

# Customized Automation Training

## Based on B&R standard trainings

B&R's Customized Automation Training is on-demand training in just the topics you and your business need and when you need it. The training is based on our popular standard seminars developed by B&R's mother company in Austria. Referring to an initial needs and skills assessment, we adapt the course to your current competencies and your desired level. All our trainers are experienced application engineers.

### ON DEMAND

Time and place for the training is adapted to your needs

### CUSTOMIZED

Your team members get customized training suited to their needs and level based on an individual test

### EFFECTIVE

Adaptive training effectively increases your team's performance and reduces waste of time

### ECONOMICAL

Customized training at individual prices based on customer needs.

### DYNAMIC APPROACH

The training programme is based on standard elements that are adapted to your needs and are developed continually

## Initial test with B&R's assessment tool for all team members

B&R has developed an online test that provides a brief overview of the test person's skills within programming and automation. The test result will also show where there is room for competence development. The test should be seen solely as a tool for assessing skills within B&R programming and automation platform and is used to offer the most ideal Customized Automation Training.

### INITIAL DIALOGUE

As a team leader, you will, together with B&R, clarify which competencies and subject areas that are relevant to your work tasks

### SKILLS ASSESSMENT

Those who need to be tested receive a personal link to an online test covering the chosen subject areas

### PERSONAL FEEDBACK

As soon as possible after the test is completed, the test person will receive his/her result by e-mail showing a score on each of the subject areas that the test person has been assessed in. In addition, the test will show a score compared to the standard seminars B&R offers

### PROPOSAL

Once all the test persons have completed the test, B&R will compile results and present a proposal for a customized training program based on these results. This takes place during a personal meeting, and this is also where further details are agreed upon.

B&R guarantees that your employees can begin their Customized Automation Training within 14 days after the proposal

# Free test for all team members when followed by a Customized Automation Training agreement

## Automation Academy

On [br-automation.com](http://br-automation.com), you will find further information on Customized Automation Training, and you can also see an overview of the standard seminars we facilitate on a continuous basis and which your training program will be customized from. This is also where you will find information about our other offers such as Applied Automation Engineer Seminar (AAES), Innovations Day and Automation Manager Forum.

### Individual price according to customer needs

The price of the agreed training program is calculated according to the customer's needs. Training can be facilitated at B&R's premises in Odense, OrangePoint in Malmö, or at your company. If a training program is not agreed upon, there is a small fee for taking B&R's Customized Automation Training test..

### Start up of Customized Automation Training

One from the B&R Solution Development team will make sure that the employees that are to be tested will receive test links and results. As a team leader, you will receive the proposal for the training program from your contact. Please send names and personal e-mail addresses of the employees that are to be tested to [academy.dk@br-automation.com](mailto:academy.dk@br-automation.com) or phone +45 6315 3080.
