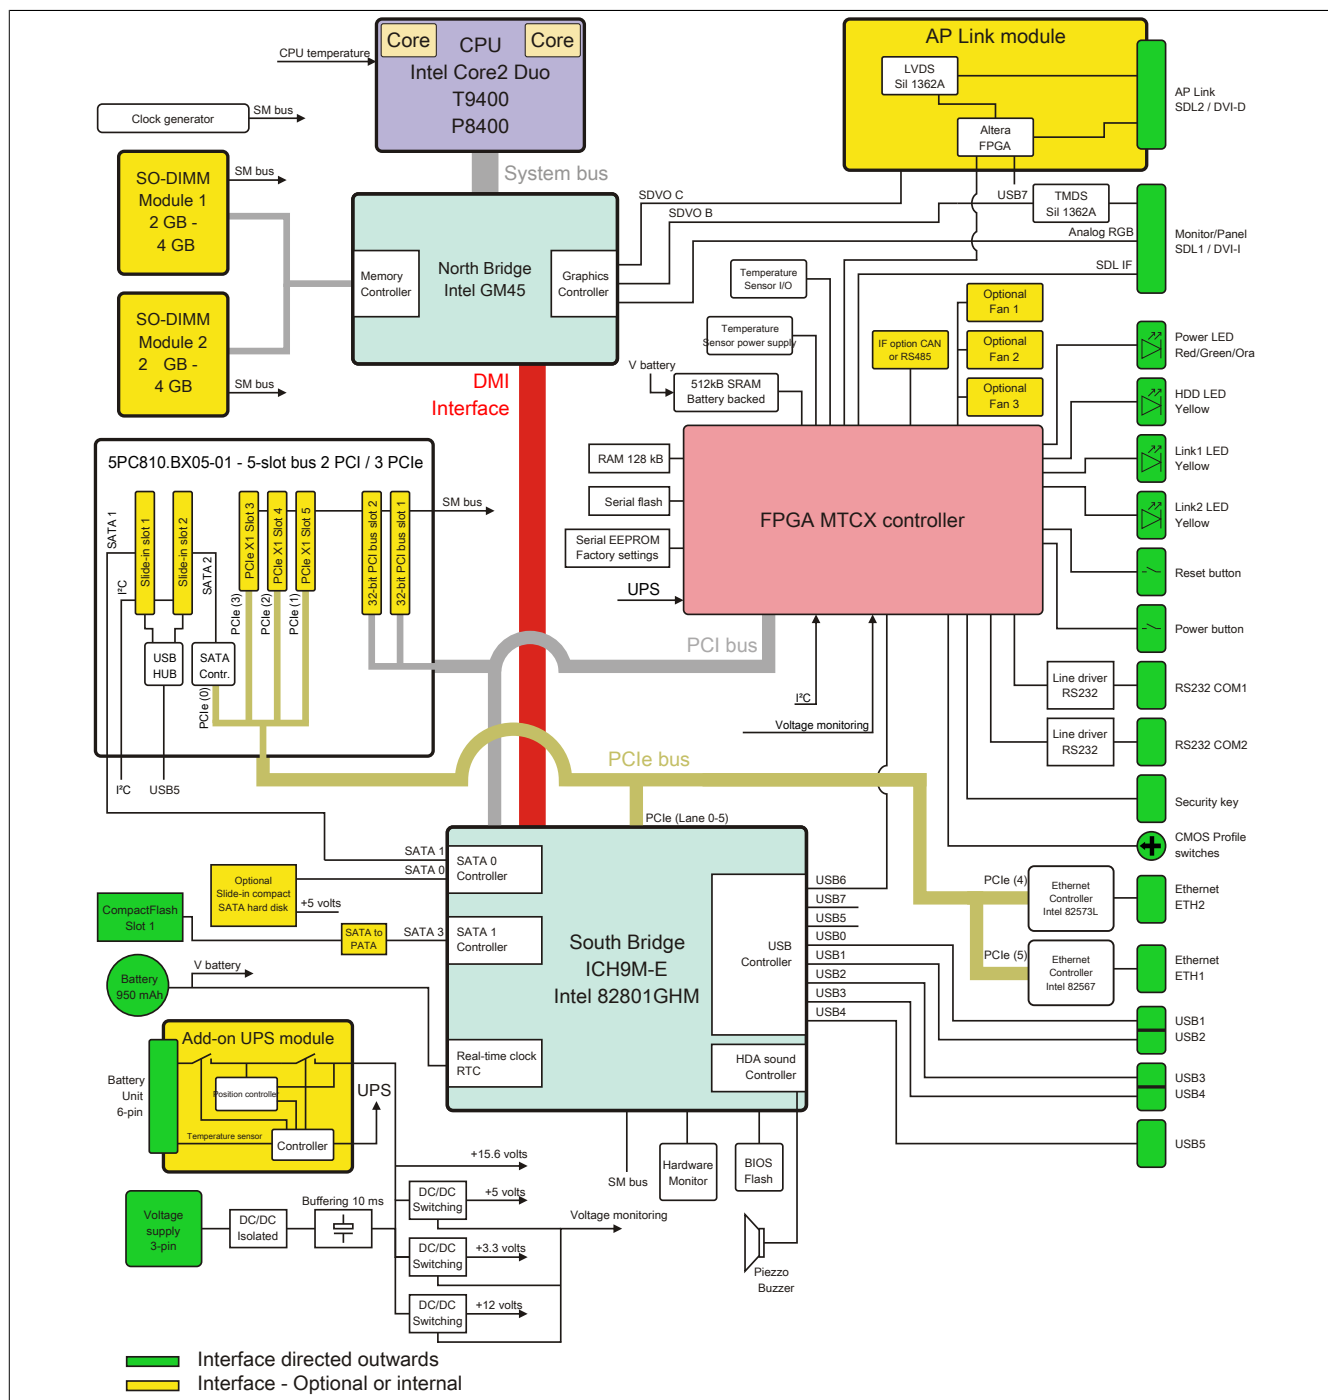

Figure 14: 5PC810.SX05-00 + 5PC810.BX05-01 - Block diagram

2.6 Device interfaces and slots

2.6.1 +24 VDC power supply

The 3-pin male connector required for the power supply interface is not included in delivery. It can be ordered from B&R using model number 0TB103.9 (screw clamp) or 0TB103.91 (cage clamp).

The pinout is listed in the following table and printed on the APC810 housing. The supply voltage is protected internally by a soldered fuse (15 A, fast-acting) to prevent damage to the device in the event of an overload (fuse replacement necessary) or if the voltage supply is connected incorrectly (reverse polarity protection - fuse replacement not necessary). The device must be returned to B&R for repairs if the fuse is blown in the event of an error.

Protected against reverse polarity		3-pin, male
Pin	Description	
1	-	
2	Functional ground	
3	+	
Model number	Short description	
	Terminal blocks	
0TB103.9	Male connector 24 V 5.08 3-pin screw clamp	
0TB103.91	Male connector 24 V 5.08 3-pin cage clamp	

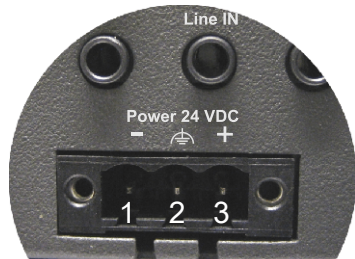

Table 14: 24 VDC power supply interface

2.6.1.1 Grounding

Caution!

The functional ground (pin 2) must be connected to ground (e.g. control cabinet) using the shortest possible path. Using the largest possible conductor cross section on the supply connector is recommended.

The ground connection is located on the bottom of the APC810 system.

The M4 self-locking nut can be used, for example, to fasten a copper strip to a central grounding point in the control cabinet or system where the APC810 is installed. The largest possible conductor cross section should be used (at least 2.5 mm²).

2.6.2 COM1 serial interface

COM1 serial interface ¹⁾	
	RS232
Type	RS232, modem-capable, not electrically isolated
UART	16550-compatible, 16-byte FIFO
Transfer rate	Max. 115 kbit/s
Bus length	Max. 15 m
Pin	Assignment
1	DCD
2	RXD
3	TXD
4	DTR
5	GND
6	DSR
7	RTS
8	CTS
9	RI

9-pin male DSUB connector

Table 15: COM1 - Pinout

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.

2.6.3 COM2 serial interface

COM2 serial interface ¹⁾	
	RS232
Type	RS232, modem-capable, not electrically isolated
UART	16550-compatible, 16-byte FIFO
Transfer rate	Max. 115 kbit/s
Bus length	Max. 15 m
Pin	Assignment
1	DCD
2	RXD
3	TXD
4	DTR
5	GND
6	DSR
7	RTS
8	CTS
9	RI

9-pin male DSUB connector

Table 16: COM2 - Pinout

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.

2.6.4 Monitor/Panel interface - SDL (Smart Display Link / DVI)

Monitor/Panel interface - SDL (Smart Display Link) / DVI

The following is an overview of the video signals available on the monitor/panel output. For details, see the technical data for the CPU board being used.

CPU board	Video signals with all system unit variants
5PC800.BM45-00	RGB, DVI, SDL
5PC800.BM45-01	RGB, DVI, SDL

Table 17: Monitor/Panel interface - RGB, DVI, SDL

Information:

The hot-plugging of display devices on the monitor/panel interface is not supported.

Information:

The RGB interface uses an analog signal; the line length depends on the resolution and prevailing environmental conditions. This interface is therefore only recommended for service purposes.

2.6.4.1 Pinout

Pin	Assignment	Description	Pin	Assignment	Description
1	TMDS data 2-	DVI lane 2 (negative)	16	HPD	Hot plug detect
2	TMDS data 2+	DVI lane 2 (positive)	17	TMDS data 0-	DVI lane 0 (negative)
3	TMDS data 2/4 SHIELD	Shield for data pair 2 and 4	18	TMDS data 0+	DVI lane 0 (positive)
4	SDL-	SDL lane (negative)	19	TMDS Data 0/ XUSB1 SHIELD	Shield for data pair 0 and USB1
5	SDL+	SDL lane (positive)	20	XUSB1-	USB lane 1 (negative)
6	DDC clock	DDC-based control signal (clock)	21	XUSB1+	USB lane 1 (positive)
7	DDC data	DDC-based control signal (data)	22	TMDS clock shield	Shield for clock pair
8	N.C.	Not connected	23	TMDS clock+	DVI clock (positive)
9	TMDS data 1-	DVI lane 1 (negative)	24	TMDS clock -	DVI clock (negative)
10	TMDS DATA 1+	DVI lane 1 (negative) HDMI clock (positive)	C1	ANALOG RED	Analog red
11	TMDS DATA 1/ XUSB0 SHIELD	Shield for data pair 1 and USB0	C2	ANALOG GREEN	Analog green
12	XUSB0-	USB lane 0 (negative)	C3	ANALOG BLUE	Analog blue
13	XUSB0+	USB lane 0 (positive)	C4	ANALOG HORZ SYNC	Analog horizontal synchronization
14	+5 V power ¹⁾	+5 V power supply	C5	ANALOG GND	Analog ground (return for R, G and B signals)
15	Ground (return for +5 V, HSync and VSync)	Ground			

Table 18: DVI interface - Pinout

1) Protected internally by a multifuse.

2.6.4.2 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

SDL cables Segment length [m]	Resolution						
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	HD 1366 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200	FHD 1920 x 1080
1.8	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00

Table 19: Cable lengths and resolutions for SDL transmission

2.6.4.3 Cable lengths and resolutions for DVI transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the DVI cable being used:

DVI cables Segment length [m]	Resolution						
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	HD 1366 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200	FHD 1920 x 1080
1.8	5CADVI.0018-00	5CADVI.0018-00	5CADVI.0018-00	5CADVI.0018-00	5CADVI.0018-00	5CADVI.0018-00	5CADVI.0018-00
5	5CADVI.0050-00	5CADVI.0050-00	5CADVI.0050-00	5CADVI.0050-00	5CADVI.0050-00	5CADVI.0050-00	5CADVI.0050-00

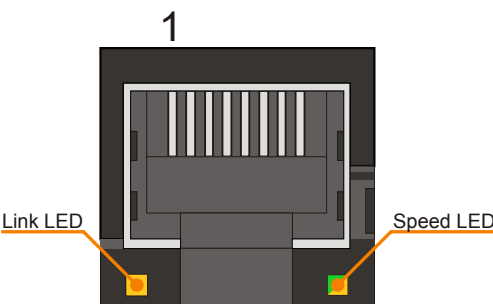

Table 20: Cable lengths and resolutions for DVI transmission

The maximum cable length for DVI transfer is limited to 5 m due to the USB specification.

2.6.5 Ethernet 1 (ETH1)

This Ethernet controller is integrated in the CPU board and connected to external devices via the system unit.

Ethernet 1 interface (ETH1 ¹⁾)		
Controller	Intel 82567	
Cabling	S/STP (Cat 5e)	
Transfer rate	10/100/1000 Mbit/s ²⁾	
Cable length	Max. 100 m (min. Cat 5e)	
Speed LED	On	Off
Green	100 Mbit/s	10 Mbit/s ³⁾
Orange	1000 Mbit/s	-
Link LED	On	Off
Orange	Link (Ethernet network connection available)	Activity (blinking - data transfer in progress)

The diagram shows a top-down view of the Ethernet 1 interface. It features a standard RJ45 port with eight pins. Below the port, there are two small square LEDs. The left LED is labeled 'Link LED' and the right LED is labeled 'Speed LED'. Both LEDs are shown with a yellow glow, indicating they are active. The interface is labeled with a large '1' above it.

Table 21: Ethernet interface (ETH1)

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Switching takes place automatically.
- 3) The 10 Mbit/s transfer speed / connection only exists if the Link LED is also lit at the same time.

Driver support

A special driver is required in order to operate the Realtek 82567 Ethernet controller. Drivers for approved operating systems are available in the Downloads section of the B&R website (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

2.6.6 Ethernet 2 (ETH2)

This Ethernet controller is integrated in the mainboard and connected to external devices via the system unit.

Ethernet 2 interface (ETH2 ¹⁾)		
Controller	Intel 82573L	
Cabling	S/STP (Cat 5e)	
Transfer rate	10/100/1000 Mbit/s ²⁾	
Cable length	Max. 100 m (min. Cat 5e)	
Speed LED	On	Off
Green	100 Mbit/s	10 Mbit/s ³⁾
Orange	1000 Mbit/s	-
Link LED	On	Off
Orange	Link (Ethernet network connection available)	Activity (blinking - data transfer in progress)

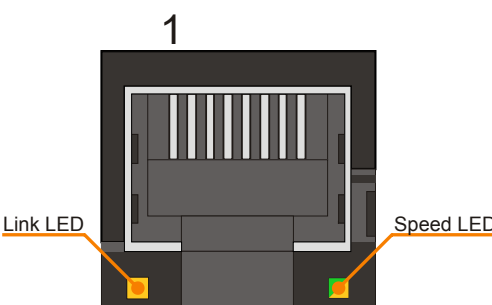

Table 22: Ethernet interface (ETH2)

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Switching takes place automatically.
- 3) The 10 Mbit/s transfer speed / connection only exists if the Link LED is also lit at the same time.

Driver support

A special driver is required in order to operate the Intel 82573L Ethernet controller. Drivers for approved operating systems are available in the Downloads section of the B&R website (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

2.6.7 USB interfaces (USB1, 2, 3, 4, 5)

The APC810 features a USB 2.0 (Universal Serial Bus) host controller with multiple USB ports, 5 of which are accessible externally for the user.

Warning!

Peripheral USB devices can be connected to the USB interfaces on this device. Due to the vast number of USB devices available on the market, B&R cannot guarantee their performance. B&R does ensure the performance of all USB devices that they provide.

Information:

For additional information, please see 3 "Installation", section "Connecting peripheral USB devices" on page 209.

Caution!

Because this interface is designed according to general PC specifications, extreme care should be exercised with regard to EMC, cable routing, etc.

USB1,2,3,4

Universal Serial Bus (USB1, USB2, USB3, USB4 ¹⁾)		4 x USB type A, female
Type	USB 2.0	
Design	Type A	
Transfer rate	Low speed (1.5 Mbit/s), full speed (12 Mbit/s), high speed (480 Mbit/s)	
Current load ²⁾ USB1, USB3 USB2, USB4	Max. 1 A Max. 500 mA	
Cable length	Max. 5 m (without hub)	

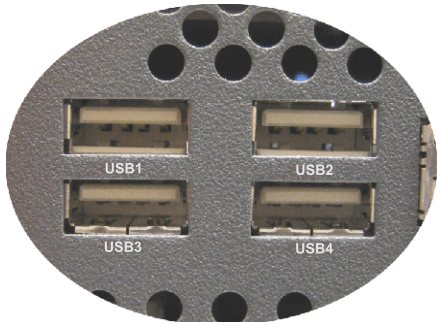

Table 23: USB1, USB2, USB3 and USB4 interfaces

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Each USB port is protected by a maintenance-free "USB current limiting circuit breaker" (max. 500 mA or 1 A).

USB5

Universal Serial Bus (USB5 ¹⁾)		1 x USB type A, female
Type	USB 2.0	
Design	Type A	
Transfer rate	Low speed (1.5 Mbit/s), full speed (12 Mbit/s), high speed (480 Mbit/s)	
Power supply ²⁾ USB5	Max. 1 A	
Cable length	Max. 5 m (without hub)	

Table 24: USB5 interface

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Each USB port is protected by a maintenance-free "USB current-limiting circuit breaker" (max. 1 A).

2.6.8 MIC, Line IN, Line OUT

Since the Intel GM45 chipset used with 5PC800.BM45-0x systems no longer supports AC97 sound, MIC, Line In and Line Out are not supported.

Table 25: MIC, Line IN, Line OUT

2.6.9 Add-on interface slot

An optional add-on interface (e.g. CAN, RS485) can be installed here. See also "Add-on interfaces (IF option)" on page 172.

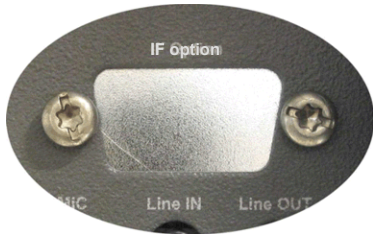

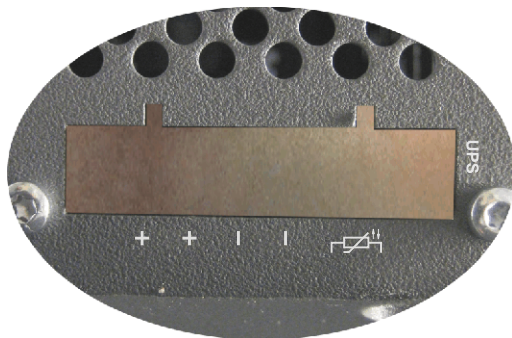

Add-on interface slot		
Model number	Short description	
	Serial port adapter	
5AC600.CANI-00	Add-on CAN interface	
5AC600.458I-00	Add-on RS232/422/458 interface	

Table 26: Add-on interface slot

2.6.10 Add-on UPS slot

An optional Automation PC add-on UPS module or the APC810 ready relay /2 can be installed in this slot.

Add-on UPS slot	
Pinout with installed add-on UPS module	
1	+
2	+
3	-
4	-
5	NTC (for battery temperature measurement)
6	NTC (for battery temperature measurement)
Model number	Short description
Uninterruptible power supply	
5AC600.UPSI-00	Add-on UPS module
5AC600.UPSB-00	Battery unit 5 Ah
5CAUPS.0005-00	UPS cable 0.5 m
5CAUPS.0030-00	UPS cable 3 m
APC810 ready relay	
5AC801.RDYR-01	APC810 ready relay /2

Table 27: Add-on UPS slot (with and without installed UPS)

For additional information about the UPS module, see chapter 6 "Accessories", section 342.

2.6.11 AP Link slot

When connected with the 5AC801.SDL0-00 AP Link card, it is possible to implement a second graphics line with DVI and SDL, but without RGB signals. In addition, the 5AC801.RDYR-00 ready relay can also be installed in the APC810.

Information:

AP Link cards can only be installed with system units 5PC810.SX02-00, 5PC810.SX03-00 and 5PC810.SX05-00.

2.6.12 Card slots (PCI / PCIe)

Standard PCI 2.2 half-size cards or PCI Express (PCIe) half-size cards can be installed depending on the type of bus unit. They cannot exceed the following dimensions.

Figure 16: Standard half-size 32-bit PCI card - Dimensions

Figure 17: Standard half-size PCIe card - Dimensions

Due to mechanical limitations, a 64-bit PCI card cannot be inserted in every system unit or card slot. The following table provides an overview of the slots where 64-bit cards can be inserted.

System unit	Bus unit	Card slot 1	Card slot 2	Card slot 3	Card slot 4	Card slot 5
5PC810.SX01-00	5PC810.BX01-00	32-bit PCI				
	5PC810.BX01-01	PCIe				
5PC810.SX02-00	5PC810.BX02-00	32-bit and 64-bit PCI	32-bit PCI			
	5PC810.BX02-01	32-bit and 64-bit PCI	PCIe			
5PC810.SX03-00	5PC810.BX03-00	32-bit and 64-bit PCI	32-bit PCI	PCIe		
5PC810.SX05-00	5PC810.BX05-00	32-bit and 64-bit PCI	32-bit and 64-bit PCI	32-bit and 64-bit PCI	32-bit PCI	PCIe
	5PC810.BX05-01	32-bit and 64-bit PCI	32-bit and 64-bit PCI	PCIe	PCIe	PCIe
	5PC810.BX05-02	32-bit and 64-bit PCI	32-bit and 64-bit PCI	32-bit and 64-bit PCI	32-bit and 64-bit PCI	32-bit and 64-bit PCI

Table 28: Overview of 64-bit cards

2.6.13 LED status indicators

LED status indicators are integrated in the system unit behind the orange front cover.

LED status indicators			
LED	Color	Status	Description
Power	Green	On	Supply voltage OK
	Red	On	System in standby mode (S5: Soft-off mode, S4: Hibernation mode suspend-to-disk or S3: Suspend-to-RAM)
	Orange ¹⁾	On	Supply voltage not OK, system operating on battery power
HDD	Yellow	On	Indicates IDE drive access (CF, HDD, CD, etc.)
Link1	Yellow	On	Indicates an active SDL connection on the monitor/panel interface
		Blinking	Indicates that an active SDL connection has been interrupted by a loss of power to the display unit
Link2	Yellow	On	Indicates an active SDL connection on the AP Link.
		Blinking	Indicates that an active SDL connection on the AP Link has been interrupted by a loss of power to the display unit

Table 29: LED status indicators - Data

1) Only lit when an add-on UPS module is installed.

The light for the LED status indicators is fed to the front cover via fiber optic lines.

Figure 18: LED status indicators - Front

2.6.14 CMOS profile switch

CMOS profile switch	
Different BIOS default value profiles can be specified using the 16-position CMOS profile switch.	
Switch position	Description
0	Profile 0: Reserved for default profile
1	Profile 1: Optimized for system units 5PC810.SX01-00, 5PC810.SX02-00 and 5PC810.SX03-00
2	Profile 2: Optimized for 5PC810.SX05-00 system unit
3	Profile 3: Optimized for system units 5PC820.SX01-00 and 5PC820.SX01-01
4	Profile 4: Reserved
5	Profile 5: Optimized for system units 5PC820.1505-00 and 5PC820.1906-00

Table 30: CMOS profile switch

Information:

The factory default switch position represents the optimal BIOS default values for this system and should therefore not be changed.

The position of the CMOS profile switch is displayed in BIOS Setup and in the B&R ADI Control Center.

2.6.15 Power button

The power button provides a wide range of ATX power supply functions.

Power button	
<p>The power button can be pressed with a pointed object (e.g. paper clip or tip of a pen).</p> <p>The power switch acts like the on/off switch on a normal desktop PC with an ATX power supply:</p> <p>Press and release ... Switches on the APC810 or shuts down the operating system and switches off the APC810.</p> <p>Press and hold ... Switches off the ATX power supply without shutting down the APC810 (data could be lost!)</p> <p>Pressing the power button does not reset the MTCX processor.</p>	

Table 31: Power button

2.6.16 Reset button

Information:

With MTCX PX32 firmware \geq V00.11 and higher, the reset button is only triggered by edges. This means that the device boots even when the reset button is pressed. With MTCX PX32 firmware $<$ V00.11, the system does not start after pressing (ca. 10 seconds) and releasing the reset button.

Reset button	
<p>The reset button can be pressed with a pointed object (e.g. paper clip or tip of a pen).</p> <p>Pushing the reset button triggers a hardware and PCI reset. The APC810 is restarted (cold restart).</p> <p>Pressing the reset button does not reset the MTCX processor.</p>	

Table 32: Reset button

Warning!

A system reset can result in lost data!

2.6.17 Battery

The lithium battery (3 V, 950 mAh) buffers the internal real-time clock (RTC), individually stored BIOS settings as well as data stored in SRAM on interface cards. It is located behind the black cover on the front of the device. The battery's buffer lifespan is at least 2½ years (at 50°C, 8.5 µA for the components being supplied and a self-discharge of 40%). The battery has a limited service life and should be replaced regularly (after the specified service life at the latest).

Battery		
Battery Type	Renata 950 mAh	
Removable	Yes, accessible from the outside	
Service life	2½ years ¹⁾	
Model number	Short description	
	Batteries	
0AC201.91	Lithium batteries, 4 pcs., 3 V, 950 mAh, button cell	
4A0006.00-000	Lithium battery, 1 pc., 3 V / 950 mAh, button cell	

Table 33: Battery

1) At 50°C, 8.5 µA of the supplied components and a self-discharge of 40%.

Evaluating the battery status

The status of the battery is determined immediately after the device is started and subsequently checked by the system every 24 hours. During this measurement, the battery is subjected to a brief load (approximately 1 second) and then evaluated. Once determined, the battery status is displayed in BIOS (Advanced - OEM features - System board features - Voltage values) and in the B&R Control Center (ADI driver); it can also be read in a customer application using the ADI library.

Battery status	Description
N/A	The hardware or firmware being used is too old and does not support reading the battery status.
GOOD	Data buffering is intact.
BAD	From the point when battery capacity is recognized as insufficient (BAD), data buffering is intact for approximately another 500 hours.

Table 34: Battery status

From the point when battery capacity is recognized as insufficient, data buffering is intact for approximately another 500 hours. When replacing the battery, data is buffered for approximately 10 minutes by a gold leaf capacitor.

2.6.18 Hardware security key (dongle)

B&R recommends a hardware security key (dongle) based on the DS1425 from MAXIM (formerly Dallas Semiconductors) for software copy protection.

Hardware security key

A hardware security key (dongle) can be inserted behind the black cover.

Table 35: Hardware security key

Warning!

Turn off power before removing or adding the hardware security key.

2.6.19 CompactFlash Slot 1

This CompactFlash slot is a standard component on an APC810 system and internally connected with the chipset via SATA to PATA bridge. Type I CompactFlash cards are supported.

CompactFlash slot (CF1)	
Connection	PATA master
CompactFlash Type	Type I
Model number	Short description
CompactFlash	
5CFCRD.0512-06	CompactFlash 512 MB B&R
5CFCRD.1024-06	CompactFlash 1024 MB B&R
5CFCRD.2048-06	CompactFlash 2048 MB B&R
5CFCRD.4096-06	CompactFlash 4096 MB B&R
5CFCRD.8192-06	CompactFlash 8192 MB B&R
5CFCRD.016G-06	CompactFlash 16 GB B&R
5CFCRD.032G-06	CompactFlash 32 GB B&R
5CFCRD.0064-03	CompactFlash 64 MB WD
5CFCRD.0128-03	CompactFlash 128 MB WD
5CFCRD.0256-03	CompactFlash 256 MB WD
5CFCRD.0512-03	CompactFlash 512 MB WD
5CFCRD.1024-03	CompactFlash 1024 MB WD
5CFCRD.2048-03	CompactFlash 2048 MB WD
5CFCRD.4096-03	CompactFlash 4096 MB WD
5CFCRD.8192-03	CompactFlash 8192 MB WD

Table 36: CompactFlash slot (CF1)

Warning!

Power must be turned off before inserting or removing CompactFlash cards.

2.6.20 CompactFlash slot 2

Since the Intel GM45 chipset used on 5PC800.BM45-0x systems no longer supports an IDE (PATA) channel, the CF2 slot is not supported.

CompactFlash slot (CF2)

Table 37: CompactFlash slot (CF2)

2.6.21 Slide-in slot 1

The internal connection between slide-in slot 1 and the chipset is made via SATA I and USB.

Slide-in slot 1	
Connection	SATA I and USB
Model number	Short description
Drives	
5AC801.ADAS-00	SATA hard disk adapter for operating a slide-in compact hard disk in a slide-in slot
5AC801.HDDS-00	40 GB SATA slide-in hard disk; 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.
5AC801.DVRS-00	DVD-R/RW DVD+R/RW SATA drive, slide-in
5AC801.DVDS-00	DVD-ROM SATA slide-in drive

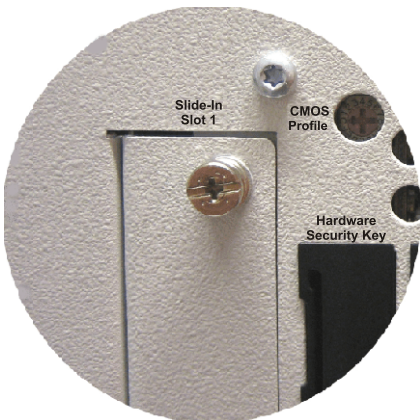

Table 38: Slide-in slot 1

Information:

The SATA I interface allows disks to be replaced during operation (hot plugging). In order to take advantage of this capability, this feature must be supported by the operating system.

2.6.22 Slide-in slot 2

The internal connection between slide-in slot 2 and the chipset is made via a PCIe to SATA bridge (SiL 3531) and USB.

Slide-in slot 2	
Connection	PCIe to SATA Bridge (SiL 3531) and USB
Model number	Short description
	Drives
5AC801.HDDS-00	40 GB SATA slide-in hard disk; 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.
5AC801.DVRS-00	DVD-R/RW DVD+R/RW SATA drive, slide-in
5AC801.DVDS-00	DVD-ROM SATA slide-in drive

Table 39: Slide-in slot 2

Information:

The APC810 slide-in compact adapter 5AC801.ADAS-00 can only be inserted into slide-in slot 1 for mechanical reasons (so that the front door can be closed).

Information:

The SATA I interface allows disks to be replaced during operation (hot plugging). In order to take advantage of this capability, this feature must be supported by the operating system.

Information:

The required drivers are available for the operating system being used and can be downloaded from the B&R website.

2.6.23 Slide-in compact slot

The internal connection between the slide-in compact slot and the chipset is made via SATA I.

Slide-in compact slot	
Connection	SATA I
Model number	Short description
Drives	
5AC801.HDDI-00	40 GB SATA hard disk, slide-in compact, 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.
5AC801.HDDI-03	250 GB SATA hard disk, slide-in compact, 24/7 operation. Note: Please see the manual for information about using this hard disk.
5AC801.HDDI-04	500 GB SATA hard disk, slide-in compact, 24/7 operation. Note: Please see the manual for information about using this hard disk.
5AC801.SSDI-00	32 GB SATA SSD (SLC), slide-in compact
5AC801.SSDI-01	60 GB SATA SSD (MLC), slide-in compact
5AC801.SSDI-02	180 GB SATA SSD (MLC), slide-in compact
5AC801.SSDI-03	60 GB SATA SSD (MLC), slide-in compact
5AC801.SSDI-04	128 GB SATA SSD (MLC), slide-in compact
5AC801.SSDI-05	256 GB SATA SSD (MLC), slide-in compact

Table 40: Slide-in compact slot

Information:

The SATA I interface allows disks to be replaced during operation (hot plugging). In order to take advantage of this capability, this feature must be supported by the operating system.

For information about installing/replacing a slide-in compact drive, see "Procedure" on page 383.

3 Individual components

3.1 System units

The system unit unites all of the individual components into one compact device. It consists of a housing and an integrated mainboard. Interfaces are easily accessible either on top of the device or behind the orange cover on the front. System units either have 1, 2, 3 or 5 card slots.

3.1.1 5PC810.SX01-00

3.1.1.1 General information

- Slot for a bus unit with 1 PCI or 1 PCIe slot
- 512 kB SRAM onboard
- Insert for 1 slide-in compact drive

3.1.1.2 Order data

Model number	Short description	Figure
	System units	
5PC810.SX01-00	APC810 system unit, 1 slot (PCI Express, PCI, depending on bus); 1 compact slide-in slot; Smart Display Link/DVI/Monitor, 2x RS232, 5x USB 2.0, 2x ETH 10/100/1000, 24 VDC (order 0TB103.9 screw clamp or 0TB103.91 cage clamp terminals separately)	
	Required accessories	
	Bus units	
5PC810.BX01-00	APC810 bus, 1 PCI	
5PC810.BX01-01	APC810 bus, 1 PCI Express (x4)	
	CPU boards	
5PC800.BM45-00	Intel Core2 Duo T9400 CPU board, 2.53 GHz, dual core, 1066 MHz FSB, 6 MB L2 cache; GM45 chipset; 2 slots for SO-DIMM DDR3 modules	
5PC800.BM45-01	Intel Core2 Duo P8400 CPU board, 2.26 GHz, dual core, 1066 MHz FSB, 3 MB L2 cache; GM45 chipset; 2 slots for SO-DIMM DDR3 modules	
	Terminal blocks	
0TB103.9	Connector, 24 VDC, 3-pin female, 3.31 mm ² screw clamp, protected against vibration by the screw flange	
0TB103.91	Connector, 24 VDC, 3-pin female, 3.31 mm ² cage clamp, protected against vibration by the screw flange	
	Main memory for GM45 CPU boards	
5MMDDR.2048-02	SO-DIMM DDR3 RAM 2048 MB PC3-8500	
5MMDDR.4096-02	SO-DIMM DDR3 RAM 4096 MB PC3-8500	
	Heat sink	
5AC801.HS00-01	APC810 heat sink for CPU boards with T7400, T9400 or P8400 dual-core processor	
	Fan kit	
5PC810.FA01-00	APC810 fan kit for 5PC810.SX01-00 system unit	
	Optional accessories	
	Drives	
5AC801.HDDI-00	40 GB slide-in compact SATA hard disk, 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.	
5AC801.HDDI-04	500 GB slide-in compact SATA hard disk; 24/7 operation. Note: Please see the manual for information about using this hard disk.	
5AC801.SSDI-04	128 GB SATA SSD (MLC), slide-in compact	
5AC801.SSDI-05	256 GB SATA SSD (MLC), slide-in compact	
5ACPCI.RAIC-06	PCI RAID system SATA 2x 500 GB; Note: Please see the manual for information about using this hard disk.	
	Serial port adapter	
5AC600.485I-00	RS232/422/485 interface, for installation in an APC620, APC810 or PPC700	
5AC600.CANI-00	CAN interface; for installation in an APC620, APC810 or PPC700	
	Uninterruptible power supply

3.1.1.4 Technical data

Product ID	5PC810.SX01-00
General information	
Dongle port	Yes
Cooling	Passive via heat sink and optionally supported with an active fan kit ¹⁾
LEDs	Power, HDD, Link 1, Link 2
B&R ID code	\$A3ED
Battery	
Type	Renata 950 mAh
Service life	2½ years ²⁾
Removable	Yes, accessible behind the orange front door
Design	Lithium ion
Power button	Yes
Reset button	Yes
Buzzer	Yes

Table 42: 5PC810.SX01-00 - Technical data

Product ID	5PC810.SX01-00
Certification	
CE	Yes
cULus	Yes
cULus HazLoc Class 1 Division 2	Yes ³⁾
ATEX Zone 22	Yes ³⁾
GOST-R	Yes
GL	Yes ³⁾
Controller	
Boot loader	BIOS
Real-time clock	
Battery-buffered	Yes
Power failure logic	
Controller	MTCX ⁴⁾
Buffer time	10 ms
Graphics	
Controller	Depends on the CPU board being used
SRAM	
Size	512 kB
Battery-buffered	Yes
Remanent variables in power failure mode	192 kB (e.g. for Automation Runtime, see AS help documentation)
Memory	
Type	Depends on the CPU board being used
Size	Depends on the CPU board being used
Interfaces	
COM1	
Type	RS232, modem-capable, not electrically isolated
Design	9-pin male DSUB connector
UART	16550-compatible, 16-byte FIFO
Max. baud rate	115 kbit/s
COM2	
Type	RS232, modem-capable, not electrically isolated
Design	9-pin male DSUB connector
UART	16550-compatible, 16-byte FIFO

Housing ⁹⁾	
Materials	Galvanized plate, plastic
Front cover	Orange plastic (similar to Pantone 144CV)
Paint	Light gray (similar to Pantone 427CV), dark gray (similar to Pantone 432CV)
Dimensions	
Width	81.3 mm with heat sink 5AC801.HS00-00 and 5AC801.HS00-02 96.5 mm with heat sink 5AC801.HS00-01
Height	270 mm
Depth	252.7 mm
Weight	Approx. 2200 g (depends on the component)

Table 42: 5PC810.SX01-00 - Technical data

- 1) A fan kit is absolutely necessary for the APC810 GM45.
- 2) At 50°C, 8.5 µA of the supplied components and a self-discharge of 40%.
- 3) Yes, although applies only if all components installed within the complete system have this certification
- 4) Maintenance Controller Extended.
- 5) No longer supported by the GM45 chipset.
- 6) The PCI and PCIe slots available depend on the bus unit being used (5AC901.BX01-00 or 5AC901.BX01-01).
- 7) Maximum values unless specified otherwise by another individual component.
- 8) The maximum ambient temperature is typically derated by 1°C per 1000 meters (starting at 500 meters above sea level).
- 9) There may be visible deviations in the color and surface appearance depending on the process or batch.

Relative humidity Operation Storage Transport	Depends on the component Depends on the component Depends on the component

Table 44: 5PC810.SX02-00 - Technical data

Product ID	5PC810.SX02-00
Vibration ⁷⁾	
Operation (continuous)	2 to 9 Hz: 1.75 mm amplitude / 9 to 200 Hz: 0.5 g
Operation (occasional)	2 to 9 Hz: 3.5 mm amplitude / 9 to 200 Hz: 1 g
Storage	2 to 8 Hz: 7.5 mm amplitude / 8 to 200 Hz: 2 g / 200 to 500 Hz: 4 g
Transport	2 to 8 Hz: 7.5 mm amplitude / 8 to 200 Hz: 2 g / 200 to 500 Hz: 4 g
Shock ⁷⁾	
Operation	15 g, 11 ms
Storage	30 g, 15 ms
Transport	30 g, 15 ms
Altitude	
Operation	Max. 3000 m (depends on the component) ⁸⁾
Mechanical characteristics	
Housing ⁹⁾	
Materials	Galvanized plate, plastic
Front cover	Orange plastic (similar to Pantone 144CV)
Paint	Light gray (similar to Pantone 427CV), dark gray (similar to Pantone 432CV)
Dimensions	
Width	120.8 mm with heat sink 5AC801.HS00-00 and 5AC801.HS00-02 136 mm with heat sink 5AC801.HS00-01
Height	270 mm
Depth	254.6 mm
Weight	Approx. 2800 g (depends on the component)

Table 44: 5PC810.SX02-00 - Technical data

- 1) A fan kit is absolutely necessary for the APC810 GM45.
- 2) At 50°C, 8.5 µA of the supplied components and a self-discharge of 40%.
- 3) Yes, although applies only if all components installed within the complete system have this certification
- 4) Maintenance Controller Extended.
- 5) No longer supported by the GM45 chipset.
- 6) The PCI and PCIe slots available depend on the 5PC810.BX02-00 and 5PC810.BX02-01 bus unit being used.
- 7) Maximum values unless specified otherwise by another individual component.
- 8) The maximum ambient temperature is typically derated by 1°C per 1000 meters (starting at 500 meters above sea level).
- 9) There may be visible deviations in the color and surface appearance depending on the process or batch.

Figure 26: 5PC810.SX02-00 - Drilling template

3.1.3 5PC810.SX03-00

3.1.3.1 General information

- Slot for a bus unit with 2 PCI and 1 PCIe slots
- 512 kB SRAM onboard
- Insert for 1 slide-in compact drive and 1 slide-in drive
- Automation Panel Link slot for connecting Automation Panels via SDL

3.1.3.2 Order data

Model number	Short description	Figure
	System units	
5PC810.SX03-00	APC810 system unit, 3 slots (PCI Express, PCI, depending on bus); 1 slot for Automation Panel Link transmitter; 1 slide-in compact and 1 slide-in slot; Smart Display Link/ DVI/Monitor, 2x RS232, 5x USB 2.0, 2x ETH 10/100/1000, AC97 sound, 24 VDC (order 0TB103.9 screw clamp or 0TB103.91 cage clamp terminals separately)	
	Required accessories	
	Bus units	
5PC810.BX03-00	APC810 bus, 2 PCI, 1 PCI Express (x4)	
	CPU boards	
5PC800.BM45-00	Intel Core2 Duo T9400 CPU board, 2.53 GHz, dual core, 1066 MHz FSB, 6 MB L2 cache; GM45 chipset; 2 slots for SO-DIMM DDR3 modules	
5PC800.BM45-01	Intel Core2 Duo P8400 CPU board, 2.26 GHz, dual core, 1066 MHz FSB, 3 MB L2 cache; GM45 chipset; 2 slots for SO-DIMM DDR3 modules	
	Terminal blocks	
0TB103.9	Connector, 24 VDC, 3-pin female, 3.31 mm ² screw clamp, protected against vibration by the screw flange	
0TB103.91	Connector, 24 VDC, 3-pin female, 3.31 mm ² cage clamp, protected against vibration by the screw flange	
	Main memory for GM45 CPU boards	
5MMDDR.2048-02	SO-DIMM DDR3 RAM 2048 MB PC3-8500	
5MMDDR.4096-02	SO-DIMM DDR3 RAM 4096 MB PC3-8500	
	Heat sink	
5AC801.HS00-01	APC810 heat sink for CPU boards with T7400, T9400 or P8400 dual-core processor	
	Fan kit	
5PC810.FA03-00	APC810 fan kit for 5PC810.SX03-00 system unit	
	Optional accessories	
	Automation Panel Link plug-in cards	
5AC801.RDYR-00	APC810 ready relay	
5AC801.SDL0-00	Smart Display Link/DVI-D transmitter	
	Drives	
5AC801.ADAS-00	SATA hard disk adapter for operating a slide-in compact hard disk in a slide-in slot	
5AC801.DVDS-00	DVD-ROM SATA slide-in drive	
5AC801.DVRS-00	DVD-R/RW DVD+R/RW SATA drive, slide-in	
5AC801.HDDI-00	40 GB slide-in compact SATA hard disk, 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.	
5AC801.HDDI-04	500 GB slide-in compact SATA hard disk; 24/7 operation. Note: Please see the manual for information about using this hard disk.	
5AC801.HDDS-00	40 GB slide-in SATA hard disk; 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.	
5AC801.SSDI-04	128 GB SATA SSD (MLC), slide-in compact	
5AC801.SSDI-05	256 GB SATA SSD (MLC), slide-in compact	
5ACPCI.RAIC-06	PCI RAID system SATA 2x 500 GB; Note: Please see the manual for information about using this hard disk.	
	Serial port adapter	
5AC600.485I-00	RS232/422/485 interface, for installation in an APC620, APC810 or PPC700	
5AC600.CANI-00	CAN interface; for installation in an APC620, APC810 or PPC700	
	Uninterruptible power supply	

Table 45: 5PC810.SX03-00 - Order data

Model number	Short description	Figure
5AC600.UPSI-00	UPS module for APC620, APC810, PPC800; for system units 5PC600.SX01-00 (starting with Rev. H0), 5PC600.SX02-00 (starting with Rev. G0), 5PC600.SX02-01 (starting with Rev. H0), 5PC600.SX05-00 (starting with Rev. F0), 5PC600.SX05-01 (starting with Rev. F0), 5PC600.SF03-00 (starting with Rev. A0), 5PC810.SX*. 5PC820.1505-00, 5PC820.1906-00. Order cable (5CAUPS.0005-00 or 5CAUPS.0030-00) and battery unit (5AC600.UPSB-00) separately	
	Accessories	
5ACPCI.ETH1-01	PCI Ethernet card 1x 10/100	
5ACPCI.ETH3-01	PCI Ethernet card 3x 10/100

3.1.3.4 Technical data

Product ID	5PC810.SX03-00
General information	
Dongle port	Yes
Cooling	Passive via heat sink and optionally supported with an active fan kit ¹⁾
LEDs	Power, HDD, Link 1, Link 2
B&R ID code	\$B2C3
Battery	
Type	Renata 950 mAh
Service life	2½ years ²⁾
Removable	Yes, accessible behind the orange front door
Design	Lithium ion
Power button	Yes
Reset button	Yes
Buzzer	Yes
Certification	
CE	Yes
cULus	Yes
GOST-R	Yes
Controller	
Boot loader	BIOS
Real-time clock	
Battery-buffered	Yes
Power failure logic	
Controller	MTCX ³⁾
Buffer time	10 ms
Graphics	
Controller	Depends on the CPU board being used

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) Due to mechanical limitations, a 64-bit PCI card cannot be inserted in every system unit or card slot. A table in the user's manual provides an overview of the slots where 64-bit cards can be inserted.

3.3 GM45 CPU boards

3.3.1 General information

The GM45 CPU boards contain two DDR3 memory sockets for a maximum of 8 GB and support dual channel memory technology. Additionally, the Intel® GMA 4500MDH is integrated with 384 MB memory and a maximum resolution of 2048 x 1537 pixels (QXGA).

- AMI BIOS
- Intel® GM45 chipset
- 2x DDR3 memory slot
- Dual-channel memory
- Intel® GMA 4500MDH
- Gigabit Ethernet
- Intel® Core™ 2 Duo T9400, 2.53GHz

3.5 Main memory

3.5.1 5MMDDR.xxxx-02

3.5.1.1 General information

These 204-pin DDR3 main memory modules operate at 1066 MHz and range in size from 2 GB to 4 GB.

If two RAM modules with the same size (e.g. 2 GB) are inserted into the CPU board, then dual-channel memory technology is supported. This technology is not supported if two RAM modules of different sizes (e.g. 2 GB and 4 GB) are inserted.

If two 2 GB modules or one 4 GB module is installed on a 32-bit operating system, only 3 GB of main memory can be used. On a 64-bit operating system, up to 8 GB of main memory can be used.

3.6 Drives

3.6.1 5AC801.HDDI-00

3.6.1.1 General information

This 40 GB slide-in compact hard disk is specified for 24-hour operation, features an extended temperature range and can be used in APC810 and PPC800 system units.

When used in an APC810

When inserted in the slide-in compact slot, the slide-in compact drive is accessed internally via SATA.

Table 64: 5AC801.HDDI-04 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) With 8760 POH (power-on hours) per year and 25°C surface temperature.
- 3) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- 4) Standard operation refers to 333 POH (power-on hours) per month.
- 5) 24-hour operation refers to 732 POH (power-on hours) per month.
- 6) Humidity gradient: Maximum 20% per hour.
- 7) Slide-in compact installation.

3.6.5 5AC801.SSDI-00

3.6.5.1 General information

This 32 GB slide-in compact SSD (solid-state drive) is based on single-level cell (SLC) technology and can be used in APC810 and PPC800 system units.

When used in an APC810

Information:

The slide-in compact SSD cannot be used with the 5AC801.ADAS-00 adapter in slide-in slot 2 of the 5-slot variant of the APC810.

When inserted in the slide-in compact slot, the slide-in compact drive is accessed internally via SATA.

3.6.5.3 Technical data

Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

3.6.11 5AC801.ADAS-00

3.6.11.1 General information

The hard disk adapter is a slide-in adapter that allows slide-in compact drives to be installed and operated on a B&R Industrial PC. This adapter can be used in APC810 and PPC800 system units with a slide-in drive slot.

When used in an APC810

Information:

The slide-in compact adapter can only be inserted into slide-in slot 1 for mechanical reasons (closing the front door).

3.6.12 5AC801.HDDS-00

3.6.12.1 General information

This 40 GB hard disk is specified for 24-hour operation, features an extended temperature range and can be used in APC810 and PPC800 system units with a slide-in drive slot.

Information:

A slide-in drive can be inserted or removed at any time.

When used in an APC810

When inserted in slide-in slot 1 or slide-in drive 2, the slide-in drive is accessed internally via SATA and USB.

Figure 54: 5AC801.DVRS-00 - Temperature humidity diagram

3.6.15 5ACPCI.RAIC-03

3.6.15.1 General information

This SATA RAID controller supports RAID level 0 and 1 and can be inserted in a PCI slot. The hard disks being used are specified for 24-hour operation and also feature an extended temperature range.

- SATA RAID controller
- RAID level 0 (striped) and 1 (mirrored)
- 2 SATA hard disk drives (suitable for 24-hour operation)
- Only requires 1 PCI slot
- Transfer rates up to 150 MB/s

Figure 55: PCI SATA RAID controller

Information:

The PCI SATA RAID controller cannot be used in place of a universal power supply (UPS). If the operating system is not shut down properly, then this will be detected as an error state (with RAID 1 sets) at the next system startup and a complete rebuild is performed. If 160 GB of memory are used, this generally takes approximately 160 minutes (configurable) to complete.

- 7) Installed in PCI slot.

3.6.15.4 Temperature humidity diagram

Figure 56: 5ACPCI.RAIC-03 - Temperature humidity diagram

3.6.15.5 Driver support

Special drivers are necessary for operating the PCI SATA RAID controller. Drivers for supported and approved operating systems are available in the Downloads section of the B&R website (www.br-automation.com).

.NET-based SATA Raid™ serial ATA RAID management software can also be found on the B&R website.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

3.6.15.6 Configuration

For information about configuring a SATA RAID set, see 3 "Installation", section 7 "Configuring a SATA RAID set" on page 211.

3.6.15.7 Replacing a HDD

A hard drive can be easily replaced in the event of an error when using the RAID1 (mirroring) configuration without having to reinstall the system. The 160 GB 5ACPCI.RAIC-04 SATA HDD is available as a replacement hard disk.

For instructions on replacing the drive, see 7 "Maintenance and service", section 11 "Replacing a PCI SATA RAID hard disk in a RAID 1 set" on page 406.

3.6.16 5ACPCI.RAIC-04

3.6.16.1 General information

This hard disk can be used as a replacement for a HDD used with the 5ACPCI.RAIC-03 PCI SATA RAID controller.

Manufacturer	Seagate
Manufacturer's product ID	ST9250315AS

Table 90: 5ACPCI.RAIC-05 - Technical data

- 1) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- 2) Standard operation refers to 333 POH (power-on hours) per month.
- 3) 24-hour operation refers to 732 POH (power-on hours) per month.

- 4) Humidity gradient: Maximum 30% per hour.
- 5) Operation in areas prone to vibration and shock can affect performance negatively (reduction of transfer rate).
- 6) Installed in PCI slot.

3.6.17.4 Temperature humidity diagram

Figure 59: 5ACPCI.RAIC-05 - Temperature humidity diagram

3.6.17.5 Driver support

Special drivers are necessary for operating the PCI SATA RAID controller. Drivers for supported and approved operating systems are available in the Downloads section of the B&R website (www.br-automation.com).

.NET-based SATA Raid™ serial ATA RAID management software can also be found on the B&R website.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

3.6.17.6 Configuration

For information about configuring a SATA RAID set, see 3 "Installation", section 7 "Configuring a SATA RAID set" on page 211.

3.6.17.7 Replacing a HDD

A hard drive can be easily replaced in the event of an error when using the RAID1 (mirroring) configuration without having to reinstall the system. The 250 GB 5MMHDD.0250-00 SATA HDD is available as a replacement hard disk.

For information about performing a replacement, see "Replacing a PCI SATA RAID hard disk in a RAID 1 set" on page 406.

3.6.18 5ACPCI.RAIC-06

3.6.18.1 General information

This SATA RAID controller supports RAID level 0 and 1 and can be inserted in a PCI slot. The 500 GB hard disks that are used are specified for 24-hour operation (24x7).

- SATA RAID controller
- RAID level 0 (striped) and 1 (mirrored)
- 2x 500 GB SATA hard disks (suitable for 24-hour operation)
- Only requires 1 PCI slot
- Transfer rates up to 150 MB/s

Figure 60: PCI SATA RAID controller

Information:

The PCI SATA RAID controller cannot be used in place of a universal power supply (UPS). If the operating system is not shut down properly, then this will be detected as an error state (with RAID 1 sets) at the next system startup and a complete rebuild is performed. If 500 GB of memory are used, this generally takes approximately 500 minutes (configurable) to complete.

3.6.18.3 Technical data

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

Product ID	5ACPCI.RAIC-06
General information	
Capacity	2x 500 GB
Number of hard disks	2
Certification	
CE	Yes
cULus	Yes
cULus HazLoc Class 1 Division 2	Yes ¹⁾
GOST-R	Yes
Controller	
Type	SII 3512 SATA link
Specification	Serial ATA 1.0
Data transfer rate	Max. 1.5 Gbit/s (150 MB/s)
RAID level	Supports RAID 0, 1
BIOS extension ROM requirements	Approx. 32 kB
Hard disk drive ²⁾	
Capacity	500 GB
Number of heads	2
Number of sectors	976,773,168
Bytes per sector	512 (logical) / 4096 (physical)
Cache	16 MB
Speed	5400 rpm ±0.2%
Startup time	Typ. 3.5 s (from 0 rpm to read access)
Service life	5 years
MTBF	1,000,000 POH ³⁾
S.M.A.R.T. support	Yes
Interface	SATA
Access time	5.5 ms
Supported transfer modes	SATA II
Data transfer rate	
Internal	Max. 147 MB/s
To/From host	Max. 150 MB/s (SATA I), max. 300 MB/s (SATA II)
Positioning time	
Nominal (read only)	11 ms
Maximum (read only)	21 ms
Environmental conditions	
Temperature ⁴⁾	
Operation ⁵⁾	0 to 60°C
24-hour operation ⁶⁾	0 to 60°C
Storage	-40 to 70°C
Transport	-40 to 70°C
Relative humidity ⁷⁾	
Operation	5 to 95%, non-condensing
Storage	5 to 95%, non-condensing
Transport	5 to 95%, non-condensing
Vibration ⁸⁾	
Operation (continuous)	5 to 500 Hz: 0.125 g; no unrecoverable errors
Operation (occasional)	5 to 500 Hz: 0.25 g; no unrecoverable errors
Storage	10 to 500 Hz: 5 g; no unrecoverable errors
Transport	10 to 500 Hz: 5 g; no unrecoverable errors
Shock	
Operation	200 g and 2 ms duration; no unrecoverable errors
Storage	1000 g and 2 ms duration; no unrecoverable errors
Transport	1000 g and 2 ms duration; no unrecoverable errors
Altitude	
Operation	-305 to 3048 m
Storage	-305 to 12192 m
Mechanical characteristics	
Installation	Fixed ⁹⁾

Table 92: 5ACPCI.RAIC-06 - Technical data

Product ID	5ACPCI.RAIC-06
Weight	350 g
Manufacturer information

Manufacturer's product ID	WD5000LUCT

Table 92: 5ACPCI.RAIC-06 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) Technical data for a hard disk.
- 3) With 8760 POH (power-on hours) per year and 25°C surface temperature.
- 4) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- 5) Standard operation refers to 333 POH (power-on hours) per month.
- 6) 24-hour operation refers to 732 POH (power-on hours) per month.
- 7) Humidity gradient: Maximum 20% per hour.
- 8) Operation in areas prone to vibration and shock can affect performance negatively (reduction of transfer rate).
- 9) Installed in PCI slot.

3.6.18.4 Temperature humidity diagram

Figure 61: 5ACPCI.RAIC-06 - Temperature humidity diagram

3.6.18.5 Driver support

Special drivers are necessary for operating the PCI SATA RAID controller. Drivers for supported and approved operating systems are available in the Downloads section of the B&R website (www.br-automation.com).

.NET-based SATA Raid™ serial ATA RAID management software can also be found on the B&R website.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

3.6.18.6 Configuration

For information about configuring a SATA RAID set, see 3 "Installation", section 7 "Configuring a SATA RAID set" on page 211.

3.6.18.7 Replacing a HDD

A hard drive can be easily replaced in the event of an error when using the RAID1 (mirroring) configuration without having to reinstall the system. The 500 GB 5MMHDD.0500-00 SATA HDD is available as a replacement hard disk.

For information about performing a replacement, see "Replacing a PCI SATA RAID hard disk in a RAID 1 set" on page 406.

3.6.19 5MMHDD.0250-00

3.6.19.1 General information

This 250 GB hard disk can be used as a replacement part or accessory.

- 250 GB hard disk
- Replacement hard disk for a 5AC801.HDDI-03 hard disk or a 5ACPCI.RAIC-05 RAID controller
- APC510 accessory (optional hard disk for the I/O board)
- Specified for 24-hour operation
- S.M.A.R.T. support

3.6.19.3 Technical data

Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

3.6.24 5MMSSD.0180-00

3.6.24.1 General information

This 180 GB slide-in compact SSD (solid-state drive) is based on multi-level cell (MLC) technology and can be used as a replacement or accessory part.

- Replacement for 5AC801.SSDI-02 or 5AC901.CSSD-02 SSD drives
- Accessory for the APC510 (optional SSD for I/O board)

5MMSSD.0180-00	180 GB SATA SSD (MLC); replacement part for 5AC801.SSDI-02 and 5AC901.CSSD-02; SSD for 5PP5IO.GMAC-00; note: please see the manual for information about using this SSD	

Table 103: 5MMSSD.0180-00 - Order data

3.6.24.3 Technical data

Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

Product ID	5MMSSD.0180-00
General information	
Certification	
CE	Yes
cULus	Yes
cULus HazLoc Class 1 Division 2	Yes ¹⁾
GOST-R	Yes
Solid state drive	
Capacity	180 GB
Data reliability	<1 unrecoverable error in 10 ¹⁶ bit read accesses
MTBF	1,200,000 hours

3.7 Fan kit

Information:

Fans are necessary when using components that must work within certain temperature limits, e.g. RAID controllers, DVD combos and PCI cards.

Fan and dust filters are subject to wear and must be checked with appropriate frequency and cleaned or replaced when not functioning properly (e.g. due to dirt and grime).

For additional information about when fans are switched on, see Appendix A.

3.7.1 5PC810.FA01-00

3.7.1.1 General information

This fan kit is an optional addition for 1-slot system units.

3.8 AP Link cards

AP Link cards can be installed in the APC810 system units 5PC810.SX02-00, 5PC810.SX03-00 and 5PC810.SX05-00.

3.8.1 5AC801.SDL0-00

3.8.1.1 General information

A second graphics line can be created using an AP Link graphics adapter card. This makes it possible to transfer DVI and SDL signals. RGB signals are not supported. Details can be found in the technical data for the CPU board being used.

Information:

It is only possible to install AP Link SDL transmitters when using the 5PC810.SX02-00, 5PC810.SX03-00 and 5PC810.SX05-00 system units.

For additional information about installing the AP Link SDL transmitter, please see "AP Link installation" on page 405.

Information:

The hot-plugging of display devices on the AP Link SDL transmitter is not supported.

Table 119: Cable lengths and resolutions for DVI transmission

The maximum cable length for DVI transfer is limited to 5 m due to the USB specification.

3.8.2 5AC801.RDYR-00

3.8.2.1 General information

Since the 5AC801.RDYR-00 ready relay switches the relay contacts as soon as the B&R Automation PC 810 has booted and is supplied internally with all voltages, it is possible to connect additional devices to the relay that will also be switched on.

The 5AC801.RDYR-00 ready relay can only be installed in an AP Link slot.

Information:

It is only possible to install the ready relay when using the 5PC810.SX02-00, 5PC810.SX03-00 and 5PC810.SX05-00 system units.

For additional information about installing the ready relay, see "AP Link installation" on page 405.

Table 121: 5AC801.RDYR-00 ready relay - Pinout

3.9 Ready relay

3.9.1 5AC801.RDYR-01

3.9.2 General information

Since the 5AC801.RDYR-01 ready relay switches the relay contacts as soon as the B&R Automation PC 810 has booted and is supplied internally with all voltages, it is possible to connect additional devices to the relay that will also be switched on.

The 5AC801.RDYR-01 ready relay can only be used in the add-on UPS slot on the APC810 (this slot must be available for this purpose).

The information sheet included in delivery explains how to attach the labels to the Automation PC 810.

Information:

For information about installing the ready relay, see chapter 7 "Maintenance and service", section 13 "Installing the ready relay /2 in the add-on UPS slot" on page 409.

3.10 Add-on interfaces (IF option)

3.10.1 General information

An additional interface (CAN or combined RS232/422/485) can be installed in the APC810's IF optional slot.

Figure 77: Add-on interfaces (IF option)

Information:

Am add-on interface drive can be inserted, removed or replaced at any time.

Information:

Turn off power before inserting or removing an add-on interface.

3.10.2 5AC600.CANI-00

3.10.2.1 General information

The add-on CAN interface is equipped with an Intel 82527 CAN controller that conforms to the CAN 2.0 specification, Part A/B. The CAN controller can trigger an NMI (non-maskable interrupt).

3.10.2.2 Order data

3.10.2.5 I/O address and IRQ

Resource	Default setting	Additional setting options
I/O address	384h / 385h	-
IRQ	IRQ10	NMI ¹

Table 127: Add-on CAN - I/O address and IRQ

¹ NMI = Non-maskable interrupt.

The IRQ setting can be changed in BIOS Setup. It is possible for conflicts with other resources to occur when changing this setting.

I/O address	Register	Function
384h	Address register	Defines the register number to access.
385h	Data registers	Access to the register defined in the address register.

3.10.2.6 Bus length and cable type

The type of cable used depends largely on the required bus length and the number of nodes. The bus length is mainly determined by the bit rate. In accordance with CiA (CAN in Automation) the maximum bus length is 1000 meters.

The following bus lengths are permitted with a maximum oscillator tolerance of 0.121%:

Distance [m]	Transfer rate [kbit/s]
≤1000	Typ. 50
≤200	Typ. 250
≤60	Typ. 500

Table 128: CAN - Bus length and transfer rate

The material used for the cable should preferably have all or most of the following properties in order to achieve an optimal transfer rate.

CAN cables	Property
Signal lines	
Cable cross section	2x 0.25 mm ² (24AWG/19), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤82 Ω/km
Stranding	Wires stranded in pairs
Shield	Paired shield with aluminum foil
Grounding line	
Cable cross section	1x 0.34 mm ² (22AWG/19), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤59 Ω/km
Outer sheathing	
Materials	PUR mixture
Features	Halogen-free
Cable shielding	From tinned copper wires

Table 129: CAN - Cable requirements

3.10.2.7 Terminating resistor

CAN networks are cabled using a bus structure where both ends of the bus are equipped with terminating resistors. The add-on CAN interface has an integrated terminating resistor (factory setting: disabled with the setting "Off").

Figure 78: 5AC600.CANI-00 - Terminating resistor for add-on CAN interface

3.10.2.8 Contents of delivery

The screws included in the mounting kit are used for installation.

Figure 79: 5AC600.CANI-00 - Contents of delivery / installation material

3.10.2.9 Driver support

Due to the dual core processors, driver version 2.36 of INACAN.SYS included in the PVI 2.6.0.3105 installer is required for operation.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

3.10.3 5AC600.485I-00

3.10.3.1 General information

This serial interface is a combined RS232/RS422/RS485 interface. The operating mode (RS232/RS422/RS485) is selected automatically depending on the electrical connection.

3.10.3.2 Order data

3.10.3.5 I/O address and IRQ

Resource	Default setting	Additional setting options
I/O address	2E8h	238, 2F8, 338, 3E8, 3F8
IRQ	IRQ10	IRQ 3, 4, 5, 7, 11, 12

Table 133: Add-on RS232/422/485 - I/O address and IRQ

The setting for the I/O address and IRQ can be changed in BIOS Setup (Advanced - Baseboard/Panel features - Legacy devices - COM E). It is possible for conflicts with other resources to occur when changing this setting.

3.10.3.6 RS232 - Bus length and cable type

The maximum transfer rate of 115 kbit/s depends on the type of cable being used.

Distance [m]	Transfer rate [kbit/s]
≤15	Typ. 64
≤10	Typ. 115
≤5	Typ. 115

Table 134: RS232 - Bus length and transfer rate

The material used for the cable should preferably have all or most of the following properties in order to achieve an optimal transfer rate.

RS232 cables	
Signal lines	
Cable cross section	4x 0.16 mm ² (26AWG), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤82 Ω/km
Stranding	Wires stranded in pairs
Shield	Paired shield with aluminum foil
Grounding line	
Cable cross section	1x 0.34 mm ² (22AWG/19), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤59 Ω/km
Outer sheathing	
Materials	PUR mixture
Features	Halogen-free
Cable shielding	From tinned copper wires

Table 135: RS232 - Cable requirements

3.10.3.7 RS422 - Bus length and cable type

The RTS line must be switched on to switch the transmitter to active.

The maximum transfer rate of 115 kbit/s depends on the type of cable being used.

Distance [m]	Transfer rate [kbit/s]
1200	Typ. 115

Table 136: RS422 - Bus length and transfer rate

The material used for the cable should preferably have all or most of the following properties in order to achieve an optimal transfer rate.

RS422 cables	Property
Signal lines	
Cable cross section	4x 0.25 mm ² (24AWG/19), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤82 Ω/km wires
Stranding	stranded in pairs
Shield	Paired shield with aluminum foil
Grounding line	
Cable cross section	1x 0.34 mm ² (22AWG/19), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤59 Ω/km
Outer sheathing	
Materials	PUR mixture
Features	Halogen-free
Cable shielding	From tinned copper wires

Table 137: RS422 - Cable requirements

3.10.3.8 When operated as an RS485 interface

When operated in this mode, the pins of the RS422 default interface (1, 4, 6 and 9) must be used. Pins should be connected as shown.

Figure 80: Add-on RS232/422/485 interface - Operated in RS485 mode

The RTS line must be switched by the driver for each transmission or reception; there is no automatic switch-back mechanism. This cannot be configured in Windows.

The voltage drop resulting from long cable lengths can lead to greater potential differences between bus stations, which can hinder communication. This can be improved by running ground wire with the others.

The line ends of the RS485 interface should (at least for longer line lengths or larger transfer rates) be closed. Normally a passive terminator can be used on the bus ends by connecting each of the signal lines with a 120 Ω resistor.

3.10.3.9 RS485 - Bus length and cable type

The maximum transfer rate of 115 kbit/s depends on the type of cable being used.

Distance [m]	Transfer rate [kbit/s]
1200	Typ. 115

Table 138: RS485 - Bus length and transfer rate

The material used for the cable should preferably have all or most of the following properties in order to achieve an optimal transfer rate.

RS485 cables	Property
Signal lines	
Cable cross section	4x 0.25 mm ² (24AWG/19), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤82 Ω /km
Stranding	Wires stranded in pairs
Shield	Paired shield with aluminum foil
Grounding line	
Cable cross section	1x 0.34 mm ² (22AWG/19), tinned Cu stranded wire
Wire insulation	PE
Conductor resistance	≤59 Ω /km
Outer sheathing	
Materials	PUR mixture
Features	Halogen-free
Cable shielding	From tinned copper wires

3.10.3.10 Contents of delivery

The screws included in the mounting kit are used for installation.

Figure 81: 5AC600.485I-00 - Contents of delivery / installation material

Chapter 3 • Installation

1 Installation

Devices are installed using the mounting plates found on the housing. These plates are designed for M5 screws.

Figure 82: Mounting plates

The exact position of the mounting holes is illustrated in the drilling templates in 2 "Technical data", section "Individual components" on page 66.

1.1 Procedure

1. Drill the necessary holes in the control cabinet. The exact position of the mounting holes is illustrated in the drilling templates.
2. Mount the B&R Industrial PC to the control cabinet using M5 screws.

1.2 Important installation information

- Environmental conditions must be taken into consideration.
- When installed in an enclosed housing, enough space must be available for air to circulate sufficiently.
- This device must be mounted to a flat surface.
- This device is only certified for operation in closed rooms.
- This device must not be subjected to direct sunlight.
- Ventilation holes must not be covered.
- This device must be mounted in one of the approved orientations.
- The wall or control cabinet must be able to withstand four times the total weight of the device.
- The flex radius of connected cables (DVI, SDL, USB, etc.) must not be exceeded.

1.3 Mounting orientation

The APC810 must be mounted as described in the following sections.

1.3.1 Vertical mounting orientation

APC810 systems with or without a fan kit can be mounted in this orientation.

Figure 83: Vertical mounting orientation

In order to facilitate natural air circulation, devices must be mounted according to the spacing indicated in the section "Spacing for air circulation" on page 180.

1.3.2 Horizontal mounting orientation

Operation in the horizontal mounting orientation (heat sink on top) requires the use of a fan kit. The maximum ambient temperature specification must be reduced by 5°C.

Figure 84: Horizontal mounting orientation

In order to facilitate natural air circulation, devices must be mounted according to the spacing indicated in the section "Spacing for air circulation" on page 180.

1.4 Spacing for air circulation

In order to guarantee sufficient air circulation, allow the specified amount of space above, below, to the side and behind the Automation PC 810 devices. The minimum specified spacing is indicated in the following diagram. This applies to all Automation PC 810 variants.

Figure 85: Standard mounting - Spacing

These defined distances are valid for both the vertical and horizontal mounting orientations for the APC810.

Information:

The spacing specifications for air circulation are based on the worst-case scenario for operation at the maximum specified ambient temperature (see "Temperature specifications" in the chapter "Technical data").

If the spacing specifications for air circulation cannot be adhered to, then the maximum specified temperatures for the temperature sensors (see "Temperature sensor positions" in the chapter "Technical data") must be monitored by the user and appropriate measures taken if they are exceeded.

2 Cable connections

Flex radius specifications must be taken into account when installing or connecting cables.

Information:

The maximum torque for the locating screws is 0.5 Nm.

Figure 86: Flex radius - Cable connection

Information:

The specified flex radius can be found in the Automation Panel 800 or Automation Panel 900 user's manual, which can be downloaded as a PDF file from the B&R website at www.br-automation.com.

3 Grounding concept

Functional ground is a current path of low impedance between electrical circuits and ground. It is used, for example, to improve immunity to disturbances and not necessarily as a protective measure. It therefore serves only to deflect disturbances, not to provide any kind of protection against electric shock.

The functional ground on the device has 2 connections:

- Supply voltage
- Ground connection

To guarantee safe conductance of electric disturbances, the following points should be observed:

- The device should be connected to the central grounding point in the control cabinet using the shortest route possible.
- A cable with a minimum cross section of 2.5 mm^2 per connection should be used. If a cable with wire end sleeves is connected to the 0TB103.9 or 0TB103.91 terminal block, then a cable with maximum 1.5 mm^2 per connection is possible.
- Note the line shielding concept; all connected data cables are used as shielded lines.

Functional ground is indicated on the B&R device with the following symbol: 

Figure 87: Grounding concept

4 General instructions for performing temperature testing

The purpose of these instructions is to explain general procedures for performing application-specific temperature testing on B&R Industrial PCs and Power Panels. Nevertheless, these instructions are meant to serve only as a guideline.

4.1 Procedure

In order to obtain accurate results, the testing conditions should match the conditions in the field. This means that for the duration of the temperature tests, the target application should be running, the PC should be installed in the control cabinet that will be used, etc.

In addition, a temperature sensor should be installed for the device being tested to provide live monitoring of the ambient temperature. In order to obtain accurate measurements, this sensor should be installed at a distance of 5 to 10 cm from the B&R Industrial PC near the air intake (not near the exhaust).

All B&R Industrial PCs and Power Panels are equipped with internal temperature sensors. These are installed in different locations for each series. The number of sensors and the temperature limits also vary from series to series.

For information about the locations of temperature sensors and the maximum specified values, please see section "Temperature sensor positions" in chapter 2 "Technical data".

To ensure that the thermal situation is evaluated reliably, a minimum of 8 hours is recommended for testing.

4.2 Evaluating temperatures in Windows operating systems

4.2.1 Evaluating with the B&R Control Center

The B&R Control Center can be used to evaluate the temperatures. Temperatures can be viewed on the "Temperatures" property page. The B&R Control Center is available at no cost in the Downloads section of the B&R website (www.br-automation.com). The B&R Control Center uses the B&R Automation Device Interface (ADI).

A separate application can be developed if it is necessary to collect historical data.

Information:

Software development kits such as the ADI .NET SDK are available on the B&R website (www.br-automation.com).

4.2.2 Evaluating with the BurnInTest tool from Passmark

If a separate application is not created or used to evaluate the temperature, then B&R recommends using the BurnInTest software tool from Passmark.

Standard and Professional versions of BurnInTest are available. In addition to the software package, there are also various loopback plugs (serial, parallel, USB, etc.) and test CDs/DVDs available. The exact software and loopback plugs used will determine the corresponding load that can be generated on the system and peripheral devices.

Information:

Loopback plugs are also available from Passmark. More information is available at www.passmark.com.

The following screenshots are based on Passmark BurnInTest Pro V4 and a 2-slot APC810 with DVD.

Figure 88: Settings for Passmark BurnInTest Pro V4 and a 2-slot APC810 with DVD

Figure 89: Test overview of a 2-slot APC810 with DVD

The respective test properties may need to be fine-tuned depending on the availability of a loopback plug and DVDs.

Information:

USB flash drives can also be used if a USB loopback plug is not available. The USB flash drives must be detected as formatted drives in Windows. The test USB must then be deselected, and the USB flash drives must be configured as the testing device in the disk properties.

Information:

Serial loopback plugs are relatively easy to create. Simply connect several pins on the serial interface with wires.

4.3 Evaluating temperatures in operating systems other than Windows

For applications that don't use Windows, temperatures can be evaluated with the help of the B&R implementation guide. In addition to the implementation guide, there are also programs available in MS-DOS.

The implementation guide only describes device-specific functions and not the main functions of the example programs.

If code from the example programs is used, it is important to observe the notes in the implementation guide regarding TODO statements, I/O access functions, etc.

Information:

Example programs and implementation guides for all B&R Industrial PCs and Power Panels are available at no cost from the B&R website (www.br-automation.com).

4.4 Evaluating the measurement results

The maximum temperature value recorded by each sensor must not exceed the temperature limits specified in the user's manuals.

If the temperature tests cannot be performed in a climate-controlled chamber, they can still be performed in an office environment. In this case, however, it is necessary to measure the ambient temperature. Experience at B&R has shown that values measured on passive systems (systems without a fan kit) can be projected linearly based on the ambient temperature. In order to be able to project the temperature values for systems with a fan kit, the fans must be running. It is also important to take values such as speed into consideration.

If the temperature tests are performed in a climate-controlled chamber with fans, the fans will cool the devices and skew the results. Measurement results for passive devices would therefore be unusable in this case. In order to obtain accurate results in climate-controlled chambers with fans, the fans must be turned off and the device must be allowed to run for a sufficient amount of time (several hours) before beginning the test.

Example using a 2-slot APC810

The following example is only valid if the instructions for installation and mounting orientation provided in the user's manual are observed.

Temperature sensor	Measured temperature	Projected temperature	
Ambient temperature	20°C	35°C	45°C
CPU	48°C	63°C	73°C
CPU board	51°C	66°C	76°C
Board I/O	51°C	66°C	76°C
Board ETH2	52°C	67°C	77°C
Board power supply	51°C	66°C	76°C
ETH2	65°C	80°C	90°C
Power supply	51°C	66°C	76°C

Table 140: Evaluation example using a 2-slot APC810

5 Connection examples

The following examples provide an overview of the configuration options for connecting Automation Panel 800 and Automation Panel 900 and/or Automation Panel 800 devices with the APC810. The following questions will be answered:

- How are Automation Panel 900 devices connected to the monitor/panel output of the APC810? What needs to be considered?
- How are Automation Panel 800 devices connected to the monitor/panel output of the APC810? What needs to be considered?
- How are Automation Panel 900 devices connected simultaneously to the monitor/panel output on the APC810's optional SDL AP Link? What needs to be considered?
- What are the "display clone" and "extended desktop" modes?
- How many Automation Panel 900 devices can be connected per line?
- How many Automation Panel 900 devices can be connected to an Automation Panel 800 device per line?
- How are the connected devices numbered internally?
- Are there limitations to the segment length? If so, what are they?
- What cables and link modules are needed?
- Do BIOS settings have to be changed for a specific configuration?

5.1 Selecting display units

In order to connect an Automation Panel 800 and an Automation Panel 900 on the same line, the devices must have the same display type. The following table lists the AP900 devices that can be connected on the same line with an AP800 device.

Automation Panel 800	Automation Panel 900
5AP820.1505-00	5AP920.1505-01 5AP951.1505-01 5AP980.1505-01 5AP981.1505-01
5AP880.1505-00	5AP920.1505-01 5AP951.1505-01 5AP980.1505-01 5AP981.1505-01

Table 141: Selecting display units

5.2 One Automation Panel 900 system via onboard DVI

An Automation Panel 900 with max. SXGA resolution is connected to the integrated DVI interface (onboard). As an alternative, an office TFT with a DVI interface or analog monitor (using adapter 5AC900.1000-00) can also be used. A separate cable is used for both the touch screen and USB data. If USB devices are to be operated on the Automation Panel 900, the maximum distance is 5 meters. USB devices can only be connected directly to the Automation Panel (i.e. without a hub).

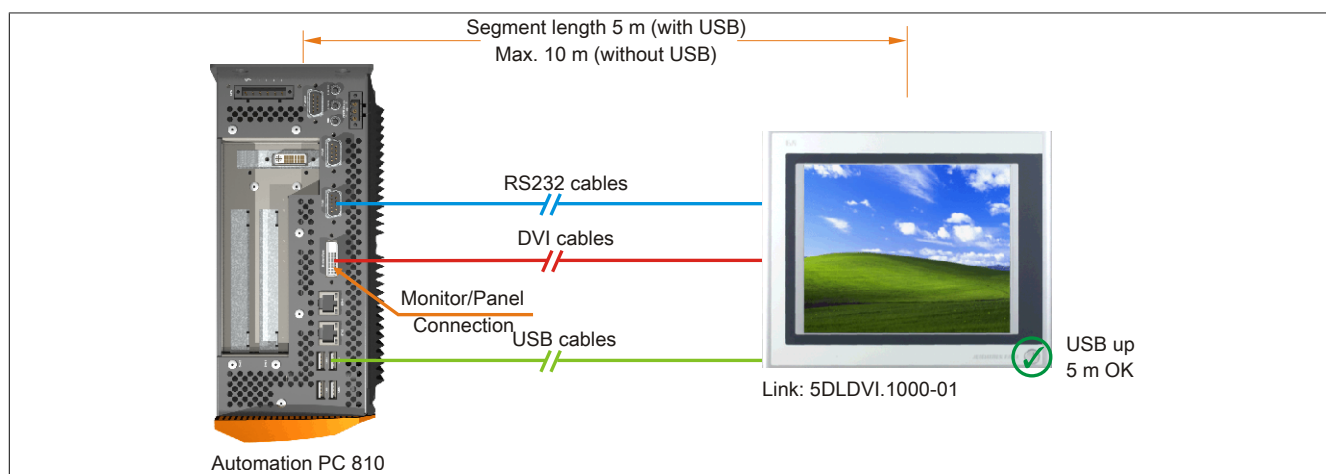

Figure 90: One Automation Panel 900 system via onboard DVI

5.2.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	✓	✓	✓	✓	Max. SXGA
5PC800.BM45-01	✓	✓	✓	✓	Max. SXGA

Table 142: Possible system unit and CPU board combinations

5.2.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DL DVI.1000-01	Automation Panel Link DVI receiver Connections for DVI-D, RS232 and USB 2.0 (Type B); 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900

Table 143: Link modules

5.2.3 Cables

Select one Automation Panel 900 cable each from the 3 required types.

Model number	Description	Length
5CADVI.0018-00	DVI-D cable, 1.8 m	1.8 m ±50 mm
5CADVI.0050-00	DVI-D cable, 5 m	5 m ±80 mm
5CADVI.0100-00	DVI-D cable, 10 m	10 m ±100 mm
9A0014.02	RS232 extension cable for remote operation of a display unit with touch screen, 1.8 m	1.8 m ±50 mm
9A0014.05	RS232 extension cable for remote operation of a display unit with touch screen, 5 m	5 m ±80 mm
9A0014.10	RS232 extension cable for remote operation of a display unit with touch screen, 10 m	10 m ±100 mm
5CAUSB.0018-00	USB 2.0 connection cable Type A - Type B, 1.8 m	1.8 m ±30 mm
5CAUSB.0050-00	USB 2.0 connection cable Type A - Type B, 5 m	5 m ±50 mm

Table 144: Cables for DVI configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 900 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.2.4 Possible Automation Panel devices, resolutions and segment lengths

The following Automation Panel 900 devices can be used. In rare cases, segment length is limited by the resolution.

Model number	Display size	Resolution	Touch screen	Keys	Max. segment length
5AP920.1043-01	10.4"	VGA	✓	-	5 m / 10 m ¹⁾
5AP920.1214-01	12.1"	SVGA	✓	-	5 m / 10 m ¹⁾
5AP920.1505-01	15.0"	XGA	✓	-	5 m / 10 m ¹⁾
5AP920.1706-01	17.0"	SXGA	✓	-	5 m / 10 m ¹⁾
5AP920.1906-01	19.0"	SXGA	✓	-	5 m / 10 m ¹⁾

Table 145: Possible Automation Panel devices, resolutions and segment lengths

- 1) USB support is not possible on the Automation Panel 900 in these cases since USB is limited to 5 m.

Information:

When transferring data via DVI, it is not possible to read statistical values from Automation Panel 900 devices.

5.2.5 BIOS settings

No special BIOS settings are necessary for operation.

5.3 One Automation Panel 900 system via onboard SDL

An Automation Panel 900 is connected to the integrated SDL interface (onboard) via an SDL cable. USB devices can only be connected directly to the Automation Panel (i.e. without a hub).

Figure 91: One Automation Panel 900 system via onboard SDL

5.3.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	✓	✓	✓	✓	Max. UXGA
5PC800.BM45-01	✓	✓	✓	✓	Max. UXGA

Table 146: Possible system unit and CPU board combinations

5.3.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDL.1000-00	Automation Panel Link SDL receiver Connection for SDL In; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900

Table 147: Link modules

5.3.3 Cables

Select an Automation Panel 900 cable from the following table.

Model number	Description	Length
5CASDL.0018-00	SDL cable, 1.8 m	1.8 m ±30 mm
5CASDL.0050-00	SDL cable, 5 m	5 m ±30 mm
5CASDL.0100-00	SDL cable, 10 m	10 m ±50 mm
5CASDL.0150-00	SDL cable, 15 m	15 m ±100 mm
5CASDL.0200-00	SDL cable, 20 m	20 m ±100 mm
5CASDL.0250-00	SDL cable, 25 m	25 m ±100 mm
5CASDL.0300-00	SDL cable, 30 m	30 m ±100 mm
5CASDL.0018-03	SDL flex cable, 1.8 m	1.8 m ±20 mm
5CASDL.0050-03	SDL flex cable, 5 m	5 m ±45 mm
5CASDL.0100-03	SDL flex cable, 10 m	10 m ±90 mm
5CASDL.0150-03	SDL flex cable, 15 m	15 m ±135 mm
5CASDL.0200-03	SDL flex cable, 20 m	20 m ±180 mm
5CASDL.0250-03	SDL flex cable, 25 m	25 m ±225 mm
5CASDL.0300-03	SDL flex cable, 30 m	30 m ±270 mm
5CASDL.0300-13	SDL flex cable with extender, 30 m	30 m ±280 mm
5CASDL.0400-13	SDL flex cable with extender, 40 m	40 m ±380 mm
5CASDL.0430-13	SDL flex cable with extender, 43 m	43 m ±410 mm

Table 148: Cables for SDL configurations

Model number	Description	Length
5CASDL.0018-01	SDL cable with 45° male connector, 1.8 m	1.8 m ±30 mm
5CASDL.0050-01	SDL cable with 45° male connector, 5 m	5 m ±50 mm
5CASDL.0100-01	SDL cable with 45° male connector, 10 m	10 m ±100 mm
5CASDL.0150-01	SDL cable with 45° male connector, 15 m	15 m ±100 mm

Table 148: Cables for SDL configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 900 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.3.3.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution				
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200
1.8	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00
	5CASDL.0018-01	5CASDL.0018-01	5CASDL.0018-01	5CASDL.0018-01	5CASDL.0018-01
	5CASDL.0018-03	5CASDL.0018-03	5CASDL.0018-03	5CASDL.0018-03	5CASDL.0018-03
5	5CASDL.0050-00	5CASDL.0050-00	5CASDL.0050-00	5CASDL.0050-00	5CASDL.0050-00
	5CASDL.0050-01	5CASDL.0050-01	5CASDL.0050-01	5CASDL.0050-01	5CASDL.0050-01
	5CASDL.0050-03	5CASDL.0050-03	5CASDL.0050-03	5CASDL.0050-03	5CASDL.0050-03
10	5CASDL.0100-00	5CASDL.0100-00	5CASDL.0100-00	5CASDL.0100-00	5CASDL.0100-00
	5CASDL.0100-01	5CASDL.0100-01	5CASDL.0100-01	5CASDL.0100-01	5CASDL.0100-01
	5CASDL.0100-03	5CASDL.0100-03	5CASDL.0100-03	5CASDL.0100-03	5CASDL.0100-03
15	5CASDL.0150-00	5CASDL.0150-00	5CASDL.0150-00	5CASDL.0150-00	-
	5CASDL.0150-01	5CASDL.0150-01	5CASDL.0150-01	5CASDL.0150-01	-
	5CASDL.0150-03	5CASDL.0150-03	5CASDL.0150-03	5CASDL.0150-03	-
20	5CASDL.0200-00	5CASDL.0200-00	5CASDL.0200-00	5CASDL.0200-00	-
	5CASDL.0200-03	5CASDL.0200-03	5CASDL.0200-03	5CASDL.0200-03	-
25	5CASDL.0250-00	5CASDL.0250-00	5CASDL.0250-00	-	-
	5CASDL.0250-03	5CASDL.0250-03	5CASDL.0250-03	-	-
30	5CASDL.0300-00	5CASDL.0300-00	-	-	-
	5CASDL.0300-03	5CASDL.0300-03	5CASDL.0300-13	5CASDL.0300-13	-
40	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	-

Table 149: Cable lengths and resolutions for SDL transmission

5.3.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM C must be enabled in BIOS in order to operate the panel touch screen connected to the monitor/panel interface ("Advanced - Baseboard/Panel features - Legacy devices").

5.4 One Automation Panel 800 system via onboard SDL

An Automation Panel 800 is connected to the integrated SDL interface (onboard) via an SDL cable. USB devices can only be connected directly to the extension keyboard (without a hub).

Figure 92: One Automation Panel 800 system via onboard SDL

5.4.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	✓	✓	✓	✓	Max. UXGA
5PC800.BM45-01	✓	✓	✓	✓	Max. UXGA

Table 150: Possible system unit and CPU board combinations

5.4.2 Cables

Select an Automation Panel 800 SDL cable from the following table.

Model number	Description	Length
5CASDL.0018-20	SDL flex cable for the Automation Panel 800, 1.8 m	1.8 m ±20 mm
5CASDL.0050-20	SDL flex cable for the Automation Panel 800, 5 m	5 m ±45 mm
5CASDL.0100-20	SDL flex cable for the Automation Panel 800, 10 m	10 m ±90 mm
5CASDL.0150-20	SDL flex cable for the Automation Panel 800, 15 m	15 m ±135 mm
5CASDL.0200-20	SDL flex cable for the Automation Panel 800, 20 m	20 m ±180 mm
5CASDL.0250-20	SDL flex cable for the Automation Panel 800, 25 m	25 m ±230 mm
5CASDL.0300-30	SDL flex cable with extender for the Automation Panel 800, 30 m	30 m ±280 mm
5CASDL.0400-30	SDL flex cable with extender for the Automation Panel 800, 40 m	40 m ±380 mm

Table 151: Cables for SDL configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 800 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.4.2.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution XGA 1024 x 768
1.8	5CASDL.0018-20
5	5CASDL.0050-20
10	5CASDL.0100-20
15	5CASDL.0150-20

Table 152: Cable lengths and resolutions for SDL transmission

Cables Segment length [m]	Resolution
	XGA 1024 x 768
20	5CASDL.0200-20
25	5CASDL.0250-20
30	5CASDL.0300-30
40	5CASDL.0400-30

Table 152: Cable lengths and resolutions for SDL transmission

5.4.3 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM C must be enabled in BIOS in order to operate the panel touch screen connected to the monitor/panel interface ("Advanced - Baseboard/Panel features - Legacy devices").

5.5 One AP900 and one AP800 via onboard SDL

An Automation Panel 900 and an Automation Panel 800 are connected to the integrated SDL interface (onboard) via SDL.

USB is supported up to a maximum distance (segment 1 + segment 2) of 30 m on the two displays. Past a distance of 30 m, USB is only available on the first display (front and back) up to 40 m. USB devices can only be connected directly to the Automation Panel 900 or extension keyboard (without a hub).

Figure 93: One AP900 system and one AP800 system via onboard SDL

5.5.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	✓	✓	✓	✓	Max. UXGA
5PC800.BM45-01	✓	✓	✓	✓	Max. UXGA

Table 153: Possible system unit and CPU board combinations

5.5.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDL.1000-01	Automation Panel Link SDL transceiver Connections for SDL In and SDL Out; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900

Table 154: Link modules

5.5.3 Cables

For a selection of SDL cables for connecting the AP900 display to an AP900 display, see "Cables" on page 190.

For a selection of SDL cables for connecting the AP800 display to an AP900 display, see "Cables" on page 192.

Information:

For detailed information regarding cables, see the chapter "Accessories".

5.5.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM C must be enabled in BIOS in order to operate the panel touch screen connected to the monitor/panel interface ("Advanced - Baseboard/Panel features - Legacy devices").

5.6 Four Automation Panel 900 systems via onboard SDL

An Automation Panel 900 is connected to the integrated SDL interface (onboard) via an SDL cable. Up to three other Automation Panels of the same type are connected to this Automation Panel and operated via SDL. All four of the panels show the same content (display clone).

USB is supported up to a maximum distance (SDL segment 1 + SDL segment 2) of 30 m on the first two panels (front and back). Past a distance of 30 m, USB is only available for the first panel (front and back). USB devices can only be connected directly to the Automation Panel (i.e. without a hub).

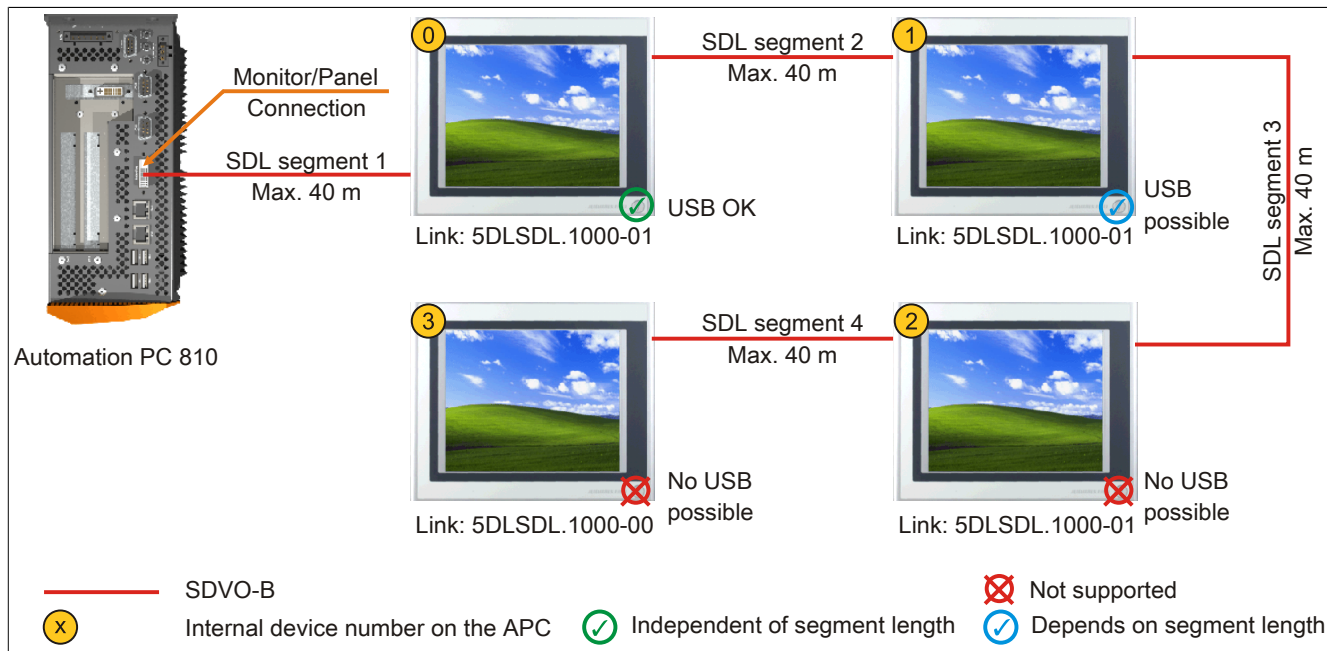

Figure 94: Four Automation Panel 900 systems via onboard SDL

5.6.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	✓	✓	✓	✓	Max. UXGA
5PC800.BM45-01	✓	✓	✓	✓	Max. UXGA

Table 155: Possible system unit and CPU board combinations

5.6.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDDL.1000-00	Automation Panel Link SDL receiver Connection for SDL In; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5DLSDDL.1000-01	Automation Panel Link SDL transceiver Connections for SDL In and SDL Out; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900

Table 156: Link modules

5.6.3 Cables

Select an Automation Panel 900 cable from the following table.

Model number	Description	Length
5CASDL.0018-00	SDL cable, 1.8 m	1.8 m ±30 mm
5CASDL.0050-00	SDL cable, 5 m	5 m ±30 mm
5CASDL.0100-00	SDL cable, 10 m	10 m ±50 mm
5CASDL.0150-00	SDL cable, 15 m	15 m ±100 mm
5CASDL.0200-00	SDL cable, 20 m	20 m ±100 mm
5CASDL.0250-00	SDL cable, 25 m	25 m ±100 mm
5CASDL.0300-00	SDL cable, 30 m	30 m ±100 mm
5CASDL.0018-03	SDL flex cable, 1.8 m	1.8 m ±20 mm
5CASDL.0050-03	SDL flex cable, 5 m	5 m ±45 mm
5CASDL.0100-03	SDL flex cable, 10 m	10 m ±90 mm
5CASDL.0150-03	SDL flex cable, 15 m	15 m ±135 mm
5CASDL.0200-03	SDL flex cable, 20 m	20 m ±180 mm
5CASDL.0250-03	SDL flex cable, 25 m	25 m ±225 mm
5CASDL.0300-03	SDL flex cable, 30 m	30 m ±270 mm
5CASDL.0300-13	SDL flex cable with extender, 30 m	30 m ±280 mm
5CASDL.0400-13	SDL flex cable with extender, 40 m	40 m ±380 mm
5CASDL.0430-13	SDL flex cable with extender, 43 m	43 m ±410 mm
5CASDL.0018-01	SDL cable with 45° male connector, 1.8 m	1.8 m ±30 mm
5CASDL.0050-01	SDL cable with 45° male connector, 5 m	5 m ±50 mm
5CASDL.0100-01	SDL cable with 45° male connector, 10 m	10 m ±100 mm
5CASDL.0150-01	SDL cable with 45° male connector, 15 m	15 m ±100 mm

Table 157: Cables for SDL configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 900 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.6.3.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution				
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200
1.8	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03
5	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03

30	5CASDL.0300-00 5CASDL.0300-03	5CASDL.0300-00 5CASDL.0300-03	- 5CASDL.0300-13	- 5CASDL.0300-13	- -
40	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	-

Table 158: Cable lengths and resolutions for SDL transmission

5.6.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM C must be enabled in BIOS in order to operate the panel touch screen connected to the monitor/panel interface ("Advanced - Baseboard/Panel features - Legacy devices").

5.7 One Automation Panel 900 via SDL AP Link

An Automation Panel 900 unit is connected to the optional SDL transmitter (AP Link) via an SDL cable. USB devices can only be connected directly to the Automation Panel (i.e. without a hub).

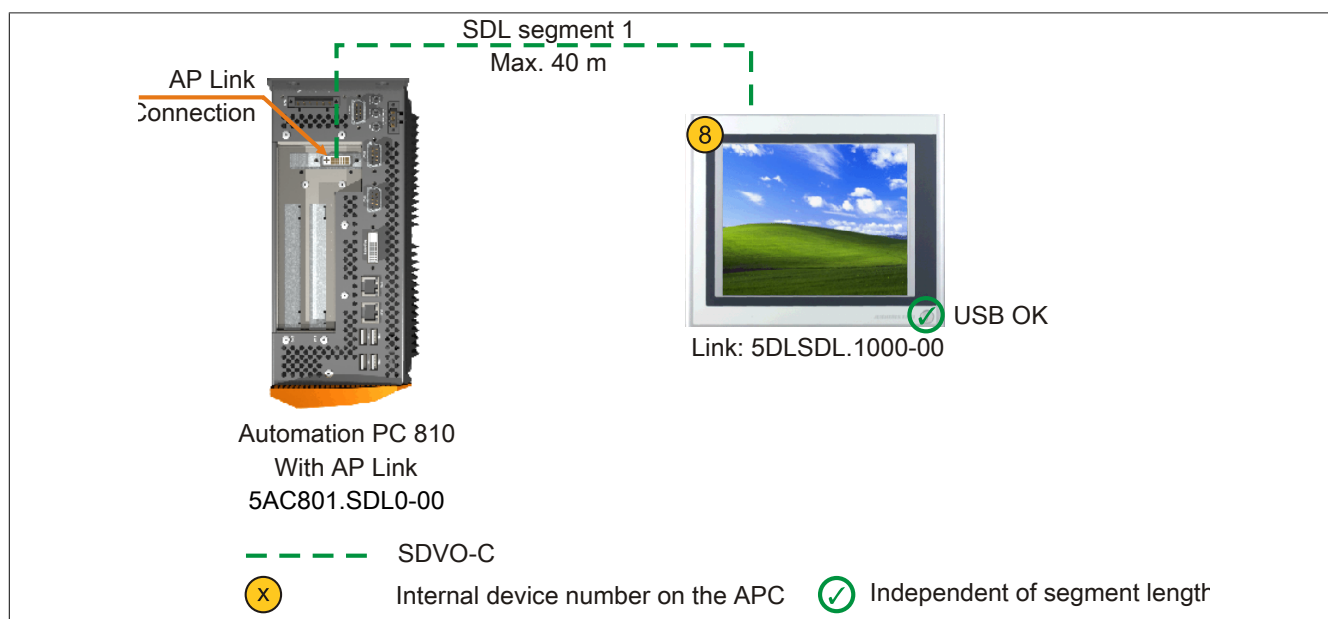

Figure 95: One Automation Panel 900 system via SDL AP Link

5.7.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00 ¹⁾	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	-	✓	✓	✓	Max. UXGA
5PC800.BM45-01	-	✓	✓	✓	Max. UXGA

Table 159: Possible system unit and CPU board combinations

1) AP Link cannot be installed.

5.7.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDL.1000-00	Automation Panel Link SDL receiver Connection for SDL In; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5AC801.SDL0-00	APC810 AP Link SDL transmitter Automation Panel SDL link transmitter	For Automation PC 810

Table 160: Link modules

5.7.3 Cables

Select an Automation Panel 900 cable from the following table.

Model number	Description	Length
5CASDL.0018-00	SDL cable, 1.8 m	1.8 m ±30 mm
5CASDL.0050-00	SDL cable, 5 m	5 m ±30 mm
5CASDL.0100-00	SDL cable, 10 m	10 m ±50 mm
5CASDL.0150-00	SDL cable, 15 m	15 m ±100 mm
5CASDL.0200-00	SDL cable, 20 m	20 m ±100 mm
5CASDL.0250-00	SDL cable, 25 m	25 m ±100 mm
5CASDL.0300-00	SDL cable, 30 m	30 m ±100 mm
5CASDL.0018-03	SDL flex cable, 1.8 m	1.8 m ±20 mm

Table 161: Cables for SDL configurations

Model number	Description	Length
5CASDL.0050-03	SDL flex cable, 5 m	5 m ±45 mm
5CASDL.0100-03	SDL flex cable, 10 m	10 m ±90 mm
5CASDL.0150-03	SDL flex cable, 15 m	15 m ±135 mm
5CASDL.0200-03	SDL flex cable, 20 m	20 m ±180 mm
5CASDL.0250-03	SDL flex cable, 25 m	25 m ±225 mm
5CASDL.0300-03	SDL flex cable, 30 m	30 m ±270 mm
5CASDL.0300-13	SDL flex cable with extender, 30 m	30 m ±280 mm
5CASDL.0400-13	SDL flex cable with extender, 40 m	40 m ±380 mm
5CASDL.0430-13	SDL flex cable with extender, 43 m	43 m ±410 mm
5CASDL.0018-01	SDL cable with 45° male connector, 1.8 m	1.8 m ±30 mm
5CASDL.0050-01	SDL cable with 45° male connector, 5 m	5 m ±50 mm
5CASDL.0100-01	SDL cable with 45° male connector, 10 m	10 m ±100 mm
5CASDL.0150-01	SDL cable with 45° male connector, 15 m	15 m ±100 mm

Table 161: Cables for SDL configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 900 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.7.3.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution				
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200
1.8	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00	5CASDL.0018-00
	5CASDL.0018-01	5CASDL.0018-01	5CASDL.0018-01	5CASDL.0018-01	5CASDL.0018-01
	5CASDL.0018-03	5CASDL.0018-03	5CASDL.0018-03	5CASDL.0018-03	5CASDL.0018-03
5	5CASDL.0050-00	5CASDL.0050-00	5CASDL.0050-00	5CASDL.0050-00	5CASDL.0050-00
	5CASDL.0050-01	5CASDL.0050-01	5CASDL.0050-01	5CASDL.0050-01	5CASDL.0050-01
	5CASDL.0050-03	5CASDL.0050-03	5CASDL.0050-03	5CASDL.0050-03	5CASDL.0050-03
10	5CASDL.0100-00	5CASDL.0100-00	5CASDL.0100-00	5CASDL.0100-00	5CASDL.0100-00
	5CASDL.0100-01	5CASDL.0100-01	5CASDL.0100-01	5CASDL.0100-01	5CASDL.0100-01
	5CASDL.0100-03	5CASDL.0100-03	5CASDL.0100-03	5CASDL.0100-03	5CASDL.0100-03
15	5CASDL.0150-00	5CASDL.0150-00	5CASDL.0150-00	5CASDL.0150-00	-
	5CASDL.0150-01	5CASDL.0150-01	5CASDL.0150-01	5CASDL.0150-01	-
	5CASDL.0150-03	5CASDL.0150-03	5CASDL.0150-03	5CASDL.0150-03	-
20	5CASDL.0200-00	5CASDL.0200-00	5CASDL.0200-00	5CASDL.0200-00	-
	5CASDL.0200-03	5CASDL.0200-03	5CASDL.0200-03	5CASDL.0200-03	-
25	5CASDL.0250-00	5CASDL.0250-00	5CASDL.0250-00	-	-
	5CASDL.0250-03	5CASDL.0250-03	5CASDL.0250-03	-	-
30	5CASDL.0300-00	5CASDL.0300-00	-	-	-
	5CASDL.0300-03	5CASDL.0300-03	5CASDL.0300-13	5CASDL.0300-13	-
40	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	-

Table 162: Cable lengths and resolutions for SDL transmission

5.7.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM D must be enabled in BIOS in order to operate the panel touch screen connected to the AP Link interface ("Advanced - Baseboard/Panel features - Legacy devices").

5.8 Four Automation Panel 900 units via SDL AP Link

An Automation Panel 900 unit is connected to the optional SDL transmitter (AP Link) via an SDL cable. Three other Automation Panels of the same type are connected to this Automation Panel and operated via SDL. All four of the panels show the same content (display clone).

USB is supported up to a maximum distance (SDL segment 1 + SDL segment 2) of 30 m on the first two panels (front and back). Past a distance of 30 m, USB is only available for the first panel (front and back). USB devices can only be connected directly to the Automation Panel (i.e. without a hub).

Figure 96: Four Automation Panel 900 systems via SDL AP Link

5.8.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00 ¹⁾	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	-	✓	✓	✓	Max. UXGA
5PC800.BM45-01	-	✓	✓	✓	Max. UXGA

Table 163: Possible system unit and CPU board combinations

1) AP Link cannot be installed.

5.8.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDL.1000-00	Automation Panel Link SDL receiver Connection for SDL In; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5DLSDL.1000-01	Automation Panel Link SDL transceiver Connections for SDL In and SDL Out; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5AC801.SDL0-00	APC810 AP Link SDL transmitter Automation Panel SDL link transmitter	For Automation PC 810

Table 164: Link modules

5.8.3 Cables

Select an Automation Panel 900 cable from the following table.

Model number	Description	Length
5CASDL.0018-00	SDL cable, 1.8 m	1.8 m ±30 mm
5CASDL.0050-00	SDL cable, 5 m	5 m ±30 mm
5CASDL.0100-00	SDL cable, 10 m	10 m ±50 mm
5CASDL.0150-00	SDL cable, 15 m	15 m ±100 mm
5CASDL.0200-00	SDL cable, 20 m	20 m ±100 mm
5CASDL.0250-00	SDL cable, 25 m	25 m ±100 mm
5CASDL.0300-00	SDL cable, 30 m	30 m ±100 mm
5CASDL.0018-03	SDL flex cable, 1.8 m	1.8 m ±20 mm
5CASDL.0050-03	SDL flex cable, 5 m	5 m ±45 mm
5CASDL.0100-03	SDL flex cable, 10 m	10 m ±90 mm
5CASDL.0150-03	SDL flex cable, 15 m	15 m ±135 mm
5CASDL.0200-03	SDL flex cable, 20 m	20 m ±180 mm
5CASDL.0250-03	SDL flex cable, 25 m	25 m ±225 mm
5CASDL.0300-03	SDL flex cable, 30 m	30 m ±270 mm
5CASDL.0300-13	SDL flex cable with extender, 30 m	30 m ±280 mm
5CASDL.0400-13	SDL flex cable with extender, 40 m	40 m ±380 mm
5CASDL.0430-13	SDL flex cable with extender, 43 m	43 m ±410 mm
5CASDL.0018-01	SDL cable with 45° male connector, 1.8 m	1.8 m ±30 mm
5CASDL.0050-01	SDL cable with 45° male connector, 5 m	5 m ±50 mm
5CASDL.0100-01	SDL cable with 45° male connector, 10 m	10 m ±100 mm
5CASDL.0150-01	SDL cable with 45° male connector, 15 m	15 m ±100 mm

Table 165: Cables for SDL configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 900 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.8.3.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution				
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200
1.8	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03
5	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03
10	5CASDL.0100-00 5CASDL.0100-01 5CASDL.0100-03	5CASDL.0100-00 5CASDL.0100-01 5CASDL.0100-03	5CASDL.0100-00 5CASDL.0100-01 5CASDL.0100-03	5CASDL.0100-00 5CASDL.0100-01 5CASDL.0100-03	5CASDL.0100-00 5CASDL.0100-01 5CASDL.0100-03
15	5CASDL.0150-00 5CASDL.0150-01 5CASDL.0150-03	5CASDL.0150-00 5CASDL.0150-01 5CASDL.0150-03	5CASDL.0150-00 5CASDL.0150-01 5CASDL.0150-03	5CASDL.0150-00 5CASDL.0150-01 5CASDL.0150-03	- - -
20	5CASDL.0200-00 5CASDL.0200-03	5CASDL.0200-00 5CASDL.0200-03	5CASDL.0200-00 5CASDL.0200-03	5CASDL.0200-00 5CASDL.0200-03	- -
25	5CASDL.0250-00 5CASDL.0250-03	5CASDL.0250-00 5CASDL.0250-03	5CASDL.0250-00 5CASDL.0250-03	- -	- -
30	5CASDL.0300-00 5CASDL.0300-03	5CASDL.0300-00 5CASDL.0300-03	- 5CASDL.0300-13	- 5CASDL.0300-13	- -
40	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	5CASDL.0400-13	-

Table 166: Cable lengths and resolutions for SDL transmission

5.8.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM D must be enabled in BIOS in order to operate the panel touch screen connected to the AP Link interface ("Advanced - Baseboard/Panel features - Legacy devices").

5.9 Two Automation Panel 900 systems via onboard SDL and SDL AP Link

An Automation Panel 900 (max. UXGA) is connected to the integrated SDL interface (onboard) via an SDL cable. A second Automation Panel 900 (max. UXGA) is connected to the optional SDL transmitter (AP Link) via an SDL cable. The Automation Panels show different content (extended desktop) and can be different types.

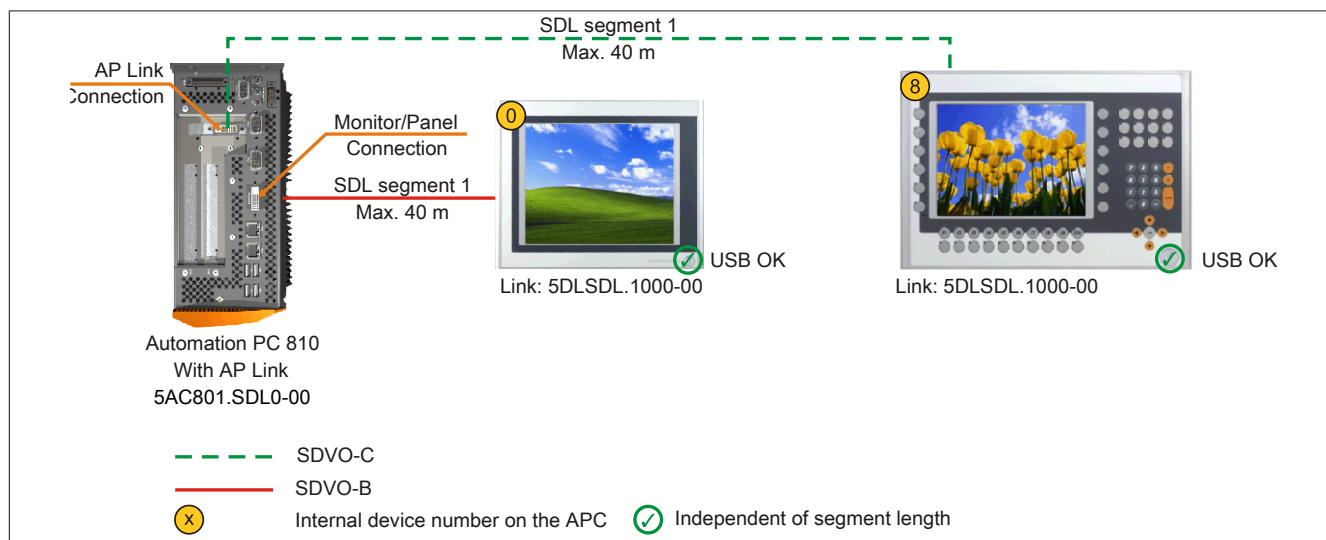

Figure 97: Two Automation Panel 900 systems via onboard SDL and SDL AP Link

5.9.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00 ¹⁾	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	-	✓	✓	✓	Max. UXGA
5PC800.BM45-01	-	✓	✓	✓	Max. UXGA

Table 167: Possible system unit and CPU board combinations

1) AP Link cannot be installed.

5.9.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDL.1000-00	Automation Panel Link SDL receiver Connection for SDL In; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5AC801.SDL0-00	APC810 AP Link SDL transmitter Automation Panel SDL link transmitter	For Automation PC 810

Table 168: Link modules

5.9.3 Cables

Select an Automation Panel 900 cable from the following table.

Model number	Description	Length
5CASDL.0018-00	SDL cable, 1.8 m	1.8 m ±30 mm
5CASDL.0050-00	SDL cable, 5 m	5 m ±30 mm
5CASDL.0100-00	SDL cable, 10 m	10 m ±50 mm
5CASDL.0150-00	SDL cable, 15 m	15 m ±100 mm
5CASDL.0200-00	SDL cable, 20 m	20 m ±100 mm
5CASDL.0250-00	SDL cable, 25 m	25 m ±100 mm
5CASDL.0300-00	SDL cable, 30 m	30 m ±100 mm
5CASDL.0018-03	SDL flex cable, 1.8 m	1.8 m ±20 mm
5CASDL.0050-03	SDL flex cable, 5 m	5 m ±45 mm

Table 169: Cables for SDL configurations

Model number	Description	Length
5CASDL.0100-03	SDL flex cable, 10 m	10 m ±90 mm
5CASDL.0150-03	SDL flex cable, 15 m	15 m ±135 mm
5CASDL.0200-03	SDL flex cable, 20 m	20 m ±180 mm
5CASDL.0250-03	SDL flex cable, 25 m	25 m ±225 mm
5CASDL.0300-03	SDL flex cable, 30 m	30 m ±270 mm
5CASDL.0300-13	SDL flex cable with extender, 30 m	30 m ±280 mm
5CASDL.0400-13	SDL flex cable with extender, 40 m	40 m ±380 mm
5CASDL.0430-13	SDL flex cable with extender, 43 m	43 m ±410 mm
5CASDL.0018-01	SDL cable with 45° male connector, 1.8 m	1.8 m ±30 mm
5CASDL.0050-01	SDL cable with 45° male connector, 5 m	5 m ±50 mm
5CASDL.0100-01	SDL cable with 45° male connector, 10 m	10 m ±100 mm
5CASDL.0150-01	SDL cable with 45° male connector, 15 m	15 m ±100 mm

Table 169: Cables for SDL configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 900 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.9.3.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution				
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200
1.8	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03

Table 170: Cable lengths and resolutions for SDL transmission

5.9.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM C must be enabled in BIOS in order to operate the panel touch screen connected to the monitor/panel or AP Link interface ("Advanced - Baseboard/Panel features - Legacy devices").

5.10 Eight Automation Panel 900 units via onboard SDL and SDL AP Link

Four Automation Panel 900 units (max. UXGA) are connected to the integrated SDL interface (onboard) via SDL. Four additional Automation Panel 900 units (max. UXGA) are connected to the optional SDL transmitter (AP Link). The Automation Panels in each line must be the same type. The two lines show different content (extended desktop), but panels in the same line show the same content (display clone).

USB is supported up to a maximum distance (SDL segment 1 + SDL segment 2) of 30 m on the first two panels (front and back) on both lines. Past a distance of 30 m, USB is only available for the first panel on each line. USB devices can only be connected directly to the Automation Panel (without hub).

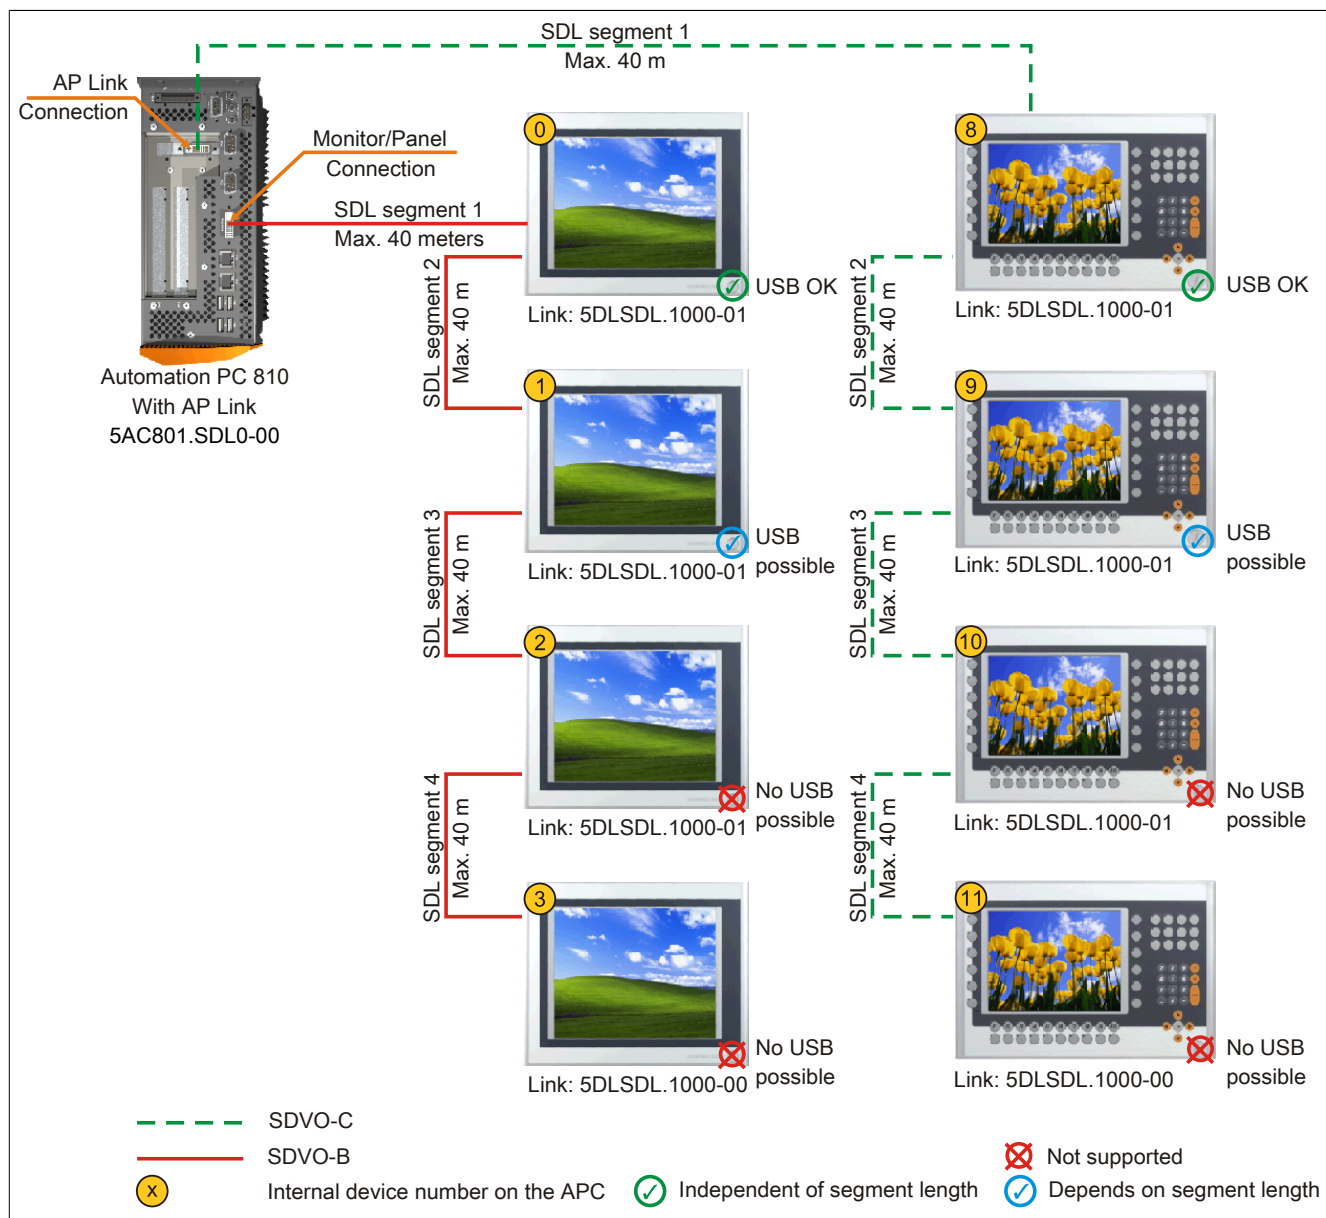

Figure 98: Eight Automation Panel 900 systems via onboard SDL and SDL AP Link

5.10.1 Base system requirements

The following table lists the possible APC810 system unit and CPU board combinations necessary to implement the configuration shown in the figure above. If a combination results in a limitation of the maximum resolution, this is also indicated (e.g. when connecting a non-B&R Automation Panel 900 device).

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00 ¹⁾	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	-	✓	✓	✓	Max. UXGA
5PC800.BM45-01	-	✓	✓	✓	Max. UXGA

Table 171: Possible system unit and CPU board combinations

1) AP Link cannot be installed.

5.10.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDL.1000-00	Automation Panel Link SDL receiver Connection for SDL In; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5DLSDL.1000-01	Automation Panel Link SDL transceiver Connections for SDL In and SDL Out; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5AC801.SDL0-00	APC810 AP Link SDL transmitter Automation Panel SDL link transmitter	For Automation PC 810

Table 172: Link modules

5.10.3 Cables

Select an Automation Panel 900 cable from the following table.

Model number	Description	Length
5CASDL.0018-00	SDL cable, 1.8 m	1.8 m ±30 mm
5CASDL.0050-00	SDL cable, 5 m	5 m ±30 mm
5CASDL.0100-00	SDL cable, 10 m	10 m ±50 mm
5CASDL.0150-00	SDL cable, 15 m	15 m ±100 mm
5CASDL.0200-00	SDL cable, 20 m	20 m ±100 mm
5CASDL.0250-00	SDL cable, 25 m	25 m ±100 mm
5CASDL.0300-00	SDL cable, 30 m	30 m ±100 mm
5CASDL.0018-03	SDL flex cable, 1.8 m	1.8 m ±20 mm
5CASDL.0050-03	SDL flex cable, 5 m	5 m ±45 mm
5CASDL.0100-03	SDL flex cable, 10 m	10 m ±90 mm
5CASDL.0150-03	SDL flex cable, 15 m	15 m ±135 mm
5CASDL.0200-03	SDL flex cable, 20 m	20 m ±180 mm
5CASDL.0250-03	SDL flex cable, 25 m	25 m ±225 mm
5CASDL.0300-03	SDL flex cable, 30 m	30 m ±270 mm
5CASDL.0300-13	SDL flex cable with extender, 30 m	30 m ±280 mm
5CASDL.0400-13	SDL flex cable with extender, 40 m	40 m ±380 mm
5CASDL.0430-13	SDL flex cable with extender, 43 m	43 m ±410 mm
5CASDL.0018-01	SDL cable with 45° male connector, 1.8 m	1.8 m ±30 mm
5CASDL.0050-01	SDL cable with 45° male connector, 5 m	5 m ±50 mm
5CASDL.0100-01	SDL cable with 45° male connector, 10 m	10 m ±100 mm
5CASDL.0150-01	SDL cable with 45° male connector, 15 m	15 m ±100 mm

Table 173: Cables for SDL configurations

Information:

Detailed technical data about cables can be found in the Automation Panel 900 user's manual. This can be downloaded as a PDF file from the B&R website at www.br-automation.com.

5.10.3.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution				
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200
1.8	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03	5CASDL.0018-00 5CASDL.0018-01 5CASDL.0018-03
5	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03	5CASDL.0050-00 5CASDL.0050-01 5CASDL.0050-03

Table 174: Cable lengths and resolutions for SDL transmission

5.10.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM C must be enabled in BIOS in order to operate the panel touch screen connected to the monitor/panel or AP Link interface ("Advanced - Baseboard/Panel features - Legacy devices").

Three Automation Panel 900 (max. UXGA) units and one Automation Panel 800 are connected to the integrated SDL interface (onboard) via SDL. In addition, three Automation Panel 900 (max. UXGA) units and one Automation Panel 800 are operated on the optional SDL transmitter. The Automation Panels in each line must be of the same type. The two lines show different content (extended desktop), but displays in the same line show the same content (display clone).

[illegible]

5.11.1 Base system requirements

CPU board	With system unit				Limitation Resolution
	5PC810.SX01-00 ¹⁾	5PC810.SX02-00	5PC810.SX03-00	5PC810.SX05-00	
5PC800.BM45-00	-	✓	✓	✓	Max. UXGA
5PC800.BM45-01	-	✓	✓	✓	Max. UXGA

1) AP Link cannot be installed.

5.11.2 Link modules

Information:

A corresponding Link module must be selected for each device used.

Model number	Description	Note
5DLSDL.1000-01	Automation Panel Link SDL transceiver Connections for SDL In and SDL Out; transmission of display, touch screen, USB 1.1, matrix key and service data; 24 VDC (order screw clamp 0TB103.9 or cage clamp 0TB103.91 separately)	For Automation Panel 900
5AC801.SDL0-00	APC810 AP Link SDL transmitter Automation Panel SDL link transmitter	For Automation PC 810

Table 176: Link modules

5.11.3 Cables

For a selection of SDL cables for connecting the AP900 display to an AP900 display, see "Cables" on page 190.

For a selection of SDL cables for connecting the AP800 display to an AP900 display, see "Cables" on page 192.

Information:

For detailed information regarding cables, see the chapter "Accessories".

5.11.3.1 Cable lengths and resolutions for SDL transmission

The following table lists the relationship between segment lengths and maximum resolution depending on the SDL cable being used:

Cables Segment length [m]	Resolution				
	VGA 640 x 480	SVGA 800 x 600	XGA 1024 x 768	SXGA 1280 x 1024	UXGA 1600 x 1200
1.8	-	-	5CASDL.0018-00	-	-
	-	-	5CASDL.0018-01	-	-
	-	-	5CASDL.0018-20	-	-
	-	-	5CASDL.0018-03	-	-
5	-	-	5CASDL.0050-00	-	-
	-	-	5CASDL.0050-01	-	-
	-	-	5CASDL.0050-20	-	-
	-	-	5CASDL.0050-03	-	-
10	-	-	5CASDL.0100-00	-	-
	-	-	5CASDL.0100-01	-	-
	-	-	5CASDL.0100-20	-	-
	-	-	5CASDL.0100-03	-	-
15	-	-	5CASDL.0150-00	-	-
	-	-	5CASDL.0150-01	-	-
	-	-	5CASDL.0150-20	-	-
	-	-	5CASDL.0150-03	-	-
20	-	-	5CASDL.0200-00	-	-
	-	-	5CASDL.0200-20	-	-
	-	-	5CASDL.0200-03	-	-
25	-	-	5CASDL.0250-00	-	-
	-	-	5CASDL.0250-20	-	-
	-	-	5CASDL.0250-03	-	-
30	-	-	5CASDL.0300-10	-	-
	-	-	5CASDL.0300-13	-	-
	-	-	5CASDL.0300-30	-	-
40	-	-	5CASDL.0400-10	-	-
	-	-	5CASDL.0400-13	-	-
	-	-	5CASDL.0400-30	-	-

Table 177: Segment lengths, resolutions and SDL cables

5.11.4 Settings in BIOS

No special BIOS settings are necessary for operation.

For detailed information, see the user's manual for the B&R Industrial PC being used.

Touch screen functionality

COM C must be enabled in BIOS in order to operate the panel touch screen connected to the monitor/panel or AP Link interface ("Advanced - Baseboard/Panel features - Legacy devices").

6 Connecting peripheral USB devices

Warning!

Peripheral USB devices can be connected to the USB interfaces on this device. Due to the vast number of USB devices available on the market, B&R cannot guarantee their performance. B&R does ensure the performance of all USB devices that they provide.

6.1 Locally on the APC810

Many different peripheral USB devices can be connected to the 5 USB interfaces on this device. USB ports USB1, USB3 and USB5 can each handle a load of 1 A, and USB ports USB2 and USB4 can each handle a load of 500 mA. The maximum transfer rate is USB 2.0.

Figure 100: Local connection of USB peripheral devices on the APC810

6.2 Remote connection to Automation Panel 900 via DVI

Many different peripheral USB devices can be connected to the 2 or 3 USB interfaces on the Automation Panel 900. These can each handle a load of 500 mA. The maximum transfer rate is USB 2.0.

Information:

Only end devices (not hubs) can be connected to the Automation Panel 900.

Figure 101: Remote connection of USB peripheral devices on the APC900 via DVI

6.3 Remote connection to Automation Panel 800 / 900 via SDL

Many different peripheral USB devices can be connected to the 2 or 3 USB interfaces on Automation Panel 900 or the USB interfaces on Automation Panel 800 devices. These can each handle a load of 500 mA. The maximum transfer rate is USB 1.1.

Information:

Only end devices (no hubs) can be connected to the Automation Panel 800 / 900.

Figure 102: Remote connection of USB peripheral devices on the APC800/900 via SDL

7 Configuring a SATA RAID set

Information:

The following software description is valid for PCI SATA controllers 5ACPCI.RAIC-01, 5ACPCI.RAIC-03, 5ACPCI.RAIC-05 and 5ACPCI.RAIC-06.

The "RAID Configuration Utility" in BIOS must be started in order to make the necessary settings. After POST, pressing <Ctrl+S> or <F4> opens the RAID BIOS.

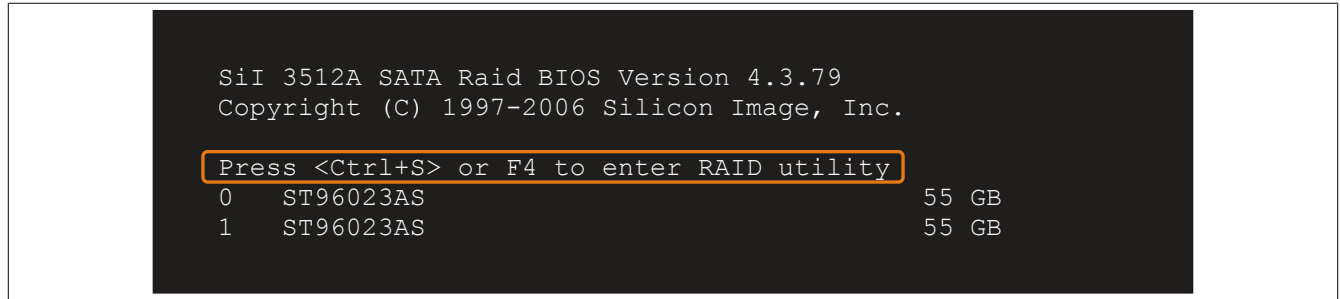

Figure 103: Open the RAID Configuration Utility

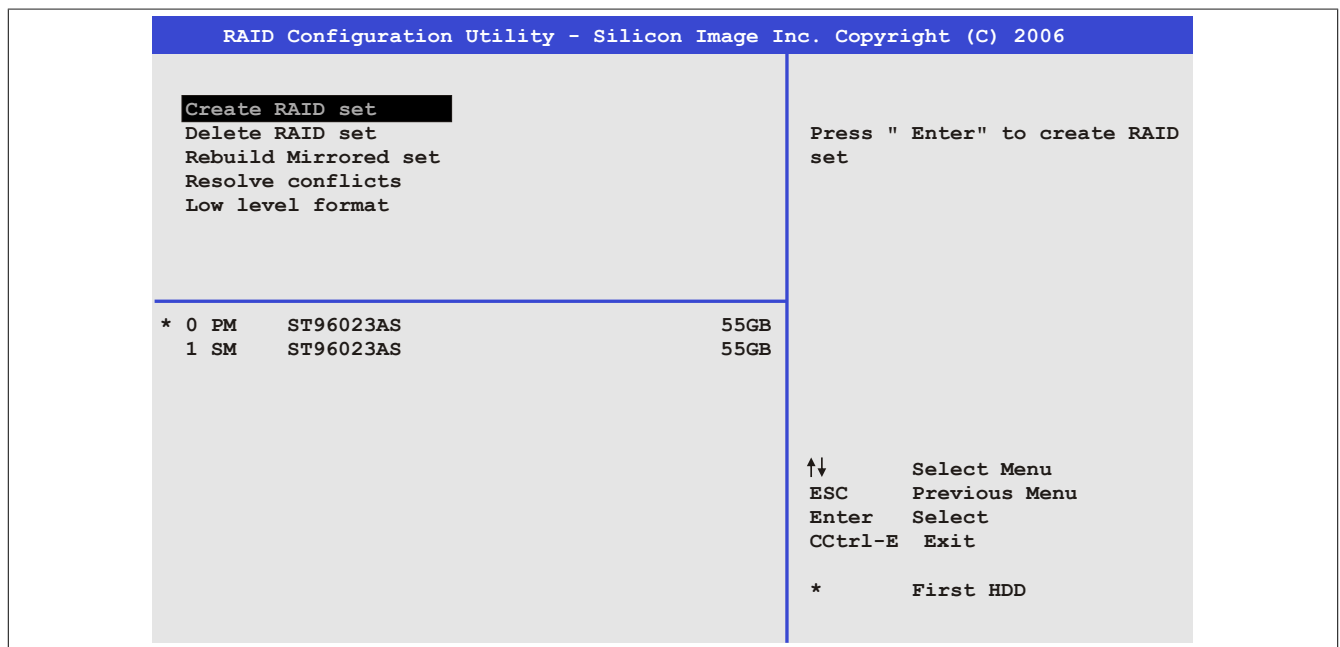

Figure 104: RAID Configuration Utility - Menu

The following keys can be used once inside BIOS Setup:

Key	Function
Cursor ↑	Moves to the previous item
Cursor ↓	Moves to the next item
Enter	Selects an item or opens a submenu
ESC	Returns to the previous menu
Ctrl+E	Saves any changed settings and exits setup

Table 178: BIOS-relevant keys in the RAID Configuration Utility

7.1 Create RAID set

Figure 105: RAID Configuration Utility - Menu

The RAID system can be set up as "Striped" = RAID0 or "Mirrored" = RAID1 using the "Create RAID set" menu option.

7.2 Create RAID set - Striped

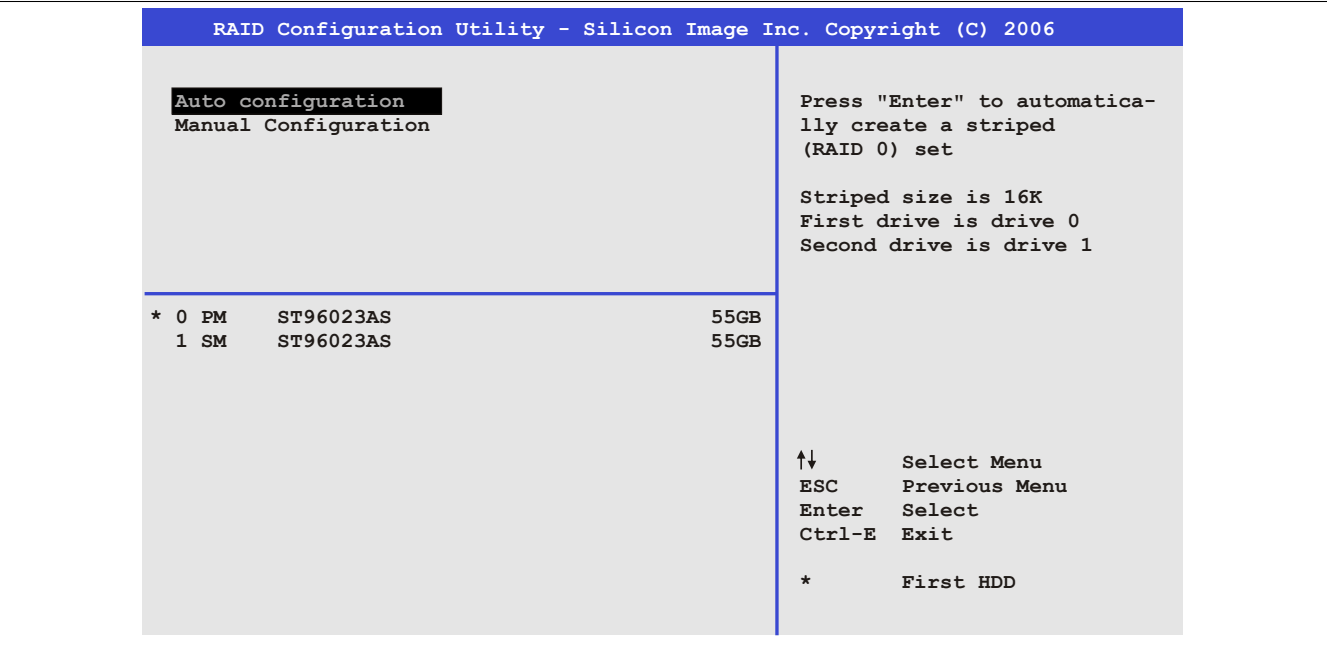

Figure 106: RAID Configuration Utility - Create RAID set - Striped

"Auto configuration"

Auto configuration optimizes all settings.

"Manual configuration"

Allows the first and second HDD to be specified as well as the "Chunk size" (= block size, application-dependent).

7.3 Create RAID set - Mirrored

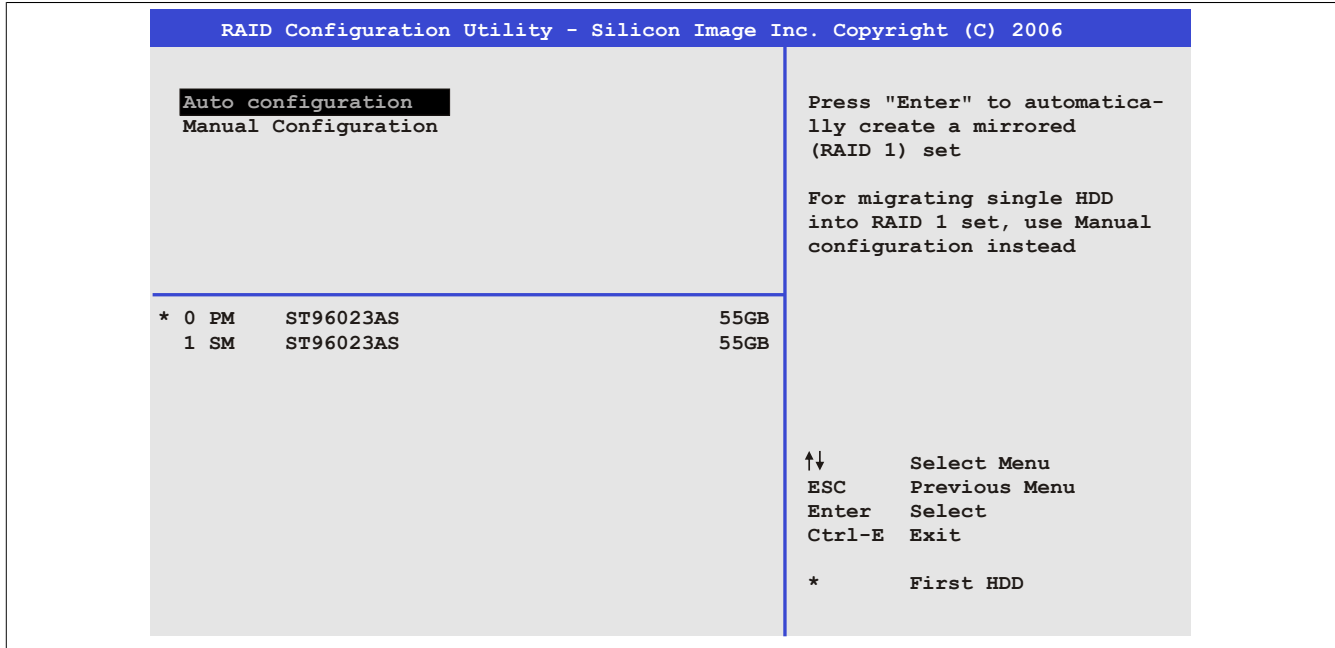

Figure 107: RAID Configuration Utility - Create RAID set - Mirrored

"Auto configuration"

Auto configuration optimizes all settings.

"Manual configuration"

Allows the "Source" and "Target" HDD to be specified as well as whether a rebuild (mirror) should be performed immediately (takes approx. 50 minutes).

7.4 Delete RAID set

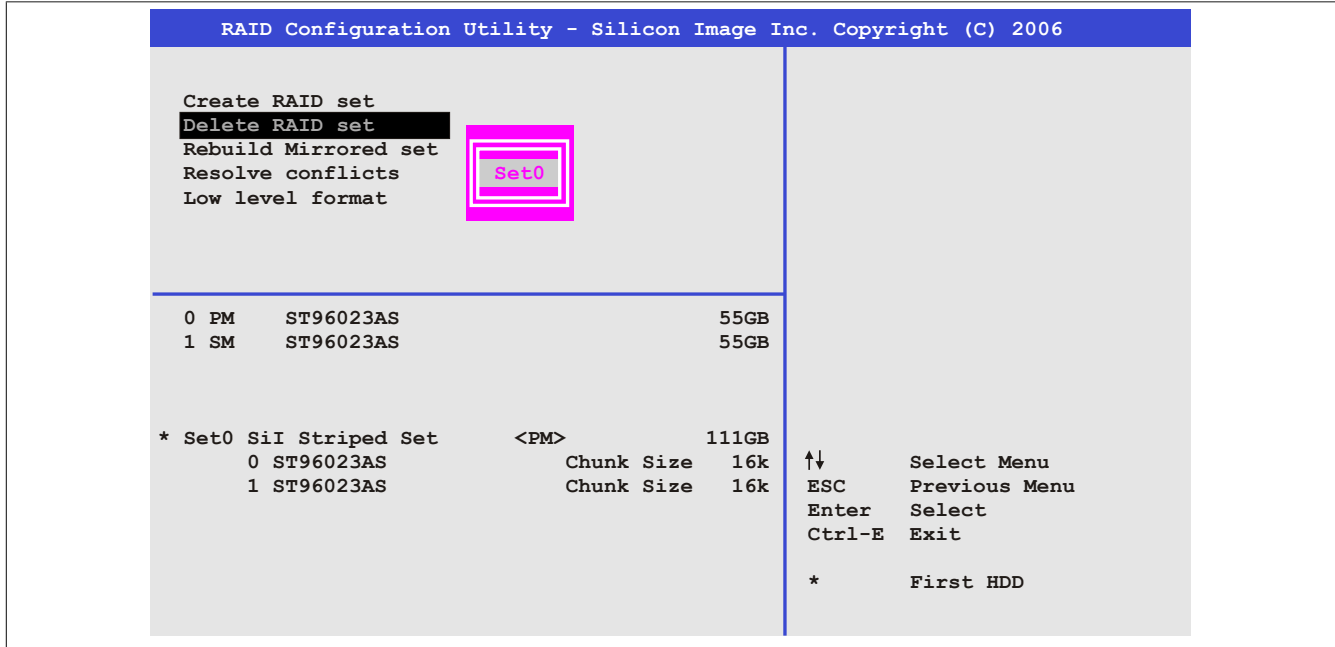

Figure 108: RAID Configuration Utility - Delete RAID set

An existing RAID set can be deleted using the "Delete RAID set" menu option.

7.5 Rebuild mirrored set

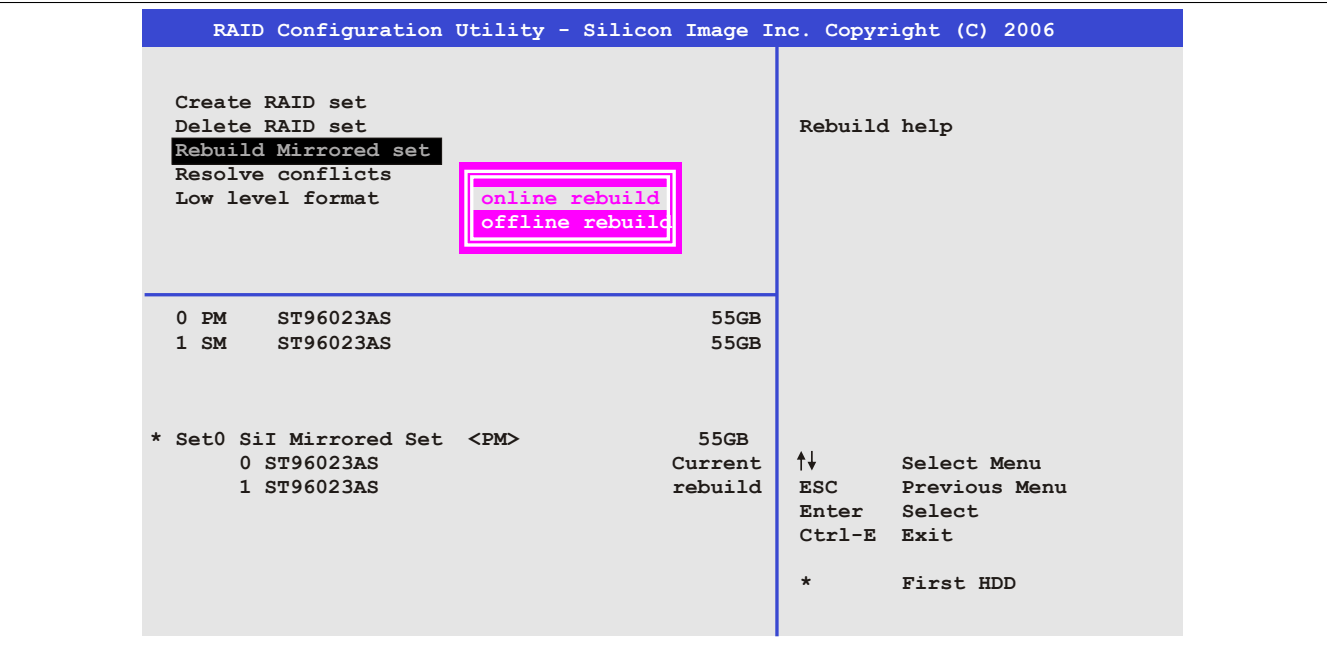

Figure 109: RAID Configuration Utility - Rebuild mirrored set

The "Rebuild mirrored set" menu option can be used to restart a rebuild procedure in a RAID 1 set if an error occurs, if a rebuild procedure was interrupted or if a hard disk was replaced.

If "Online rebuild" is selected, then the rebuild is executed during operation after the system is booted. The installed SATA RAID configuration program may display an event pop-up message: `SATA Raid detected a new event` before restarting the rebuild. The entire rebuild takes approximately 50 minutes.

If "Offline rebuild" is selected, then a rebuild is performed immediately before the operating system is started (duration depends on the respective memory size).

7.6 Resolve conflicts

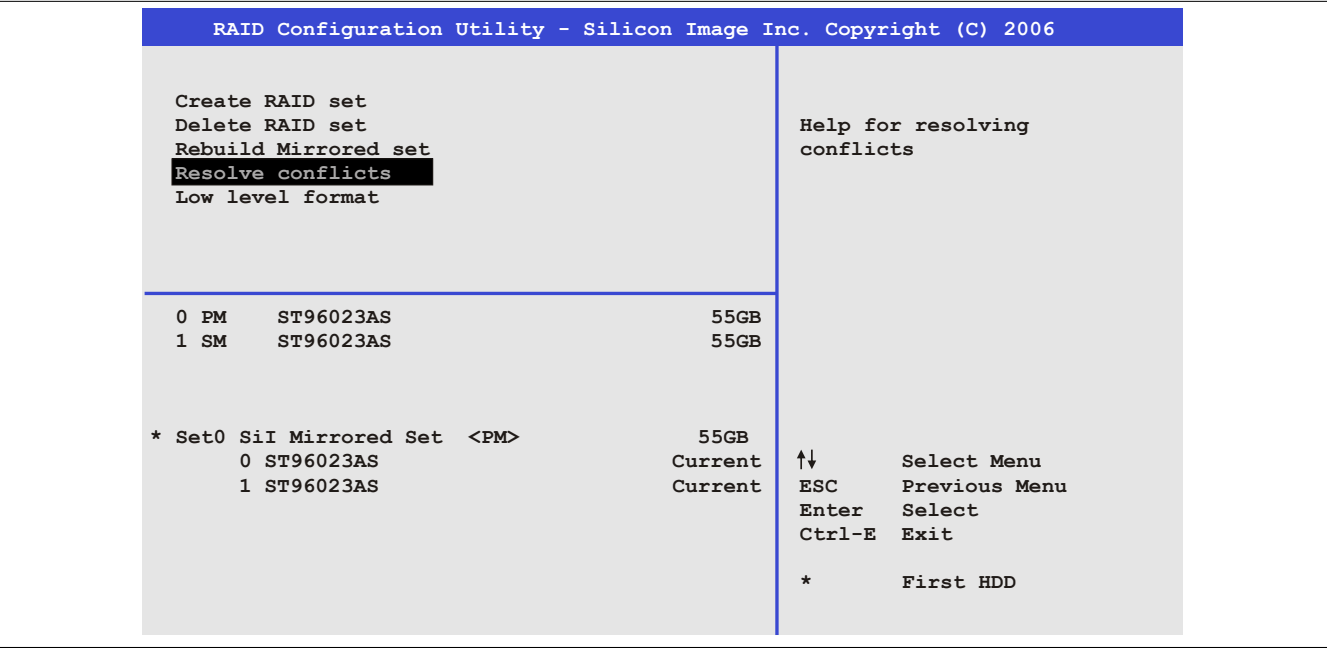

Figure 110: RAID Configuration Utility - Resolve conflicts

Conflicts in a RAID set can be resolved using the "Resolve conflicts" menu option. This function is only available if the status of the hard disk is "Conflict".

7.7 Low level format

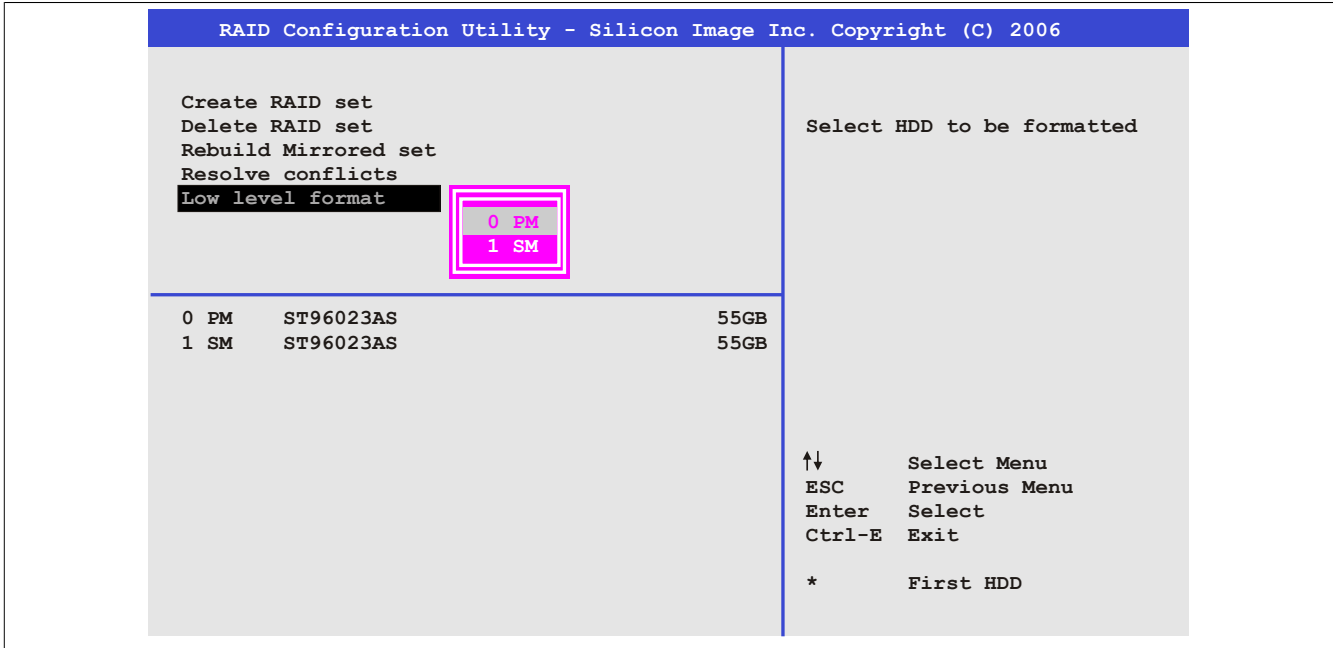

Figure 111: RAID Configuration Utility - Low level format

Individual hard disks can be configured using the "Low level format" menu option. This can only be done if a RAID set is not configured. A low level format of a hard disk takes approx. 40 minutes.

8 Known problems/issues

8.1 Problems and properties of the first production batch

The following points are known as of 07-May-08 in the first production batch of APC800 devices:

- The hardware security key interface is supported beginning with MTCX FPGA version 00.06 and higher.
- It was sporadically possible that the ETH2 interface was not initialized during startup and would therefore not function. The problem could be corrected by a reset or warm restart (Ctrl+Alt+Del). This problem is corrected in MTCX FPGA version 00.03.
- First Boot Agent Windows XP embedded and built-in SATA HDD drive: The BIOS setting "Legacy IDE channels" under "Advanced - IDE configuration" must be set to "PATA only" before inserting a CompactFlash card with a Windows XP embedded image and executing the First Boot Agent. Alternatively, the SATA drive can be removed first.
- When using two graphic lines, the Windows XP graphics driver assigns the labels "Digital display" to the monitor/panel connector and "Digital display 2" to the AP Link connector. In "extended desktop" mode, the following behavior is observed: If the cable for the digital display device on the monitor/panel interface is disconnected, digital display 2 become the primary display automatically, with the graphics driver settings also switching over accordingly. The next time the system is rebooted, the image content is routed from the monitor/panel interface to the AP Link interface. If the "SDVO/DVI Hot plugging support" option is set to "Enabled" in BIOS (found under "Advanced - Graphics - Configuration"), then the image content is automatically routed from the disconnected monitor/panel interface to the second graphics line on the AP Link interface.
- Special features of "quick switching": If the APC810 is in standby mode, i.e. the Power LED is red (e.g. during Windows XP shutdown), then buffering takes a little more time due to the capacitors and lower power consumption. If the "Power loss control" option is set to "Power on" or "Last state" in BIOS, then the system might not restart because a power off/on was not detected. To make sure that these system units will restart after a power off/on, the cutoff time should be set to at least 10 seconds.
- With MTCX PX32 firmware \geq V00.11 and higher, the reset button is only triggered by edges. This means that the device boots even when the reset button is pressed. With MTCX PX32 firmware $<$ V00.11, the system does not start after pressing (ca. 10 seconds) and releasing the reset button.

8.2 Problems and properties of subsequent production batches

- Hardware revision B0 of the 5AC801.DVDS-00 slide-in DVD-ROM does not offer SATA hot plugging functionality. Hot plugging is possible for other hardware revisions.
- The MIC, Line IN and Line OUT inputs/outputs are not supported due to the Intel GM45 chipset.
- The CompactFlash Slot 2 is not supported due to the Intel GM45 chipset.
- During daisy chain operation of multiple AP800/AP900 devices via SDL, it is possible that the touch controller status shows a red "X" in the Control Center applet for the touch screen driver when the touch controller is detected. The functionality of the touch system is not affected by this. This can be avoided by setting a panel locking time of 50 ms. The panel locking time can be configured with the B&R Key Editor.

Chapter 4 • Software

1 BIOS options

Information:

The following diagrams, BIOS menu items and their descriptions refer to BIOS version 1.17. It is therefore possible that these diagrams and BIOS descriptions will not correspond with the BIOS version actually installed.

1.1 General information

BIOS is an acronym for "Basic Input/Output System". It is the most basic standardized interface between the user and the system (hardware). The BIOS system used in this B&R Industrial PC was developed by American Megatrends Inc.

The BIOS Setup utility can be used to modify basic system configuration settings. These settings are stored in CMOS and EEPROM memory (as a backup).

CMOS data is buffered by a battery (if present) and continues to remain stored on the B&R Industrial PC even when the power is turned off (no 24 VDC supply).

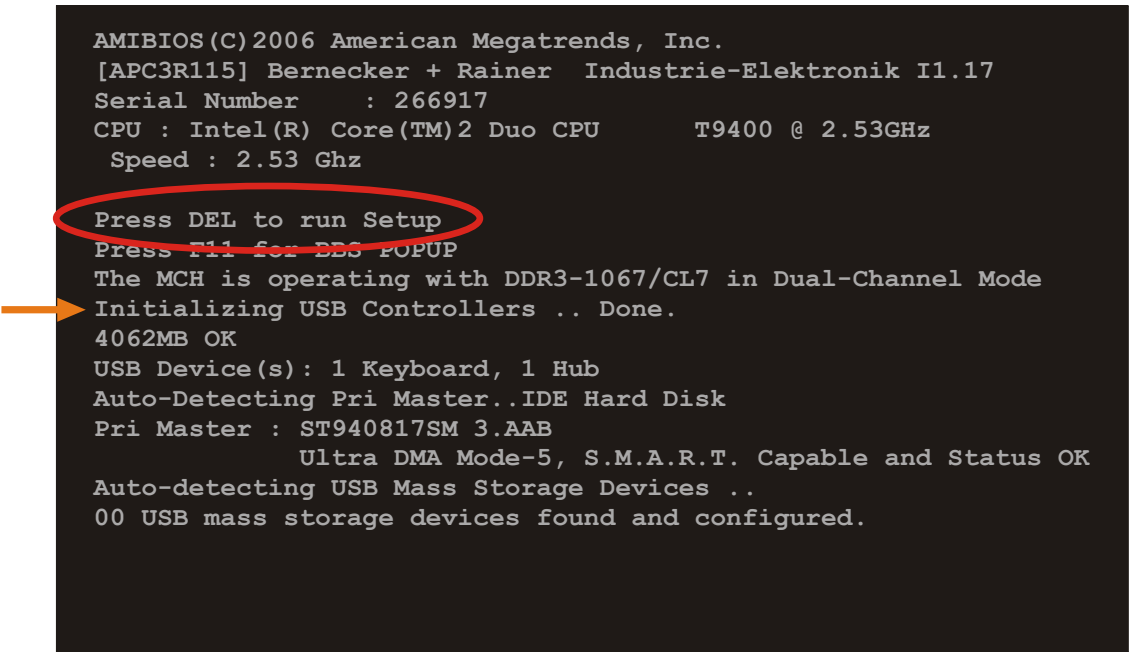

1.2 BIOS setup and boot procedure

BIOS is immediately activated when switching on the power supply or pressing the power button on the B&R Industrial PC. The system checks if the setup data from EEPROM memory is "OK". If the data is "OK", then it is transferred to CMOS. If the data is "Not OK", then the CMOS data is checked to see whether it is valid. An error message is output if the CMOS data contains errors, and the boot procedure can be continued by pressing <F1>. To prevent an error message from appearing at each restart, the BIOS Setup utility can be opened by pressing . The settings can then be re-saved.

BIOS reads the system configuration information, checks and configures the system with the Power-On Self-Test (POST).

When these "preliminaries" are finished, BIOS looks for an operating system on the available data storage devices (hard drive, floppy drive, etc.). BIOS then launches the operating system and hands over to it the control of system operations.

To enter BIOS Setup, the key must be pressed after the USB controller has been initialized as soon as the following message appears on the screen (during POST): "Press DEL to run SETUP".

```
AMIBIOS(C)2006 American Megatrends, Inc.  
[APC3R115] Bernecker + Rainer Industrie-Elektronik I1.17  
Serial Number      : 266917  
CPU : Intel(R) Core(TM)2 Duo CPU          T9400 @ 2.53GHz  
Speed : 2.53 Ghz  
  
Press DEL to run Setup  
Press F11 for DDS POPUP  
The MCH is operating with DDR3-1067/CL7 in Dual-Channel Mode  
Initializing USB Controllers .. Done.  
4062MB OK  
USB Device(s): 1 Keyboard, 1 Hub  
Auto-Detecting Pri Master..IDE Hard Disk  
Pri Master : ST940817SM 3.AAB  
                Ultra DMA Mode-5, S.M.A.R.T. Capable and Status OK  
Auto-detecting USB Mass Storage Devices ..  
00 USB mass storage devices found and configured.
```

Figure 112: GM45 Boot Screen

1.2.1 BIOS Setup keys

The following keys are enabled during POST:

Information:

Key signals from USB keyboards will only be registered after the USB controller has been initialized.

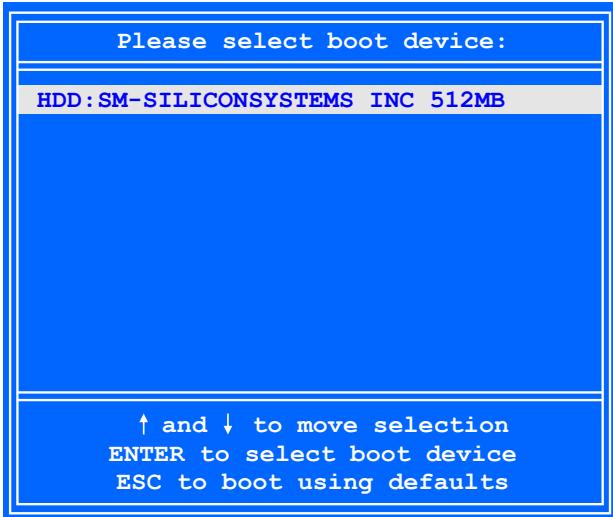

Keys	Function
Del	Opens the main BIOS Setup screen
F12	Network boot
F11	Opens the boot menu. This lists all bootable devices that are connected to the system. Selecting a device with cursor ↑, cursor ↓ and the pressing <ENTER> will boot from that device.
	
<Pause>	Pauses POST. Pressing any other key resumes POST.

Table 179: BIOS-relevant keys for POST

The following keys can be used once inside BIOS Setup:

Key	Function
F1	Opens general help information
Cursor ↑	Moves to the previous item
Cursor ↓	Moves to the next item
Cursor ←	Moves to the previous item
Cursor →	Moves to the next item
+-	Changes the setting for the selected function
Enter	Changes to the selected screen
Page ↑	Changes to the previous page
Page ↓	Changes to the next page
Pos 1	Jumps to the first BIOS menu item or object
End	Jumps to the last BIOS menu item or object
F2 / F3	Changes the colors of BIOS Setup
F7	Resets any changes
F9	Loads and configures CMOS default values for all BIOS settings
F10	Saves and exits
ESC	Exits a submenu

Table 180: BIOS-relevant keys

1.3 Main

The main BIOS Setup screen appears immediately after the button is pressed during startup.

Figure 113: GM45 Main menu

BIOS setting	Function	Configuration options	Effect
System time	The currently configured system time setting. This is buffered by the CMOS battery when the system is switched off.	Changes the system time	Sets the system time in the format Hour:Minute:Second (hh:mm:ss)
System date	The currently configured system date. This is buffered by the CMOS battery when the system is switched off.	Changes the system date	Sets the system date in the format Month:Day:Year (mm:dd:yyyy)
BIOS ID	Displays the BIOS version	None	-
Processor	Displays the processor type	None	-
CPU frequency	Displays the processor frequency	None	-
System memory	Displays the system memory size	None	-
Product revision	Displays the hardware revision of the CPU board	None	-
Serial number	Displays the serial number of the CPU board	None	-
BC firmware rev.	Displays the firmware revision of the CPU board controller	None	-
MAC address (ETH1)	Displays the assigned MAC address for the ETH1 interface	None	-
Boot counter	Displays the boot counter; each restart increases the counter by one (max. 16777215)	None	-
Running time	Displays the runtime in hours (max. 65535)	None	-

Table 181: GM45 Main menu - Configuration options

1.4 Advanced

Figure 114: GM45 Advanced menu

BIOS setting	Function	Configuration options	Effect
ACPI configuration	Configures ACPI devices	Enter	Opens the submenu See "ACPI configuration" on page 222
PCI configuration	Configures PCI devices	Enter	Opens the submenu See "PCI configuration" on page 223
PCI Express configuration	Configures PCI Express settings	Enter	Opens the submenu See "PCI Express configuration" on page 226
Graphics configuration	Configures graphics settings	Enter	Opens the submenu See "Graphics configuration" on page 228
CPU configuration	Configures CPU settings	Enter	Opens the submenu See "CPU configuration" on page 230
Chipset configuration	Configures chipset functions	Enter	Opens the submenu See "Chipset settings" on page 231
I/O interface configuration	Configures I/O devices	Enter	Opens the submenu See "I/O interface configuration" on page 232
Clock configuration	Configures clock settings	Enter	Opens the submenu See "Clock configuration" on page 233
IDE configuration	Configures IDE functions	Enter	Opens the submenu See "IDE configuration" on page 233
USB configuration	Configures USB settings	Enter	Opens the submenu See "USB configuration" on page 238
Keyboard/Mouse configuration	Configures keyboard/mouse options	Enter	Opens the submenu See "Keyboard/Mouse configuration" on page 240
CPU board monitor	Displays the current voltages and temperature of the processor in use	Enter	Opens the submenu See "CPU board monitor" on page 241
Baseboard/Panel features	Displays and configures device-specific settings	Enter	Opens the submenu See "Baseboard/Panel features" on page 242

Table 182: GM45 Advanced menu

1.4.1 ACPI configuration

Figure 115: GM45 Advanced - ACPI configuration

BIOS setting	Function	Configuration options	Effect
ACPI aware O/S	This function determines if the operating system supports the ACPI function (Advanced Configuration and Power Interface).	Yes	The operating system supports ACPI.
		No	The operating system does not support ACPI.
ACPI version features	Option for setting the power option specifications to be supported. The ACPI functions must be supported by the drivers and operating systems being used.	ACPI v1.0	Uses ACPI functions in accordance with v1.0
		ACPI v2.0	Uses ACPI functions in accordance with v2.0
		ACPI v3.0	Uses ACPI functions in accordance with v3.0
ACPI APIC support	This option controls the support of the advanced programmable interrupt controller in the processor.	Enabled	Enables this function
		Disabled	Disables the function
Suspend mode	Selects the ACPI status to be used when Suspend mode is enabled	S1 (POS)	Sets S1 as Suspend mode. Only a few functions are disabled and are available again at the touch of a button.
		S3 (STR)	Sets S3 as Suspend mode. The current state of the operating system is written to RAM, which is then the only component to receive power.
USB device wakeup from S3/S4	This option makes it possible for activity on a connected USB device to wake the system up from S3/S4 standby mode.	Enabled	Enables this function
		Disabled	Disables this function
Active cooling trip point	This function can be used to switch on an optional CPU fan via the operating system when the CPU reaches the set temperature.	Disabled	Disables this function
		50°C, 60°C, 70°C, 80°C, 90°C	Temperature setting for the active cooling trip point. Configurable in increments of 10 degrees.
Passive cooling trip point	Option for configuring a CPU temperature at which the operating system throttles the CPU speed	Disabled	Disables this function
		50°C, 60°C, 70°C, 80°C, 90°C	Temperature setting for the passive cooling trip point. Configurable in increments of 10 degrees.
Critical trip point	Option for configuring a CPU temperature at which the operating system automatically shuts down	80°C, 85°C, 90°C, 95°C, 100°C, 105°C, 110°C	Temperature setting for the critical trip point. Configurable in increments of 5 degrees.

Table 183: GM45 Advanced - ACPI configuration - Configuration options

1.4.2 PCI configuration

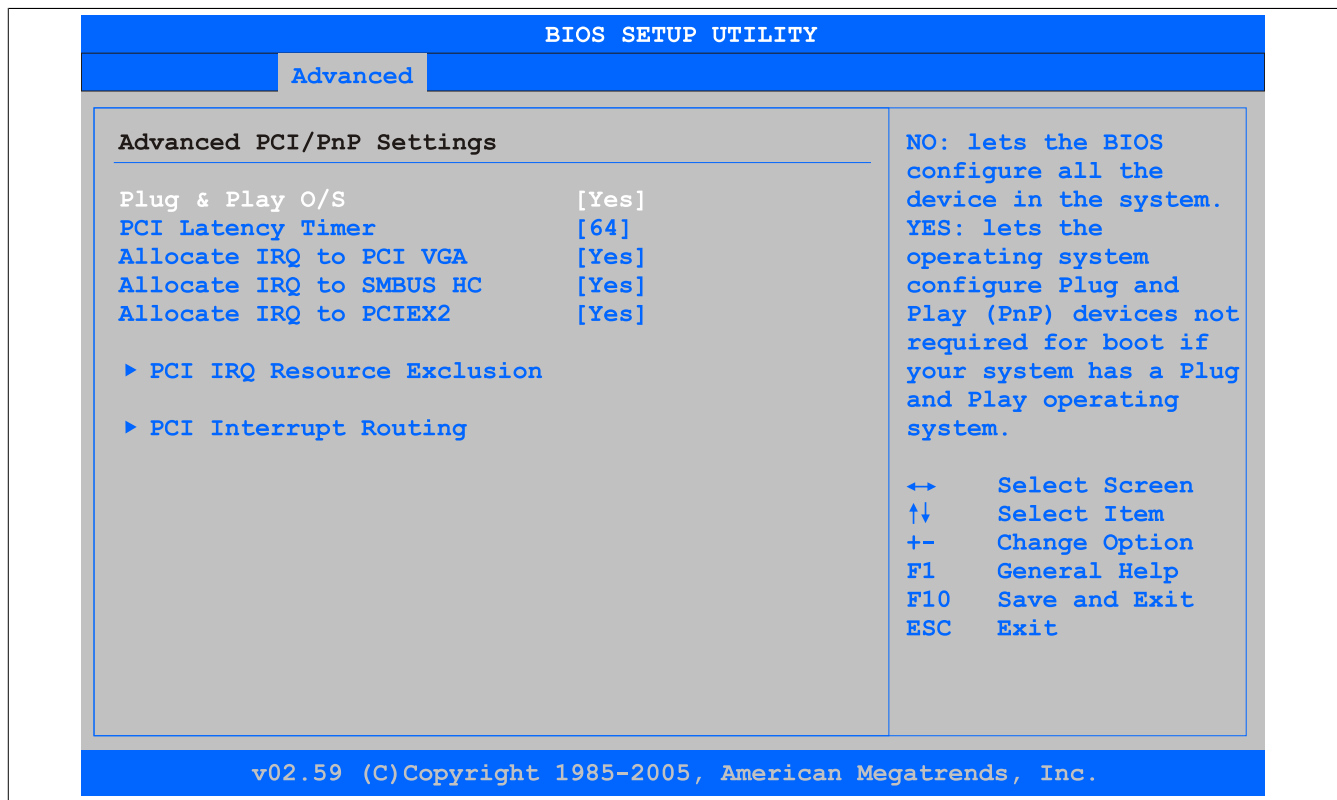

Figure 116: GM45 Advanced - PCI configuration

BIOS setting	Function	Configuration options	Effect
Plug & Play O/S	Informs BIOS if the operating system is capable of handling plug and play	Yes	Resource allocation handled by the operating system
		No	Resource allocation handled by BIOS
PCI latency timer	Option for controlling how long (in PCI ticks) one PCI bus card can continue to use the master after another PCI card has requested access	32, 64, 96, 128, 160, 192, 224, 248	Manually sets the value in PCI ticks
Allocate IRQ to PCI VGA	This function is used to determine if an interrupt is assigned to the PCI VGA.	Yes	Interrupt assigned automatically
		No	Interrupt not assigned
Allocate IRQ to SMBUS HC	This function is used to set whether the SM (system management) bus controller is assigned a PCI interrupt.	Yes	PCI interrupt assigned automatically
		No	Interrupt not assigned
Allocate IRQ to PCIEX2	This function is used to specify whether the PCIEX2 is assigned a PCI interrupt.	Yes	PCI interrupt assigned automatically
		No	Interrupt not assigned
PCI IRQ resource exclusion	Configures the PCI IRQ resource settings for ISA Legacy devices	Enter	Opens the submenu See "PCI IRQ resource exclusion" on page 224
PCI interrupt routing	Configures PCI interrupt routing	Enter	Opens the submenu See "PCI interrupt routing" on page 225

Table 184: GM45 Advanced - PCI configuration - Configuration options

1.4.2.1 PCI IRQ resource exclusion

Figure 117: GM45 Advanced - PCI IRQ resource exclusion

BIOS setting	Function	Configuration options	Effect
IRQx	IRQ interrupt routing for Legacy ISA devices	Allocated	Allocated by the system - cannot be used
		Available	Available - can be used
		Reserved	Reserved - cannot be used

Table 185: GM45 Advanced - PCI IRQ resource exclusion - Configuration options

1.4.2.2 PCI interrupt routing

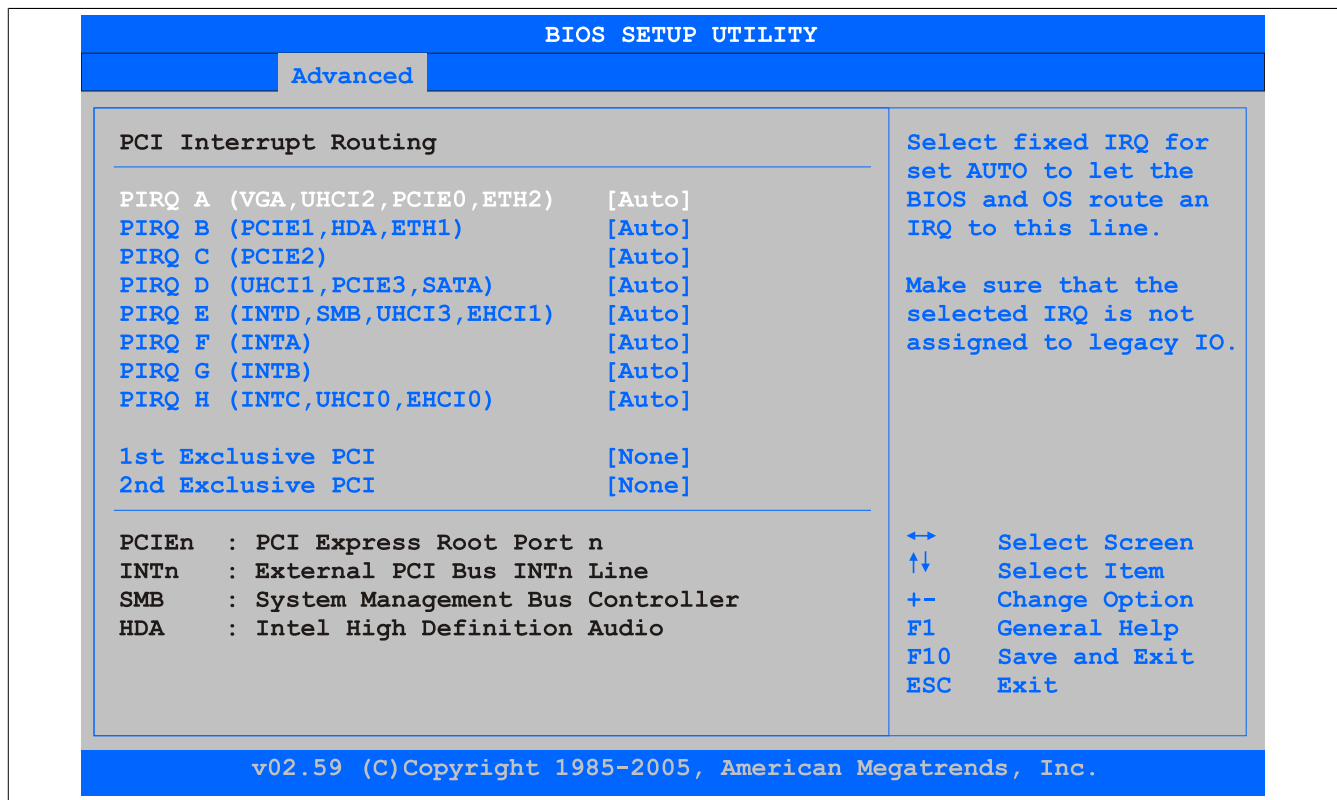

Figure 118: GM45 Advanced - PCI interrupt routing

BIOS setting	Function	Configuration options	Effect
PIRQ A (VGA,UHCI2,PCIE0,ETH2)	Option for configuring PIRQ A	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
PIRQ B (PCIE1,HDA,ETH1)	Option for configuring PIRQ B	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
PIRQ C (PCIE2)	Option for configuring PIRQ C	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
PIRQ D (UHCI1,PCIE3,SATA)	Option for configuring PIRQ D	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
PIRQ E (INTD,SMB,UHCI3,EHCI1)	Option for configuring PIRQ E	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
PIRQ F (INTA)	Option for configuring PIRQ F	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
PIRQ G (INTB)	Option for configuring PIRQ G	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
PIRQ H (INTC,UHCI0,EHCI0)	Option for configuring PIRQ H	Auto	Automatic assignment by BIOS and the operating system
		5,6,7,9,10,11,12	Manual assignment
1st exclusive PCI	This option is used to determine if the IRQ listed under PIRQ x is handled exclusively (no IRQ sharing).	None	No interrupt assigned
		x	Assigns the PIRQ as the 1st exclusive PCI IRQ

Information:

This is only displayed if a PIRQ is configured manually (e.g. 5).

Table 186: GM45 Advanced - PCI interrupt routing - Configuration options

BIOS setting	Function	Configuration options	Effect
2nd exclusive PCI	This option is used to determine if the IRQ listed under PIRQ x is handled exclusively (no IRQ sharing).	None	No interrupt assigned
		x	Assigns the PIRQ as the 2nd exclusive PCI IRQ
<div><div></div><div>Information: This is only displayed if two PIRQs are configured manually.</div></div>			

Table 186: GM45 Advanced - PCI interrupt routing - Configuration options

1.4.3 PCI Express configuration

Figure 119: GM45 Advanced - PCI Express configuration

BIOS setting	Function	Configuration options	Effect
Active state power management	Option for configuring a power saving function (L0s/L1) for PCIe slots if they do not require full power	Enabled	Enables this function
		Disabled	Disables this function
PCIE port 0	This option enables or disables the PCI Express interface function. Information: If no PCI Express devices are being used, this option should be disabled.	Auto	Automatic assignment by BIOS and the operating system
		Enabled	Enables this function
		Disabled	Disables this function
PCIE port 1	This option enables or disables the PCI Express interface function. Information: If no PCI Express devices are being used, this option should be disabled.	Auto	Automatic assignment by BIOS and the operating system
		Enabled	Enables this function
		Disabled	Disables this function
PCIE port 2	This option enables or disables the PCI Express interface function. Information: If no PCI Express devices are being used, this option should be disabled.	Auto	Automatic assignment by BIOS and the operating system
		Enabled	Enables this function
		Disabled	Disables this function
PCIE port 3	This option enables or disables the PCI Express interface function.	Auto	Automatic assignment by BIOS and the operating system

Table 187: GM45 Advanced - PCI Express configuration - Configuration options

BIOS setting	Function	Configuration options	Effect
	Information: If no PCI Express devices are being used, this option should be disabled.	Enabled	Enables this function
		Disabled	Disables this function
PCIe port 4 (ETH2)	This option enables or disables the PCI Express interface function. Information: If no PCI Express devices are being used, this option should be disabled.	Auto	Automatic assignment by BIOS and the operating system
		Enabled	Enables this function
		Disabled	Disables this function
PCIe high priority port	This option enables or disables the priority port for PCIe.	Disabled	Disables this function
		Port 0	Enables port 0 as the priority port
		Port 1	Enables port 1 as the priority port
		Port 2	Enables port 2 as the priority port
		Port 3	Enables port 3 as the priority port
		ETH2	Enables ETH2 as the priority port
Res. PCIe hot plugging resource	This option is used to reserve an I/O and memory resource for an unused PCIe port. A PCIe port must be set to "Enabled" and resources must be reserved in order for ExpressCard hot-plugging to be supported on the respective port.	Yes	Resource reserved
		No	Resource not reserved
PCIe port 0 IOxAPIC enable	This option enables or disables the APIC (Advanced Programmable Interrupt Controller) on PCIe port 0. The IRQ resources available to the system are expanded when APIC mode is enabled.	Enabled	Enables this function
		Disabled	Disables this function
PCIe port 1 IOxAPIC enable	This option enables or disables the APIC (Advanced Programmable Interrupt Controller) on PCIe port 1. The IRQ resources available to the system are expanded when APIC mode is enabled.	Enabled	Enables this function
		Disabled	Disables this function
PCIe port 2 IOxAPIC enable	This option enables or disables the APIC (Advanced Programmable Interrupt Controller) on PCIe port 2. The IRQ resources available to the system are expanded when APIC mode is enabled.	Enabled	Enables this function
		Disabled	Disables this function
PCIe port 3 IOxAPIC enable	This option enables or disables the APIC (Advanced Programmable Interrupt Controller) on PCIe port 3. The IRQ resources available to the system are expanded when APIC mode is enabled.	Enabled	Enables this function
		Disabled	Disables this function

Table 187: GM45 Advanced - PCI Express configuration - Configuration options

1.4.4 Graphics configuration

Figure 120: GM45 Advanced - Graphics configuration

BIOS setting	Function	Configuration options	Effect
Primary video device	Option for selecting the primary display device	Internal VGA	Uses the internal graphics chip on the CPU board as the video device (monitor/panel interface)
		PCI / Int. VGA	Uses the graphics chip of a connected graphics card as the display device
Internal graphics mode select	Option for setting the amount of memory used for the internal graphics controller	Disabled	Nothing reserved, disables the graphics controller
		Enabled, 32MB	Provides 32 MB main memory
		Enabled, 64MB	Provides 64 MB main memory
		Enabled, 128MB	Provides 128 MB main memory
DVMT memory	Option for setting the amount of memory used for DVMT mode	128 MB	Allows 128 MB of main memory to be used
		256 MB	Allows 256 MB of main memory to be used
		Maximum DVMT	Allows the remaining available main memory to be used
Boot display device	Determines which video channel should be enabled for a display device during booting	Auto	Automatic selection
		CRT only	Uses only the CRT (Cathode Ray Tube) channel
		TV only	Uses only the TV channel
		SDVO only	Uses only the SDVO (Serial Digital Video Out) channel
		CRT + SDVO	Uses the CRT and SDVO channel
		LFP only	Uses only the LFP (Local Flat Panel) channel
Boot display preference	This option determines the order in which the devices on the connected LFP and SDVO channels should be checked and booted.	CRT + LFP	Uses the CRT and LFP channel
		LFP SDVO-B SDVO-C	Local Flat Panel - Serial Digital Video B output - Serial Video C output
		LFP SDVO-C SDVO-B	Local Flat Panel - Serial Digital Video C output - Serial Video B output
		SDVO-B SDVO-C LFP	Serial Digital Video B output - Serial Digital Video C output - Local Flat Panel
Always try auto panel detect	This option first searches for EDID data in an external EEPROM to configure the LFP. If no EDID data is found, then the data selected under "Local flat panel type" is used.	SDVO-C SDVO-B LFP	Serial Digital Video C output - Serial Digital Video B output - Local Flat Panel
		No	Disables this function
Local flat panel type	This option can be used to set a predefined profile for the LVDS channel.	Yes	Enables this function
		Auto	Automatic detection and configuration using the EDID data
		VGA 1x18 (002h)	640 x 480
		VGA 1x18 (013h)	640 x 480

Table 188: GM45 Advanced - Graphics configuration - Configuration options

BIOS setting	Function	Configuration options	Effect
		SVGA 1x18 (01Ah)	800 x 600
		XGA 1x18 (006h)	1024 x 768
		XGA 2x18 (007h)	1024 x 768
		XGA 1x24 (008h)	1024 x 768
		XGA 2x24 (012h)	1024 x 768
		SXGA 2x24 (00Ah)	1280 x 1024
		SXGA 2x24 (018h)	1280 x 1024
		UXGA 2x24 (00Ch)	1600 x 1200
		Customized EDID 1	User-defined profile
		Customized EDID 2	User-defined profile
		Customized EDID 3	User-defined profile
SDVO local flat panel type	<p>This option can be used to set a pre-defined profile for the SDVO LVDS channel.</p> <p>Information:</p> <p>An SDVO LVDS transmitter must be connected to one of the SDVO ports, and the corresponding SDVO port device must be set to LVDS.</p>	Disabled	Disables this function
		Auto	Automatic detection and configuration using the EDID data
		VGA 1x18 (002h)	640 x 480
		VGA 1x18 (013h)	640 x 480
		SVGA 1x18 (01Ah)	800 x 600
		XGA 1x18 (006h)	1024 x 768
		XGA 2x18 (007h)	1024 x 768
		XGA 1x24 (008h)	1024 x 768
		XGA 2x24 (012h)	1024 x 768
		SXGA 2x24 (00Ah)	1280 x 1024
		SXGA 2x24 (018h)	1280 x 1024
		UXGA 2x24 (00Ch)	1600 x 1200
		Customized EDID 1	User-defined profile
		Customized EDID 1	User-defined profile
		Customized EDID 1	User-defined profile
Local flat panel scaling	Determines the screen content should be output depending on the configured local flat panel type	Centering	Centers the screen contents on the display
		Expand text	Expands text across the entire display
		Expand graphics	Expands graphics across the entire display
		Expand text & graphics	Expands text and graphics across the entire display
SDVO port B configuration	Option for selecting the video device that is connected to SDVO port B or to define the port as an HDMI or DisplayPort	Disabled	No display device connected
		HDMI port	Configures the port as an HDMI port
		DisplayPort	Configures the port as a DisplayPort
		SDVO DVI	Optimizes video signal output for an SDVO DVI-compatible display device
		SDVO TV	Optimizes video signal output for an SDVO TV-compatible display device
		SDVO CRT	Optimizes video signal output for a SDVO CRT-compatible display device
		SDVO LVDS	Optimizes video signal output for an SDVO LVDS-compatible display device
		SDVO DVI-Analog	Optimizes video signal output for an analog SDVO DVI-compatible display device
SDVO port C configuration	Option for selecting the video device that is connected to SDVO port C or to define the port as an HDMI or DisplayPort	Disabled	No display device connected
		HDMI port	Configures the port as an HDMI port
		DisplayPort	Configures the port as a DisplayPort
		SDVO DVI	Optimizes video signal output for an SDVO DVI-compatible display device
		SDVO TV	Optimizes video signal output for an SDVO TV-compatible display device
		SDVO CRT	Optimizes video signal output for a SDVO CRT-compatible display device
		SDVO LVDS	Optimizes video signal output for an SDVO LVDS-compatible display device
		SDVO DVI-Analog	Optimizes video signal output for an analog SDVO DVI-compatible display device
SDVO/DVI hot plugging support	If this option is set to enabled, the Windows XP graphics driver supports "hot plugging" and "configuration mode persistence" for DVI monitors connected to a DVI SDVO transmitter. "Hot plugging" support means that when a DVI monitor is connected while the operating system is running, it is detected automatically and activated. "Configuration mode persistence" means that a dual DVI configuration, for example, is automatically restored when both DVI monitors are reconnected, even if only one of them was connected and enabled during a previous boot.	Enabled	Enables "Hot plugging" and "Configuration mode persistence" mode
		Disabled	Disables "Hot plugging" and "Configuration mode persistence" mode
Display mode persistence	"Display mode persistence" means that the operating system can remember and restore past display configurations. For example, a dual DVI configuration is automatically restored when both DVI monitors are reconnected, even if only one of them was connected and enabled during a previous boot.	Enabled	Enables this function
		Disabled	Disables this function

Table 188: GM45 Advanced - Graphics configuration - Configuration options

1.4.5 CPU configuration

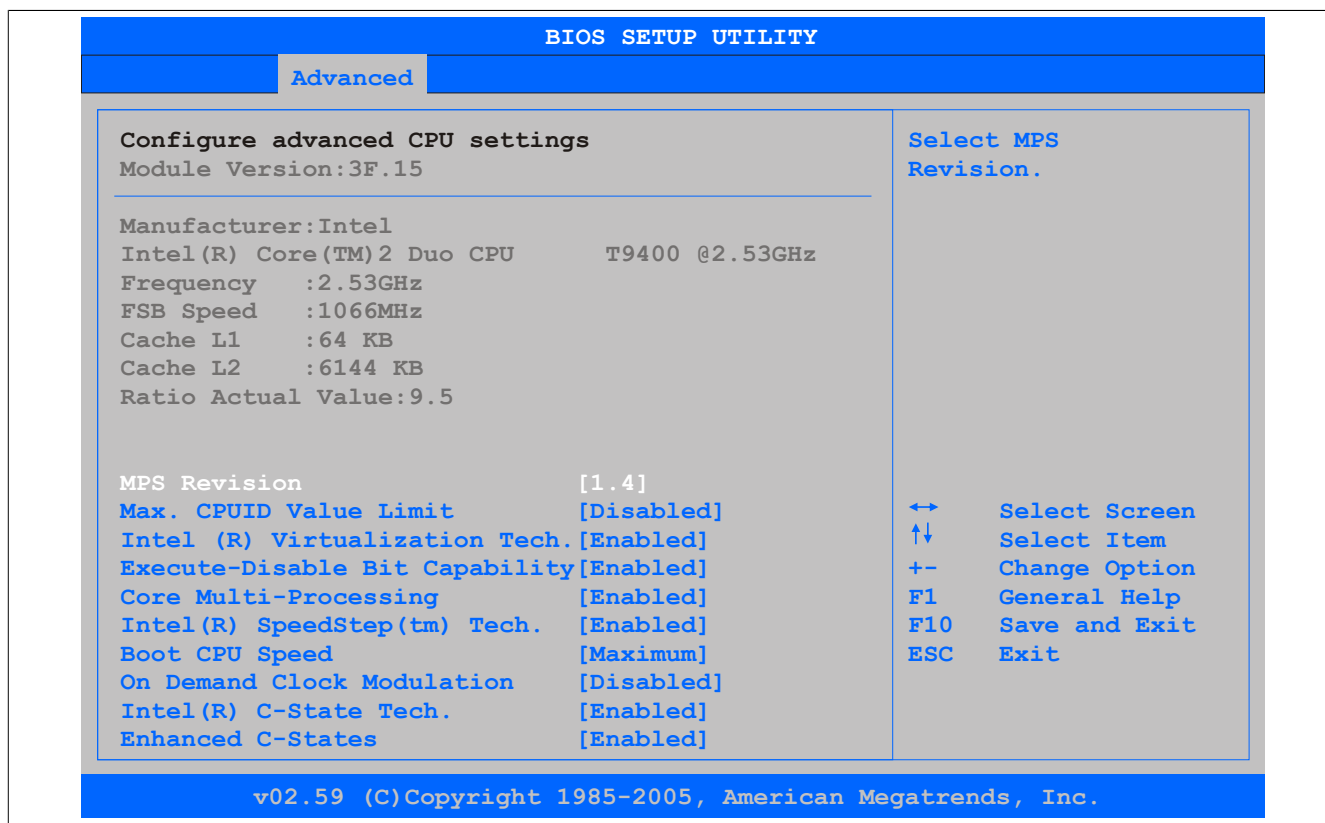

Figure 121: GM45 Advanced - CPU board monitor

BIOS setting	Function	Configuration options	Effect
MPS revision	This option supports the use of multiple CPUs (MPS=multiprocessor system).	1.1	Sets MPS support to Revision 1.1
		1.4	Sets MPS support to Revision 1.4
Max CPUID value limit	Option for limiting the CPUID input value. This may be necessary for older operating systems.	Enabled	The processor limits the maximum CPUID input value to 03h if necessary if the processor supports a higher value.
		Disabled	The processor returns the current maximum value when the CPUID input value is requested.
Intel(R) Virtualization Tech.	Information: A restart is required in order to apply changes made to this setting.	Disabled	Disables this function
		Enabled	Allows a virtual machine to use the additional hardware capacity
Execute-Disable bit capability	Option for enabling/disabling hardware support for prevention of data execution	Enabled	Enables this function
		Disabled	Disables this function
Core multi-processing	This option can be used to disable a core when using a dual-core processor.	Enabled	Uses both cores in a dual-core processor
		Disabled	Uses only one core in a dual-core processor
Intel(R) SpeedStep(tm) Tech.	Option for controlling the Intel(R) SpeedStep(TM) technology. The processor clock speed is increased or decreased according to the number of calculations that must be made. As a result, the power consumption depends largely on the processor load.	Enabled	The processor speed is regulated by the operating system.
		Disabled	Disables SpeedStep technology
Boot CPU speed	Information: This setting can be changed in ACPI operating systems by activating Intel SpeedStep technology.	Maximum	Maximum CPU speed
		Minimum	Chokes the CPU speed LFM = Low Frequency Mode = 1.6 GHz
On demand clock modulation	Option for configuring CPU performance using "On demand clock modulation"	Disabled	Disables this function
		12.5%, 25%, 37.5%, 50%, 62.5%, 75%, 87.5%	Example: 75% results in a performance reduction of 25%.

Table 189: GM45 Advanced - CPU configuration - Configuration options

BIOS setting	Function	Configuration options	Effect
Intel(R) C-State Tech.	This setting allows the operating system to set the processor clock speed on its own, thereby saving energy.	Disabled	Disables this function. Both processors are operated at the same frequency.
		Enabled	Enables this function. The processors are operated at different frequencies to save energy.
Enhanced C-States ¹⁾	This setting allows the operating system to set the processor clock speed on its own, thereby saving energy.	Disabled	Disables this function
		Enabled	Enables this function

Table 189: GM45 Advanced - CPU configuration - Configuration options

1) This setting is only shown if *Intel(R) C-State tech.* is set to *Enabled*.

1.4.6 Chipset settings

Figure 122: GM45 Advanced - Chipset settings

BIOS setting	Function	Configuration options	Effect
DRAM refresh rate	Option for configuring the DRAM refresh rate	Auto	Reads the DRAM refresh rate from the SPD data of the DRAM module
		7.8 μ s	The DRAM refresh rate is set manually.
		3.9 μ s	The DRAM refresh rate is set manually.
Memory hole	Option for ISA cards with a frame buffer. This does not apply to the APC810.	Disabled	Disables this function
		15MB-16MB	Reserves the address range
DIMM thermal control	Option for setting the maximum surface temperature of the DIMM module. The module is cooled by limiting the memory bandwidth if the defined surface temperature is reached.	Disabled	Surface temperature not limited
		40°C, 50°C, 60°C, 70°C, 80°C, 85°C, 90°C	Temperature limit value for the limitation
High precision event timer	The HPET is a timer inside the PC. It is able to trigger an interrupt with a high degree of accuracy, which allows other programs to better synchronize a variety of applications.	Enabled	Enables this function. This function is recommended for multimedia applications.
		Disabled	Disables this function
IOAPIC	This option is used to enable or disable the APIC (Advanced Programmable Interrupt Controller).	Enabled	The IRQ resources available to the system are expanded when APIC mode is enabled.
		Disabled	Disables this function
APIC ACPI SCI IRQ	This option is used to modify the SCI IRQ when in APIC (Advanced Programmable Interrupt Controller) mode.	Enabled	Uses IRQ20 for SCI
		Disabled	Uses IRQ9 for SCI.
POST code output	This option is used when the port 80h/84h BIOS POST code output should be routed to the PCI bus or the LPC bus.	PCI	Routes port 80h/84h to the PCI bus
		LPC	Routes port 80h/84h to the LPC bus

Table 190: GM45 Advanced - Chipset settings - Configuration options

1.4.7 I/O interface configuration

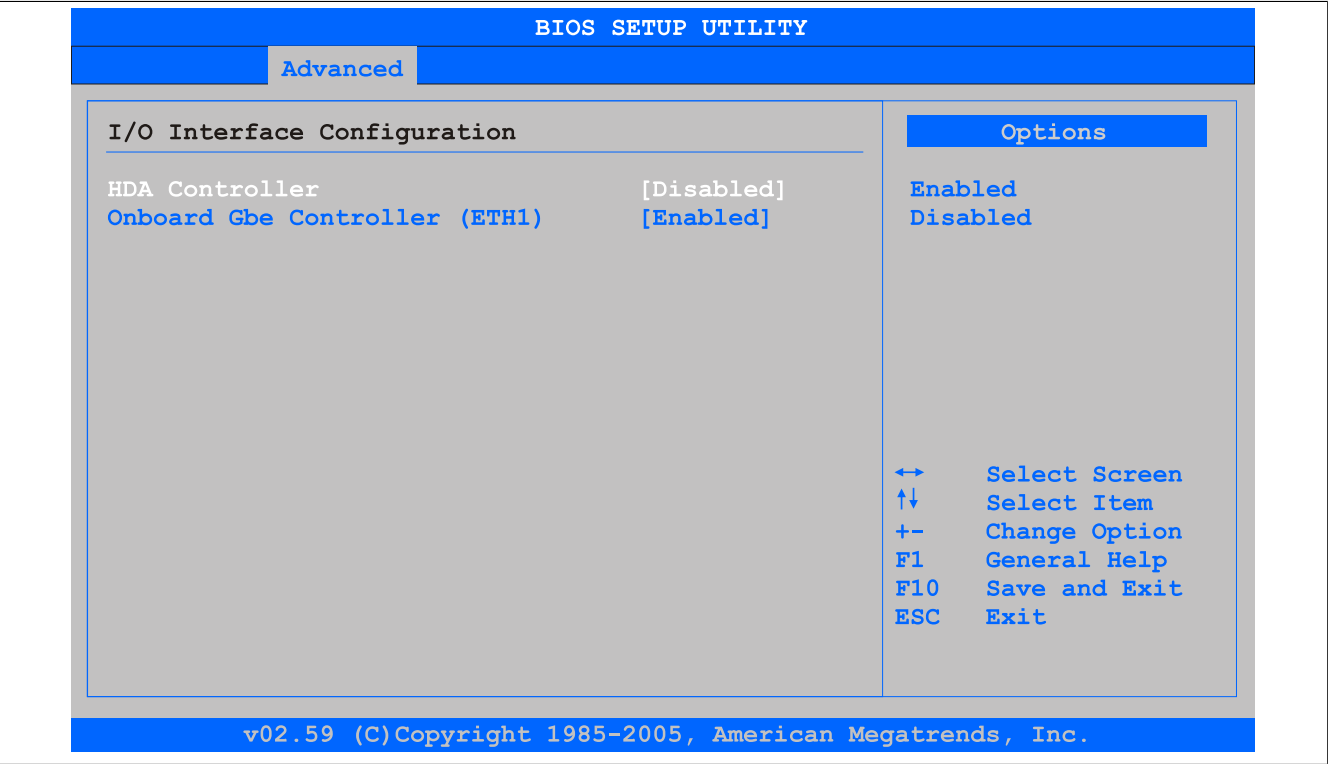

Figure 123: GM45 Advanced - I/O interface configuration

BIOS setting	Function	Configuration options	Effect
HDA controller	This option is used to turn the HDA controller on or off. Information: The GM45 CPU board does not have a sound controller.	Enabled	Enables the HDA controller
		Disabled	Disables the HDA controller
Onboard Gbe controller (ETH1)	This option is used to turn the onboard Ethernet controller on or off.	Disabled	Disables the onboard Ethernet controller
		Enabled	Enables the onboard Ethernet controller

Table 191: GM45 Advanced - I/O interface configuration - Configuration options

1.4.8 Clock configuration

Figure 124: GM45 Advanced - Clock configuration

BIOS setting	Function	Configuration options	Effect
Spread spectrum	This option is used to modulate the cycle frequency to slightly reduce electromagnetic interference.	Enabled	Enables this function
		Disabled	Disables this function

Table 192: GM45 Advanced - Clock configuration - Configuration options

1.4.9 IDE configuration

Figure 125: GM45 Advanced - IDE configuration

BIOS setting	Function	Configuration options	Effect
SATA port 0/1	Option for configuring the integrated SATA controller	Compatible	The controller runs in Legacy or Compatible mode.
		Disabled	Disables the controller and both ports
		Enhanced	The controller runs in Enhanced or Native mode.
Configure SATA port 0/1 as ¹⁾	Allows the serial ATA connections 0/1 supported by the southbridge to be defined	IDE	Uses the serial ATA hard drive as a parallel ATA physical drive
		RAID	RAID 0, 1, 5, 10 or Intel® Matrix Storage technology can be configured here with the serial ATA hard drive.
		AHCI	The AHCI setting enables the internal memory driver for SATA functions, which increases the storage performance for random read-write access by allowing the drive itself to determine the sequence of commands.
Hot plug ²⁾	Option for turning SATA hot plugging support on or off	Disabled	Disables this function
		Enabled	Enables this function
SATA port 2/3 (opt. PATA port)	Option for turning integrated SATA controllers 2 and 3 on or off	Disabled	Disables this function
		Enabled	Enables this function
PATA detection time out (sec) ³⁾	Configures the time overrun limit for ATA/ATAPI device detection. This option only applies for PATA channels.	0,1,2,3,5,10,15,30	Time setting in seconds
Primary IDE master	Option for configuring the drive in the system that is connected to the primary IDE master port	Enter	Opens the submenu See "Primary IDE master" on page 234
Secondary IDE master	Option for configuring the drive in the system that is connected to the secondary IDE master port	Enter	Opens the submenu See "Secondary IDE master" on page 235
Third IDE master	Option for configuring the drive in the system that is connected to the third IDE master port	Enter	Opens the submenu See "Third IDE master" on page 236
Fourth IDE master	Option for configuring the drive in the system that is connected to the fourth IDE master port	Enter	Opens the submenu See "Fourth IDE master" on page 237
Hard disk write protect	Option for enabling/disabling write protection for the hard drive	Enabled	Enables this function
		Disabled	Disables this function
IDE detect time out (sec)	Configures the time overrun limit for ATA/ATAPI device detection. This option applies for SATA and PATA channels.	0, 5, 10, 15, 20, 25, 30, 35	Time setting in seconds

Table 193: GM45 Advanced - IDE configuration - Configuration options

- 1) These settings are only possible if *SATA port 0/1* is set to *Enhanced*.
2) These settings are only possible if *Configure SATA port 0/1* is set to *RAID* or *AHCI*.
3) These settings are only possible if *SATA port 2/3 (opt. PATA port)* is set to *Enhanced*.

1.4.9.1 Primary IDE master

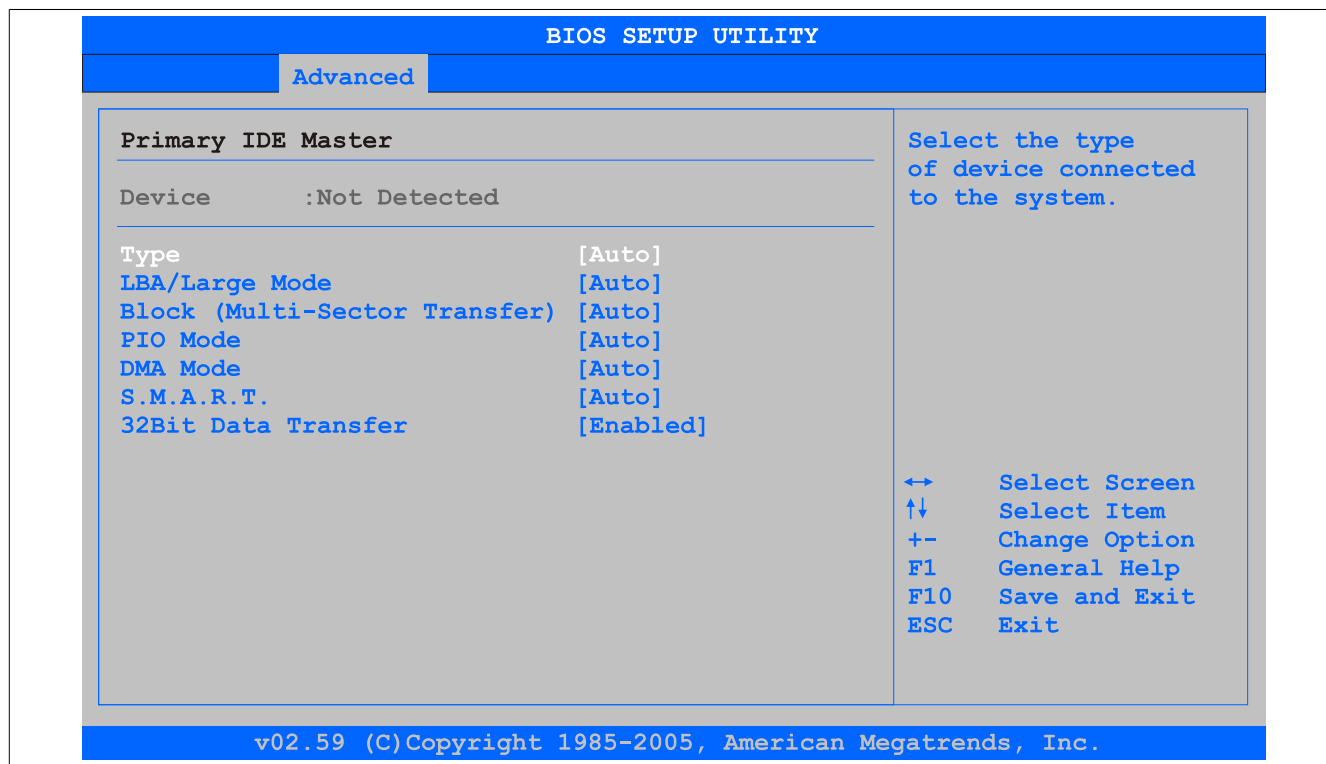

Figure 126: GM45 Advanced - Primary IDE master

BIOS setting	Function	Configuration options	Effect
Type	Configures the type of drive connected to the primary master	Not installed	No drive installed
		Auto	Automatically detects the drive and configures the necessary values
		CD/DVD	CD/DVD drive
		ARMD	ARMD drive (zip drive)
LBA/Large mode	This option enables IDE logical block addressing / large mode.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system
Block (multi-sector transfer)	This option enables block mode for IDE hard drives. If this option is enabled, the number of blocks per request is read from the configuration sector of the hard drive.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system
PIO mode	PIO mode determines the data rate of the hard drive. Information: This option is not available on the APC810. This setting therefore does not apply.	Auto	Configures PIO mode automatically
		0, 1, 2, 3, 4	Configures PIO mode manually
DMA mode	Defines the data transfer rate to and from the primary master drive. DMA mode must be enabled activated in the Windows Device Manager in order to guarantee maximum performance. This is only possible when manually setting up the drive.	Auto	Defines the transfer rate automatically
		Disabled	Defines the transfer rate manually
S.M.A.R.T.	Monitoring function for hard drives (Self-Monitoring, Analysis and Reporting Technology)	Auto	Detected and enabled automatically
		Enabled	Enables this function
		Disabled	Disables this function
32 bit data transfer	Enables 32-bit data transfer	Enabled	Enables this function
		Disabled	Disables this function

Table 194: GM45 Advanced - Primary IDE master - Configuration options

1.4.9.2 Secondary IDE master

Figure 127: GM45 Advanced - Secondary IDE master

BIOS setting	Function	Configuration options	Effect
Type	Configures the type of drive connected to the secondary master	Not installed	No drive installed
		Auto	Automatically detects the drive and configures the necessary values
		CD/DVD	CD/DVD drive
		ARMD	ARMD drive (zip drive)

Table 195: GM45 Advanced - Secondary IDE master - Configuration options

BIOS setting	Function	Configuration options	Effect
LBA/Large mode	This option enables IDE logical block addressing / large mode.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system
Block (multi-sector transfer)	This option enables block mode for IDE hard drives. If this option is enabled, the number of blocks per request is read from the configuration sector of the hard drive.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system
PIO mode	PIO mode determines the data rate of the hard drive. Information: This option is not available on the APC810. This setting therefore does not apply.	Auto	Configures PIO mode automatically
		0, 1, 2, 3, 4	Configures PIO mode manually
DMA mode	The data transfer rate to and from the secondary master drive is defined here. DMA mode must be enabled activated in the Windows Device Manager in order to guarantee maximum performance. This is only possible when manually setting up the drive.	Auto	Defines the transfer rate automatically
		Disabled	Defines the transfer rate manually
S.M.A.R.T.	Monitoring function for hard drives (Self-Monitoring, Analysis and Reporting Technology)	Auto	Detected and enabled automatically
		Enabled	Enables this function
		Disabled	Disables this function
32 bit data transfer	Enables 32-bit data transfer	Enabled	Enables this function
		Disabled	Disables this function

Table 195: GM45 Advanced - Secondary IDE master - Configuration options

1.4.9.3 Third IDE master

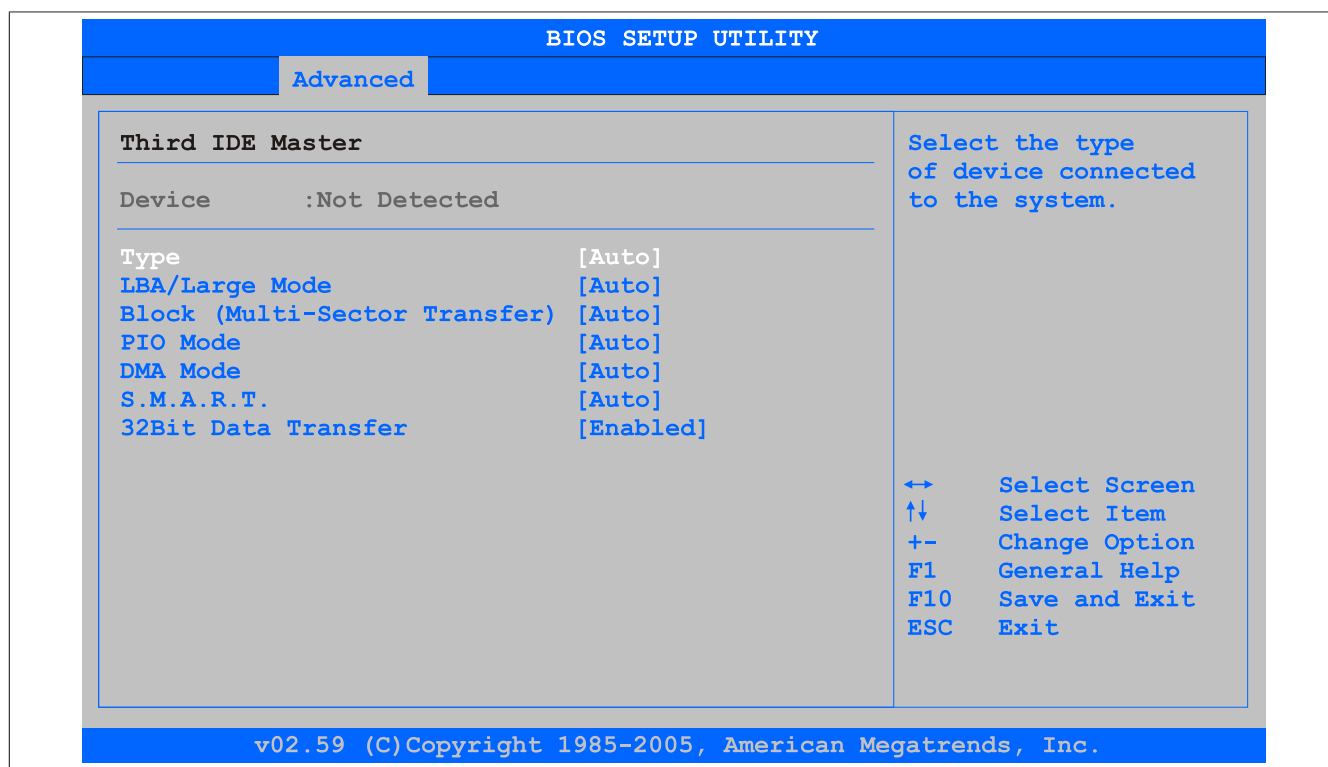

Figure 128: GM45 Advanced - Third IDE master

BIOS setting	Function	Configuration options	Effect
Type	Configures the type of drive connected to the third master	Not installed	No drive installed
		Auto	Automatically detects the drive and configures the necessary values
		CD/DVD	CD/DVD drive
		ARMD	ARMD drive (zip drive)
LBA/Large mode	This option enables IDE logical block addressing / large mode.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system

Table 196: GM45 Advanced - Third IDE master - Configuration options

BIOS setting	Function	Configuration options	Effect
Block (multi-sector transfer)	This option enables block mode for IDE hard drives. If this option is enabled, the number of blocks per request is read from the configuration sector of the hard drive.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system
PIO mode	PIO mode determines the data rate of the hard drive. Information: This option is not available on the APC810. This setting therefore does not apply.	Auto	Configures PIO mode automatically
		0, 1, 2, 3, 4	Configures PIO mode manually
DMA mode	The data transfer rate to and from the third master drive is defined here. DMA mode must be enabled activated in the Windows Device Manager in order to guarantee maximum performance. This is only possible when manually setting up the drive.	Auto	Defines the transfer rate automatically
		Disabled	Defines the transfer rate manually
S.M.A.R.T.	Monitoring function for hard drives (Self-Monitoring, Analysis and Reporting Technology)	Auto	Detected and enabled automatically
		Enabled	Enables this function
		Disabled	Disables this function
32 bit data transfer	Enables 32-bit data transfer	Enabled	Enables this function
		Disabled	Disables this function

Table 196: GM45 Advanced - Third IDE master - Configuration options

1.4.9.4 Fourth IDE master

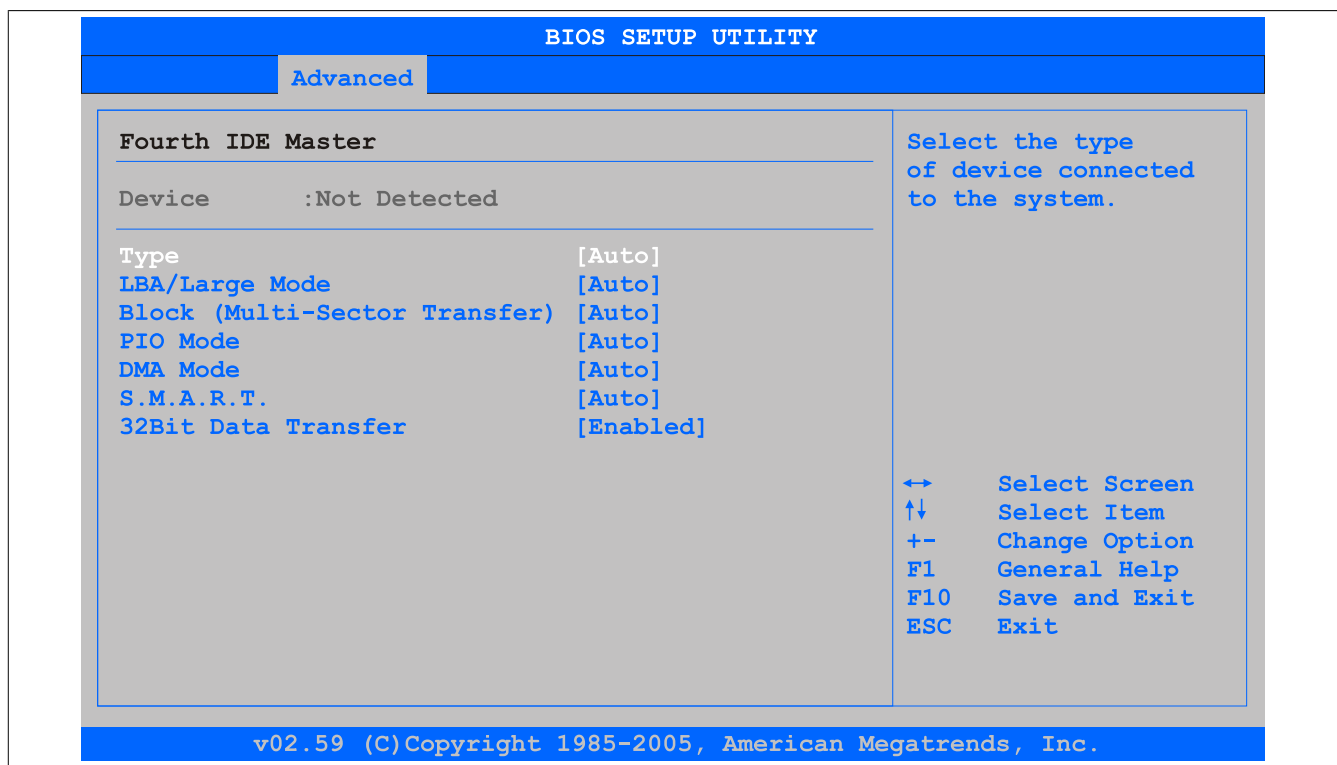

Figure 129: GM45 Advanced - Fourth IDE master

BIOS setting	Function	Configuration options	Effect
Type	Configures the type of drive connected to the fourth master	Not installed	No drive installed
		Auto	Automatically detects the drive and configures the necessary values
		CD/DVD	CD/DVD drive
		ARMD	ARMD drive (zip drive)
LBA/Large mode	This option enables IDE logical block addressing / large mode.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system
Block (multi-sector transfer)	This option enables block mode for IDE hard drives. If this option is enabled, the number of blocks per request is read from the configuration sector of the hard drive.	Disabled	Disables this function
		Auto	Automatically enables this function if supported by the system

Table 197: GM45 Advanced - Fourth IDE master - Configuration options

BIOS setting	Function	Configuration options	Effect
PIO mode	PIO mode determines the data rate of the hard drive. Information: This option is not available on the APC810. This setting therefore does not apply.	Auto	Configures PIO mode automatically
		0, 1, 2, 3, 4	Configures PIO mode manually
DMA mode	The data transfer rate to and from the fourth master drive is defined here. DMA mode must be enabled activated in the Windows Device Manager in order to guarantee maximum performance. This is only possible when manually setting up the drive.	Auto	Defines the transfer rate automatically
		Disabled	Defines the transfer rate manually
S.M.A.R.T.	Monitoring function for hard drives (Self-Monitoring, Analysis and Reporting Technology)	Auto	Detected and enabled automatically
		Enabled	Enables this function
		Disabled	Disables this function
32 bit data transfer	Enables 32-bit data transfer	Enabled	Enables this function
		Disabled	Disables this function

Table 197: GM45 Advanced - Fourth IDE master - Configuration options

1.4.10 USB configuration

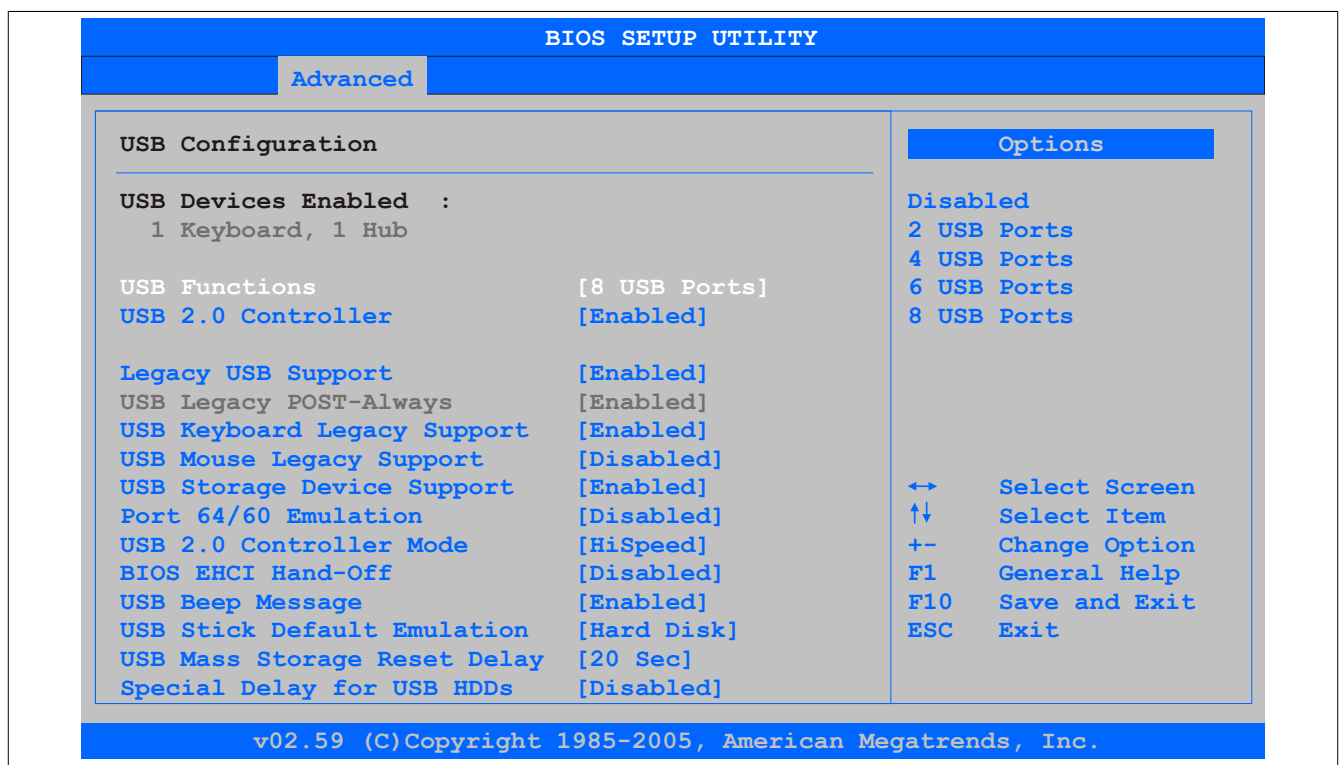

Figure 130: GM45 Advanced - USB configuration

BIOS setting	Function	Configuration options	Effect
USB function	Enables/Disables USB ports USB numbers (USB1, USB3, etc.) are printed on the APC810 housing.	Disabled	Disables the USB port
		2 USB ports	Enables USB1 and USB3
		4 USB ports	Enables USB1, USB2, USB3 and USB4
		6 USB ports	Enables USB1, USB2, USB3, USB4 and USB5
USB 2.0 controller	Option for enabling or disabling USB 2.0 mode	8 USB ports	Enables USB1, USB2, USB3, USB4, USB5 and USB on an AP via SDL
		Enabled	Uses USB 2.0 for all USB ports
		Disabled	Uses USB 1.1 for all USB ports
Legacy USB support	Enables/Disables Legacy USB support USB ports do not function during startup. USB support is available again after the operating system has started. A USB keyboard is still recognized during POST.	Enabled	Enables this function
		Disabled	Disables this function
		Auto	Automatic enabling
USB Legacy POST-always	Legacy USB support is enabled during the POST (Power On Self Test) regardless of the Legacy USB support setting.	None (automatically enabled)	Allows BIOS Setup to be opened during POST using a USB keyboard

Table 198: GM45 Advanced - USB configuration - Configuration options

BIOS setting	Function	Configuration options	Effect
USB keyboard Legacy support	Enables/Disables USB keyboard support	Enabled	Enables this function
		Disabled	Disables this function
USB mouse Legacy support	Enables/Disables USB mouse support	Enabled	Enables this function
		Disabled	Disables this function
USB storage device support	Enables/Disables USB mass storage device support	Enabled	Enables this function
		Disabled	Disables this function
Port 64/60 emulation	Enables/Disables port 64/60 emulation	Enabled	Allows USB keyboard functionality in Windows NT
		Disabled	Allows USB keyboard functionality on all systems except Windows NT
USB 2.0 controller mode	Configures the USB controller	Full speed	12 MBps
		Hi speed	480 MBps
BIOS EHCI hand-off	Allows support for operating systems to be set up without the fully automatic EHCI function	Enabled	Enables this function
		Disabled	Disables this function
USB beep message	Option for emitting a tone each time a USB device is detected by BIOS during POST	Enabled	Enables this function
		Disabled	Disables this function
USB stick default emulation	Configures how a USB device is to be used	Auto	USB devices with less than 530 MB of memory are simulated as floppy disk drives. Devices with larger memory capacity are simulated as hard drives.
		Hard disk drive	An HDD-formatted drive can be used as an FDD (e.g. zip drive) to start the system.
USB mass storage reset delay	Option for configuring the time that POST waits for USB memory storage devices after the device start command is issued Information: The message "No USB mass storage device detected" is displayed if a USB memory device has not been installed.	10 sec, 20 sec, 30 sec, 40 sec	Sets the value manually
Special delay for USB HDDs	Option for setting a boot delay prior to counting the number of USB 2.0 devices in order to allow more time for USB devices that generally take longer to boot (e.g. USB hard disks) Information: This option should only be used if absolutely necessary; otherwise, it would unnecessarily extend the boot procedure by the configured time.	Disabled 1 sec, 2 sec, 3 sec, 4 sec, 5 sec, 7 sec, 10 sec	Disables this function. Doesn't add a boot delay. Adds a boot delay of 1, 2, 3, 4, 5, 7 or 10 seconds

Table 198: GM45 Advanced - USB configuration - Configuration options

1.4.11 Keyboard/Mouse configuration

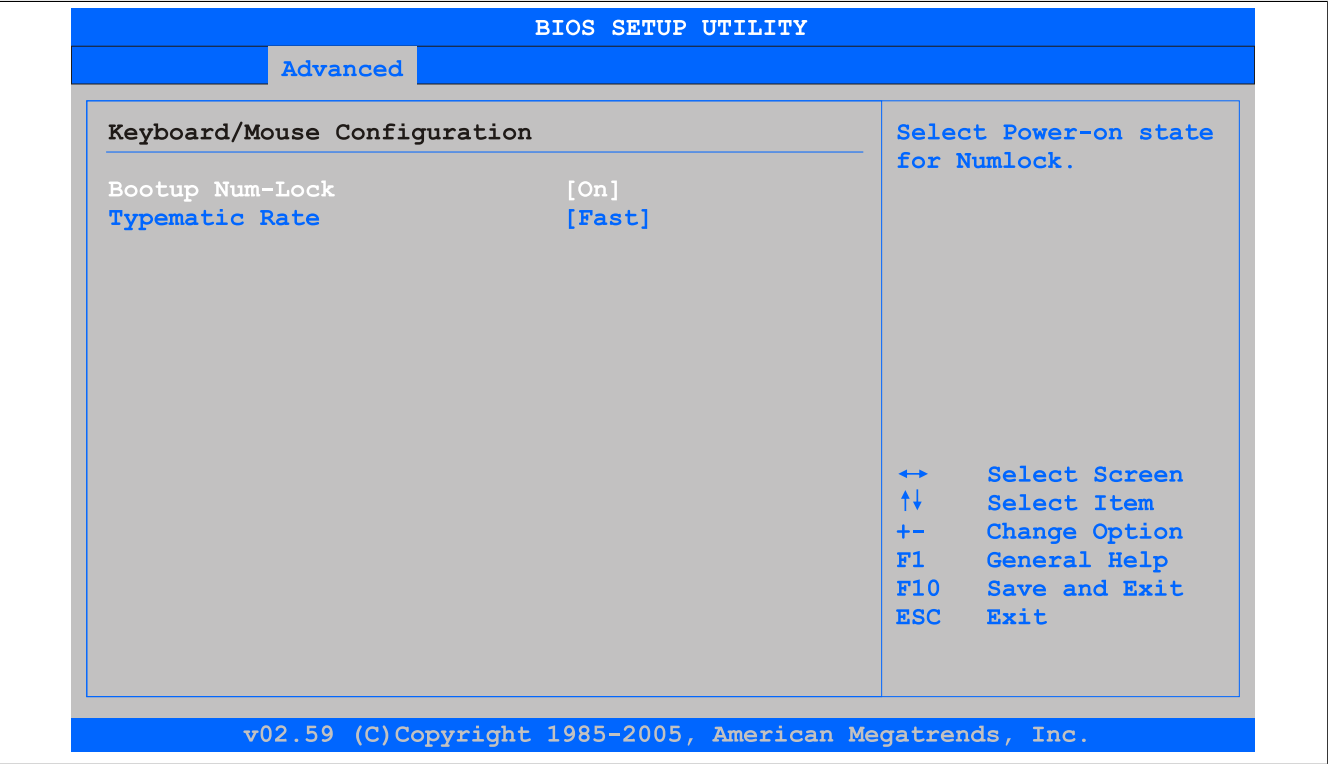

Figure 131: GM45 Advanced - Keyboard/Mouse configuration

BIOS setting	Function	Configuration options	Effect
Bootup Num-lock	Defines the state of the NumLock key on the numeric keypad when booting	Off	Only enables the cursor (movement) functions of the numeric keypad
		On	Enables the numeric keypad
Typematic rate	Configures the key repeat function	Slow	Slow key repeat
		Fast	Fast key repeat

Table 199: GM45 Advanced - Keyboard/Mouse configuration - Configuration options

1.4.12 CPU board monitor

Information:

The voltage values (e.g. core voltage, battery voltage) displayed on this BIOS Setup screen represent uncalibrated values for informational purposes. They cannot be used to draw any conclusions about hardware alarms or error conditions. The hardware components used have automatic diagnostic functions that can be applied in the event of error.

Figure 132: GM45 Advanced - CPU board monitor

BIOS setting	Function	Configuration options	Effect
H/W health function	Option for displaying all values on this screen	Enabled Disabled	Displays all values Displays no value on this screen
Board temperature	Displays the board temperature in degrees Celsius and Fahrenheit	None	-
CPU temperature	Displays the processor's temperature (in degrees Celsius and Fahrenheit)	None	-
Top DIMM environment temp.	Displays the temperature of the first DRAM module	None	-
Bottom DIMM environment temp.	Displays the temperature of the second DRAM module	None	-
CPU fan speed	Displays the speed of the processor fan	None	-
VcoreA	Displays the processor core voltage A in volts	None	-
+3.3VSB	Displays the current voltage of the 3.3 volt supply	None	-
+5VSB	Displays the current voltage of the 5 volt supply	None	-
+12Vin	Displays the current voltage of the 12 volt supply	None	-
VRTC	Displays the battery voltage in volts	None	-

Table 200: GM45 Advanced - CPU board monitor - Configuration options

1.4.13 Baseboard/Panel features

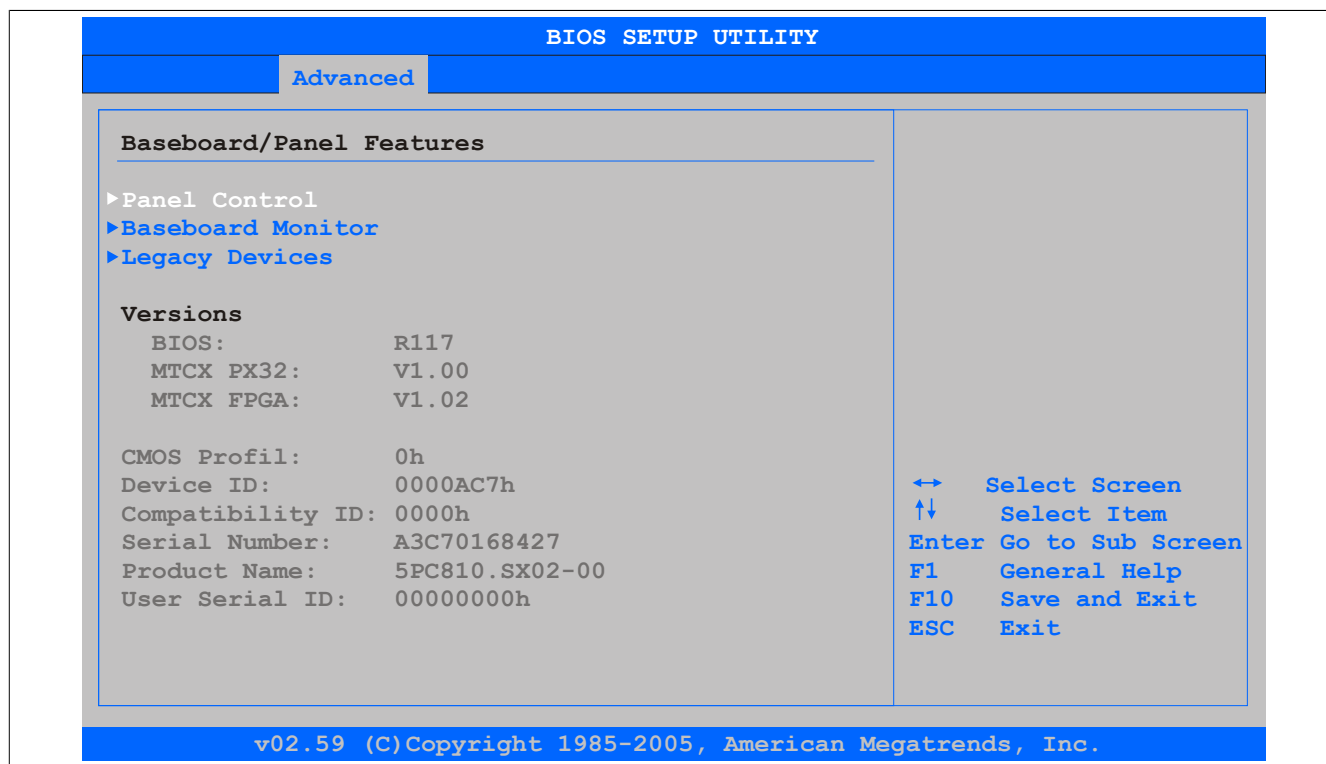

Figure 133: GM45 Advanced - Baseboard/Panel features

BIOS setting	Function	Configuration options	Effect
Panel control	Configures special settings for connected panels (display units)	Enter	Opens the submenu See "Panel control" on page 243
Baseboard monitor	Displays various temperatures and fan speeds	Enter	Opens the submenu See "Baseboard monitor" on page 244
Legacy devices	Configures special settings for interfaces	Enter	Opens the submenu See "Legacy devices" on page 245
BIOS	Displays the BIOS version	None	-
MTCX PX32	Displays the MTCX PX32 firmware version	None	-
MTCX FPGA	Displays the MTCX FPGA firmware version	None	-
CMOS profile	Displays the CMOS profile number	None	-
Device ID	Displays the hexadecimal value of the hardware device ID	None	-
Compatibility ID	Displays the version of the device within the same B&R device ID. This ID is needed for Automation Runtime.	None	-
Serial number	Displays the B&R serial number	None	-
Product name	Displays the B&R model number	None	-
User serial ID	Displays the user serial ID. This 8-digit hexadecimal value can be freely specified by the user (e.g. to give the device a unique ID) and can only be changed using the "B&R Control Center" included with the ADI driver.	None	-

Table 201: GM45 Advanced - Baseboard/Panel features - Configuration options

1.4.13.1 Panel control

Figure 134: GM45 Advanced - Panel control

BIOS setting	Function	Configuration options	Effect
Select panel number	Selects the panel number for which the values should be displayed and/or changed	0...15	Selects panel 0-15 Panel 15 is specifically intended for Panel PC 800 systems.
Version	Displays the firmware version of the SDLR controller	None	-
Brightness	Sets the brightness of the selected panel	0%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 100%	Sets the brightness (in %) of the selected panel Changes take effect after saving and restarting the system (e.g. by pressing <F10>).
Temperature	Displays the selected panel's temperature in degrees Celsius and Fahrenheit	None	-
Fan speed	Displays the fan speed for the selected panel	None	-
Keys/LEDs	Displays the available keys and LEDs on the selected panel	None	-

Table 202: GM45 Advanced - Panel control - Configuration options

1.4.13.2 Baseboard monitor

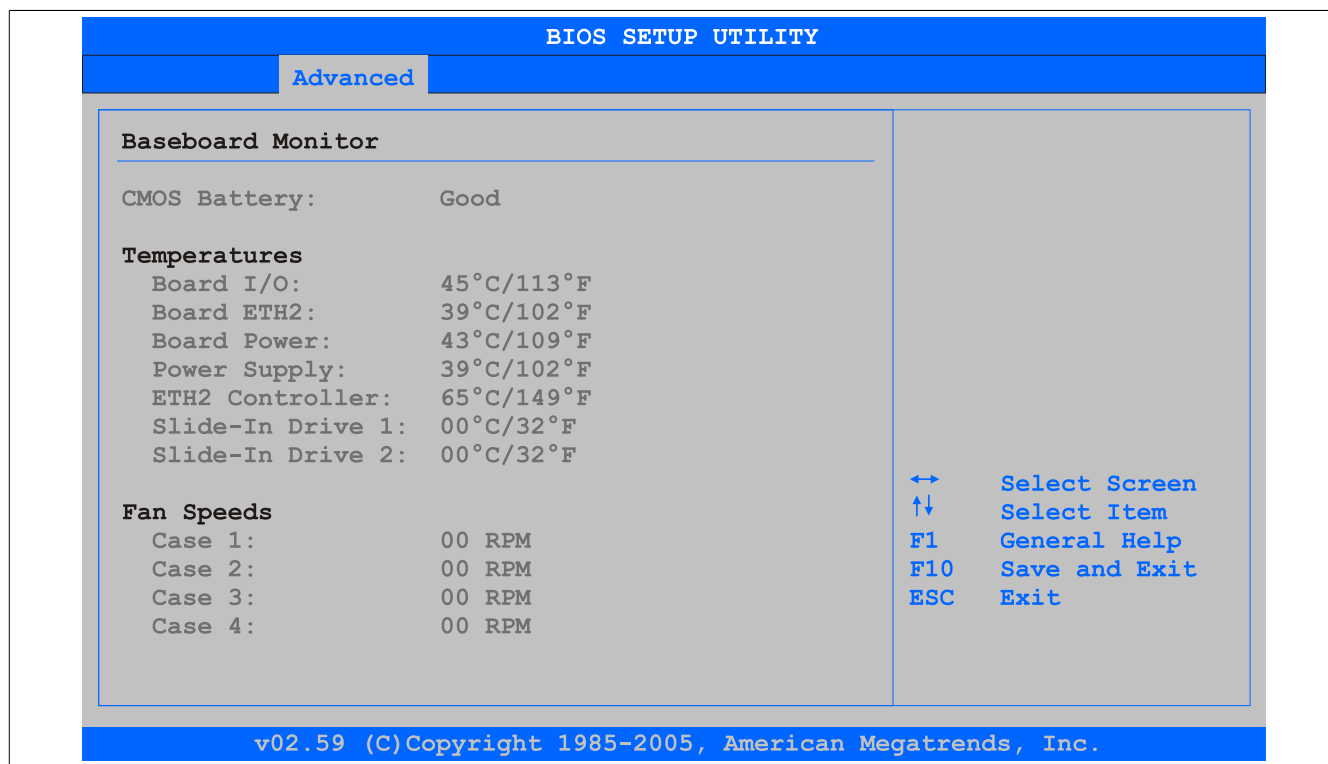

Figure 135: GM45 Advanced - Baseboard monitor

BIOS setting	Function	Configuration options	Effect
CMOS battery	Displays the battery status n.a. - Not available Good - Battery OK Bad - Battery not OK	None	-
Board I/O	Displays the temperature in the I/O area in degrees Celsius and Fahrenheit	None	-
Board ETH2	Displays the temperature in the ETH2 controller chip area in degrees Celsius and Fahrenheit	None	-
Board power	Displays the power supply temperature in degrees Celsius and Fahrenheit	None	-
Power supply	Displays the temperature in the power supply in degrees Celsius and Fahrenheit	None	-
ETH2 controller	Displays the temperature of the ETH2 controller in degrees Celsius and Fahrenheit	None	-
Slide-in drive 1	Displays the temperature of slide-in drive 1 in degrees Celsius and Fahrenheit	None	-
Slide-in drive 2	Displays the temperature of slide-in drive 2 in degrees Celsius and Fahrenheit	None	-
Case 1	Displays the speed of housing fan 1	None	-
Case 2	Displays the speed of housing fan 2	None	-
Case 3	Displays the speed of housing fan 3	None	-
Case 4	Displays the speed of housing fan 4	None	-

Table 203: GM45 Advanced - Baseboard monitor - Configuration options

1.4.13.3 Legacy devices

Figure 136: GM45 Advanced - Legacy devices

BIOS setting	Function	Configuration options	Effect
COM A	Settings for the COM1 serial interface	Enabled	Enables the interface
		Disabled	Disables the interface
Base I/O address	Selects the base I/O address of the COM port	238, 2E8, 2F8, 328, 338, 3E8, 3F8	Assigns the selected base I/O address
Interrupt	Selects the interrupt for the COM port	IRQ 3, IRQ 4, IRQ 5, IRQ 6, IRQ 7, IRQ 10, IRQ 11, IRQ 12	Assigns the selected interrupt
COM B	Settings for the COM2 serial interface	Disabled	Disables the interface
		Enabled	Enables the interface
Base I/O address	Selects the base I/O address of the COM port	238, 2E8, 2F8, 328, 338, 3E8, 3F8	Assigns the selected base I/O address
Interrupt	Selects the interrupt for the COM port	IRQ 3, IRQ 4, IRQ 5, IRQ 6, IRQ 7, IRQ 10, IRQ 11, IRQ 12	Assigns the selected interrupt
COM C	Sets the COM port for the touch screen connected to the monitor/panel interface	Enabled	Enables the interface
		Disabled	Disables the interface
Base I/O address	Selects the base I/O address of the COM port	238, 2E8, 2F8, 328, 338, 3E8, 3F8	Assigns the selected base I/O address
Interrupt	Selects the interrupt for the COM port	IRQ 3, IRQ 4, IRQ 5, IRQ 6, IRQ 7, IRQ 10, IRQ 11, IRQ 12	Assigns the selected interrupt
COM D	Sets the COM port for the touch screen connected to the AP Link interface	Enabled	Enables the interface
		Disabled	Disables the interface
Base I/O address	Selects the base I/O address of the COM port	238, 2E8, 2F8, 328, 338, 3E8, 3F8	Assigns the selected base I/O address
Interrupt	Selects the interrupt for the COM port	IRQ 3, IRQ 4, IRQ 5, IRQ 6, IRQ 7, IRQ 10, IRQ 11, IRQ 12	Assigns the selected interrupt
COM E	Configures the COM port of the 5AC600.4851-00 B&R add-on interface (IF option)	Enabled	Enables the interface
		Disabled	Disables the interface
Base I/O address	Selects the base I/O address of the COM port	238, 2E8, 2F8, 328, 338, 3E8, 3F8	Assigns the selected base I/O address
Interrupt	Selects the interrupt for the COM port	IRQ 3, IRQ 4, IRQ 5, IRQ 6, IRQ 7, IRQ 10, IRQ 11, IRQ 12	Assigns the selected interrupt
CAN	Configures the CAN port on the 5AC600.CANI-00 B&R add-on CAN interface card (IF option)	Disabled	Disables the interface
		Enabled	Enables the interface
Base I/O address	Displays the base I/O address of the CAN port	None	-
Interrupt	Selects the interrupt for the CAN port	IRQ 10, NMI	Assigns the selected interrupt
Hardware security key	Configures settings for the hardware security key (dongle)	Disabled	Disables the interface
		Enabled	Enables the interface
Base I/O address	Displays the base I/O address of the hardware security interface	278, 378, 3BC	Assigns the base I/O address for the parallel port

Table 204: GM45 Advanced - Legacy devices - Configuration options

BIOS setting	Function	Configuration options	Effect
ETH2 LAN controller	Option for turning the onboard LAN controller (ETH2) on and off	Enabled	Enables the controller
		Disabled	Disables the controller
ETH2 MAC address	Displays the MAC address of the Ethernet 2 controller	None	-

Table 204: GM45 Advanced - Legacy devices - Configuration options

1.5 Boot

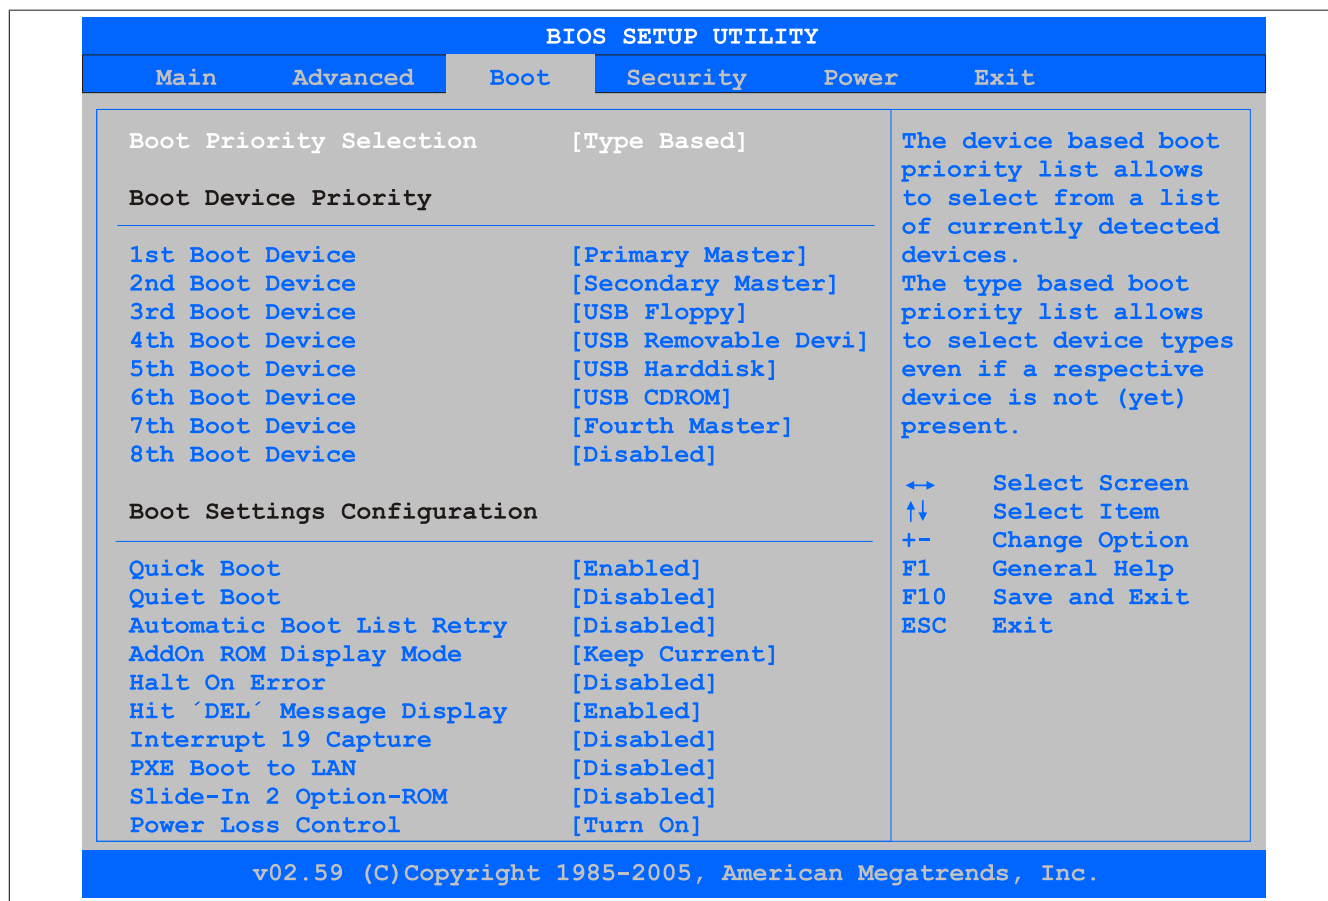

Figure 137: GM45 Boot menu

BIOS setting	Function	Configuration options	Effect
Boot priority selection	Option for determining the method for how drives should be booted	Device based	Only lists devices that are recognized by the system. The order of devices in this list can be changed. Information: It is only possible to use either "Device based" or "Type based". Using both together is not permitted.
		Type based	The boot sequence of a device type list can be changed. It is also possible to add device types that are not connected to this list. Information: It is only possible to use either "Device based" or "Type based". Using both together is not permitted.

Table 205: GM45 Boot menu - Configuration options

BIOS setting	Function	Configuration options	Effect
1st boot device	Option for selecting drives to be used for booting	Disabled, Primary master, Primary slave, Secondary master, Secondary slave, Legacy floppy, USB floppy, USB hard disk, USB CDROM, USB removable device, Onboard LAN, External LAN, PCI mass storage, PCI SCSI card, Any PCI BEV device, Third master, Third slave, PCI RAID, Local BEV ROM, Fourth master, Fourth slave	Specifies the desired boot sequence
2nd boot device			
3rd boot device			
4th boot device			
5th boot device			
6th boot device			
7th boot device			
8th boot device			
Quick boot	This function reduces the boot time by skipping some POST procedures.	Enabled	Enables this function
Quiet boot	Determines whether the POST message or the OEM logo (default = black background) is displayed	Disabled	Disables this function
		Enabled	Displays the OEM logo instead of the POST message
Automatic boot list retry	This option can be used to attempt to restart the operating system automatically if it fails to start the first time.	Disabled	Displays the POST message
		Enabled	Enables this function
Add-on ROM display mode	Sets the display mode for the ROM (during the booting procedure)	Disabled	Disables this function
		Force BIOS	Displays an additional part of BIOS
Halt on error	This option determines the system should resume after a startup error during POST.	Keep current	Displays BIOS information
		Enabled	Pauses the system. The system pauses each time an error occurs.
Hit 'DEL' message display	Configures settings for the "Hit 'DEL'" message	Disabled	Does not pause the system. All errors are ignored.
		Enabled	Displays the message
	<div><div></div><div>Information:</div><div>The message is not displayed if "Quiet boot" is enabled.</div></div>	Disabled	Does not display the message
Interrupt 19 capture	This function can be used to include BIOS interruptions.	Enabled	Enables this function
PXE boot to LAN	Enables/disables the function to boot from LAN (ETH1)	Disabled	Disables this function
		Enabled	Enables this function
Slide-in 2 optional ROM	Enables/Disables optional ROM for a slide-in 2 drive	Disabled	Disables this function
		Enabled	Enables this function
Power loss control	Specifies whether the system should be on/off following power loss	Disabled	Disables this function
		Remain off	System remains off
		Turn on	System powered on
		Last state	Enables the previous state

Table 205: GM45 Boot menu - Configuration options

1.6 Security

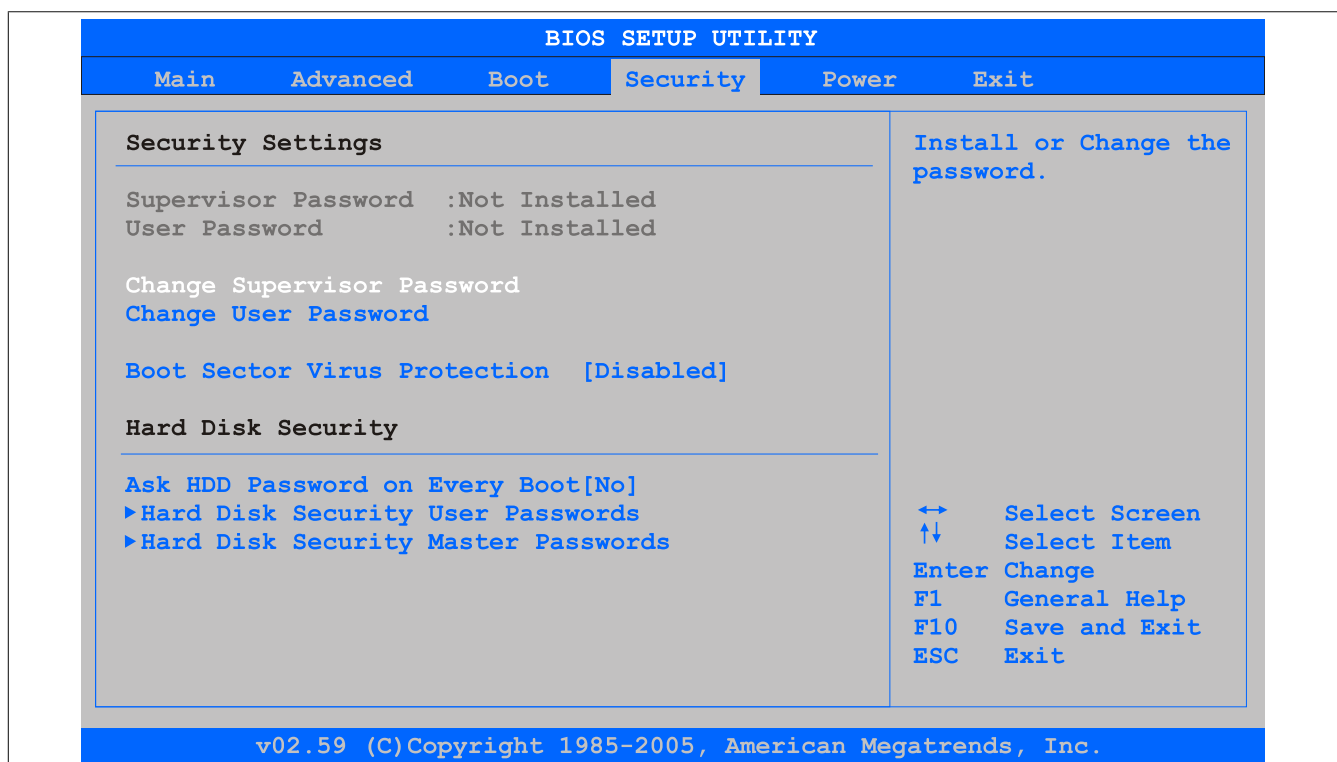

Figure 138: GM45 Security menu

BIOS setting	Function	Configuration options	Effect
Supervisor password	Displays whether a supervisor password has been set	None	-
User password	Displays whether a user password has been set	None	-
Change supervisor password	Function for entering/changing a supervisor password. A supervisor password is necessary to edit all BIOS settings.	Enter	Password entry
Change user password	Function for entering/changing a user password. The user password allows the user to edit only certain BIOS settings.	Enter	Password entry
Boot sector virus protection	This option is used to issue a warning when the boot sector is accessed by a program or virus. Information: This option only protects the boot sector, not the entire hard drive.	Enabled	Enables this function
		Disabled	Disables this function
Ask HDD Password on Every Boot	This option can be used to select whether the hard disk password must be entered each time the system boots. Information: This option only makes sense if a hard disk user security password is set.	Yes	The hard disk password must be entered when booting.
		No	The hard disk password doesn't have to be entered when booting.
Hard disk security user passwords	Creates the hard disk security user password	Enter	Opens the submenu See "Hard disk security user password" on page 248
Hard disk security master passwords	Creates the hard disk security master password	Enter	Opens the submenu See "Hard disk security master password" on page 249

Table 206: GM45 Security menu - Configuration options

1.6.1 Hard disk security user password

Figure 139: GM45 Security - Hard disk security user password

BIOS setting	Function	Configuration options	Effect
Primary slave HDD user password	This function makes it possible to configure or change the user password for each hard drive without having to reboot the device. The user password allows the user to edit only certain BIOS settings.	Enter	Password entry

Table 207: GM45 Security - Hard disk security user password

1.6.2 Hard disk security master password

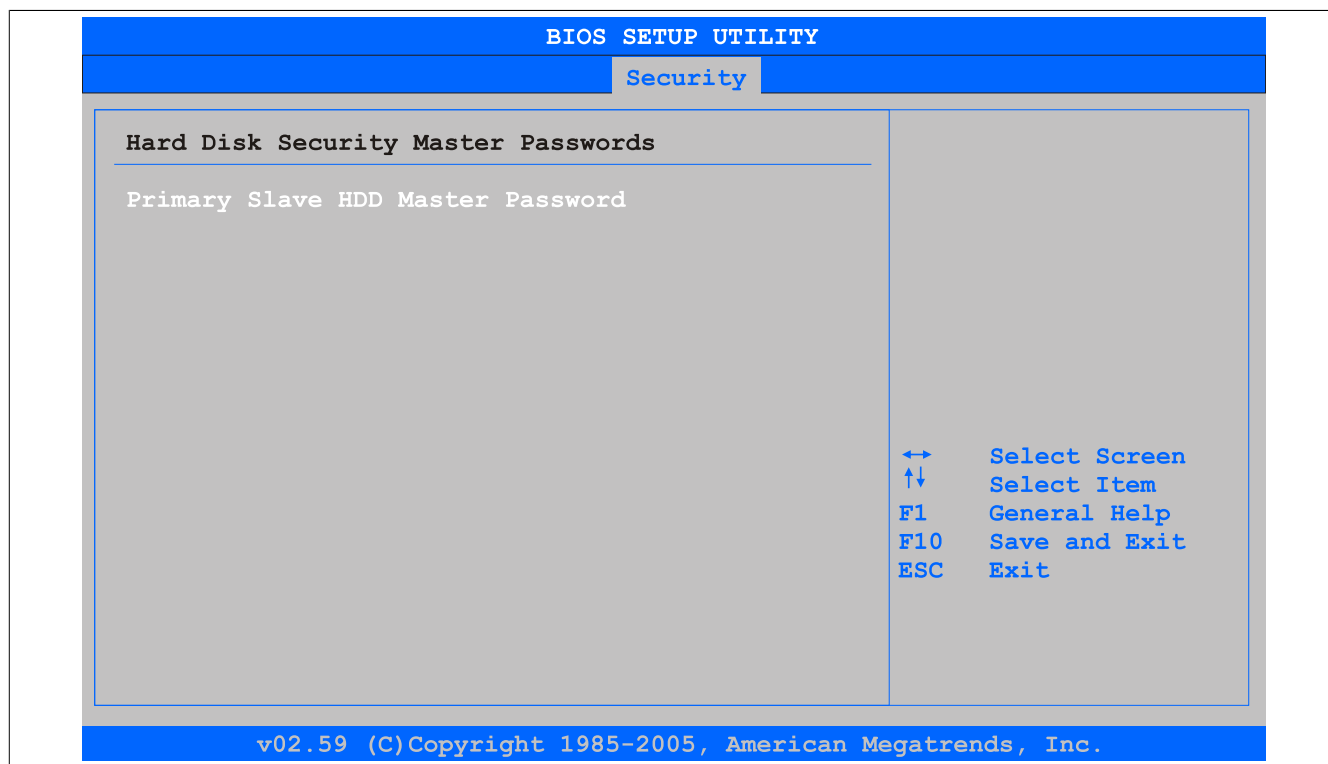

Figure 140: GM45 Security - Hard disk security master password

BIOS setting	Function	Configuration options	Effect
Primary slave HDD master password	This function makes it possible to configure or change the master password for each hard drive without having to reboot the device.	Enter	Password entry

Table 208: GM45 Security - Hard disk security master password

1.7 Power

Figure 141: GM45 Power menu

BIOS setting	Function	Configuration options	Effect
Power Management / APM	This option enables or disables APM functionality. This is advanced plug and play and power management functionality.	Enabled	Enables this function
		Disabled	Disables this function
Suspend time out	This option can be used to configure how long the system must be inactive before entering suspend mode (all components except the CPU are shut down as far as possible).	1 min, 2 min, 4 min, 8 min, 10 min, 20 min, 30 min, 40 min, 50 min, 60 min	Sets the value manually
		Disabled	Disables this function
Video power down mode	This option can be used to set the energy saving mode for the monitor.	Disabled	Does not switch off the monitor
		Standby	Switches the monitor to standby mode
		Suspend	Switches the monitor to suspend mode
Hard disk power down mode	This option is used to set the energy saving mode for the hard drive.	Disabled	Does not switch off the monitor
		Standby	Switches the monitor to standby mode
		Suspend	Switches the monitor to suspend mode
Keyboard & PS/2 mouse	Configures the monitoring of activity during energy saving mode	MONITOR	Returns the system to its normal state from the respective energy saving mode when activity is detected on the keyboard or PS/2 mouse
		IGNORE	Ignores activity
FDC/LPT/COM ports	Configures the monitoring of activity during energy saving mode	MONITOR	Returns the system to its normal state from the respective energy saving mode when activity is detected on the parallel port, serial port 1&2 or the floppy drive port.
		IGNORE	Ignores activity
Primary master IDE	Configures the monitoring of activity during energy saving mode	MONITOR	Returns the system to its normal state from the respective energy saving mode when activity is detected on the IRQ of the respective interface or device
		IGNORE	Ignores activity
Primary slave IDE	Configures the monitoring of activity during energy saving mode	MONITOR	Returns the system to its normal state from the respective energy saving mode when activity is detected on the IRQ of the respective interface or device
		IGNORE	Ignores activity
Secondary master IDE	Configures the monitoring of activity during energy saving mode	MONITOR	Returns the system to its normal state from the respective energy saving mode when activity is detected on the IRQ of the respective interface or device
		IGNORE	Ignores activity
Secondary slave IDE	Configures the monitoring of activity during energy saving mode	MONITOR	Returns the system to its normal state from the respective energy saving mode when activity is detected on the IRQ of the respective interface or device
		IGNORE	Ignores activity
Resume on ring	Returns the PC from energy saving mode when the modem receives an incoming call	Enabled	Enables this function
		Disabled	Disables this function
Resume on PME#	Configures whether the PME wakeup function is enabled or disabled	Enabled	Enables this function
		Disabled	Disables this function
Resume on RTC alarm	This option can be used to enable the alarm and enter the date and time during system startup.	Enabled	Enables this function
		Disabled	Disables this function
Power button mode	This function determines what the power button does.	On/Off	Switches the system on/off
		Suspend	Suppresses this function

Table 209: GM45 Power menu - Configuration options

1.8 Exit

Figure 142: GM45 Exit menu

BIOS setting	Function	Configuration options	Effect
Save changes and exit	Selecting this option closes BIOS Setup. Any changes made are saved to CMOS after confirmation, and the system is rebooted.	OK / Cancel	
Discard changes and exit	Selecting this option closes BIOS Setup without saving any changes made. The system is then rebooted.	OK / Cancel	
Discard changes	This option can be used to reset any settings that may have been made but have been forgotten in the meantime (provided they have not yet been saved).	OK / Cancel	
Load CMOS defaults	This option loads the CMOS default values defined by the DIP switch settings. These values are loaded for all BIOS settings.	OK / Cancel	

Table 210: GM45 Exit menu - Configuration options

1.9 BIOS default settings

The various positions of the CMOS profile hex switch can be used to load predefined BIOS profile settings.

Information:

The factory default switch position represents the optimal BIOS default values for this system and should therefore not be changed.

If the "Load setup defaults" function is selected in the main BIOS Setup screen, or if "Exit" is selected (or <F9> is pressed) in the individual setup screens, the following BIOS settings are the optimized values that will be used.

Profile number	Optimized for	Switch position	Note
Profile 0	Reserved	0	
Profile 1	System unit 5PC810.SX01-00 / 5PC810.SX02-00 / 5PC810.SX03-00	1	The default settings for this profile can be found in the APC810 user's manual. This can be downloaded at no cost from the B&R website.
Profile 2	System unit 5PC810.SX05-00	2	
Profile 3	System unit 5PC820.SX01-00 / 5PC820.SX01-01	3	The default settings for this profile can be found in the APC820 user's manual. This can be downloaded at no cost from the B&R website.
Profile 4	Reserved	4	
Profile 5	System unit 5PC820.1505-00 / 5PC820.1906-00	5	The default settings for this profile can be found in the PPC800 user's manual. This can be downloaded at no cost from the B&R website.

Table 211: Profile overview

The following pages provide an overview of the BIOS default settings for the different CMOS profile switch positions. Settings highlighted in yellow are variations from the BIOS default profile (=profile 0).

1.9.1 Main

Setting/Option	Profile 0	Profile 1	Profile 2	My setting
System time	-	-	-	
System date	-	-	-	
BIOS ID	-	-	-	
Processor	-	-	-	
CPU frequency	-	-	-	
System memory	-	-	-	
Product revision	-	-	-	
Serial number	-	-	-	
BC firmware rev.	-	-	-	
MAC address (ETH1)	-	-	-	
Boot counter	-	-	-	
Running time	-	-	-

1.10 BIOS error signals (beep codes)

While the B&R Industrial PC is booting, the following messages and errors can occur with BIOS. These errors are signaled by different beep codes.

Beep code	Description	Necessary user action
1x short	Memory refresh failed	Load BIOS defaults. If the error persists, send the industrial PC to B&R for testing.
2x short	Parity error: POST error (error in one of the hardware testing procedures)	Check that the card has been inserted properly. If the error persists, send the industrial PC to B&R for testing.
3x short	Base 64 kB memory failure: Basic memory error, RAM error within the initial 64 kB	Send the industrial PC to B&R for testing.
4x short	Timer not operational: System timer	Send the industrial PC to B&R for testing.
5x short	Processor error: Defective processor	Send the industrial PC to B&R for testing.
6x short	8042 gate A20 failure: Defective keyboard controller (block 8042/ gate A20). The processor cannot switch to protected mode.	Send the industrial PC to B&R for testing.
7x short	Processor exception interrupt error: Virtual mode exception error (CPU generated an interrupt error)	Send the industrial PC to B&R for testing.
8x short	Display memory read/write error: Video memory not accessible, defective graphic card or not installed (not a fatal error)	Check that the graphics card has been inserted correctly, replace if necessary. If the error persists, send the industrial PC to B&R for testing.
9x short	ROM checksum error: ROM BIOS checksum incorrect; defective EPROM, EEPROM or flash ROM component; defective BIOS or incorrectly updated	Send the industrial PC to B&R for testing.
10x short	CMOS shutdown register read/write error: Unable to read/write from/ to CMOS	Send the industrial PC to B&R for testing.
11x short	Cache error / external cache bad: Defective L2 cache on the main-board	Send the industrial PC to B&R for testing.

Table 229: GM45 BIOS - POST messages

1.11 Allocation of resources

1.11.1 RAM address assignment

RAM address	Address in hexadecimal	Resource
(TOM - 384 kB) – TOM ¹⁾	N.A.	ACPI reclaim, MPS and NVS area ²⁾
(TOM - 128 MB - 384 kB) – (TOM - 384 kB)	N.A.	VGA frame buffer ³⁾
1024 kB – (TOM - 128 MB - 384 kB)	100000h - N.A.	Extended memory
869 kB – 1024 kB	0E0000h - 0FFFFFFh	Runtime BIOS
832 kB – 869 kB	0D0000h - 0DFFFFh	Upper memory
640 kB – 832 kB	0A0000h - 0CFFFFh	Video memory and BIOS
639 kB – 640 kB	09FC00h - 09FFFFh	Extended BIOS data
0 – 639 kB	000000h - 09FC00h	Conventional memory

Table 230: RAM address assignment

- 1) TOM = Top of memory: max. installed DRAM.
- 2) Only if ACPI Aware OS is set to "YES" in the setup.
- 3) The VGA frame buffer can be reduced to 32 MB in the setup.

1.11.2 I/O address assignments

I/O address	Resource
0000h - 00FFh	Motherboard resources
0170h - 0177h	Secondary IDE channel
01F0h - 01F7h	Primary IDE channel
0238h - 023Fh	COM5
0278h - 027Fh	Hardware security key (LPT2)
02E8h - 02EFh	COM4
02F8h - 02FFh	COM2
0376h - 0376h	Secondary IDE channel command port
0377h - 0377h	Secondary IDE channel status port
0378h - 037Fh	Hardware security key (LPT1)
0384h - 0385h	CAN controller
03B0h - 03DFh	Video system
03E8h - 03EFh	COM3
03F6h - 03F6h	Primary IDE channel command port
03F7h - 03F7h	Primary IDE channel status port
03F8h - 03FFh	COM1
04D0h - 04D1h	Motherboard resources
0500h - 053Fh	Motherboard resources
0800h - 087Fh	Motherboard resources
0A00h - 0A7Fh	Motherboard resources
0CF8h - 0CFBh	PCI config address register
0CFCh - 0CFFh	PCI config data register
0D00h - FFFFh	PCI / PCI Express bus ¹⁾
4100h - 417Fh	MTCX
FF00h - FF07h	IDE bus master register

Table 231: I/O address assignment

- 1) The BIOS assigns the PCI and PCI Express bus I/O resources from FFF0h downward. Devices that are not compatible with PnP/PCI/PCI Express cannot use the I/O resources in this range.

1.11.3 Interrupt assignments in PIC mode

IRQ	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	NMI	NONE

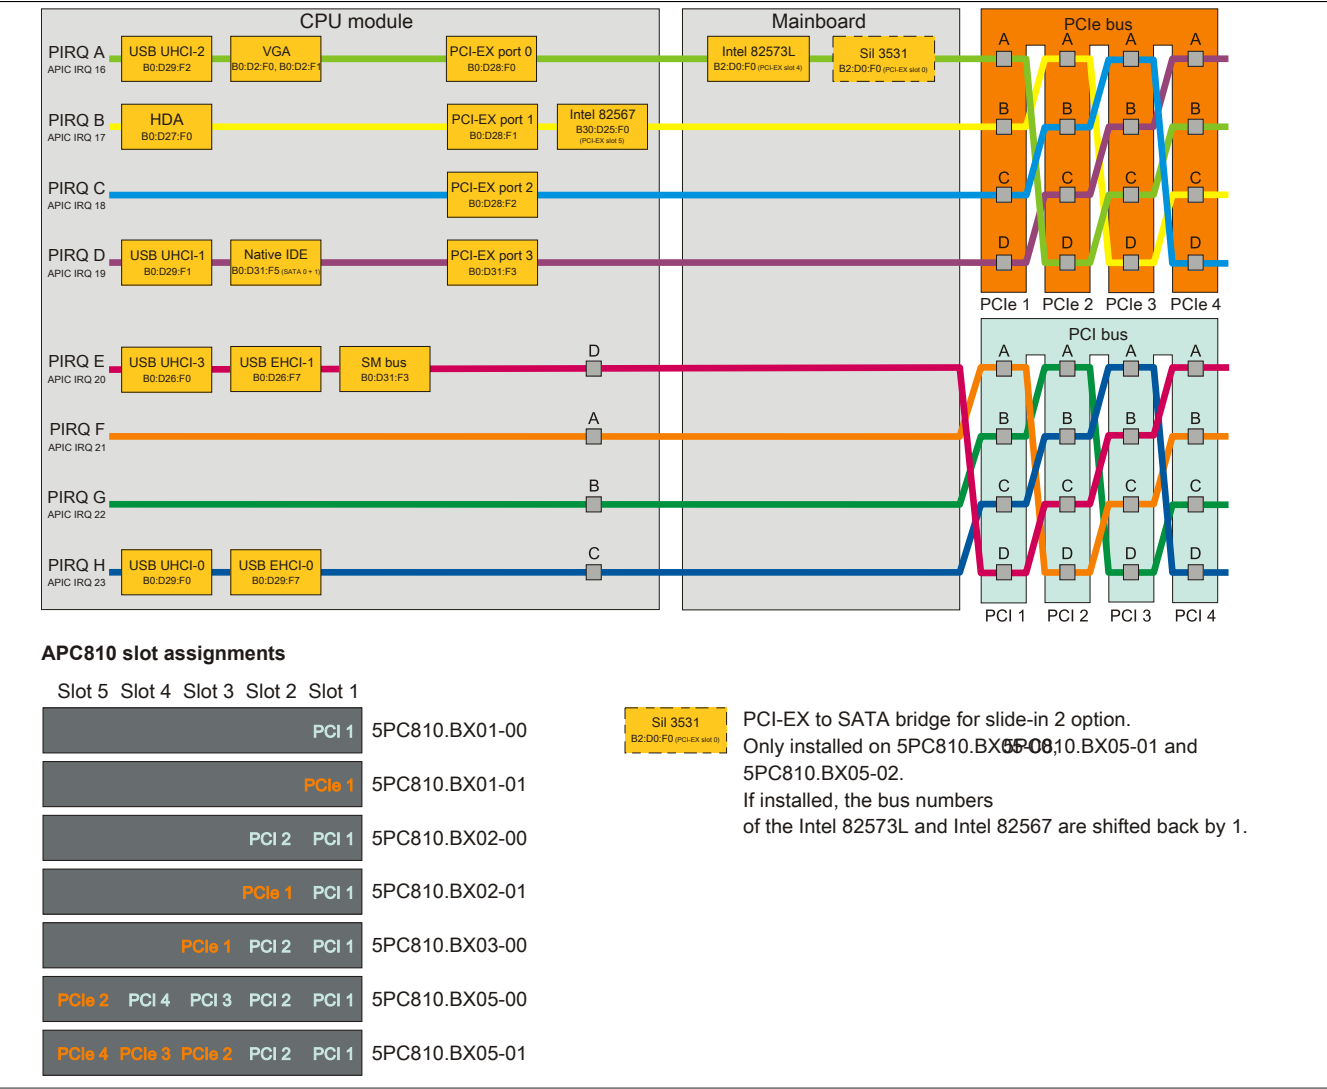

Figure 143: PCI and PCIe routing with enabled APIC for GM45 CPU boards (bus units 5PC810.BX0x-0x)

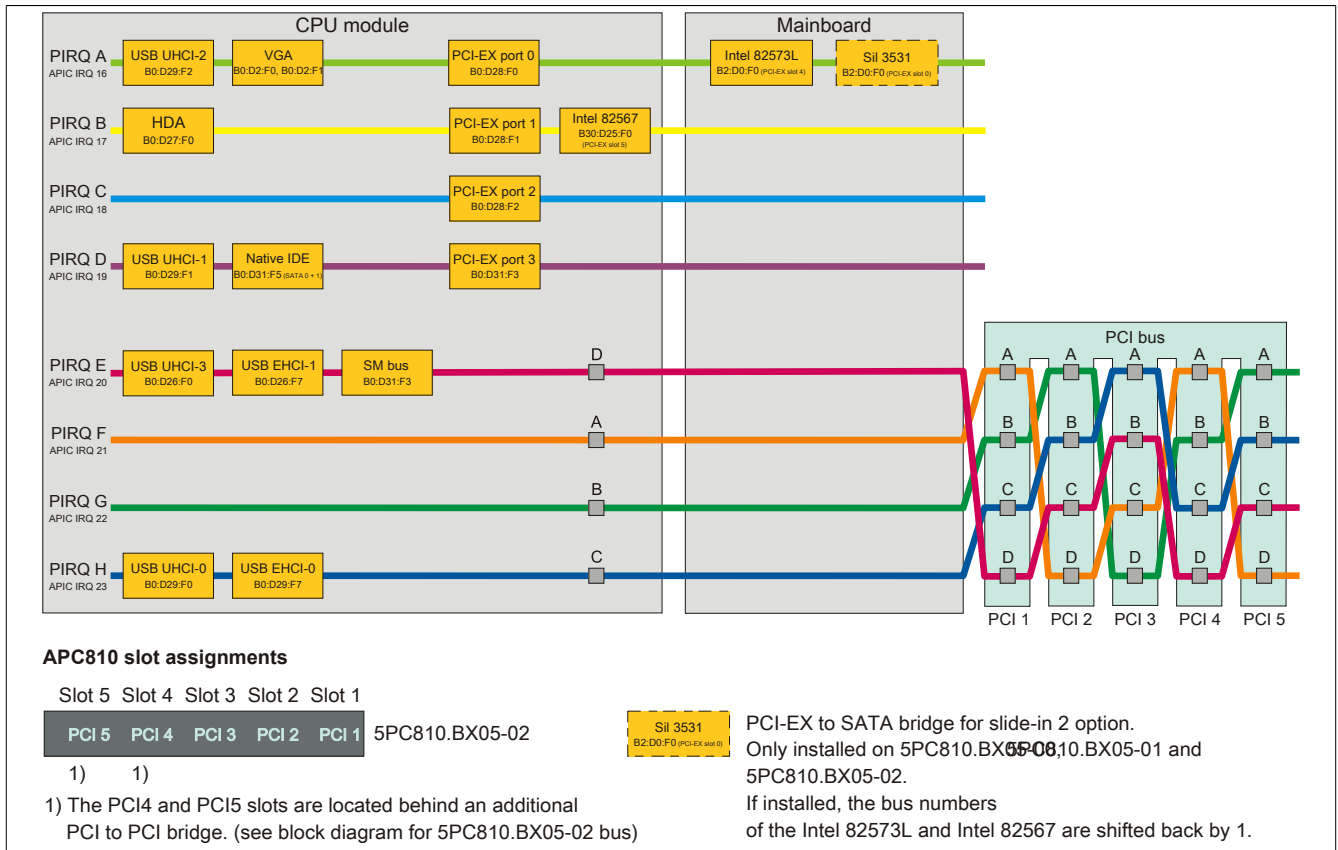

Figure 144: PCI and PCIe routing with the enabled 5PC810.BX05-02 APIC GM45 CPU board (bus unit 5PC810.BX05-02)

2 Upgrade information

Warning!

The BIOS and firmware on B&R devices must be kept current. New versions can be downloaded from the B&R website (www.br-automation.com).

2.1 BIOS upgrade

An upgrade may be necessary in order to accomplish the following:

- Updating implemented functions or adding newly implemented functions or components to BIOS Setup (information about changes can be found in the Readme file for the BIOS upgrade).

2.1.1 Important information

Information:

Customized BIOS settings are deleted when upgrading BIOS.

Before starting an upgrade, it helps to determine the various software versions.

2.1.1.1 Which BIOS version and firmware are already installed on the APC810?

This information can be found on the following BIOS Setup screen:

- After switching on the APC810, BIOS Setup can be accessed by pressing .
- From the BIOS main menu "Advanced", select "Baseboard/Panel features".

Figure 145: Software version

2.1.1.2 Which firmware is installed on the Automation Panel Link transmitter?

This information can be found on the following BIOS Setup screen:

- After switching on the APC810, BIOS Setup can be accessed by pressing .
- From the BIOS main menu "Advanced", select "Baseboard/Panel features" and then "Panel control".

Information:

The version can only be displayed when an Automation Panel with an AP Link SDL transmitter (5AC801.SDL0-00) is connected.

Figure 146: Firmware version of the AP Link SDL transmitter

2.1.2 Procedure with MS-DOS

1. Download the .zip file from the B&R website (www.br-automation.com).
2. Create bootable media.

Information:

In MS-DOS, Win95 and Win98, a blank HD disk can be made bootable by typing "sys a:" or "format a: /s" on the command line.

Information about creating a bootable diskette in Windows XP can be found on page 270.

Information on creating a USB flash drive for a B&R upgrade can be found on page 272.

Information on creating a CompactFlash card for a B&R upgrade can be found on page 273.

3. Copy the contents of the .zip file to the bootable media. If the B&R upgrade was already added when creating the bootable media with the B&R Embedded OS Installer, then this step is not necessary.
4. Connect the bootable media to the B&R device and reboot.
5. The following boot menu will be shown after startup:

```
1. Upgrade AMI BIOS for BM45 (5PC800.BM45-00, -01)
2. Exit
```

Item 1:

BIOS is automatically upgraded (default after 5 seconds).

Item 2:

Returns to the shell (MS-DOS)

Information:

If a button is not pressed within 5 seconds, then item 1 "Upgrade AMI BIOS for BM45" is automatically carried out and the industrial PC is updated automatically.

6. The system must be rebooted after a successful upgrade.
7. Reboot and press to enter BIOS Setup and load the setup defaults, then select "Save changes and exit".

2.2 Firmware upgrade

The "Firmware upgrade (MTCX, SDLT, SDLR, UPS)" software makes it possible to update the firmware for multiple controllers (MTCX, SDLT, SDLR, UPSI) depending on the APC810 system variant.

The latest firmware upgrade is available in the Downloads section of the B&R website (www.br-automation.com).

2.2.1 Procedure

Proceed as follows to carry out a firmware upgrade:

1. Download the .zip file from the B&R website (www.br-automation.com).
2. Create bootable media.

Information:

In MS-DOS, Win95 and Win98, a blank HD disk can be made bootable by typing "sys a:" or "format a: /s" on the command line.

Information about creating a bootable diskette in Windows XP can be found on page 270.

Information on creating a USB flash drive for a B&R upgrade can be found on page 272.

Information on creating a CompactFlash card for a B&R upgrade can be found on page 273.

3. Copy the contents of the .zip file to the bootable media. If the B&R upgrade was already added when creating the bootable media with the B&R Embedded OS Installer, then this step is not necessary.
4. Connect the bootable media to the B&R device and reboot.
5. The following boot menu will be shown after startup:

Information:

The following boot menu options including descriptions are based on Version 1.00 of the APC800 upgrade (MTCX, SDLR, SDLT, UPSI) disk. In some cases, these descriptions might not match the version you are currently using.

```

1. Upgrade MTCX (APC810) PX32 and FPGA
2. Upgrade SDLT (APC810) only
3. Upgrade SDLR (AP800/AP900) on monitor/panel
3.1 Upgrade SDLR on AP 0 (AP800/AP900)
3.2 Upgrade SDLR on AP 1 (AP800/AP900)
3.3 Upgrade SDLR on AP 2 (AP800/AP900)
3.4 Upgrade SDLR on AP 3 (AP800/AP900)
3.5 Upgrade all SDLR (AP800/AP900)
3.6 Return to main menu
4. Upgrade SDLR (AP800/AP900) on AP link slot
4.1 Upgrade SDLR on AP 8 (AP800/AP900)
4.2 Upgrade SDLR on AP 9 (AP800/AP900)
4.3 Upgrade SDLR on AP 10 (AP800/AP900)
4.4 Upgrade SDLR on AP 11 (AP800/AP900)
4.5 Upgrade all SDLR (AP800/AP900)
4.6 Return to main menu
5. Upgrade add-on UPS (firmware and battery settings)
5.1 Upgrade add-on UPS firmware (5AC600.UPSI-00)
5.2 Upgrade Battery Settings (5AC600.UPSB-00)
5.3 Return to main menu
6. Exit

```

Item 1:

Automatically upgrades the PX32 and FPGA of the MTCX (default after 5 seconds)

Item 2:

Automatically updates the FPGA of the SDLT controller on the AP Link slot

Item 3:

Opens Submenu 1 for upgrading the SDLR controller on the monitor/panel interface

3.1 Upgrade SDLR on AP 0 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 0 interface

3.2 Upgrade SDLR on AP 1 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 1 interface

3.3 Upgrade SDLR on AP 2 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 2 interface

3.4 Upgrade SDLR on AP 3 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 3 interface

3.5 Upgrade all SDLR (AP800/AP900)

Automatically updates all SDLR controllers on all Automation Panels on the monitor/panel interface (default selection after 5 sec)

3.6 Return to main menu

Returns to the main menu

Item 4:

Opens Submenu 2 for upgrading the SDLR controller on the AP Link slot

4.1 Upgrade SDLR on AP 8 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 8 interface

4.2 Upgrade SDLR on AP 9 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 9 interface

4.3 Upgrade SDLR on AP 10 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 10 interface

4.4 Upgrade SDLR on AP 11 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 11 interface

4.5 Upgrade all SDLR (AP800/AP900)

Automatically updates all SDLR controllers on all Automation Panels on the AP Link slot (default selection after 5 sec).

4.6 Return to main menu

Returns to the main menu

Item 5:

Opens Submenu 3 for upgrading the add-on UPS firmware and battery settings

5.1 Upgrade add-on UPS firmware (5AC600.UPSI-00)

Updates the firmware for the add-on UPSI

5.2 Upgrade battery settings (5AC600.UPSB-00)

Automatically updates the battery settings for 5AC600.UPSB-00

5.3 Return to main menu

Returns to the main menu

Item 6:

Returns to the shell (MS-DOS)

Information:

The system must be powered off and back on again after a successful upgrade.

2.2.2 Possible upgrade problems and software dependencies (for V1.00)

- The SDLR firmware can only be updated if an Automation Panel with Automation Panel Link transceiver (5DLSDL.1000-01) and Automation Panel Link receiver (5DLSDL.1000-00) is connected.
- Automation Panel Link transceivers (5DLSDL.1000-01) or Automation Panel Link receivers (5DLSDL.1000-00) with a firmware version less than or equal to V00.10 can no longer be combined with Automation Panel Link transceivers (5DLSDL.1000-01) or Automation Panel Link receivers (5DLSDL.1000-00) with a firmware version greater than or equal to V01.04. Daisy chain mode is not possible with this type of a combination.
- If a UPS (e.g. 5AC600.UPSI-00) + battery unit (e.g. 5AC600.UPSB-00) is connected to the system and ready to be operated, then either the battery must be disconnected or the Power button pushed after upgrading the MTCX or SDLT (to put the system in standby mode) before powering the system off and back on. If this is not done, the firmware upgrade will not work since the UPS is buffering the system.
- The "Legacy mouse support" and "Keyboard controller reset" functions are only provided starting with the MTCX PX32 V00.12 and MTCX FPGA V00.09 combination (included on APC810 MTCX upgrade disk V00.05).

2.3 Creating an MS-DOS boot diskette in Windows XP

1. Insert a blank 1.44 MB HD diskette into the disk drive.
2. Open Windows Explorer.
3. Right-click on the 3½ floppy diskette icon and select "Format".

Figure 147: Creating a bootable diskette in Windows XP - Step 1

4. Select the **"Create an MS-DOS startup disk"** option, click on **"Start"** and acknowledge the warning message with "OK".

Figure 148: Creating a bootable diskette in Windows XP - Step 2

Figure 149: Creating a bootable diskette in Windows XP - Step 3

After creating the startup disk, some of the files must be deleted because of the size of the update.

To do this, all files (hidden system files, etc.) must be visible on the diskette.

In Windows Explorer, go to the "Tools" menu, select "Folder options" and open the "View" tab. Then deselect the option "Hide protected operating system files (Recommended)" (enabled by default) and enable the option "Show hidden files and folders".

Figure 151: Creating a bootable diskette in Windows XP - Step 5

Now all files (selected) except Command.com, IO.sys and MSDOS.sys can be deleted.

2.4 Creating a bootable USB flash drive for B&R upgrade files

When used in connection with a B&R Industrial PC, it is possible to upgrade (e.g. upgrade BIOS) from one of the USB flash drives available from B&R. To do this, the USB flash drive must be prepared accordingly. This is done with the B&R Embedded OS Installer, which can be downloaded at no cost from the B&R website (www.br-automation.com).

2.4.1 Requirements

The following is required to create a bootable USB flash drive:

- B&R USB flash drive
- B&R Industrial PC
- USB media drive
- B&R Embedded OS Installer (V3.00 or higher)

2.4.2 Procedure

1. Connect the USB flash drive to the PC.
2. If the drive list is not refreshed automatically, the list can be updated using the command **Drives > Refresh**.
3. Select the desired USB flash drive in the drive list.
4. Change to the **Action** tab and select **Install a B&R update to a USB flash drive** as the type of action.
5. Enter the path to the MS-DOS operating system files. If the files are part of a .zip archive, then click on the button **From .zip file**. If the files are stored in a directory on the hard drive, then click on the button **From folder**.
6. In the **B&R upgrade** text box, it is also possible to enter the path to the .zip file for the B&R upgrade disk and select the file.
7. Click on the **Start action** button in the toolbar.

Figure 152: Creating a USB flash drive for B&R upgrade files

2.4.3 How to access MS-DOS

Information on creating an MS-DOS boot diskette can be found in section see "Creating an MS-DOS boot diskette in Windows XP" on page 270. The files from the diskette are then copied to the hard drive.

2.5 Creating a bootable CompactFlash card for B&R upgrade files

When used in connection with a B&R industrial PC, it is possible to upgrade (e.g. upgrade BIOS) from one of the CompactFlash cards available from B&R. To do this, the CompactFlash card must be prepared accordingly. This is done with the B&R Embedded OS Installer, which can be downloaded at no cost from the B&R website (www.br-automation.com).

2.5.1 Requirements

The following peripherals are required for creating a bootable CompactFlash card:

- CompactFlash card
- B&R Industrial PC
- USB media drive
- B&R Embedded OS Installer (at least V3.10)

2.5.2 Procedure

1. Insert the CompactFlash card in the CF slot on the industrial PC.
2. If the drive list is not refreshed automatically, the list can be updated using the command **Drives > Refresh**.
3. Select the desired CompactFlash card from the drive list.
4. Change to the **Action** tab and select **Install a B&R Update to a CompactFlash card** as the type of action.
5. Enter the path to the MS-DOS operating system files. If the files are part of a .zip archive, then click on the button **From .zip file**. If the files are stored in a directory on the hard drive, then click on the button **From folder**.
6. In the **B&R upgrade** text box, it is also possible to enter the path to the .zip file for the B&R upgrade disk and select the file.
7. Click on the **Start action** button in the toolbar.

Figure 153: Creating a CompactFlash card for B&R upgrade files

2.5.3 How to access MS-DOS

Information on creating an MS-DOS boot diskette can be found in section see "Creating an MS-DOS boot diskette in Windows XP" on page 270. The files from the diskette are then copied to the hard drive.

2.6 Upgrade problems

Potential upgrade problems are listed in the Readme.txt files on the upgrade disks.

3 Microsoft DOS

3.2 Known problems

Either no drivers are available for the following hardware components or only with limitations:

- AC97 sound is not supported.
- USB 2.0: only USB 1.1 rates can be achieved.
- A second graphics line (for e.g. extended desktop mode) cannot be used.
- Some "ACPI control" functions in BIOS cannot be used.

3.3 Resolutions and color depths

The following table shows the tested resolutions and color depths on the monitor/panel interface with 945GME CPU boards.

Resolutions for DVI	Color depth

4.4 Installation

Upon request, B&R can preinstall the required Windows XP Professional version on the desired mass storage device (e.g. CompactFlash card, etc.). All of the drivers required for operation (graphics, network, etc.) are also installed in this process.

4.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03, 5ACPCI.RAIC-05, 5ACPCI.RAIC-06

The following steps are necessary to install Windows XP Professional on a PCI SATA RAID controller:

1. Download the RAID driver from the B&R website www.br-automation.com and copy the files to a diskette.
2. Connect the media drive (5MD900.USB2-01 or 5MD900.USB2-00) to the USB port.
3. Insert the diskette and Windows XP Professional CD in the media drive and boot from the CD.
4. Press the F6 key during installation to install a third-party SCSI or driver.
5. Press the "s" key when asked about installing an additional drive. Insert the diskette into the floppy drive. Press "Enter" and select the driver.
6. Follow the installation instructions.
7. The installer will copy the files to the Windows XP Professional folder and restart the B&R Industrial PC.

4.4.2 For variants with 5 PCI slots

The following steps are necessary when installing to a slide-in HDD being operated in slide-in slot 2 (located behind the PCI to SATA bridge) on the APC810:

1. Download the Si3531 SATA driver from the B&R website www.br-automation.com and copy the files to a diskette.
2. Connect the media drive (5MD900.USB2-01 or 5MD900.USB2-00) to the USB port.
3. Insert the diskette and Windows XP Professional CD in the media drive and boot from the CD.
4. Press the F6 key during installation to install a third-party SCSI or driver.
5. Press the "s" key when asked about installing an additional drive. Insert the diskette into the floppy drive. Press "Enter" and select the driver.
6. Follow the installation instructions.
7. The installer will copy the files to the Windows XP Professional folder and restart the Automation PC 810.

Information:

- Not all USB FDD drives are supported by the Windows XP installer (see Microsoft KB 916196).
- Depending on the system, the boot order may have to be changed in BIOS.

4.5 Drivers

Current drivers for all approved operating systems are available in the Downloads section of the B&R website www.br-automation.com.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

5 Windows 7

5.1 General information

Windows® 7 offers a wealth of innovative features and performance improvements. The 64-bit variants can also exploit the full power of current PC architectures. Faster switching to power saving mode, quicker restores, less memory usage and high-speed detection of USB devices are just a few of the advantages provided by Windows® 7. Both English and German are available in Windows® 7 Professional, while Windows® 7 Ultimate supports up to 35 different languages (up to 36 languages in Service Pack 1). Product activation is not necessary on B&R PCs, which is a huge advantage for simple logistical procedures relating to machine automation.

All of the Windows® operating systems offered by B&R are from the Microsoft Embedded division. This guarantees much longer availability, especially compared to products offered on the consumer market.

1) The memory used by additional language packs is not taken into account in the minimum size of the disk.

5.4 Installation

Upon request, B&R can preinstall the required Windows 7 version on the desired mass storage device (e.g. CompactFlash card, etc.). All of the drivers required for operation (graphics, network, etc.) are also installed in this process.

5.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03, 5ACPCI.RAIC-05, 5ACPCI.RAIC-06

The following steps are necessary for installing Windows 7 on the PCI SATA RAID controller:

1. Download the RAID driver for Windows 7 from the B&R website at www.br-automation.com and copy the data to a folder on a USB flash drive.
2. Boot using the Windows 7 DVD.
3. Follow the installation steps until a page appears asking "Where do you want to install Windows?".
4. Plug the USB flash drive with the RAID drivers into an available USB port.
5. Click on "Load driver" and navigate to the directory containing the RAID drivers. Then click Next to continue.
6. Remove the USB flash drive.
7. The Windows 7 installation can now be performed as usual.

5.4.2 For variants with 5 PCI slots

The following steps are necessary when installing to a slide-in HDD being operated in the slide-in slot 2 (located behind the PCI to SATA Bridge) on the APC810:

1. Download the SiI3531 SATA driver for Windows 7 from the B&R website at www.br-automation.com and copy the data to a folder on a USB flash drive.
2. Boot using the Windows7 DVD.
3. Follow the installation steps until a page appears asking "Where do you want to install Windows?".
4. Plug the USB flash drive with the RAID drivers into an available USB port.
5. Click on "Load driver" and navigate to the directory containing the RAID drivers. Then click Next to continue.

6. Remove the USB flash drive.
7. The Windows 7 installation can now be performed as usual.

Information:

Depending on the system, the boot order may have to be changed in BIOS.

5.5 Special considerations, limitations

- Windows 7 does not contain a Beep.sys file, which means that an audible signal is no longer sounded (e.g. when pressing a key).
- There is currently no support for the Windows 7 system rating (although this does not apply to PP500, APC510, APC511, APC910 or PPC800 devices with an NM10 chipset).

5.6 Drivers

Current drivers for all approved operating systems are available in the Downloads section of the B&R website www.br-automation.com.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

6 Windows Embedded Standard 2009

6.1 General information

Windows® Embedded Standard 2009 is the modular version of Windows® XP Professional. It is used if XP applications should be executed with a minimal operating system size. Together with CompactFlash memory, Windows® Embedded Standard 2009 makes it possible to use the Microsoft desktop operating system in harsh environmental conditions. In addition to the familiar features included in Windows® XP Professional, Windows® Embedded Standard 2009 has been improved with regard to dependability by adding a write filter for individual memory partitions. By protecting individual partitions such as the boot partition, the PC system can be started without problems even after an unexpected power failure. B&R offers complete images for industrial PCs, Power Panel and Mobile Panel devices to make the transition to Windows® Embedded Standard 2009 as easy as possible. In addition to Windows® Embedded Standard 2009, the standard Windows® XP Professional operating system is also available in English, German and a multilingual version.

Windows® Embedded Standard 2009 is based on the same binary files as Windows® XP Professional with Service Pack 3 and is optimally tailored to the hardware being used. In other words, only the functions and modules required by the respective device are included. Windows® Embedded Standard 2009 is also based on the same reliable code as Windows® XP Professional with SP3. It provides industry with leading reliability, security and performance improvements as well as the latest technology for web browsing and extensive device support.

Class Installer	✓
CoDevice Installer	✓
Media Player 6.4	✓
DirectX 9.0c	✓
Accessories	✓
Number of fonts	89

Table 240: Device functions in Windows Embedded Standard 2009

6.5 Installation

Upon request, Windows Embedded Standard 2009 can be preinstalled by B&R on a suitable CompactFlash card (minimum 1 GB). The system is then automatically configured when it is switched on for the first time. This procedure takes approximately 10 minutes, with the device being rebooted a number of times.

6.6 Drivers

All drivers required for operation are preinstalled along with the operating system. If an older version of the driver is still being used, the latest version can be downloaded and installed from the B&R website (www.br-automation.com). It is important that Enhanced Write Filter (EWF) is disabled for this.

6.6.1 Touch screen driver

In order to operate Automation Panel 800 or Automation Panel 900 touch screen devices, the touch screen driver must be installed manually or the touch screen interface updated in the device manager. The driver is available in the Downloads section of the B&R website (www.br-automation.com). It is important that Enhanced Write Filter (EWF) is enabled for this.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

7 Windows Embedded Standard 7

7.1 General information

The successor to Windows® XP Embedded is Windows® Embedded Standard 7. As with previous versions, this embedded operating system offers full system support for B&R Industrial PCs. In addition to brand new features that are also included in Windows® 7 Professional, Windows® Embedded Standard 7 includes embedded components such as Enhanced Write Filter, File-Based Write Filter, Registry Filter and USB Boot. Windows® Embedded Standard 7 is available in two different versions. The main difference between them has to do with multilingual support. Windows® Embedded Standard 7 is only available in a single language, whereas Windows® Embedded Standard 7 Premium supports the installation of several languages simultaneously.

With Windows® Embedded Standard 7, Microsoft has made substantial improvements in the area of security. The AppLocker program, available in the premium version, can prevent the execution of unknown or potentially undesired applications that are being installed over a network or from drives that are directly connected. A tiered approach allows the differentiation between scripts (.ps1, .bat, .cmd, .vbs and .js), installation files (.msi, .msp) and libraries (.dll, .ocx). AppLocker can also be configured to record undesired activity and display it in the Event Viewer. Windows® Embedded Standard 7 is available in both a 32-bit and 64-bit version.⁴⁾, which ensures that even the most demanding applications have the level of support they need.

7.3 Overview

Model number	Edition	Target system	Chipset	Service Pack	Architectures	Language	Preinstalled	Minimum disk size	Minimum RAM required
5SWWI7.1533-ENG	Embedded	APC810	GM45	SP1	32-bit	English	Optional	16 GB	1 GB
5SWWI7.1633-ENG	Embedded	APC810	GM45	SP1	64-bit	English	Optional	16 GB	2 GB
5SWWI7.1733-MUL	Premium	APC810	GM45	SP1	32-bit	Multilingual	Optional	16 GB ¹⁾	1 GB
5SWWI7.1833-MUL	Premium	APC810	GM45	SP1	64-bit	Multilingual	Optional	16 GB ¹⁾	2 GB

1) The memory used by additional language packs is not taken into account in the minimum size of the disk.

7.4 Features with WES7 (Windows Embedded Standard 7)

The following list of features shows the most important device functions included in Windows Embedded Standard 7.

Function	Windows Embedded Standard 7	Windows Embedded Standard 7 Premium
Enhanced Write Filter (EWF)	✓	✓
File-Based Write Filter (FBWF)	✓	✓
Administrator accounts	✓	✓
User accounts	Configurable	Configurable

Table 242: Device functions in Windows Embedded Standard 7

⁴⁾ 64-bit versions are not supported by all systems.

Function	Windows Embedded Standard 7	Windows Embedded Standard 7 Premium
Windows Explorer shell	✓	✓
Registry filter	✓	✓
Internet Explorer 8.0	✓	✓
Internet Information Service (IIS) 7.0	✓	✓
Anti-malware (Windows Defender)	-	✓
Add-ons (Snipping Tool, Sticky Notes)	-	✓
Windows Firewall	✓	✓
.NET Framework 3.5	✓	✓
32-bit and 64-bit	✓	✓
Remote Desktop Protocol 7.0	✓	✓
File Compression Utility	✓	✓
Windows Installer Service	✓	✓
Windows XP mode	-	-
Media Player 12	✓	✓
DirectX	✓	✓
Multilingual user interface packs in the same image	-	✓
International components and language services	✓	✓
Language pack setup	✓	✓
Windows update	Configurable	Configurable
Windows PowerShell 2.0	✓	✓
BitLocker	-	✓
AppLocker	-	✓
Tablet PC support	-	✓
Windows Touch	-	✓
Boot from USB flash drive	✓	✓
Accessories	✓	✓
Page file	Configurable	Configurable
Number of fonts	134	134

Table 242: Device functions in Windows Embedded Standard 7

7.5 Installation

Upon request, B&R can preinstall Windows Embedded Standard 7 on a suitable CompactFlash card (32-bit: minimum 8 or 16 GB, 64-bit: minimum 16 GB). The system is then automatically configured when it is switched on for the first time. This procedure takes approximately 30 minutes, with the device being rebooted a number of times.

Information:

If the EWF should be used, all mass storage devices should be disconnected from the system during installation oder SYSPREP (except for the boot drive). It is also possible to disable additional mass storage devices in BIOS.

7.6 Drivers

All drivers required for operation are preinstalled along with the operating system. If an older version of the driver is still being used, the latest version can be downloaded and installed from the B&R website (www.br-automation.com). It is important that Enhanced Write Filter (EWF) is disabled for this.

7.6.1 Touch screen driver

A touch screen driver will be installed automatically if a touch controller is detected during the Windows Embedded Standard 7 installation. If a touch controller is not detected during Windows Embedded Standard 7 installation or a B&R Automation Panel is connected at a later time, then the touch screen driver needs to be installed manually or the additional touch screen interface must be selected in the touch screen settings in the Windows Control Panel. The driver is available in the Downloads section of the B&R website (www.br-automation.com). It is important that both the Enhanced Write Filter (EWF) and the File Based Write Filter (FBWF) are disabled for this.

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

8 Automation Runtime

8.1 General information

An integral component of Automation Studio is the real-time operating system, which makes up the software kernel that allows applications to run on a target system.

- Guaranteed highest possible performance for the hardware being used
- Runs on all B&R target systems
- Makes the application hardware-independent
- Easy portability of applications between B&R target systems
- Deterministic behavior guaranteed by cyclic runtime system
- Multitasking according to deterministic runtime rules
- Configuration of priorities, time classes and jitter tolerance
- Up to eight different time classes with any number of subroutines
- Guaranteed response to time and jitter tolerance violations
- Exception handling
- Configurable jitter tolerance in all task classes
- Support for all relevant programming languages, including IEC 61131-3 and ANSI C
- Extensive function library conforming to IEC 61131-3 as well as the expanded Automation library
- Access to all networks and bus systems via function calls or the Automation Studio configuration

B&R Automation Runtime is fully embedded in the corresponding target system (the hardware where Automation Runtime is installed). It allows application programs to access I/O systems (e.g. via fieldbus) and other devices (interfaces, networks, etc.).

8.2 Order data

Model number	Short description	Figure
	Automation Runtime	
1A4600.10	B&R Automation Runtime ARwin, incl. license sticker and copy protection	
1A4600.10-2	B&R Automation Runtime ARwin, ARNC0	
1A4600.10-3	B&R Automation Runtime ARwin+PVIControls incl. license sticker and copy protection	
1A4600.10-4	B&R Automation Runtime ARwin+ARNC0+PVIControls	
1A4601.06	B&R Automation Runtime ARemb, incl. license sticker and copy protection	
1A4601.06-2	B&R Automation Runtime ARemb, ARNC0	

Table 243: 1A4600.10, 1A4600.10-2, 1A4600.10-3, 1A4600.10-4, 1A4601.06, 1A4601.06-2 - Order data

8.3 Automation Runtime Windows (ARwin)

System support is provided by ARwin with an AS 2.7 / AR 2.xx upgrade.

8.4 Automation Runtime Embedded (ARemb)

System support is provided by ARemb with an AS 3.0.90 / AR 4.00 upgrade.

9 B&R Automation Device Interface (ADI) - Control Center

The ADI (Automation Device Interface) enables access to specific functions on B&R devices. Settings for devices can be read and configured using the B&R Control Center applet in the Control Panel.

Figure 154: ADI Control Center screenshots - Examples

Information:

The temperature and voltage values (e.g. CPU temperature, core voltage, battery voltage) shown in the corresponding ADI window represent uncalibrated values for informational purposes. They cannot be used to draw any conclusions about hardware alarms or error conditions. The hardware components used have automatic diagnostic functions that can be applied in the event of error.

9.1 Functions

Information:

The functions provided by the Automation Device Interface (ADI) - Control Center vary according to the device series.

- Changing display-specific parameters
- Reading device-specific keys
- Updating the key configuration
- Enabling device-specific LEDs on a membrane keypad
- Reading and calibrating control devices (e.g. key switches, handwheels, joysticks, potentiometers)
- Reading temperatures, fan speeds, statistical data and switch settings
- Reading operating hours (power-on hours)
- Reading user and factory settings
- Reading software versions
- Updating and backing up BIOS and firmware
- Creating reports about the current system (support assistance)
- Setting the SDL equalizer value when adjusting SDL cables
- Changing the user serial ID

Supports the following systems:

- Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Automation PC 910
- Panel PC 300
- Panel PC 700
- Panel PC 725
- Panel PC 800
- Panel PC 900
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500
- Mobile Panel 40/50
- Mobile Panel 100/200
- Connected Automation Panel 800
- Connected Automation Panel 900

9.2 Installation

A detailed description of the Control Center can be found in the integrated online help documentation. The B&R Automation Device Interface (ADI) driver (also contains Control Center) is available in the Downloads section of the B&R website (www.br-automation.com).

1. Download and unzip the .zip archive.
2. Close all applications.
3. Run the Setup.exe file (e.g. double-click on it in Explorer).

Information:

The ADI driver is already included in B&R images of embedded operating systems.

If a more current ADI driver version exists (see the Downloads section of the B&R website), it can be installed later. It is important that Enhanced Write Filter (EWF) is disabled for this.

9.3 SDL Equalizer settings

1. Open the **Control Center** in the **Control Panel**.
2. Select the **Display** tab.
3. Click on **Settings**. This opens the following window:

Figure 155: ADI Control Center - SDL Equalizer settings

The settings in this window can be used to configure the SDL Equalizer settings for the display. The equalizer is integrated into Automation Panel devices and adapts the DVI signal to different cable lengths. The equalizer value is automatically calculated based on the cable length. It is possible to set a different equalizer value in order to obtain the best possible display quality (e.g. in the event of low-quality cables or poor DVI signal quality).

The optimal value for the cable length is defined by selecting "Use automatic setting".

The equalizer value can only be changed if the function is supported by Automation Panel 900 (Panel firmware version 1.04 or higher).

9.4 UPS configuration

This window displays the status values for an optionally installed B&R add-on UPS and allows the battery settings for the UPS to be edited, updated and backed up. It is also possible to configure the system settings for the UPS.

Figure 156: ADI Control Center - UPS settings

Caution!

The installed UPS must be selected and configured in the Power Options section of the Control Panel in order for battery operation to be supported.

Information:

The UPS service is supported in B&R Windows Embedded Version 2.10 and higher.

9.4.1 Installing the UPS service for the B&R add-on UPS

1. Open the **Control Center** in the **Control Panel**.
2. Select the **UPS** tab.
3. Under **UPS settings**, click on **System**. This opens the **Power options** in the Control Panel (**Power options** can also be opened directly from the **Control Panel**).
4. Go to the **UPS** tab and click **Select**.
5. Select "Bernecker + Rainer" as the manufacturer and "APC add-on UPS" as the model and then click **Finish**. The value for the COM connection is only required for a serially connected UPS and is ignored by the APC add-on UPS driver.
6. Click on **Apply** to start the UPS service. The UPS status and details will be displayed after a few seconds.
7. Click **OK**.

The text field next to **System** (on the **UPS** tab in the **Control Center**) also indicates whether the B&R UPS driver is active.

Information:

Administrator rights are required in order to change the energy options or display the UPS status.

9.4.2 Displaying UPS default values

1. Open the **Control Center** in the **Control Panel**.
2. Select the **UPS** tab.

The displayed values are updated automatically.

Information:

The status "Reversed battery polarity" is only displayed if using UPS firmware version 1.08 or higher. With UPS firmware versions 1.07 and older, switching between battery operation and normal operation can lead to a communication error.

3. Select "UPS monitor" to display UPS status changes since the last time the system or UPS driver was started.

Figure 157: ADI Control Center - UPS monitor

The window is updated automatically when the status changes.

To remove a status from the list, click on **Clear**.

Information:

The current status of the UPS is also displayed on the UPS page in the power options when the UPS service is started in the Windows Control Panel.

Information:

In a German version of Windows XP Professional the battery status is shown as "Low" in the power options even if the battery is OK (Windows error). In an English version, three battery status levels are displayed: unknown, OK and replace. A low battery status is never displayed.

9.4.3 Changing UPS battery settings

1. Open the **Control Center** in the **Control Panel**.
2. Select the **UPS** tab.
3. Under **Battery settings**, click on **Edit**. This opens the "Open" dialog box.
4. Select and **open** the file containing the battery settings.

Figure 158: ADI Control Center - UPS battery settings

This window can be used to change the settings for the UPS battery.

Click **OK** to write the changed settings to the file. The battery settings for the UPS can then be updated with this file.

Information:

To make settings for non-B&R batteries, it is best to make a copy of a file that contains battery settings from B&R under a new name and then adjust the settings in this new file for the battery being used.

Current files with settings for batteries from B&R can be updated using B&R's "Upgrade PPC800 MTCX" software.

Information:

- The current UPS firmware version 1.10 does not use charge end voltage, deep discharge voltage, service life and deep discharge cycles.
- Service life is only included in version 2 (and higher) of the UPS battery settings and only valid for B&R UPS batteries at 25°C ambient temperature.
- Deep discharge cycles are only included in version 3 (and higher) of the UPS battery settings and only valid for UPS batteries from B&R.

Information:

To change the current battery settings on the UPS, they must first be saved to a file.

9.4.4 Updating UPS battery settings

1. Open the **Control Center** in the **Control Panel**.
2. Select the **UPS** tab.
3. Under **Battery settings**, click on **Update**. Clicking on "Open" opens a dialog box.
4. Select and **open** the file containing the battery settings. The "Download" dialog box is opened.

The transfer can be canceled by clicking on **Cancel**. "Cancel" is disabled when writing to flash memory.

Information:

- The UPS cannot be operated while the battery settings are being updated.
- If the transfer is aborted, then the procedure must be repeated until the battery settings have been updated successfully. Otherwise, battery operation will no longer be possible.

Deleting the data in flash memory can take several seconds depending on the memory block being used. The progress indicator is not updated during this time.

Information:

The UPS is automatically restarted after a successful download. This can cause a brief failure in the UPS communication.

9.4.5 Saving UPS battery settings

1. Open the **Control Center** in the **Control Panel**.
2. Select the **UPS** tab.
3. Under "Battery settings", click on **Save**. This opens the "Save as" window.
4. Enter a filename or select an existing file and click on **Save**.

Information:

UPS settings can only be saved with UPS firmware version 1.10 and higher.

The transfer can be aborted by clicking on **Cancel** in the Download dialog box.

9.4.6 Configuring UPS system settings

1. Open the **Control Center** in the **Control Panel**.
2. Select the **UPS** tab.
3. Under **UPS settings**, click on **Change**. This opens the following window:

Figure 159: ADI Control Center - UPS settings

Additional information regarding UPS system settings can be found in the Windows help documentation.

Information:

- UPS settings can only be changed with UPS firmware version 1.10 and higher. If there are no modified settings on the UPS, then the factory or default settings are used.
- The UPS is automatically restarted after the UPS settings have been changed. This can cause a brief disruption in communication with the UPS.
- Administrator rights are required in order to change the energy options or display the UPS status.

9.4.6.1 Disabling 8 A current limitation

Information:

It is not UL-compliant to switch off the 8 A current limitation on devices during battery operation!

"Low battery" shutdowns caused by overcurrent >8 A on devices running on the battery are not UL compliant!

Select the checkbox **Disable current limitation (8 A)**.

If current limitation is enabled (checkbox not selected), then the UPS uses battery operation to check whether the UPS battery is discharged with 8 A for longer than 16 seconds. If so, then an overcurrent alarm is sent to the PC.

Information:

Current limitation is only supported with UPS firmware version 1.10 and higher.

Enabling one of the two following options determines how the UPS should perform when an overcurrent alarm occurs:

If **Turn-off within 1 minute** is selected, then the UPS will be switched off within one minute when an overcurrent alarm occurs.

Warning!

The operating system will not be properly shut down if an overcurrent alarm occurs!

If **Perform "low battery" shutdown** is selected, then the UPS will also signal a "Low battery alarm" in addition to the overcurrent alarm and will be switched off after the defined **Low battery shutdown time**. This will allow the operating system to shut down properly when the UPS service is enabled.

9.4.6.2 Changing the shutdown time of the UPS when the battery is low

Enter the **Low battery shutdown time** in seconds. This is the amount of time that the UPS will wait before shutting off the power supply when the battery level is low.

This prevents the UPS battery from becoming too low if the Windows UPS service is not enabled to have the operating system turn off the UPS.

If the UPS service is enabled, then the UPS will be turned off by the operating system in accordance with the **Shutdown time** UPS service in Windows (see "Changing additional UPS settings" on page 292) when the battery level is low. The **Low battery shutdown time** will then be ignored.

Information:

- The low battery shutdown time must be set to at least 60 seconds so that the operating system has enough time to send the shutdown command to the UPS when the battery level is low (normally occurs after approximately 30 seconds).
- The low battery shutdown time can only be set with UPS firmware version 1.10 and higher. UPS firmware version 1.08 always uses a switch-off delay of 180 seconds. UPS firmware versions older than 1.08 do not shut down automatically when the battery level is low.

9.4.7 Changing additional UPS settings

1. Open the **Control Center** in the **Control Panel**.
2. Select the **UPS** tab.
3. Under **UPS settings**, click on **Advanced**. This opens the following window:

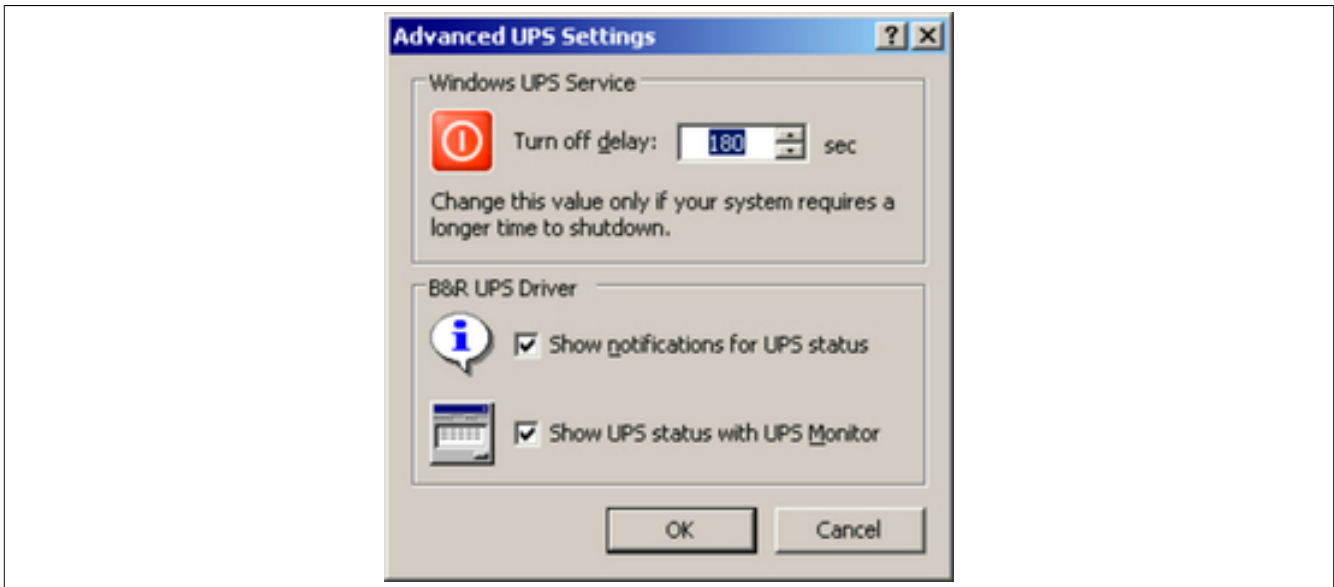

Figure 160: ADI Control Center - Advanced UPS settings

Information:

Administrator rights are required in order to display this window.

9.4.7.1 Changing the UPS shutdown time

The **Turn off delay** can be entered under **Windows UPS service** in seconds. This is the length of time that the UPS waits before switching off the power supply. When a critical alarm occurs (e.g. low battery level), the Windows UPS service will send a shutdown command with the turn off delay time to the UPS and shut down the system.

Information:

This time is evaluated by the Windows UPS Service but cannot be set in the UPS system settings of the power options. This value should only be changed if the system requires longer than the default setting of 180 seconds to shut down.

Caution!

The time entered must be longer than the time required to shut down the operating system.

9.4.7.2 Enabling UPS notifications

Under **B&R UPS driver**, enable the checkbox **Show notifications for UPS status**. Any changes to the UPS status will then trigger a message from the B&R UPS driver.

Information:

Shutting down the system is only reported by the Windows UPS service. The UPS service also sends other notifications if so enabled in the UPS system settings in the power options. These messages are only displayed when the Windows Messenger service⁵⁾ is active and the PC is connected to a network. In addition, some conditions of the B&R add-on UPS are not detected by the Windows UPS Service and therefore do not trigger messages (e.g. when there are no battery settings on the UPS). Windows services can be found by opening the Control Panel and selecting "Services" under "Administrative tools".

If the checkbox **Show UPS status with UPS monitor** is also enabled, a new message is not displayed for every change. Instead, only a general message and request to start the B&R UPS monitor are shown. As long as the UPS monitor is active, no new messages will be displayed.

Information:

Regardless of these options, all changes to the UPS status are logged in the Windows event log (under "Application").

⁵⁾ The Windows Messenger service is supported starting with B&R Windows Embedded version 2.20 and higher.

9.4.8 Procedure following power failure

9.4.8.1 Overcurrent shutdown

If overcurrent >8 A is present during battery operation for a duration of 16 seconds, then an overcurrent shutdown takes place. A switch-off time of one minute is available to the system.

If power returns during this time, then the shutdown process is aborted.

Information:

Overcurrent shutdown has the highest priority.

9.4.8.2 Low battery shutdown

If the LowBatteryFlag is set during power failure, then a "low battery" shutdown is performed to prevent the battery from fully discharging. Once the switch-off time expires (3 minutes by default), the UPS shuts down.

If an "overcurrent" shutdown or "standard" shutdown is detected during the shutdown process, the "low battery" shutdown is replaced by the respective process.

9.4.8.3 Standard shutdown

The standard shutdown is in effect whenever the UPS service is active; the switch-off time is 3 minutes by default.

If power returns during the switch-off time, then the shutdown procedure is aborted.

If power returns during the shutdown process, then the shutdown timer will run until the B&R Industrial PC enters standby mode, at which point the system will be rebooted.

10 B&R Automation Device Interface (ADI) Development Kit

This software can be used to access B&R Automation Device Interface (ADI) functions directly from Windows applications created in one of the following development environments:

- Microsoft Visual C++ 6.0
- Microsoft Visual Basic 6.0
- Microsoft Embedded Visual C++ 4.0
- Microsoft Visual Studio 2005 (or newer)

Figure 161: ADI Development Kit screenshots (version 3.60)

Features:

- One Microsoft Visual Basic module with ADI function declarations
- Header files and import libraries for Microsoft Visual C++
- Help files for Visual Basic and Visual C++
- Sample projects for Visual Basic and Visual C++
- ADI DLL (for application testing if no ADI driver is installed)

The following systems are supported (version 3.60 and higher):

- Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Automation PC 910
- Panel PC 300
- Panel PC 700
- Panel PC 800
- Panel PC 900
- Power Panel 100/200
- Power Panel 300/400

- Power Panel 500
- Mobile Panel 40/50
- Mobile Panel 100/200

The ADI driver installed on the stated product series must be suitable for that device. The ADI driver is already included in B&R images of embedded operating systems.

A detailed description of how to use ADI functions can be found in the online help documentation.

The B&R Automation Device Interface (ADI) development kit is available at no cost in the Downloads section of the B&R website (www.br-automation.com).

11 B&R Automation Device Interface (ADI) .NET SDK

This software can be used to access B&R Automation Device Interface (ADI) functions directly from .NET applications created using Microsoft Visual Studio 2005 or later.

Supported programming languages:

- Visual Basic
- Visual C++
- Visual C#

System requirements

- Development system: PC with Windows XP/7 and
 - Microsoft Visual Studio 2005 (or newer)
 - Microsoft .NET Framework 2.0 and/or Microsoft .NET Compact Framework 2.0 (or newer)

Figure 162: ADI .NET SDK screenshots (version 2.00)

Features (version 2.00 and higher):

- ADI .NET class library
- Help files in HTML Help 1.0 format (.chm) and MS Help 2.0 format (.HxS) (help documentation is in English)
- Sample projects and code snippets for Visual Basic, Visual C++ and Visual C#
- ADI DLL (for application testing if no ADI driver is installed)

The following systems are supported (version 2.00 and higher):

- Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Automation PC 910
- Panel PC 300
- Panel PC 700
- Panel PC 800
- Panel PC 900
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500
- Mobile Panel 40/50
- Mobile Panel 100/200

The ADI driver installed on the stated product series must be suitable for that device. The ADI driver is already included in B&R images of embedded operating systems.

A detailed description of how to use ADI functions can be found in the online help documentation.

The ADI .NET SDK is available in the Downloads section of the B&R website (www.br-automation.com).

12 B&R Key Editor

On display devices, it is often necessary to adapt the function keys and LEDs directly to the application software being used. The B&R Key Editor makes it quick and easy to implement a unique configuration for the application.

Figure 163: B&R Key Editor screenshots (version 3.40)

Features:

- Configuration of normal keyboard keys (A, B, C, etc.)
- Keyboard shortcuts (CTRL+C, SHIFT+DEL, etc.) using only one key
- Special key functions (change brightness, etc.)
- Assignment of functions to LEDs (HDD access, power, etc.)
- 4 assignments possible per key (using layers)
- Configuration of the panel locking time when multiple Automation Panel 900 devices are connected to Automation PC and Panel PC devices.

The following systems are supported (version 3.40):

- Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Automation PC 910
- Automation Panel 800
- Automation Panel 830
- Automation Panel 900

- Automation Panel 9x3
- IPC2000, IPC2001, IPC2002
- IPC5000, IPC5600
- IPC5000C, IPC5600C
- Mobile Panel 40/50
- Mobile Panel 100/200
- Panel PC 300
- Panel PC 700
- Panel PC 800
- Panel PC 900
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500

A detailed guide for configuring keys and LEDs can be found in the B&R Key Editor's online help documentation. The B&R Key Editor is available at no cost in the Downloads section of the B&R website (www.br-automation.com). It can also be found on the B&R HMI Drivers & Utilities DVD (model number 5SWHMI.0000-00).

Chapter 5 • Standards and certifications

1 Standards and guidelines

1.1 CE mark

This mark certifies that all harmonized EN standards for the applicable directives have been met for B&R products.

1.2 EMC directive

These devices meet the requirements of EC directive "2004/108/EC Electromagnetic compatibility" and are designed for the following areas:

EN 61131-2:2007	Programmable logic controllers - Part 2: Equipment requirements and tests
EN 61000-6-2:2005	Electromagnetic compatibility (EMC) - Part 6-2: Generic standards - Immunity for industrial environments
EN 61000-6-4:2007	Electromagnetic compatibility (EMC) - Part 6-4: Generic standards - Emission standard for industrial environments

1.3 Low voltage directive

These devices satisfy the requirements of EC directive "2006/95/EC Low voltage directive" and are designed for the following areas:

EN 61131-2:2007	Programmable logic controllers - Part 2: Equipment requirements and tests
EN 60204-1:2006 + A1:2009	Safety of machinery - Electrical equipment of machines - Part 1: General requirements

2 Certifications

Danger!

A complete system can only receive certification if ALL of the individual components it includes have the applicable certifications. If an individual component is being used that DOES NOT have an applicable certification, then the complete system will NOT RECEIVE certification.

B&R products and services comply with applicable standards. This includes international standards from organizations such as ISO, IEC and CENELEC, as well as national standards from organizations such as UL, CSA, FCC, VDE, ÖVE, etc. We are committed to ensuring the reliability of our products in an industrial environment.

Unless otherwise specified, the following certifications apply:

2.1 UL certification

Products with this label have been certified by Underwriters Laboratories and are listed as "Industrial Control Equipment". This mark is valid for the USA and Canada and simplifies the certification of your machines and systems in these areas.

Underwriters Laboratories (UL) in accordance with the UL508 standard - 17th Edition
Canadian (CSA) standard in accordance with C22.2 No. 142-M1987

2.2 Certifications for use in potentially explosive environments

2.2.1 UL Haz. Loc. Certifications

Products with this label have been certified by Underwriters Laboratories and are listed as "Industrial Control Equipment for Use in Hazardous Locations". This mark is valid for the USA and Canada and simplifies the certification of your machines and systems in these areas.

Underwriters Laboratories (UL) in accordance with standard ANSI/ISA 12.12.01:2011
Canadian (CSA) standard in accordance with C22.2 No. 213-M1987

Ind. Cont. Eq.
for Haz.Locs.
Cl. I, Div. 2,
Groups ABCD
Listed 2P61

2.2.2 ATEX certification

Products with this mark have been certified by an accredited certification body and have been approved for use in potentially explosive environments.

II 3D Ex tc IIIA T85°C Dc
IP20 Tamb: 0°C to 55°C
FTZU 11 E 0001U

2.2.3 Requirements for use in potentially explosive environments

General safety guidelines

Automation PC 810 devices are suitable for use in the environments described above as well as in environments that are not at risk of explosion. Wiring must follow national regulations and meet all legal requirements. Devices must be installed in suitable protective housings and final assembly must be inspected and approved by the local authorities. Additional equipment must be suitable for the operating location.

Devices with explosion protection are to be used as intended and are only permitted to be operated by knowledgeable and qualified personnel according to these operating instructions and the corresponding user's manual. Operation in any other way endangers the safety and functionality of the devices and the connected systems. The operator is responsible for following all applicable safety and accident prevention regulations, as well as adhering to standards.

Mounting and installation

Automation PC 810 systems must be installed according to the guidelines in the user's manual. In order to guarantee sufficient air circulation, the specified amount of space around the device must be provided. The maximum ambient temperature is 50°C. A fan kit must be used in conjunction with a 5PC800.BM45-xxx processor board. The tightening torque for the power supply terminals is 0.5 Nm. Cables must be able to handle a surface temperature of 75°C. Devices must remain voltage-free until installation work is complete. Devices must be used within a potential equalization system and connected to the potential offset. ATEX: Devices must be installed in a protective housing that meets minimum IP54 (EN 60529) and "tc" (EN 60079-31) protection requirements.

Maintenance

Accumulated dust must be removed regularly.

Breakdowns and disassembly

Devices must be shut down and protected against accidental startup. Defective devices must be replaced by knowledgeable and qualified personnel.

The battery (Renata CR2477N) or fuses must not be removed while voltage is applied or only removed when in non-hazardous areas.

Danger!

Explosion hazard: Replacing components may impair eligibility for Class I, Division 2!

Explosion hazard: Connectors must not be disconnected while voltage is applied or only disconnected when in non-hazardous areas.

Warning!

Only non-transmitting USB devices used in accordance with the operating manual are permitted!

Conformity test and certification

Devices marked "Ex" satisfy the requirements set forth in directives 2004/108/EC and 94/9/EC as well as the harmonized standards EN 61131-2:2007, EN 61000-6-2:2005, EN 61000-6-4:2007, cl. 5.3 EN 60079-0:2009, cl. 6.1.2 EN 60079-31:2009.

Devices marked with "c-UL-us" satisfy the requirements set forth in CSA Std C22.2 No. 213-M1987, CSA Std C22.2 No. 142-M1987, UL Std 508 - 17th Edition and ANSI/ISA 12.12.01:2011.

Product documentation in detail

Additional product information is available on the B&R website at www.br-automation.com or from these user's manuals.

2.3 GOST-R

Products with this mark have been certified by an accredited certification body and have been approved for import to the Russian Federation.

Chapter 6 • Accessories

The following accessories have successfully completed functional testing at B&R and are approved for use with this device. Nevertheless, it is important to observe any limitations that may apply to the complete system when operated with other individual components. When operating the complete system, the specifications for the individual components must be adhered to.

All components listed in this manual have been subjected to extensive system and compatibility testing and are approved for use. B&R can make no guarantee regarding the functionality of non-approved accessories.

1 Replacement CMOS batteries

1.1 0AC201.91 / 4A0006.00-000

1.1.1 General information

This lithium battery is needed to back BIOS CMOS data and the real-time clock (RTC).

The battery is subject to wear and must be replaced when the battery power is insufficient ("Bad" status).

1.1.2 Order data

Model number	Short description	Figure
	Batteries	
0AC201.91	Lithium batteries 4 pcs., 3 V / 950 mAh button cell We hereby state that the lithium cells contained in this shipment qualify as "partly regulated". Handle with care. If the package is damaged, inspect the cells, repack intact cells and protect the cells against short circuit. For emergency information, call RENATA SA at +41 61 319 28 27.	
4A0006.00-000	Lithium battery, 3 V / 950 mAh, button cell	

Table 244: 0AC201.91, 4A0006.00-000 - Order data

1.1.3 Technical data

Warning!

The battery must be replaced by a Type CR2477N Renata battery only. The use of another battery may present a risk of fire or explosion.

The battery may explode if handled improperly. Do not recharge, disassemble or dispose of in fire.

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

Product ID	0AC201.91	4A0006.00-000
General information		
Storage time	Max. 3 years at 30°C	
Certification		
CE	Yes	
cULus	Yes	
Electrical characteristics		
Capacity	950 mAh	
Self-discharging	<1% per year (at 23°C)	
Voltage range	3 V

2 Power connectors

2.1 0TB103.9x

2.1.1 General information

The single-row 3-pin terminal block 0TB103 is used to connect the supply voltage.

2.1.2 Order data

Model number	Short description	Figure
	Terminal blocks	
0TB103.9	Connector, 24 VDC, 3-pin female, 3.31 mm ² screw clamp, protected against vibration by the screw flange	
0TB103.91	Connector, 24 VDC, 3-pin female, 3.31 mm ² cage clamp, protected against vibration by the screw flange	

Table 246: 0TB103.9, 0TB103.91 - Order data

2.1.3 Technical data

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

Product ID	0TB103.9		0TB103.91	
General information				
Certification				
CE			Yes	
cULus			Yes	
cULus HazLoc Class 1 Division 2			Yes ¹⁾	
GL			Yes ¹⁾	
Terminal block				
Note	Protected against vibration by the screw flange Nominal values according to UL			
Number of pins	3 (female)			
Type of terminal clamp	Screw clamps		Cage clamps ³⁾	
Cable type	Only copper wires (no aluminum wires!)			
Distance between contacts	5.08 mm			
Connection cross section				
AWG wire	26 to 14 AWG		26 to 12 AWG	
Wire end sleeves with plastic covering			0.20 to 1.50 mm²	
Solid wires			0.20 to 2.50 mm²	
Fine strand wires	0.20 to 1.50 mm²		0.20 to 2.50 mm²	
With wire end sleeves			0.20 to 1.50 mm²	
Fastening torque	0.4 Nm		-	
Electrical characteristics				
Nominal voltage	300 V			
Nominal current ²⁾	10 A / contact			
Contact resistance	≤5 mΩ			

Table 247: 0TB103.9, 0TB103.91 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) The limit data for each I/O module must be taken into consideration.
- 3) Cage clamp terminal blocks cannot be used side-by-side.

3 Replacement fan

3.1 General information

Information:

Fan filters are subject to wear and should be checked with appropriate frequency to determine whether the air flow provides sufficient cooling. Replacing or cleaning the fan filter is appropriate at that time.

3.2 Order data

Model number	Short description	Figure
	Accessories	
5AC801.FA01-00	APC810 replacement fan filter for 5PC810.SX01-00; 5 pcs.

5 CompactFlash cards

5.1 General information

CompactFlash cards are storage media that are easy to replace. Due to their robustness against environmental influences (e.g. temperature, shock, vibration, etc.), CompactFlash cards are ideal for use as storage media in industrial environments.

5.2 General information

In order to be suited for use in industrial automation, CompactFlash cards must be highly reliable. The following items are very important to achieving the necessary level of reliability:

- The flash technology used
- An efficient algorithm for maximizing service life
- Good mechanisms for detecting and fixing errors in the flash memory

5.2.1 Flash technology

Currently, CompactFlash cards are available with MLC (multi-level cell) and SLC (single-level cell) flash blocks. SLC flash memory has a service life 10 times longer than MLC, which is why only CompactFlash cards with SLC flash blocks are suited for industrial applications.

5.2.2 Wear leveling

Wear leveling is an algorithm that can be used to maximize the service life of a CompactFlash card. There are three different algorithms:

- No wear leveling
- Dynamic wear leveling
- Static wear leveling

The basic idea behind wear leveling is to distribute data over a broad area of blocks or cells on the disk so that the same areas don't have to be cleared and reprogrammed over and over again.

5.2.2.1 No wear leveling

The earliest CompactFlash cards didn't have an algorithm for maximizing service life. The service life of a CompactFlash card was determined only by the guaranteed lifespan of the flash blocks.

5.2.2.2 Dynamic wear leveling

Dynamic wear leveling makes it possible to utilize unused flash blocks when writing to a file.

If the disk is 80% full with files, then only 20% can be used for wear leveling.

The service life of the CompactFlash card is therefore dependent on the amount of unused flash blocks.

5.2.2.3 Static wear leveling

Static wear leveling monitors which data is rarely modified. From time to time, the controller then moves this data to blocks that have already been used frequently in order to prevent further wear on those cells.

5.2.3 ECC error correction

Bit errors can be caused by inactivity or when a certain cell is being operated. Error correction coding (ECC) implemented via hardware or software can detect and correct many errors of this type.

5.2.4 S.M.A.R.T. support

Self-Monitoring, Analysis and Reporting Technology (S.M.A.R.T.) is an industry standard for mass storage devices that has been introduced to monitor important parameters and quickly detect imminent failures. Critical performance and calibration data is monitored and stored in order to help predict the probability of errors.

5.2.5 Maximum reliability

CompactFlash cards supplied by B&R use SLC flash blocks and static wear leveling together with a powerful ECC algorithm to provide maximum reliability.

5.3 5CFCRD.xxxx-06

5.3.1 General information

Information:

B&R CompactFlash cards 5CFCRD.xxxx-06 and CompactFlash cards from a different manufacturer cannot be used in the same system at the same time. Due to differences in technology (older vs. newer technologies), problems can occur during system startup that are caused by different boot times.

see "Known problems/issues" on page 323

Information:

5CFCRD.xxxx-06 CompactFlash cards are supported on B&R devices with WinCE version ≥ 6.0 .

5.3.3 Technical data

Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

5.5 5CFCRD.xxxx-03

5.5.1 General information

Information:

Western Digital CompactFlash cards 5CFCRD.xxxx-03 and CompactFlash cards from a different manufacturer cannot be used in the same system at the same time. Due to differences in technology (older vs. newer technologies), problems can occur during system startup that are caused by different boot times.

see "Known problems/issues" on page 323

Information:

On Windows CE 5.0 devices, 5CFCRD.xxxx-03 CompactFlash cards up to 1 GB are supported.

Information:

On CompactFlash cards 5CFCRD.xxxx-03, only the sticker and the description have changed. The technical data has not been changed.

5.5.3 Technical data

Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, B&R recommends that you use a UPS device.

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

5.5.5 Dimensions

Figure 173: Type I CompactFlash card - Dimensions

5.6 Known problems/issues

The following is a known issue for devices with two CompactFlash slots:

- Using two different types of CompactFlash cards can cause problems with Automation PCs and Panel PCs. For example, it is possible that one of the two cards is not detected during system startup. This is caused by different startup speeds. CompactFlash cards with older technology require significantly more time during system startup than CompactFlash cards with newer technology. This behavior occurs near the end of the time frame provided for startup. The problem described can occur because the startup time for the CompactFlash cards fluctuates due to the different components being used. Depending on the CompactFlash cards being used, this error may occur never, sometimes or always.

6 USB media drive

6.1 5MD900.USB2-01

6.1.1 General information

The USB media drive is a drive combination with diskette, DVD-RW/CD-RW drive, CompactFlash slot and USB ports (front and back). It is connected to a USB port on the B&R Industrial PC.

- Desktop or rack-mounted operation (mounting rail brackets)
- Integrated USB diskette drive
- Integrated DVD-RW/CD-RW drive
- Integrated IDE/ATAPI CompactFlash slot (hot pluggable)
- Integrated USB 2.0 connection (up to 480 Mbit high speed)
- +24 VDC supply (back)
- USB/B 2.0 connection (back)
- Optional front cover

6.1.8 Contents of delivery

Quantity	Component
1	USB media drive
2	Mounting rail brackets

Table 258: 5MD900.USB2-01 - Contents of delivery

6.1.9 Installation

The USB media drive can be operated as a desktop device (rubber feet) or as a rack-mounted device (2 mounting rail brackets included).

6.1.9.1 Mounting orientation

Because of limits to the mounting orientation with the components used (floppy, DVD-CDRW drive), the USB media drive is only permitted to be mounted and operated as shown in the following figure.

Figure 178: 5MD900.USB2-01 - Mounting orientation

6.2 5MD900.USB2-02

6.2.1 General information

The USB media drive features a DVD-R/RW DVD+R/RW drive, a CompactFlash slot and one USB port on both the front and back. It is connected to a USB port on the B&R Industrial PC.

- Desktop or rack-mounted operation (mounting rail brackets)
- Integrated DVD-R/RW DVD+R/RW drive
- Integrated IDE/ATAPI CompactFlash slot (hot pluggable)
- Integrated USB 2.0 connection
- +24 VDC supply (back)
- USB 2.0 connection (back)
- Optional front cover

Figure 186: USB media drive with front cover - Installation cutout

7 USB flash drives

7.1 5MMUSB.2048-00

7.1.1 General information

USB flash drives are storage media that are easy to replace. Because of their fast data transfer (USB 2.0), USB flash drives are ideal for use as portable data storage. Without requiring additional drivers ("hot plugging", except in the case of Windows 98SE), the USB flash drive can immediately act as an additional drive where data can be read or written.

Information:

Due to the vast quantity of USB flash drives available on the market as well as their short product life cycle, we reserve the right to supply alternative products at any time. The following measures may therefore be necessary in order to boot from these flash drives as well:

- The flash drive must be reformatted or in some cases even repartitioned (set active partition).
- The flash drive must be the first bootable device in the BIOS boot order; alternatively, the IDE controllers can be disabled in BIOS. This can be avoided in most cases if the "fdisk /mbr" command is additionally executed on the USB flash drive.

7.1.2 Order data

7.1.3 Technical data

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

Product ID	5MMUSB.2048-00
General information	
Data retention	10 years
LEDs	1 LED (green) ¹⁾
MTBF	100,000 hours (at 25°C)
Type	USB 1.1, USB 2.0
Maintenance	None
Certification CE	Yes
Interfaces	
USB	
Type	USB 1.1, USB 2.0
Connection	To any USB type A interface
Transfer rate	Low speed (1.5 Mbit/s), full speed (12 Mbit/s), high speed (480 Mbit/s)
Sequential reading	Max. 8.7 MB/s
Sequential writing	Max. 1.7 MB/s
Support	
Operating systems	
Windows XP Professional	Yes
Windows XP Embedded	Yes
Windows ME	Yes
Windows 2000	Yes
Windows CE 5.0	Yes
Windows CE 4.2	Yes
Electrical characteristics	
Power consumption	650 µA sleep mode, 150 mA read/write

Table 266: 5MMUSB.2048-00 - Technical data

Product ID	5MMUSB.2048-00
Environmental conditions	
Temperature	
Operation	0 to 45°C
Storage	-20 to 60°C
Transport	-20 to 60°C
Relative humidity	
Operation	10 to 90%, non-condensing
Storage	5 to 90%, non-condensing
Transport	5 to 90%, non-condensing
Vibration	
Operation	10 to 500 Hz: 2 g (19.6 m/s ² 0-peak), oscillation rate 1/minute
Storage	10 to 500 Hz: 2 g (19.6 m/s ² 0-peak), oscillation rate 1/minute
Transport	10 to 500 Hz: 2 g (19.6 m/s ² 0-peak), oscillation rate 1/minute
Shock	
Operation	Max. 40 g (392 m/s ² 0-peak) and 11 ms duration
Storage	Max. 80 g (784 m/s ² 0-peak) and 11 ms duration
Transport	Max. 80 g (784 m/s ² 0-peak) and 11 ms duration
Altitude	
Operation	Max. 3048 m
Storage	Max. 12192 m
Transport	Max. 12192 m
Mechanical characteristics	
Dimensions	
Width	19 mm
Length	52.2 mm
Height	7.9 mm

7.1.4 Temperature humidity diagram

Figure 187: 5MMUSB.2048-00 - Temperature humidity diagram

7.2 5MMUSB.xxxx-01

7.2.1 General information

USB flash drives are storage media that are easy to replace. Because of their fast data transfer (USB 2.0), USB flash drives are ideal for use as portable data storage. Without requiring additional drivers ("hot plugging", except in the case of Windows 98SE), the USB flash drive can immediately act as an additional drive where data can be read or written.

Information:

Due to the vast quantity of USB flash drives available on the market as well as their short product life cycle, we reserve the right to supply alternative products at any time. The following measures may therefore be necessary in order to boot from these flash drives as well:

- The flash drive must be reformatted or in some cases even repartitioned (set active partition).
- The flash drive must be the first bootable device in the BIOS boot order; alternatively, the IDE controllers can be disabled in BIOS. This can be avoided in most cases if the "fdisk /mbr" command is additionally executed on the USB flash drive.

7.2.2 Order data

Model number	Short description	Figure

8 HMI Drivers & Utilities DVD

8.1 5SWHMI.0000-00

8.1.1 General information

This DVD contains drivers, utilities, software upgrades and user's manuals for B&R panel system products (see the "Industrial PCs" or "Visualization and operation" section of the B&R website at www.br-automation.com).

When the DVD is created, its contents are identical to the files found in the Downloads section of the B&R website (Service / Material-related downloads).

- Internet Explorer 5.0 (German and English)
- Internet Explorer 6.0 (German and English)

9 Uninterruptible power supply

With an optionally integrated UPS, the B&R Industrial PC makes sure that the PC system completes write operations even when a power failure occurs. When the UPS detects a power failure, it switches to battery operation immediately without interruption. Any running programs will be properly terminated by the UPS. This eliminates the chance of inconsistent data (only works if the UPS has already been configured and the drive is enabled).

Information:

- The monitor/panel is not buffered by the UPS and will shut off when the power fails.
- More detailed information about uninterruptible power supplies can be found in the user's manual for the external UPS. This can be downloaded from the B&R website.

Because the charging circuit is integrated in the housing of the B&R Industrial PC, installation has been simplified to merely attaching the connection cable to the battery unit mounted next to the PC.

Special emphasis was placed on ease of maintenance when the battery unit was designed. Batteries are easily accessible from the front and can be replaced in just a few moments when servicing.

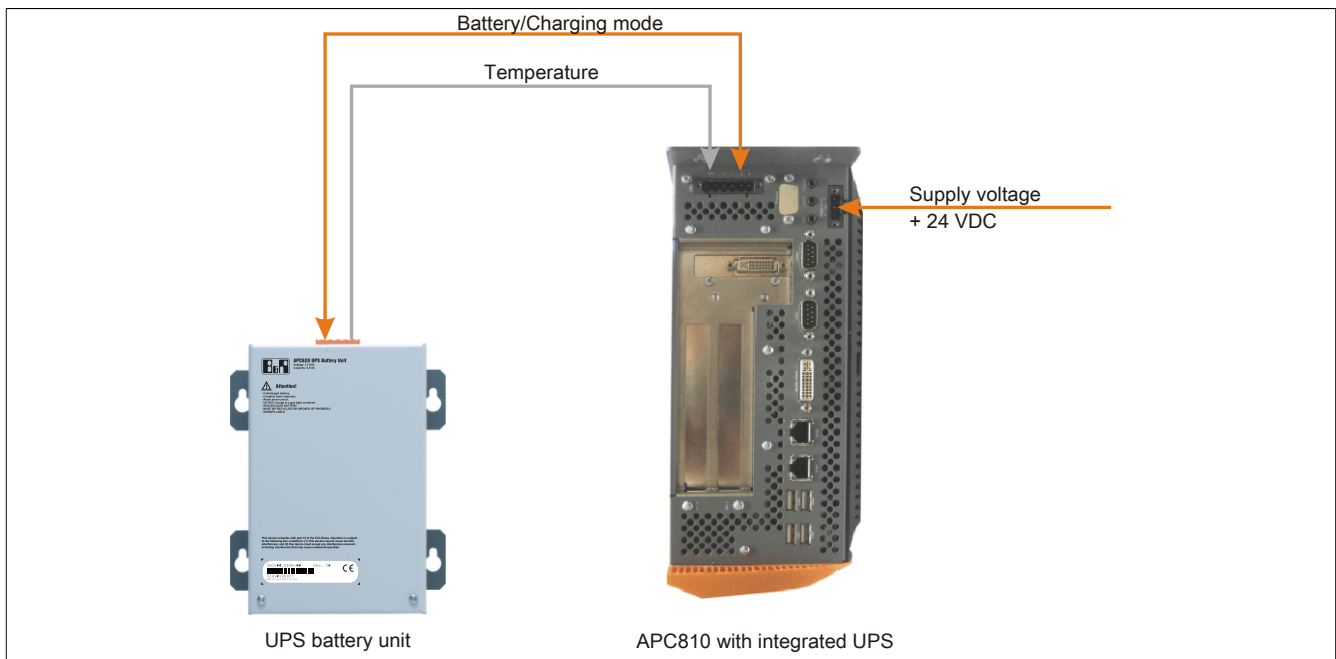

Figure 189: UPS principle

9.1 Features

- Long-lasting, maintenance-free rechargeable batteries
- Communication via integrated interfaces
- Temperature sensor
- Driver software
- Deep discharge protection

9.2 Requirements

- A suitable system unit
- Add-on UPS module 5AC600.UPSI-00
- Battery unit 5AC600.UPSB-00
- UPS connection cable 0.5 m (5CAUPS.0005-00) or 3 m (5CAUPS.0030-00)
- Configuration of the B&R UPS in the ADI Control Center

9.3 5AC600.UPSI-00

9.3.1 General information

This add-on UPS module can easily be installed in an appropriate system unit (for a list of required revisions, see section 9.2 "Requirements" on page 342).

9.3.2 Order data

Model number	Short description	Figure

9.6 5AC600.UPSF-00

9.6.1 General information

The UPS fuse kit can be used to add a fuse for the 5AC600.UPSB-00 battery unit.

Information about installing the 5AC600.UPSF-00 fuse kit can be found in the section "Installing the UPS fuse kit on the battery unit" on page 401.

Information:

The 5AC600.UPSF-00 UPS fuse kit is only needed for battery units up to and including revision D0. A 25 A fuse is integrated on the connector circuit board beginning with revision E0.

9.6.2 Order data

Model number	Short description	Figure

10 Line filter

10.1 5AC804.MFLT-00

10.1.1 General information

The 5AC804.MFLT-00 line filter may be necessary to satisfy requirements regarding conducted disturbances in supply lines in accordance with the 2003 edition of GL EMC1 (Germanischer Lloyd).

The line filter should be installed as close to the end device as possible; the supply line from the end device to the line filter should be kept as short as possible.

10.1.2 Order data

10.1.6 Connecting to the end device

The line filter must be connected between the supply voltage and the end device.

The following points must be observed:

- Use shielded, twisted wires.
- Keep the lines as short as possible (supply voltage - line filter - end device).
- The line filter must be installed on an unpainted, oil-free metallic surface.

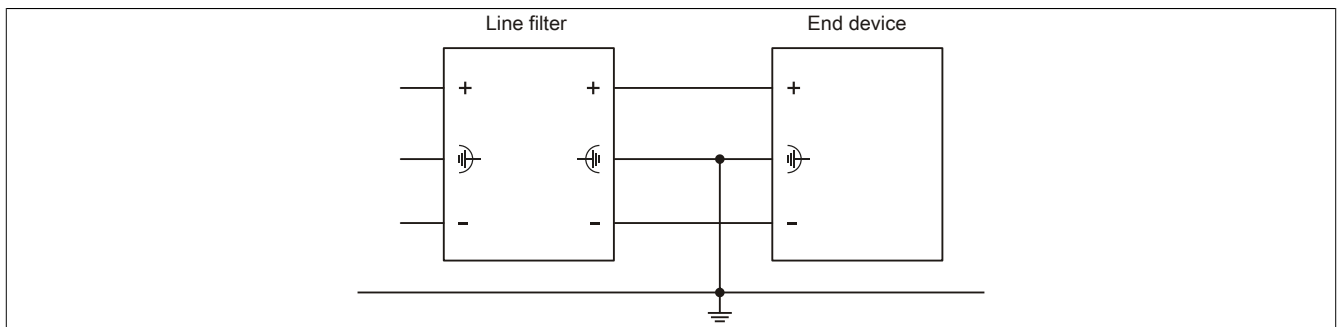

Figure 197: Connection example

11 PCI plug-in cards

11.1 5ACPCI.ETH1-01

11.1.1 General information

These universal (3.3 V and 5 V) half-size PCI Ethernet card have a 10/100 Mbit/s network connection and can be inserted and operated in a standard 16-bit PCI slot as an additional network interface.

- PCI Ethernet card
- 1 network connection (10/100 Mbit/s)

Orange	Link (Ethernet network connection available)	Activity (blinking - data transfer in progress)

Table 282: 5ACPCI.ETH1-01 - Technical data

11.1.4 Driver support

A special driver is required in order to operate the Intel 82551ER Ethernet controller. Drivers for approved operating systems (Windows XP Professional, Windows XP Embedded and MS-DOS) are available in the Downloads section of the B&R website (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

11.1.5 Dimensions

Figure 199: 5ACPCI.ETH1-01 - Dimensions

11.2 5ACPCI.ETH3-01

11.2.1 General information

These universal (3.3 V and 5 V) half-size PCI Ethernet card have three 10/100 Mbit/s network connections and can be inserted and operated in a standard 16-bit PCI slot as an additional network interface.

- PCI Ethernet card
- 3 network connections (10/100 Mbit/s)

1) Yes, although applies only if all components installed within the complete system have this certification

11.2.3.1 Ethernet interface

Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

Ethernet interfaces		
Controller	each with Intel 82551ER	
Power supply	Universal card (2 notches) for 3.3 V or 5 V	
Cabling	S/STP (Cat 5e)	
Transfer rate	10/100 Mbit/s	
Cable length	Max. 100 m (min. Cat 5e)	
LED	On	Off
Green	100 Mbit/s	10 Mbit/s
Orange	Link (Ethernet network connection available)	Activity (blinking - data transfer in progress)

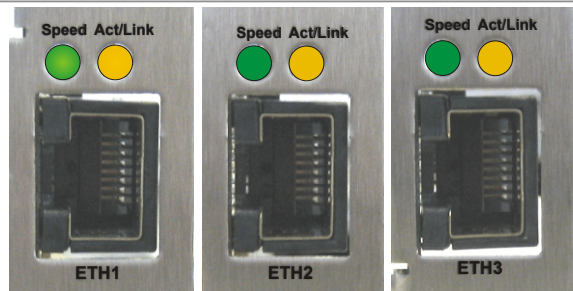

Table 285: 5ACPCI.ETH3-01 - Technical data

11.2.4 Driver support

A special driver is required in order to operate the Intel 82551ER Ethernet controller. Drivers for approved operating systems (Windows XP Professional, Windows XP Embedded and MS-DOS) are available in the Downloads section of the B&R website (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

12.7.1.4 Cable pinout

Warning!

If you choose to make a suitable cable yourself, it should be wired according to these specifications.

If a self-made cable is used, B&R cannot guarantee that it will function properly. All cables provided by B&R are guaranteed to function properly.

Figure 219: 9A0014.xx RS232 cables - Pinout

12.8 Internal supply cable

12.8.1 5CAMSC.0001-00

12.8.1.1 General information

This supply cable is used internally, for example to provide power to special PCI cards. It is connected to the mainboard.

For requirements and procedures, see "Connecting an external device to the mainboard" on page 413.

Caution!

Power must be turned off before plugging in and unplugging cables.

13 HDD replacement disk tray

13.1 5AC801.FRAM-00

13.1.1 General information

To ensure that a hard disk can be replaced as quickly as possible, it is possible to install a compartment on the APC810 for storing a replacement HDD.

For more information about installing the HDD replacement disk tray, see chapter "Maintenance and service".

Chapter 7 • Maintenance and service

This chapter describes service/maintenance work that can be carried out by a qualified end user.

1 Changing the battery

The lithium battery buffers the internal real-time clock (RTC) and CMOS data.

Information:

- The product design allows the battery to be changed with the B&R device switched either on or off. In some countries, safety regulations do not allow batteries to be changed while the module is switched on.
- Any BIOS settings that have been made will remain when the battery is changed with the power turned off (stored in non-volatile EEPROM). The date and time must be reset later since this data is lost when the battery is changed.
- The battery should only be changed by qualified personnel.

Warning!

The battery must be replaced by a Type CR2477N Renata battery only. The use of another battery may present a risk of fire or explosion.

The battery may explode if handled improperly. Do not recharge, disassemble or dispose of in fire.

The following replacement lithium batteries are available: 4A0006.00-000 (1 pc.) and 0AC201.91 (4 pcs.).

1.1 Evaluating the battery status

The status of the battery is determined immediately after the device is started and subsequently checked by the system every 24 hours. During this measurement, the battery is subjected to a brief load (approximately 1 second) and then evaluated. Once determined, the battery status is displayed in BIOS (Advanced - OEM features - System board features - Voltage values) and in the B&R Control Center (ADI driver); it can also be read in a customer application using the ADI library.

Battery status	Description
N/A	The hardware or firmware being used is too old and does not support reading the battery status.
GOOD	Data buffering is intact.
BAD	From the point when battery capacity is recognized as insufficient (BAD), data buffering is intact for approximately another 500 hours.

Table 305: Battery status

From the point when battery capacity is recognized as insufficient, data buffering is intact for approximately another 500 hours. When replacing the battery, data is buffered for approximately 10 minutes by a gold leaf capacitor.

1.2 Procedure

- Disconnect the power supply to the B&R Industrial PC.
- Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- Remove the cover from the battery compartment and carefully pull out the battery using the removal strip.

Figure 222: Removing the battery

- The battery should not be held by its edges. Insulated tweezers may also be used to insert the battery.

Figure 223: Battery handling

- Insert the new battery with the correct polarity.

Figure 224: Battery polarity

- To make the next battery replacement easier, be sure the removal strip is in place when inserting the battery.
- Reconnect the power supply to the B&R Industrial PC (plug in the power cable).
- Reset the date and time in BIOS.

Warning!

Lithium batteries are considered hazardous waste. Used batteries should be disposed of in accordance with applicable local regulations.

2 Replacing a CompactFlash card

Caution!

Power must be turned off before replacing CompactFlash cards.

The CompactFlash card can be replaced quickly and easily by pressing the ejector (see image) with a pointed object such as a pen.

Figure 225: CompactFlash + ejector

3 Installing and replacing slide-in compact drives

Information:

The SATA I interface allows disks to be replaced during operation (hot plugging). In order to take advantage of this capability, this feature must be supported by the operating system.

3.1 Procedure

1. Loosen and remove the two quick release screws on the protective cover / slide-in compact drive.

Figure 226: Loosening the quick release screws

2. Insert the compact SATA drive and tighten the quick release screws.

Figure 227: Inserting the compact SATA drive

4 Installing and replacing slide-in drives

Slide-in drives can be installed and replaced in system units with 2, 3 or 5 card slots.

4.1 Procedure

1. Disconnect the power supply to the B&R Industrial PC.
2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
3. Remove the dummy slide-in module or slide-in drive by unscrewing the two quick release screws.

Figure 228: Loosening the quick release screws

4. Insert the slide-in drive and tighten with the two ¼ turn screws.

Figure 229: Installing the slide-in drive

5 Installing a slide-in compact adapter

Slide-in compact adapters can be installed and replaced in system units with 2, 3 or 5 card slots. A slide-in compact drive (e.g. slide-in compact HDD) can be installed in a slide-in slot using the slide-in compact adapter.

5.1 Procedure

1. Disconnect the power supply to the B&R Industrial PC.
2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
3. Remove the dummy slide-in module or slide-in drive by unscrewing the two quick release screws.

Figure 230: Loosening the quick release screws

4. Insert the slide-in compact adapter and tighten the two quick release screws.

Figure 231: Installing the slide-in compact adapter

5. Once the adapter has been installed, the slide-in compact drive can be inserted.

Figure 232: Inserting the slide-in compact drive

6 Installing and replacing fan kits

6.1 Procedure

1. Remove the fan kit cover. Loosen the Torx (T10) screws and slide the cover forward.

Figure 233: Removing the fan kit insert

2. Insert the frame by mounting the contact board side to the sliding contacts on the system unit and fasten using the quick release screws.

Figure 234: Inserting and fastening the fan kit

3. Place the dust filter in the fan kit cover and secure it with the filter clasp.

Figure 235: Securing the dust filter with the filter clasp

4. Place the fan kit cover in the housing and fasten using the Torx screws removed earlier.

Information:

The dust filter should be checked regularly depending on the area of use and degree of contamination.

Installation is the same as for all APC810 devices.

7 Installing the UPS module

This module is installed using the materials included in delivery.

Figure 236: 5AC600. UPSI-00 Add-on UPS module - Installation materials

Installation may vary depending on the system unit variant (1, 2, 3 or 5 card slots) or whether an add-on interface module (IF option) is installed in the APC810.

7.1 Installation without installed add-on interface module

Different parts are used depending on the system unit and whether the add-on interface module is installed or not installed.

7.1.1 1-slot APC810

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Remove the UPS module cover by removing the 2 marked Torx screws (T10).

Figure 237: Removing the UPS module cover

3. Screw in the spacer bolt and spacer ring on the mainboard (using the M5 hex socket screwdriver).

Figure 238: Screwing in the spacer bolt and spacer ring

4. Attach the UPS isolation to the bottom/rear of the UPS module and install both using 2 Torx screws (T10) on the housing and 1 Torx screw (T10) on the mainboard (spacer bolt). Use the previously removed Torx screws from the installation material.

Figure 239: Installing the UPS module

5. Attach the connection cable (see marked female connector).

Figure 240: Attaching the connection cable

Information:

When connecting the cable, make sure that the connector locks into place.

Figure 241: Connector locking mechanism

6. Attach the side cover.

7.1.2 2- and 3-slot APC810

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Remove the UPS module cover by removing the 2 marked Torx screws (T10).

Figure 242: Removing the UPS module cover

3. Screw in the spacer bolt and spacer ring on the mainboard (using the M5 hex socket screwdriver).

Figure 243: Screwing in the spacer bolt and spacer ring

4. Install the mounting bracket on the UPS module using 2 Torx screws (T10).

Figure 244: Installing the mounting bracket

5. Attach the UPS isolation to the bottom/rear of the UPS module and install both using 2 Torx screws (T10) on the housing and 1 Torx screw (T10) on the mainboard (spacer bolt). Use the previously removed Torx screws from the installation material.

Figure 245: Installing the UPS module

6. Attach the connection cable (see marked female connector).

Figure 246: Attaching the connection cable

Information:

When connecting the cable, make sure that the connector locks into place.

Figure 247: Connector locking mechanism

7. Attach the side cover.

7.1.3 5-slot APC810

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Remove the UPS module cover by removing the 2 marked Torx screws (T10).

Figure 248: Removing the UPS module cover

3. Screw in the spacer bolt and spacer ring (using the M5 hex socket screwdriver).

Figure 249: Screwing in the spacer bolt and spacer ring

4. Install the mounting bracket on the UPS module using 2 Torx screws (T10).

Figure 250: Installing the mounting bracket

5. Attach the UPS isolation to the bottom/rear of the UPS module and install both using 2 Torx screws (T10) on the housing and 1 Torx screw (T10) on the mainboard (spacer bolt). Use the previously removed Torx screws from the installation material.

Figure 251: Installing the UPS module

6. Attach the connection cable (see the marked female connector).

Figure 252: Attaching the connection cable

Information:

When connecting the cable, make sure that the connector locks into place.

Figure 253: Connector locking mechanism

7. Attach the side cover.

7.2 Installation with installed add-on interface module

7.2.1 1-slot APC810

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Remove the UPS module cover by removing the 2 marked Torx screws (T10).

Figure 254: Removing the UPS module cover

3. Screw in the spacer bolt (using the M5 hex socket screwdriver).

Figure 255: Screwing in the spacer bolt

4. Attach the UPS isolation to the bottom/rear of the UPS module and install both using 3 Torx screws (T10). Use the previously removed Torx screws and a Torx screw from the installation material.

Figure 256: Installing the UPS module

5. Attach the connection cable (see marked female connector).

Figure 257: Attaching the connection cable

Information:

When connecting the cable, make sure that the connector locks into place.

Figure 258: Connector locking mechanism

6. Attach the cover plate and side cover.

7.2.2 2- and 3-slot APC810

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Remove the UPS module cover by removing the 2 marked Torx screws (T10).

Figure 259: Removing the UPS module cover

3. Screw in the spacer bolt (using the M5 hex socket screwdriver).

Figure 260: Screwing in the spacer bolt

4. Install the mounting bracket on the UPS module using 2 Torx screws (T10).

Figure 261: Installing the mounting bracket

5. Attach the UPS isolation to the bottom/rear of the UPS module and install both using 3 Torx screws (T10). Use the previously removed Torx screws and a Torx screw from the installation material.

Figure 262: Installing the UPS module

6. Attach the connection cable (see marked female connector).

Figure 263: Attaching the connection cable

Information:

When connecting the cable, make sure that the connector locks into place.

Figure 264: Connector locking mechanism

7. Attach the cover plate and side cover.

7.2.3 5-slot APC810

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Remove the UPS module cover by removing the 2 marked Torx screws (T10).

Figure 265: Removing the UPS module cover

3. Screw in the spacer bolt (using the M5 hex socket screwdriver).

Figure 266: Screwing in the spacer bolt

4. Install the mounting bracket on the UPS module using 2 Torx screws (T10).

Figure 267: Installing the mounting bracket

5. Attach the UPS isolation to the bottom/rear of the UPS module and install both using 3 Torx screws (T10). Use the previously removed Torx screws and a Torx screw from the installation material.

Figure 268: Installing the UPS module

6. Attach the connection cable (see marked female connector).

Figure 269: Attaching the connection cable

Information:

When connecting the cable, make sure that the connector locks into place.

Figure 270: Connector locking mechanism

7. Attach the cover plate and side cover.

8 Installing the UPS fuse kit on the battery unit

Information:

The 5AC600.UPSF-00 UPS fuse kit is only needed for battery units up to and including revision D0. A 25 A fuse is integrated on the connector circuit board beginning with revision E0.

8.1 Procedure

1. Power to the 5AC600.UPSB-00 battery unit must be disconnected by unplugging the UPS connection cable from the B&R Industrial PC.
2. Remove the cover on the battery unit. This is done by unscrewing the two Torx screws (T10) so that the cover can be removed by sliding it towards the orange connector.

Figure 271: Removing the cover for the battery unit

3. To install the fuse, the red cable must be disconnected from the battery circuit board.

Figure 272: Disconnecting the cable

4. The male fuse kit connector must be connected to the female connector on the red cable (1). The female fuse kit connector must be connected to the male connector on the battery circuit board (2).

Figure 273: Connecting the fuse

5. The fuse can then be secured in the battery unit.

Figure 274: Securing the fuse

6. The cover for the battery unit can now be reattached. Insert the clips on the cover into the notch on the battery unit and tighten down the cover with the Torx screws removed previously.
7. Reconnect the 5AC600.UPSB-00 battery unit to the B&R Industrial PC.

9 Installing the side cover

The side cover can be easily removed by loosening the Torx (T10) screws. The number of Torx screws can vary depending on the system.

9.1 1-slot APC810

1. Disconnect the power supply to the Automation PC 810.
2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
3. Open the orange front cover. The Combi-Torx screws (T10) behind the cover that are marked in the image must then be removed.
4. After the screws have been removed, the side cover can be removed by sliding it toward the front.

Figure 275: 1-slot APC810 - Installing the side cover

9.2 2- and 3-slot APC810

1. Disconnect the power supply to the Automation PC 810.
2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
3. Open the orange front cover. The Combi-Torx screws (T10) behind the cover that are marked in the image must then be removed.
4. After the screws have been removed, the side cover can be removed by sliding it toward the front.

Figure 276: 2-slot APC810 - Installing the side cover

9.3 5-slot APC810

1. Disconnect the power supply to the Automation PC 810.
2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
3. Open the orange front cover. The Combi-Torx screws (T10) behind the cover that are marked in the image must then be removed.
4. After the screws have been removed, the side cover can be removed by sliding it toward the front.

Figure 277: 5-slot APC810 - Installing the side cover

10 AP Link installation

10.1 Procedure

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Remove the AP Link module cover by removing the 2 marked Torx screws (T10).

Figure 278: Removing the AP Link module cover

3. Insert the AP Link card in the appropriate slot.

Warning!

When inserting the AP Link card, be sure to push it all the way into the AP Link slot.

Do not force the card into the slot.

4. Install the AP Link module using 3 Torx screws (T10). Use the previously removed Torx screws and an additional Torx screw from the installation material.

Figure 279: Installing the AP Link module

5. Attach the cover plate and side cover.

11 Replacing a PCI SATA RAID hard disk in a RAID 1 set

This example assumes that the secondary hard disk (HDD1) is defective in a RAID 1 configuration. In such a case, the defective hard disk can be replaced by the replacement drive SATA hard disk.

Model number of PCI SATA RAID controller	Model number of required replacement SATA HDD	Note
5ACPCI.RAIC-01	5ACPCI.RAIC-02	60 GB hard disk
5ACPCI.RAIC-03	5ACPCI.RAIC-04	160 GB hard disk
5ACPCI.RAIC-05	5MMHDD.0250-00	250 GB hard disk
5ACPCI.RAIC-06	5MMHDD.0500-00	500 GB hard disk

Table 306: Overview of required replacement SATA HDD for PCI SATA HDD RAID controller

A size 10 Torx screwdriver is needed to replace the hard disk.

11.1 Procedure

1. Disconnect the power supply.
2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
3. Remove the side cover.
4. Remove the SATA RAID insert.
5. Loosen the 4 appropriate fastening screws (M3x5).

Figure 280: Screw layout on the back side of the 5ACPCI.RAIC-03 SATA RAID controller

6. On the front side, slide the hard disk down and away (Replacing the hard disk - left image).
7. Insert the new hard disk carefully into the connector (Replacing the hard disk - right image), being careful to only touch it on the front, not on the top.

Figure 281: Replacing the hard disk

8. Re-secure the hard disk using the 4 fastening screws (M3x5) used earlier.
9. Reassemble the device in the reverse order.
10. An error message is output by the RAID BIOS after starting the system: "RAID1 set is in Rebuild status. The rebuild will continue after boot sequence is complete".
11. A rebuild can be performed immediately in SATA RAID BIOS or once the PC has booted - see "Rebuild mirrored set" on page 214.

12 Installing the HDD replacement disk tray

12.1 Procedure

1. Remove the side cover (see "Installing the side cover" on page 403).
2. Insert the replacement HDD in the replacement disk tray and fasten using the quick release screws.

Figure 282: Inserting the replacement hard disk in the replacement disk tray

3. Attach the HDD replacement disk tray to the ventilation slots on the side of the APC810 housing using the hooks provided.
4. Affix to the inside of the side cover by lightly bending the hooks with a suitable tool (e.g. universal pliers).

Figure 283: Installing the replacement disk tray in the APC810

5. Attach the side cover.

13 Installing the ready relay /2 in the add-on UPS slot

13.1 Procedure

1. Remove the side cover (see section 9 "Installing the side cover" on page 403).
2. Remove the UPS module cover or mounted UPS by loosening the 2 marked Torx screws (T10).

Figure 284: Removing the UPS module cover

3. Attach the spacer bolt and spacer ring (if not already mounted from the UPS) on the mainboard (using the size 5 hex screwdriver). The 14 mm spacer bolt must be used for APC810 system units 5PC810.SX01-00, 5PC810.SX02-00 and 5PC810.SX03-00. The 16 mm spacer bolt must be used for the 5PC810.SX05-00 system unit.

Figure 285: Screwing in the spacer bolt and spacer ring

4. Install the ready relay with 2 Torx screws (T6) and the mounting bracket on the housing with 1 Torx screw (T6) on the mainboard (spacer bolt).

Figure 286: Installing the ready relay

5. Attach the connection cable.

Information:

When connecting the internal supply voltage cable, make sure that the connector locks into place.

Figure 287: Attaching the connection cable

6. Attach the side cover.

Appendix A

1 Maintenance Controller Extended (MTCX)

The MTCX controller (FPGA processor) is located on the mainboard (part of every system unit) of the APC810 device.

Figure 288: MTCX controller location

The MTCX is responsible for the following monitoring and control functions:

- Power on (power OK sequencing) and power failure logic
- Watchdog handling (NMI and reset handling)
- Temperature monitoring (I/O area, power supply, slide-in drive 1/2)
- Fan control
- Key and LED handling/coordination (matrix keyboard on B&R display units)
- Advanced desktop operation (keys, USB forwarding)
- Daisy chain display operation (touch screen, USB forwarding)
- Panel locking mechanism (can be configured using B&R Control Center - ADI driver)
- Backlight control for connected B&R displays
- Statistical data recording (power cycles - records every switch-on, power on and fan hour; each full hour is counted, i.e. not increased at 50 minutes)
- SDL data transfer (display, matrix keyboard, touch screen, service data, USB)
- LED status indicators (Power, HDD, Link 1, Link 2)

Extended MTCX functions are available by upgrading firmware ⁶⁾. The version can be read in BIOS ("Advanced" - Baseboard/Panel Features) or in approved Microsoft Windows operating systems with the B&R Control Center.

1.1 Temperature monitoring - Fan control

The MTCX constantly monitors the temperature using temperature sensors (see "Temperature sensor positions" on page 29), which directly determines how the fans are controlled. The speed depends on the measured temperature. Limit values may depend on the MTCX firmware version being used.

⁶⁾ Available in the Downloads section of the B&R website (www.br-automation.com).

Sensor range	Startup temperature	Max fan speed at:
CPU	65°C	81°C
Board CPU	65°C	81°C
Board I/O	60°C	76°C
Board ETH2	60°C	76°C
Board power	60°C	76°C
Power supply	60°C	76°C
ETH2 controller	70°C	86°C
Slide-in 1/2	44°C	60°C

Table 307: Temperature limits of the fan (MTCX PX32 ≥ V0.06)

Once the startup temperature is reached, the device is started at the minimum fan speed. The maximum fan speed is reached at a startup temperature of 16°C. The fan speed in this area is controlled depending on the temperature.

For example, slide-in 1/2: 44°C + 16°C = 60°C --> Maximum fan speed

The fans will only be shut off again if the evaluation temperature is more than 6°C below the switch-on temperature for a period of 4 hours (=overshoot time).

2 Connecting an external device to the mainboard

A male connector on the mainboard allows +5 VDC and +12 VDC to be rerouted in order to provide power to special PCI cards, for example.

This voltage can be accessed using the "5CAMSC.0001-00" on page 377. The connector is located close to the bus unit(s) and can be attached with a cable tie (see arrow in image). In order to reach the connector, the side cover (see "Installing the side cover" on page 403) of the APC810 as well as any slide-in drives and PCI plug-in cards must be removed.

Figure 289: Connector location for external devices

Connector for external devices			
Pin	Assignment	Power	4-pin connector, male 
1	+12 VDC	Max. 10 watts	
2	GND		
3	GND	Max. 5 watts	
4	+5 VDC
