

# 8EAC0152.003-1

## 1 General information

Analog multi-encoder plug-in module 8EAC0152.003-1 can be used in the slot on an ACOPOS P3 8EI servo drive. The module includes 3 analog multi-encoder interface for evaluating analog encoders.

The plug-in module evaluates encoders that are built into B&R servo motors or used to evaluate external axes.

The encoder input signals are monitored. This makes it possible to detect open circuits, short circuits and failures of the encoder power supply (reference signal).

When switched on, the plug-in module is automatically identified by the operating system on the ACOPOS P3 8EI servo drive.

### Information:

**The number of usable interfaces on multi-encoder plug-in module 8EAC depends on the number of axes on the ACOPOS P3 8EI servo drive in which it is used.**

8EI servo drives	Maximum number of usable interfaces on multi-encoder plug-in module 8EI
8ElxxxxS... 1-axis modules	1
8ElxxxxD... 2-axis modules	2
8ElxxxxT... 3-axis modules	3

### 1.1 Supported encoder types

- SinCos
- EnDat 2.1, serial with evaluation of sinusoidal output signals
- HIPERFACE
- SSI SinCos, serial with evaluation of sinusoidal output signals

### Information:

**The encoder type for the multi-encoder interface is not predefined from the factory.**

**Before commissioning, configure the encoder type in Automation Studio for each multi-encoder interface!**

### Caution!

**An incorrect configuration can result in irreparable damage to the connected encoder!**

### 1.2 Overview of encoder types

	SinCos	EnDat 2.1	SSI SinCos	HIPERFACE
Encoder power supply		5.2 V ±0.1 V		11.45 V ±0.1 V
Compensation <sup>1)</sup>		Max. 2x 0.7 V		---
Terminating resistors			120 Ω	
Signal frequency		DC up to 400 kHz		DC up to 200 kHz
Transfer rate	---	781.25 kbit/s	100 to 400 kbit/s	9600 bit/s
Support <sup>2)</sup>		ACOPOS operating system 5.00.0 and higher		ACOPOS operating system 5.05.0 and higher

Table 1: Overview of encoder types

1) Compensation is implemented by configuring the cable resistance in Automation Studio.

2) Operating system version from which a certain encoder type is supported.

## 2 Order data

Order number	Short description	Figure
	<b>Plug-in modules</b> 8EAC0152.003-1 ACOPOS P3 plug-in module, 3 analog multi-encoder interfaces	
	<b>Optional accessories</b> <b>Adapter cables</b> 8ECG00X4.3151D-0 ACOPOS P3 adapter cable, length 0.4 m, for analog multi-encoder interfaces and incremental encoder interfaces, 5x 2x 0.14 mm <sup>2</sup> , 10-pin male IX connector to 15-pin female DSUB	

Table 2: 8EAC0152.003-1 - Order data

## 3 Technical data

Order number	8EAC0152.003-1
<b>General information</b>	
Short description	3 analog multi-encoder interfaces in one module
Module type	ACOPOS P3 plug-in module
B&R ID code	0xEFDF
Slot	Slot 1
Max. power consumption	12 W
Certifications	
CE	Yes
Functional safety <sup>1)</sup>	Not relevant
UL	cULus E225616 Power conversion equipment
EAC	Not relevant
KC	Yes
<b>Encoder connection <sup>2)</sup></b>	
Module-side connection	10-pin male connector
Status indicators	None <sup>3)</sup>
Max. encoder cable length	75 m
<b>Encoder inputs</b>	
Sine/Cosine inputs	
Signal transmission	Differential signals, symmetrical <sup>4)</sup>
Signal frequency	Depends on the configured encoder type
Terminating resistor	120 Ω
Resolution	12-bit
<b>Encoder power supply <sup>2)</sup></b>	
Output voltage	Configurable Typ. 11.45 V ±0.1 V / 5.2 V ±0.1 V
Load capacity	Max. 300 mA for 5.2 V Max. 200 mA for 11.45 V <sup>5)</sup>
Sense lines	None <sup>6)</sup>
Protective measures	
Overload-proof	Yes
Short-circuit proof	Yes
<b>Reference input</b>	
Signal transmission	Differential signal, symmetrical
Differential voltage for low	≤-0.2 V
Differential voltage for high	≥+0.2 V
Terminating resistor	120 Ω
<b>Position</b>	
Resolution @ 1 V <sub>ss</sub>	2 <sup>14</sup> increments * number of encoder lines
<b>Synchronous serial interface</b>	
Signal transmission	RS485
Data transfer rate	Depends on the configured encoder type
<b>Support</b>	
Motion system	
mapp Motion	5.1.0 and higher
ACP10/ARNC0	5.00.0 and higher

Table 3: 8EAC0152.003-1 - Technical data

<b>Order number</b>	8EAC0152.003-1		
<b>Ambient conditions</b>			
Temperature			
Operation		5 to 40°C	
Nominal		55°C	
Maximum			
Storage		-25 to 55°C	
Transport		-25 to 70°C	
Relative humidity			
Operation		5 to 85%	
Storage		5 to 95%	
Transport		Max. 95% at 40°C	
<b>Mechanical properties</b>			
Dimensions			
Width		82 mm	
Length		24 mm	
Depth		103 mm	
Weight		72 g	

Table 3: 8EAC0152.003-1 - Technical data

- 1) Achievable safety classifications (safety integrity level, safety category, performance level) are documented in the user's manual (section "Safety technology").
- 2) The data in this section applies to each of the 3 analog multi-encoder interfaces.
- 3) The direction of rotation of the encoder can be displayed on the 8EAD0000.000-1 display module.
- 4) HIPERFACE encoder type: Asymmetrical
- 5) Up to revision C0, the load capacity is reduced from 200 mA to 100 mA at an output voltage of 11.45 V and ambient temperatures starting at 40°C.
- 6) Possible to compensate for encoder voltage drop by configuring cable resistance (max. 2x 0.7 V at 5 V output voltage)

## 4 Wiring

### 4.1 Pinout

#### Information:

**Plug-in module 8EAC is not capable of hot plugging. An 8EAC plug-in module is only permitted to be connected to or disconnected from an ACOPOS P3 8EI servo drive when power to the servo drive is switched off.**

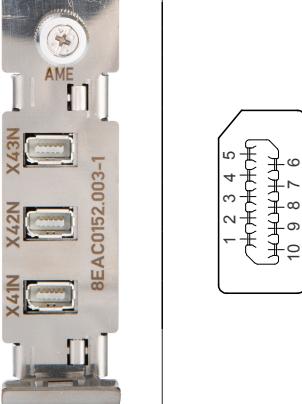

Figure	Male connector X41N / X42N / X43N	Pin	Name	Function depending on configured encoder type				
				SinCos	EnDat 2.1	SSI SinCos	HIPERFACE	
		1	B\	Channel B inverted			REF cosine	
		2	B	Channel B			Cosine	
		3	GND	Encoder power supply 0 V				
		4	A\	Channel A inverted			REF sine	
		5	A	Channel A			Sine	
		6	R	Reference pulse	Data +			
		7	R\	Reference pulse inverted	Data -			
		8	U+	Encoder power supply 5 V		Encoder power supply 12 V		
		9	T-	Temperature sensor -	Clock -	Temperature sensor -		
		10	T+	Temperature sensor +	Clock +	Temperature sensor +		

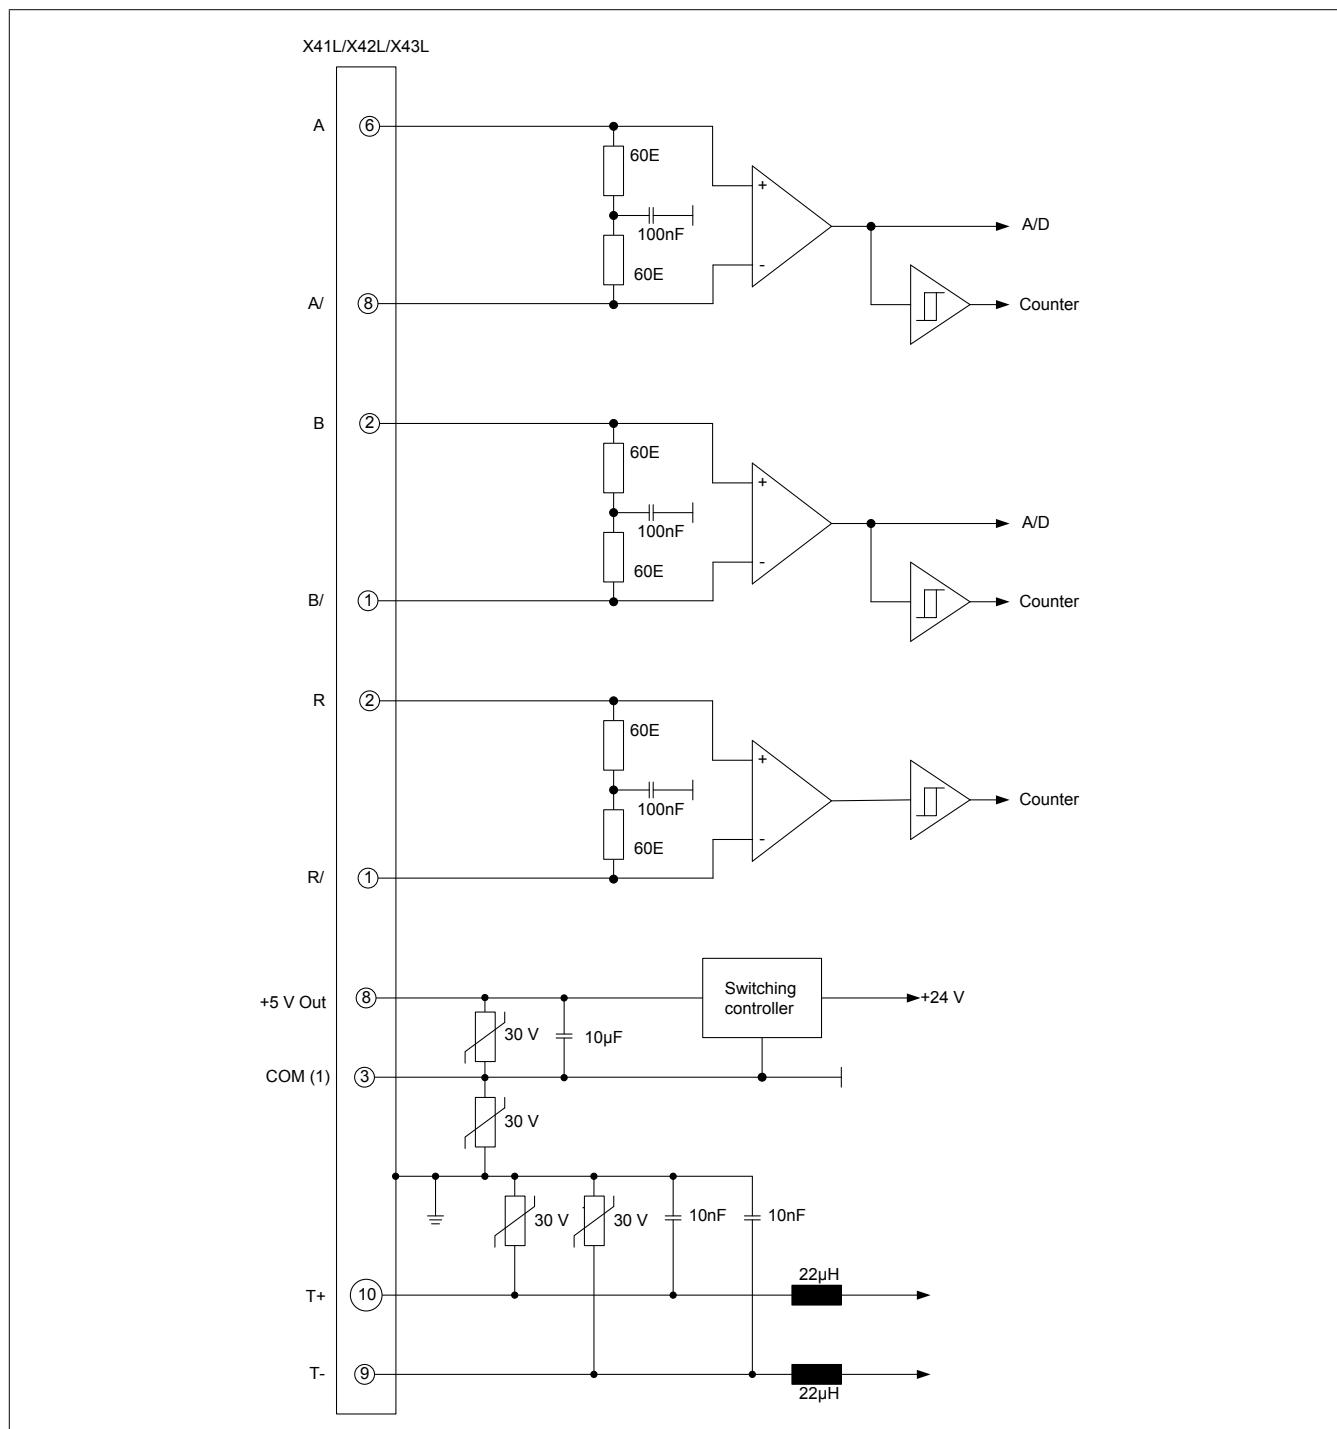

Table 4: Analog multi-encoder interface 8EAC0152.003-1 - Pinout

#### Danger!

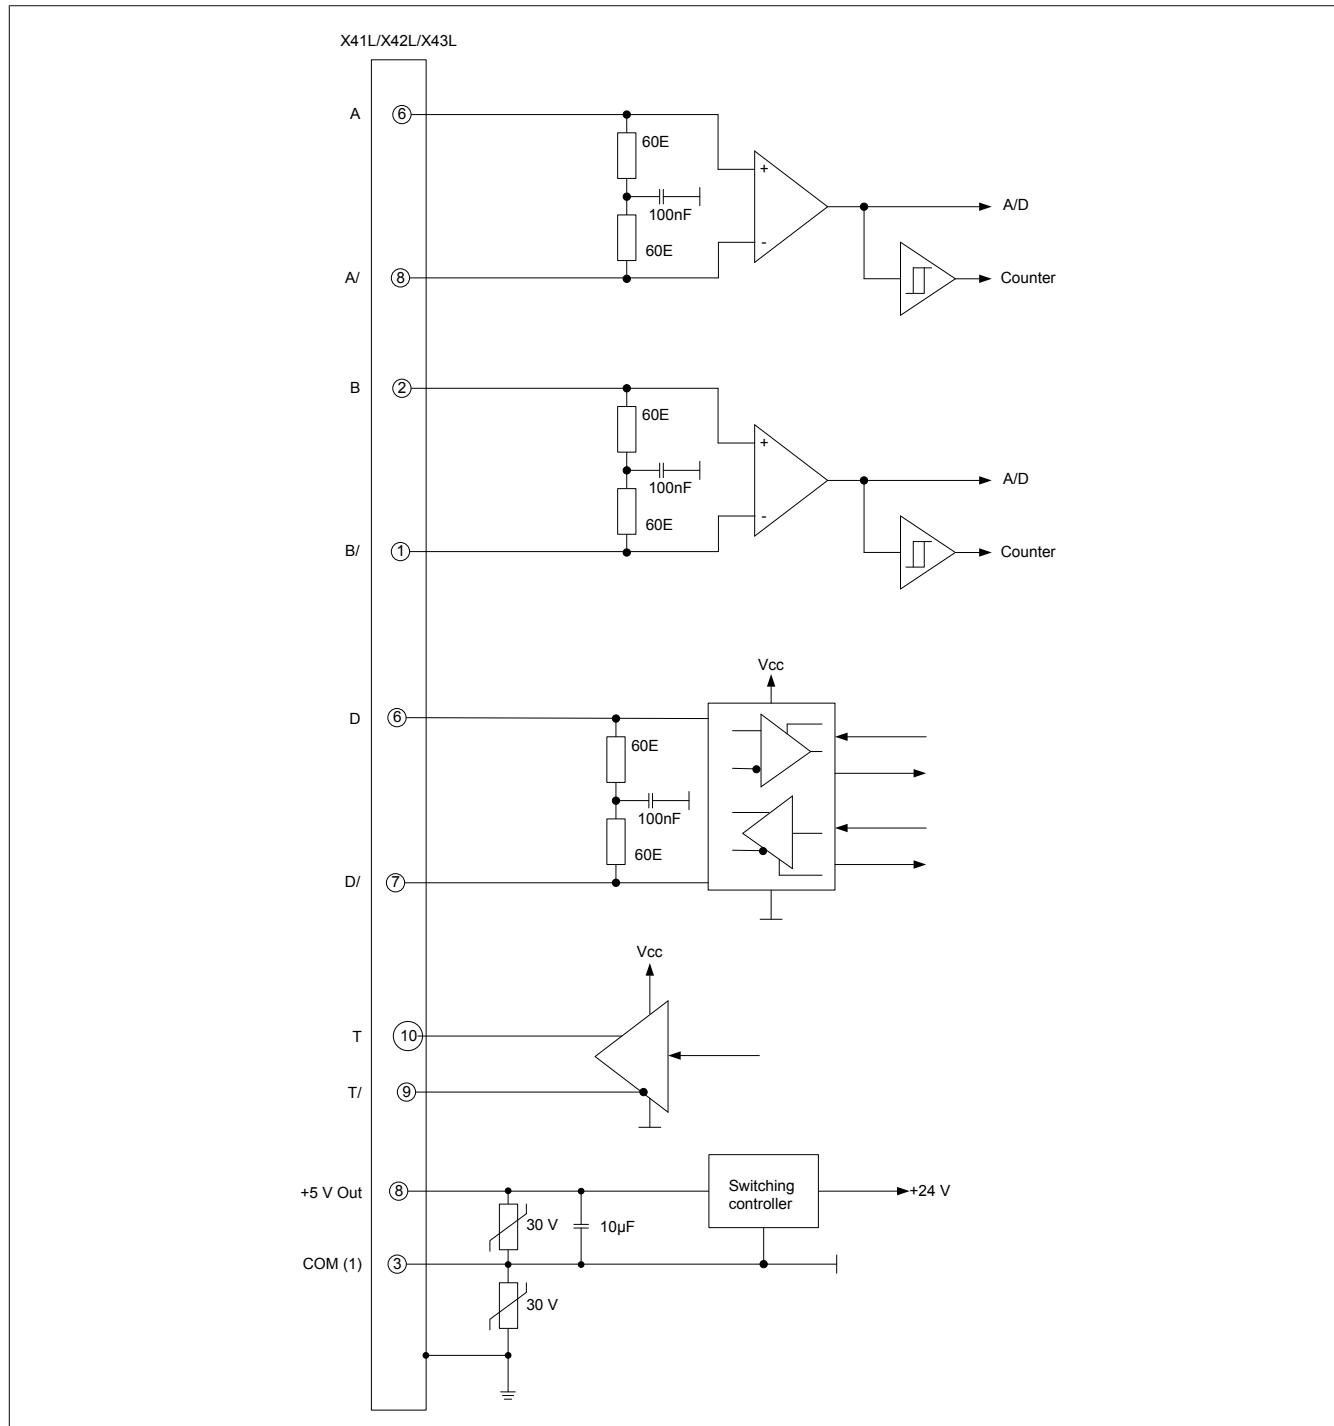

**The connections for the encoders are isolated circuits. These connections are therefore only permitted to be connected to devices or components that have sufficient isolation per IEC 60364-4-41 or EN 61800-5-1.**
