PERFECTION IN AUTOMATION
A MEMBER OF THE ABB GROUP

Refresh your existing machine's operator interface without changing your PLC code

Updated HMI for
popular PLCs

Versatile panel
technology

Change Your View!

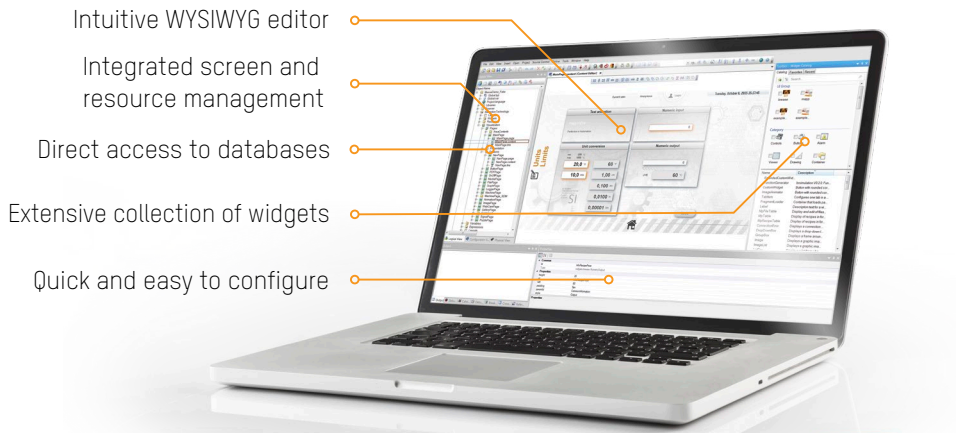

What's the one thing you can readily update without affecting your machine's operation? The visualization.

Change Your View gives you the latest HTML5 HMI integrated with brilliant touch panel to make your existing machine's HMI look like new.

We've made it easy to communicate between the most commonly used PLCs and the latest HMI technology without making any changes to your existing PLC code.

That's Change Your View.

Fast and easy development

HMI projects are developed in the B&R Automation Studio engineering environment by dragging and dropping widgets into place and then configuring them.

Change Your View gives you access to B&R's drag-and-drop HMI software tool, mapp View. Dozens of widgets make it easy to design your HMI with stunning features.

With Change Your View, it's easy to import just the I/O tags you need for your HMI without touching your PLC code.

You get the benefits of an HTML5 based HMI without needing to program HTML.

You can also display and modify scalable vector graphics (SVGs) for high resolution animations regardless of size.

Use animations to effectively visualize machine processes and provide self-guided diagnostics. Just click on elements to interact with them.

Animations are ideal for maintenance, training and changeover instructions.

If an alarm comes up, Change Your View makes it easy to call up a video or PDF document to simplify troubleshooting and make training realistic. Let the machine explain the problem! You can update manuals over a secure remote connection and you can use PDFs in single or multi-touch applications.

Change Your View lets you take advantage of the latest trends.

With Change Your View, you get the new wide screen aspect ratios and crisp, high definition touch screens.

Running HMI on mobile devices, especially content like training manuals, has become very popular with end users. Because Change Your View is HTML5 based, you can run on any Web-enabled

device, and readily format for mobile devices such as phones and tablets, regardless of operating system.

Change Your View and its extensive widget library make it easy to build graphics that are clean, clear and easy to use. It lets you view and interact with 3D models, and display HD videos, animations and PDF files.

Maximum reusability

HMI is how customers interact with your machinery

Intuitive operation

From operators to managers, your HMI makes a lasting impression on your customers. Make your screens more contemporary, easier to navigate, more connected. Display HMI applications from multiple machines on your line.

Add animation, audio, video and PDF files to make troubleshooting, help documentation and training manuals more effective. Make your HMI more like the devices they use every day in their business and personal lives. Your customers will thank you.

Quality hardware

With Change Your View, you can select from a range of HMI hardware choices.

B&R is known for a broad selection of quality single- and multi-touch panel HMIs, from panel mount to swing arm, ratings up to IP69K, in an

array of sizes, configurations and finishes.

Options include 'light ring' pushbuttons, RFID readers, even your own brand identification. Whatever B&R hardware you choose, its look reflects the quality and technology inside.
