### III Safety notices

Safety notices in this document are organized as follows:

Safety notice	Description
Danger!	Disregarding the safety regulations and guidelines can be life-threatening.
Warning!	Disregarding the safety regulations and guidelines can result in severe injury or heavy damage to material.
Caution!	Disregarding the safety regulations and guidelines can result in injury or damage to material.
Information:	Important information used to prevent errors.

## 1 What's it all about?

This document is meant to show how the performance of different B&R industrial PCs compare to each other.

The setup of information provided was based on a setup used by many popular magazines and web pages (e.g. Techchannel).

### Information:

All results provided cannot be interpreted and used as absolute values. They should be considered as comparison values that can vary slightly depending on the operating system and computer being used.

## 2 Hardware

The following hardware was used for the benchmark tests:

### 2.1 Devices being tested

#	CPU	RAM	VGA controller	Manuf.
<b>Power Panel 100/200 (5PP120.1505-37)</b>				
1	Geode SC2200 266 MHz	128 MB SD RAM	Geode SC2200 4MB (Shared)	B&R
<b>IPC2001</b>				
2	AMD 486DX2-66 MHz	8 MB DRAM	Chips & Technologies 65535 1MB	B&R
3	AMD 486DX5-133 MHz	32 MB DRAM	Chips & Technologies 65535 1MB	B&R
<b>IPC5000C</b>				
4	Intel Celeron 3 566 MHz 66 MHz FSB	256 MB SDRAM 100 MHz	Chips & Technologies 69000 2MB	B&R
5	Intel Celeron 3 850 MHz 66 MHz FSB	256 MB SDRAM 100 MHz	Chips & Technologies 69000 2MB	B&R
6	Intel Pentium 3 600 MHz 100 MHz FSB	256 MB SDRAM 100 MHz	Chips & Technologies 69000 2MB	B&R
7	Intel Pentium 3 850 MHz 100 MHz FSB	256 MB SDRAM 100 MHz	ATI Rage Mobility 4MB	B&R
<b>APC680</b>				
8	Intel Celeron 3 850 MHz 100 MHz FSB	256 MB SDRAM 133 MHz	Intel 815E Graphics Controller 32 MB	B&R
9	Intel Pentium 3 1.26 GHz 133 MHz FSB	512 MB SDRAM 133 MHz	Intel 815E Graphics Controller 32 MB	B&R
<b>APC620 with INTEL 815E chipset</b>				
10	Intel Celeron 3 400 MHz 100 MHz FSB	256 MD SDRAM 133 MHz	Intel 82815 Graphics Controller 32 MB	B&R
11	Intel Celeron 3 733 MHz 133 MHz FSB	512 MB SDRAM 133 MHz	Intel 82815 Graphics Controller 32 MB	B&R
12	Intel Celeron 3 1000 MHz 133 MHz FSB	512 MB SDRAM 133 MHz	Intel 82815 Graphics Controller 32 MB	B&R
<b>APC620 with INTEL 855GME chipset</b>				
13	Intel Celeron M 600 MHz 400 MHz FSB	256 MB DDR-SDRAM PC2700 333 MHz	Intel 82855 GME Graphic Controller 64 MB	B&R
14	Intel Celeron M 1000 MHz 400 MHz FSB	256 MB DDR-SDRAM PC2700 333MHz	Intel 82855 GME Graphic Controller 64 MB	B&R
15	Intel Pentium M 1.1 GHz 400 MHz FSB	1 GB DDR-SDRAM PC2700 333 MHz	Intel 82855 GME Graphic Controller 64 MB	B&R
16	Intel Pentium M 1.4 GHz 400 MHz FSB	512 MB DDR-SDRAM PC2700 333 MHz	Intel 82855 GME Graphic Controller 64 MB	B&R
17	Intel Pentium M 1.6 GHz 400 MHz FSB	1 GB DDR-SDRAM PC2700 333 MHz	Intel 82855 GME Graphic Controller 64 MB	B&R
18	Intel Pentium M 1.8 GHz 400 MHz FSB	512 MB DDR-SDRAM PC2700 333 MHz	Intel 82855 GME Graphic Controller 64 MB	B&R
<b>Other test computers</b>				
19	Intel Pentium 4 2.4 GHz 533 MHz FSB	512 MB DDR-SDRAM 333 MHz	Intel 82865G Graphics Controller 96 MB	HP
20	Intel Pentium 4 2.6 GHz 533 MHz FSB	512 MB DDR-SDRAM 333 MHz	Sapphire ATI Radeon 9600 Atlantis 256 MB DDR	HP
<b>APC810 with INTEL 945GME chipset</b>				
21	Celeron M 1.06 GHz 533 MHz FSB	512MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R
22	Celeron M 1.06 GHz 533 MHz FSB	2x512MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R

#	CPU	RAM	VGA controller	Manuf.
23	Core 2 Duo 1.06 GHz 533 MHz FSB	2x1024MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R
24	Core 2 Duo 1.50 GHz 667MHz FSB	2x512MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R
25	Core Duo 1.66 GHz 667MHz FSB	2x1024MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R
26	Core 2 Duo 2.16 GHz 667MHz FSB	1024MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R
27	Core 2 Duo 2.16 GHz 667MHz FSB	2x1024MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R
<b>Power Panel 300/400 (5PP320.1214-39)</b>				
28	AMD Geode LX800-500	256MB DDR-SDRAM 333MHz	AMD Geode LX800 4MB	B&R
<b>APC810 with Intel 945GME chipset + Intel Atom N270</b>				
29	Intel Atom N270 1,6GHz, 533MHz FSB, 512KB Cache	2 x 2048MB DDR2-SDRAM	Intel Graphics Media Accelerator 950 max. 224MB	B&R
<b>APC810 with Intel GM45 chipset + Intel T9400</b>				
30	Core 2 Duo 2,53GHz, 1066 MHz FSB, 6MB Cache	2 x 2048MB DDR3-SODIMM	Intel GM45	B&R
<b>APC620 with Intel 945GME chipset + Intel Atom N270</b>

Table 7: Benchmark programs used and the corresponding WEB links

### 3.2 Operating system

- Windows 98 was used as the operating system for IPC2001 computers.
- Microsoft Windows XP Professional SP2 or SP3 was used for all other computers.
- Microsoft Windows 7 Ultimate (32 or 64Bit, depending on the CPU) was used for the Sisoft Sandra 2011 and Passmark Performance Test 7 on APC910/PPC900.
- Microsoft Windows 8.1 Industry (32 or 64Bit, depending on the CPU or rather memory size) was used for the Sisoft Sandra 2011 and Passmark Performance Test 7 on APC2100/PPC2100.
- Microsoft Windows 10 LTSB 2016 64Bit was used for the Passmark Performance Test 7 on APC3100/PPC3100.

## 4 Results

### 4.1 Sisoft Sandra 2002 Prof

Sisoft Sandra provides many different tests.

For this reason, Sandra has become a very popular benchmark program and is used in nearly all performance tests.

#### 4.1.1 CPU arithmetic

Here, the program determines the maximum number of operations per second. The result is output in MIPS (Million Instructions per Second).

At the same time, the maximum number of floating point operations per second is also determined. The result is shown in MFLOPS (Million Floating Point Operations per Second).

## 4.2 Sisoft Sandra 2005 SR1

Sisoft Sandra 2005 is the most current version of Sandra and supports the newest technologies (such as SSE3).

### 4.2.1 CPU arithmetic

Here, the program determines the maximum number of operations per second. The result is output in MIPS (Million Instructions per Second).

At the same time, the maximum number of floating point operations per second is also determined. The result is shown in MFLOPS (Million Floating Point Operations per Second).

#	Test device	Dhrystone ALU (MIPS)	Whetstone FPU (MFLOPS)
<b>Power Panel 100/200</b>			
1	Geode 266 MHz, 128 MB RAM	407	170

## Information:

IPC2001 computers are not included in this test because Sisoft Sandra 2005 SR1 is not supported by Windows 98.

### 4.3 PCMark2002

PCMark2002 is a current benchmark that has many users and is therefore very good for comparing PC systems. It supports both new and older processors and, for this reason, provides a very good overview of the performance of various systems.

PCMark2002 tests the following system components:

- The CPU => both Integer and FPU
- Memory subsystems => main memory, L1 & L2 cache
- Graphics card => graphics card memory and AGP bus
- Hard drive
- Microsoft Windows XP GUI (Graphic User Interface)
- Video performance and quality
- Laptop battery (if PC Mark is being used on a laptop)

#	Test device	CPU (points)	Memory (points)
<b>VIA CPUs</b>			
	VIA M6000, 600MHz	584 <sup>4</sup>	677 <sup>4</sup>
	VIA M10000, 1000 MHz	1119 <sup>4</sup>	869 <sup>4</sup>
<b>Power Panel</b>

Table 14: Results for PCMark2002

<sup>4</sup> Source: Tolly Group

Figure 7 – Results for PCMark2002

## Information:

IPC2001 computers are not included in this test because PCMark2002 requires at least a CPU with MMX technology.

#### 4.4 PCMark04

PCMark04 is a benchmark from the newest generation. This program tests and supports the newest technologies (e.g. HT, SSE3) and takes the system to the limit of its performance.

The test criteria for PCMark04 are similar to the ones for PCMark2002.

All components tested with PCMark2002 are also tested with PCMark04, however PCMark04 determines the results with the help of coding and decoding processes for the individual media codecs (e.g. DivX, WMV Codec, etc.)

The manufacturer explicitly states that the test results from PCMark2002 and PCMark04 are not (!!!) comparable!

In addition, all systems can no longer be tested with this program.

The system must meet the following requirements (and others):

- Intel or AMD processor > 1 GHz
- At least 128 MB RAM
- Full DirectX 7 compatible graphics card
- Windows Media Player 9.0 + MS Encoder 9.0
- Microsoft Internet Explorer 6

#	Test device	Points

Table 15: Results for PCMark04

Figure 8 – Results for PCMark04

### Information:

PCMark04 requires a graphics card that is fully DirectX7 compatible. This requirement is only met by the APC620 computers with an Intel 855GME chipset.  
Therefore there are no test results for Power Panel, IPC2001, IPC5000C, APC680 and APC620 (with Intel 815 E).

## 4.5 WinBench99

WinBench99 was developed together with ZD Net. However, the development was stopped in the middle of 2000.

Up to that point, WinBench was an important tool for comparing the performance measurements of PC systems. WinBench99 offers many subprograms that analyze certain aspects of the systems. This program was used to create comparison values for "older" systems.

### 4.5.1 CPUMark99

CPUMark99 is a test that determines the computing power of the CPU. All arithmetic units on the CPU. As a result, the program calculates a number of points that can be used for further comparison.

#	Test device	Points
<b>Power Panel</b>		
1	Geode 266 MHz, 128 MB RAM	7.08
<b>IPC2001 computer</b>		
2	AMD 486DX2 66MHz, 8MB DRAM	3.21
3	AMD 486DX5 133 MHz, 32 MB DRAM	4.19
<b>IPC5000C computer</b>		
4	Celeron 3 566 MHz, 256 MB SDRAM	43.6
5	Celeron 3 850 MHz, 256 MB SDRAM	64.7
6	Pentium 3 600 MHz, 256 MB SDRAM	56.9
7	Pentium 3 850 MHz, 256 MB SDRAM	76.1
<b>APC680 computer</b>		
8	Celeron 3 850 MHz, 256 MB SDRAM	57.2
9	Pentium 3 1.26 GHz, 256 MB SDRAM	112
<b>APC620 with INTEL 815 E chipset</b>

18	Pentium M 1.8 GHz, 512 MB DDR-SDRAM	220
<b>Other test computers</b>		
19	Pentium 4 2.4 GHz, 512 MB DDR-SDRAM	Not supported
20	Pentium 4 2.6 GHz, 512 MB DDR-SDRAM	Not supported

Table 16: Results for WinBench99 CPUMark99

Figure 9 – Results for WinBench99 CPUMark99

### Information:

Winbench99 could not be executed on Pentium 4 systems because the program had a problem with the CPU frequency.

#### 4.5.2 FPUWinMark

As a special feature, FPUWinMark tests the FPU of the CPU being used. The speed and computing power, among other things, are determined. As a test result, the program calculates a number of points that can be used for further comparison.

#	Test device	Points
<b>Power Panel</b>		
1	Geode 266 MHz, 128 MB RAM	488
<b>IPC2001 computer</b>		
2	AMD 486DX2 66MHz, 8MB DRAM	93.5
3	AMD 486DX5 133 MHz, 32 MB DRAM	180
<b>IPC5000C computer</b>		
4	Celeron 3 566 MHz, 256 MB SDRAM	3000
5	Celeron 3 850 MHz, 256 MB SDRAM	4410
6	Pentium 3 600 MHz, 256 MB SDRAM	3190
7	Pentium 3 850 MHz, 256 MB SDRAM	4510
<b>APC680 computer</b>		
8	Celeron 3 850 MHz, 256 MB SDRAM	4510

12	Celeron 3 1000 MHz, 256 MB SDRAM	5430
<b>APC620 with INTEL 855GME chipset</b>		
13	Celeron M 600 MHz, 256 MB DDR-SDRAM	3310
14	Celeron M 1 GHz, 256 MB DDR-SDRAM	5590
15	Pentium M 1.1 GHz, 1 GB DDR-SDRAM	6100
16	Pentium M 1.4 GHz, 512 MB DDR-SDRAM	7830
17	Pentium M 1.6 GHz, 1GB DDR-SDRAM	8870
18	Pentium M 1.8 GHz, 512 MB DDR-SDRAM	10100
<b>Other test computers</b>		
19	Pentium 4 2.4 GHz, 512 MB DDR-SDRAM	Not supported
20	Pentium 4 2.6 GHz, 512 MB DDR-SDRAM	Not supported

Table 17: Results for WinBench99 FPUWinMark

Figure 10 – Results for WinBench99 FPUWinMark

## Information:

Winbench99 could not be executed on Pentium 4 systems because the program had a problem with the CPU frequency.

#### 4.5.3 Direct Draw

With this test, the system is continually checked to determine how fast and how correct moving 2D/3D graphics are animated. All supported resolutions and color depths are determined and tested.

The frames per second are measured. The maximum value reached is recorded at the end of the test report.

#	Test device	Direct Draw resolution 640x480	Direct Draw resolution 800x600
<b>Power Panel</b>			
1	Geode 266 MHz, 128 MB RAM	38.8	38.3
<b>IPC2001 computer</b>			
2	AMD 486DX2 66 MHz 8 MB DRAM	11.2	9.3
3	AMD 486DX5 133 MHz 32 MB DRAM	12.9	10.3
<b>IPC5000C computer</b>			
4	Celeron 3 566 MHz, 256 MB SDRAM	84.5	83
5	Celeron 3 850 MHz, 256 MB SDRAM	85.2	84.1

14	Celeron M 1 GHz, 256 MB DDR-SDRAM	946	900
15	Pentium M 1.1 GHz, 1GB DDR-SDRAM	1190	1200
16	Pentium M 1.4 GHz, 512 MB DDR-SDRAM	1290	1290
17	Pentium M 1.6 GHz, 1GB DDR-SDRAM	1439	1411
18	Pentium M 1.8 GHz, 512 MB DDR-SDRAM	1410	1390
<b>Other test computers</b>			
19	Pentium 4 2.4 GHz, 512 MB DDR-SDRAM	Not supported	Not supported
20	Pentium 4 2.6 GHz, 512 MB DDR-SDRAM	Not supported	Not supported

Table 18: Results for WinBench99 Direct Draw

Figure 11 – Results for WinBench99 Direct Draw

## Information:

Winbench99 could not be executed on Pentium 4 systems because the program had a problem with the CPU frequency.

#### 4.5.4 Disk Inspection Test

During this test, the speed of the memory media being used (hard disk, CF, etc.) is determined. When doing this, the program writes a large amount of data to the memory and determines the data transfer rates in the individual sectors. The transfer rates reached are shown in a diagram during the test. The final result contains the maximum and the minimum data transfer rate as well as the average access time.

#	Test device	Data rate - start (MB/s)	Data rate - end (MB/s)	Access time (ms)
<b>ICP5000C hard disks</b>				
1	5.6 GB Fujitsu Slide-In (4200 rpm)	15.3	9.3	20.6
<b>APC620 hard disks</b>				
2	20 GB Fujitsu ADD ON (4200 rpm)	20.4	17.9	16
3	30 GB Fujitsu ADD ON (4200 rpm)	24.9	13.2	20
4	20 GB Fujitsu Slide-In (4200 rpm)	20.3	14	18.8
5	30 GB Fujitsu Slide-In (4200 rpm)	24.9	13.3	19.6
6	40 GB Hitachi Travelstar (7200 rpm)	60.3	31.2	13.2
<b>Reference HDD</b>				
7	40 GB Seagate ST340014A (7200 rpm)	Not supported	Not supported	Not supported

Table 19: Results for WinBench99 Disk Inspection Test

Figure 12 - Results for WinBench99 Disc Inspection Test

## Information:

There are no results for the reference HDD because WinBench99 had a problem with the CPU frequency for the computer. Therefore the test could not be completed.

#### 4.5.5 High End Disk WinMark99

This test determines the performance of the memory media under certain conditions. The program simulates individual applications (e.g. Frontpage98, VisualC++ 5.0, etc.) and determines the maximum data transfer rate in the individual environments.

As test result, the program provides the average of the data transfer rates achieved. These values can be used for comparison.

#	Test device	KBytes/s
<b>ICP5000C hard disks</b>		
1	5.6 GB Fujitsu Slide-In (4200 rpm)	5640
<b>APC620 hard disks</b>		
2	20 GB Fujitsu ADD ON (4200 rpm)	10400
3	30 GB Fujitsu ADD ON (4200 rpm)	12400
4	20 GB Fujitsu Slide-In (4200 rpm)	12400
5	30 GB Fujitsu Slide-In (4200 rpm)	13400
6	40 GB Hitachi Travelstar (7200 rpm)	22200
<b>Reference HDD</b>		
7	40 GB Seagate ST340014A (7200 rpm)	Not supported

Table 20: Results for WinBench99 High End Disk WinMark99

Figure 13 – Results for WinBench99 High End Disk WinMark99

## Information:

There are no results for the reference HDD because WinBench99 had a problem with the CPU frequency for the computer. Therefore the test could not be completed.

#### 4.5.6 Business Disk WinMark99

During this test, the memory media is tested especially for the performance for office and business application. As a result, an average data rate is determined that can be used for comparison.

#	Test device	KBytes/s
<b>ICP5000C hard disks</b>		
1	5.6 GB Fujitsu Slide-In (4200 rpm)	1730
<b>APC620 hard disks</b>		
2	20 GB Fujitsu ADD ON (4200 rpm)	3370
3	30 GB Fujitsu ADD ON (4200 rpm)	3370
4	20 GB Fujitsu Slide-In (4200 rpm)	3920
5	30 GB Fujitsu Slide-In (4200 rpm)	3920
6	40 GB Hitachi Travelstar (7200 rpm)	4800
<b>Reference HDD</b>		
7	40 GB Seagate ST340014A (7200 rpm)	Not supported

Table 21: Results for WinBench99 Business Disk Winmark99

Figure 14 – Results for WinBench99 Business Disk WinMark99

## Information:

There are no results for the reference HDD because WinBench99 had a problem with the CPU frequency for the computer. Therefore the test could not be completed.

## 4.6 HDTACH Version 2.70

HDTACH is a tool that can be used to determine the data transfer rate of memory media (e.g. hard disk). When doing this, the data is read from the media and the maximum, minimum and average data rate is output as the result.

### 4.6.1 HDTACH read speed

#	Test device	Maximum data rate (MB/s)	Average data rate (MB/s)	Minimum data rate (MB/s)
<b>ICP5000C hard disks</b>				
1	5.6 GB Fujitsu Slide-In (4200 rpm)	16	12.4	2.3
<b>APC620 hard disks</b>				
2	20 GB Fujitsu ADD ON (4200 rpm)	20.6	17.5	13.5
3	30 GB Fujitsu ADD ON (4200 rpm)	26	20.4	12.1
4	20 GB Fujitsu Slide-In (4200 rpm)	20.6	17.6	13.3
5	30 GB Fujitsu Slide-In (4200 rpm)	26	20.3	12.1
6	40 GB Hitachi Travelstar (7200 rpm)	39.9	34.5	26.7
<b>Reference HDD</b>				
7	40 GB Seagate ST340014A (7200 rpm)	62.2	47.1	30.4

Table 22: Results for HDTACH 2.70 read speed

HDTACH Hard Disk Read Performance

Figure 15 – Results for HDTACH read speed

#### 4.6.2 HDTACH access time measurement

#	Test device	Access time (ms)
<b>ICP5000C hard disks</b>		
1	5.6 GB Fujitsu Slide-In (4200 rpm)	20.4
<b>APC620 hard disks</b>		
2	20 GB Fujitsu ADD ON (4200 rpm)	18.3
3	30 GB Fujitsu ADD ON (4200 rpm)	19.9
4	20 GB Fujitsu Slide-In (4200 rpm)	18.4
5	30 GB Fujitsu Slide-In (4200 rpm)	18.5
6	40 GB Hitachi Travelstar (7200 rpm)	16.7
<b>Reference HDD</b>		
7	40 GB Seagate ST340014A (7200 rpm)	12.5

Table 23: Results for HDTACH access time measurement

Figure 16 – Results for HDTACH access time measurement

## 4.7 3D Mark 2000

Originally, 3D Mark 2000 (like all later 3D Mark versions) was a benchmark that specialized on the performance of 3D games on PC systems.

However, this benchmark generally provides a very good representation of the 3D performance of a system.

For this reason, the 3D Mark line was also included in this performance test.

3D Mark 2000 does not have any special requirements (except for MMX technology) and supports a wide range of systems. This makes it possible to compare many systems and system types

#	Test device	Points
<b>Power Panel</b>		
1	Geode 266 MHz, 128 MB RAM	Not supported
<b>IPC5000C computer</b>		
4	Celeron 3 566 MHz, 256 MB SDRAM	Not supported
5	Celeron 3 850 MHz, 256 MB SDRAM	Not supported
6	Pentium 3 600 MHz, 256 MB SDRAM	Not supported
7	Pentium 3 850 MHz, 256 MB SDRAM	737
<b>APC680 computer</b>		
8	Celeron 3 850 MHz, 256 MB SDRAM	773
9	Pentium 3 1.26 GHz, 256 MB SDRAM	851
<b>APC620 with INTEL 815E chipset</b>

11	Celeron 3 733 MHz, 512 MB SDRAM	790
12	Celeron 3 1000 MHz, 256 MB SDRAM	796
<b>APC620 with INTEL 855GME chipset</b>		
13	Celeron M 600 MHz, 256 MB DDR-SDRAM	3622
14	Celeron M 1 GHz, 256 MB DDR-SDRAM	4013
15	Pentium M 1.1 GHz, 1 GB DDR-SDRAM	4467
16	Pentium M 1.4 GHz, 512 MB DDR-SDRAM	4520
17	Pentium M 1.6 GHz, 1GB DDR-SDRAM	4610
18	Pentium M 1.8 GHz, 512 MB DDR-SDRAM	4768
<b>Other test computers</b>		
19	Pentium 4 2.4 GHz, 512 MB DDR-SDRAM	4674
20	Pentium 4 2.6 GHz, 512 MB DDR-SDRAM	11364

Table 24: Results for 3D Mark 2000

Figure 17 – Results for 3D Mark 2000

## Information:

On computers without test results, the graphics controller does not meet the minimum requirements.

## 4.8 3D Mark 2001SE

3D Mark2001 SE is a further development of 3D Mark 2000 and supports newer technologies (SSE2) and processors (P4, etc.). The test specializes on these new technologies and therefore the benchmark cannot be used for all systems.

The results achieved provide a good comparison of the 3D performance as compared to current systems (systems with Pentium 4, Pentium M, AMD AthlonXP, etc.).

#	Test device	Points
<b>Power Panel</b>		
1	Geode 266 MHz, 128 MB RAM	Not supported
<b>IPC5000C computer</b>		
4	Celeron 3 566 MHz, 256 MB SDRAM	Not supported
5	Celeron 3 850 MHz, 256 MB SDRAM	Not supported

<b>Other test computers</b>		
19	Pentium 4 2.4 GHz, 512 MB DDR-SDRAM	2225
20	Pentium 4 2.6 GHz, 512 MB DDR-SDRAM	9389

Table 25: Results for 3D Mark 2001SE

Figure 18 – Results for 3D Mark 2001SE

## Information:

On computers without test results, the graphics controller does not meet the minimum requirements.

## 4.9 B&R Automation Runtime AR010 Version E2.82

Since the APC620 is not only used as a Windows computer, it was necessary to determine the performance using Automation Runtime. The Windows-based system AR010 Version E2.82 was used. To determine the performance of the computer, a project was created containing intensive integer and floating point operations. A visualization application was also created, which was executed in a high priority class. All tasks were executed without(!) tolerance times. This way, system overloads are recognized immediately.

The APC620 with Intel Celeron 3, 400 MHz was used as the reference device. The application was adjusted so that the computer ran at nearly 100% system load. In order to determine the system load, the B&R Profiler was used.

After the recording, only the hardware was exchanged, and the project was left the same. This allows the measurements to be easily compared with each other.

#	Test device	CPU load in percent (%)
<b>APC620 with INTEL 815E chipset</b>		
10	Celeron 3 400 MHz, 256 MB SDRAM	99.72
11	Celeron 3 733 MHz, 512 MB SDRAM	58.75
12	Celeron 3 1000 MHz, 256 MB SDRAM	49.08
<b>APC620 with INTEL 855GME chipset</b>		
13	Celeron M 600 MHz, 256 MB DDR-SDRAM	85.25
14	Celeron M 1 GHz, 256 MB DDR-SDRAM	50.53
15	Pentium M 1.1 GHz, 1 GB DDR-SDRAM	41.84
16	Pentium M 1.4 GHz, 512 MB DDR-SDRAM	37.58
17	Pentium M 1.6 GHz, 1GB DDR-SDRAM	32.96
18	Pentium M 1.8 GHz, 512 MB DDR-SDRAM	28.96

Table 26: Results for AR010 Version E2.82

Figure 19 – B&R Automation Runtime AR010 Version E2.82

## 4.10 B&R Automation Runtime AR106 Version B2.83

### 4.10.1 Structure of the test

The following elements were used for the test:

#### 4.10.1.1 Automation Panel AP920.1505-01

The panel was used to check that the visualization was displayed correctly

#### 4.10.1.2 36 ACOPOS 1045 axes

To create a high computation load, 36 ACOPOS axes were operated simultaneously. Ethernet POWERLINK was used as the bus system

#### 4.10.1.3 26 X20IOs

Since real-time applications require operation of large numbers of I/Os, the X20 I/O system was used in order to make the test realistic. All available modules were used. These included analog/digital inputs and outputs, temperature modules, and encoder/counter modules.

### 4.10.2 Test procedure

During this test, emphasis was placed on demonstrating the performance of the APC series as realistically as possible. An application was created that reflects realistic demands placed on a system in the field. Not only computational performance is important, but also a large number of accesses to individual subsystems must also take place (e.g. PCI access for operating bus systems).

To create a complex load on the computer, 5 different task classes with different timings were used. Various cyclic programs were executed. The cycle times ranged from 1.6 ms in the highest priority task class #1 to 200 ms in task class #5.

A visualization application was also created containing a large number of pages.

As an additional load on the system, 36 ACOPOS axes were operated simultaneously via Ethernet POWERLINK.

The size of the project was adjusted in such a way that an APC620 with an INTEL Celeron3 400 MHz reaches a load of approximately 90%. Once the project is activated, a profiler measurement was started for a duration of one minute. Then the results of the measurement were evaluated and saved.

After the test, the CF was removed and another target system was connected. The project was left unchanged (same structure, same software) in order to achieve consistent results (the project „APC620p.pgp“ used can be found here in the benchmark folder).

#### 4.10.3 Results

#	Test device	CPU load in percent (%)
<b>APC620 with INTEL 815E chipset</b>		
10	Celeron 3 400 MHz, 256 MB SDRAM	84.39
11	Celeron 3 733 MHz, 512 MB SDRAM	60.8
12	Celeron 3 1000 MHz, 256 MB SDRAM	54.35
<b>APC620 with INTEL 855GME chipset</b>		
13	Celeron M 600 MHz, 256 MB DDR-SDRAM	48.69

## 4.11 Sisoft Sandra Pro Business 2007

### 4.11.1 CPU arithmetic

Here, the program determines the maximum number of operations per second. The result is output in MIPS (Million Instructions per Second).

At the same time, the maximum number of floating point operations per second is also determined. The result is shown in MFLOPS (Million Floating Point Operations per Second).

#	Test device	Dhrystone ALU (MIPS)	Whetstone FPU (MFLOPS)
<b>APC620 with INTEL 855GME chipset</b>

#### 4.11.2 CPU multimedia

This test determines the multimedia performance of the CPU. During this test, the speed and performance are checked for the technologies used, such as MMX, SSE, SSE2 (depending on the processor).

#	Test device	Integer (it/s)	Floating Point (it/s)
<b>APC620 with INTEL 855GME chipset</b>			
13	Celeron M 600 MHz, 512MB DDR-SDRAM	5559	6288

#### 4.11.3 Memory bandwidth

The performance of the system memory (main memory) is determined here. This is done by transferring a large amount of data. The result is the maximum "memory throughput" in MB/s.

#	Test device	RAM Bandwidth ALU (MB/s)	RAM Bandwidth FPU (MB/s)
<b>APC620 with INTEL 855GME chipset</b>			
13	Celeron M 600 MHz, 512MB DDR-SDRAM	1701	1836
14	Celeron M 1000 MHz, 512MB DDR-SDRAM	2072	2077
15	Pentium M 1.1 GHz, 512MB DDR-SDRAM <sup>1</sup>	2057	2057
16	Pentium M 1,4 GHz, 512MB DDR-SDRAM	1681	1694
18	Pentium M 1.8 GHz, 1024MB DDR-SDRAM <sup>1</sup>	1541	1549
<b>APC810 with INTEL 945GM chipset</b>			
21	Celeron M 1.06 GHz, 512MB DDR2-SDRAM	2548	2545
22	Celeron M 1.06 GHz, 2x512MB DDR2-SDRAM	2694	2692
23	Core 2 Duo 1.06 GHz, 2x1024MB DDR2-SDRAM	2912	2921
24	Core 2 Duo 1.50 GHz, 2x512MB DDR2-SDRAM	3531	3533
25	Core Duo 1.66 GHz, 2x1024MB DDR2-SDRAM	3644	3616
26	Core 2 Duo 2.16 GHz, 1024MB DDR2-SDRAM	3712	3716

1) See information

Table 30: Results for Sisoft Sandra Pro Business 2007, CPU Memory Bandwidth

Figure 23 - Results for Sisoft Sandra Pro Business 2007, CPU Memory Bandwidth

## Information:

The memory bandwidth test for the APC620 with PM-1100, PM-1400 and PM-1800 returns values that are "not plausible", since according to this test the PM-1100 would be faster than the PM-1400 and PM-1800. With the benchmark tests with Sisoft Sandra 2002 and 2005 the values are correct.

#### 4.11.4 Cache and memory bandwidth

#	Test device	Combined index (MB/s)	Speed factor
<b>APC620 with INTEL 855GME chipset</b>			
13	Celeron M 600 MHz, 512MB DDR-SDRAM	2597	8,2

#### 4.11.5 Physical devices / removable devices

This test determines the performance of physical devices (HDD) and removable devices (compact flash, USB memory stick). Therefore big datapackages are being transferred (reading speed / writing speed). The result is the maximal performance in MB/s.

#	Test device	Reading speed (MB/s)	Writing speed (MB/s)
<b>APC620 with INTEL 855GME chipset</b>			
30	Pentium M 1,4 GHz, 1024MB DDR-SDRAM Siliconsystems INC 1 GB card (NTFS)	9,83	4,36
30	Pentium M 1,4 GHz, 1024MB DDR-SDRAM B&R Compact Flash 1 GB card (NTFS)	37,13	9,83
<b>APC810 with INTEL GM45 chipset</b>

#### 4.12.1.3 Multi-Core Efficiency

Benchmark the multi-core efficiency of the processors. Shows how efficient the processor cores and their inter – connects are in comparison to other types to other typical processors. The ability of the cores to process data blocks and pass them to another core for processing of different sizes and different chain sizes is measured. The efficiency of the inter – connect between cores is thus benchmarked. The number of cores also counts as more data buffers can be processed simultaneously.

#	Test device	Inter-Core Bandwidth (GB/s) (higher scores are better)	Inter-Core Latency (ns) (lower scores are better)

#### 4.12.1.5 Video Rendering

Benchmark the graphics performance of the video adapters (GFXs). Shows how your graphics processors handle rendering in comparison to other typical graphics processors. Such operations are used by all graphics software, image manipulation, video decoders/encoders, games and modern operating systems.

Higher scores are better

#### 4.12.1.6 Video Memory Bandwidth

Benchmark the bandwidth of the memory of the video adapters (GFXs) and the bandwidth of the bus that connects them to your computer. Shows how your video adapters' memory bandwidth compares to other video sub-systems in terms of bandwidth.

Higher scores are better

#### 4.12.1.8 Memory Latency

Benchmark the latency (response time) of processors' caches and memory. Shows how your processors' caches and memory sub-systems compare to other computers in terms of latency. The latency of caches is measured in processor clocks (i.e. how many clocks it takes for the data to be ready) as it is dependent on the processor clock speed. The latency of memory is measured in nanoseconds as it is typically independent on processor clock speed.

Lower scores are better

#	Test device	CPU1 Memory Latency Random (ns)	CPU1 Speed Factor Random (ns)	CPU1 Memory Latency Linear (ns)	CPU1 Speed Factor Linear (ns)

## 4.12.2 APC2100/PPC2100

### 4.12.2.1 CPU Arithmetic

Benchmarks the ALU and FPU processor units. Shows how your processors handle arithmetic and floating point instructions in comparison to other typical processors. Such operations are used by software in typical tasks.

Higher scores are better

#	Test device	Arithmetic Performance (GOPS)	Dhrystone iSSE4.2 (GIPS)	Whetstone iSSE3 (GFLOPS)
<b>APC2100/PPC2100 with INTEL Bay Trail</b>				
60	E3815 1C 1.46GHz 512kB 5W, 1GB-1067MHz	3,9	4,46	3,41
61	E3825 2C 1.33GHz 1MB 6W, 1GB-1067MHz	7	8	6,2
62	E3826 2C 1.46GHz 1MB 7W, 2GB-1067MHz	7,8	9,64	6,3
63	E3827 2C 1.75GHz 1MB 8W, 4GB-1333MHz	9,3	11,52	7,5
64	E3845 4C 1.91GHz 2MB 10W, 4GB-1333MHz	20,36	25,18	16,46
65	E3845 4C 1.91GHz 2MB 10W, 8GB-1333MHz	20,3	25,1	16,43

Table 45: Results for SiSoft Sandra 2011, CPU Arithmetic – APC2100/PPC2100

Figure 60: Results for SiSoft Sandra 2011, CPU Arithmetic – APC2100/PPC2100

#### 4.12.2.2 Processor Multi-media

Benchmark the SIMD processor units. Shows how your processors handle multi-media instructions and data in comparison to other typical processors. Such operations are used by more specialized software, e.g. image manipulation, video decoders/encoders and games.

Higher scores are better

#	Test device	Multimedia Performance (MPixel/s)	Integer x8 iSSSE4.1 (MPixel/s)	Float x4 iSSE2 (MPixel/s)	Multimedia Double x2 iSSE2 (MPixel/s)
<b>APC2100/PPC2100 with INTEL Bay Trail</b>					
60	E3815 1C 1.46GHz 512kB 5W, 1GB-1067MHz	6	7	5	2,12
61	E3825 2C 1.33GHz 1MB 6W, 1GB-1067MHz	10,78	12,52	9,28	3,85
		Multimedia Performance (MPixel/s)	Integer x16 iSSSE4.1 (MPixel/s)	Float x8 iSSE2 (MPixel/s)	Multimedia Double x4 iSSE2 (MPixel/s)
<b>APC2100/PPC2100 with INTEL Bay Trail</b>					
62	E3826 2C 1.46GHz 1MB 7W, 2GB-1067MHz	16	17,2	14,7	5,16
63	E3827 2C 1.75GHz 1MB 8W, 4GB-1333MHz	19	20,53	17,7	6,17
64	E3845 4C 1.91GHz 2MB 10W, 4GB-1333MHz	42,57	46,7	38,8	13,5
65	E3845 4C 1.91GHz 2MB 10W, 8GB-1333MHz	42,47	46,7	38,62	13,52

Table 46: Results for SiSoft Sandra 2011, Processor Multi-Media – APC2100/PPC2100

Figure 61: Results for SiSoft Sandra 2011, Processor Multi-Media – APC2100/PPC2100

#### 4.12.2.3 Multi-Core Efficiency

Benchmark the multi-core efficiency of the processors. Shows how efficient the processor cores and their inter – connects are in comparison to other types to other typical processors. The ability of the cores to process data blocks and pass them to another core for processing of different sizes and different chain sizes is measured. The efficiency of the inter – connect between cores is thus benchmarked. The number of cores also counts as more data buffers can be processed simultaneously.

#	Test device	Inter-Core Bandwidth (GB/s) (higher scores are better)	Inter-Core Latency (ns) (lower scores are better)
<b>APC2100/PPC2100 with INTEL Bay Trail</b>			
60	E3815 1C 1.46GHz 512kB 5W, 1GB-1067MHz	-	-
61	E3825 2C 1.33GHz 1MB 6W, 1GB-1067MHz	0,92	199,5
62	E3826 2C 1.46GHz 1MB 7W, 2GB-1067MHz	0,935	314,7
63	E3827 2C 1.75GHz 1MB 8W, 4GB-1333MHz	1	156,8
64	E3845 4C 1.91GHz 2MB 10W, 4GB-1333MHz	1,68	154,1
65	E3845 4C 1.91GHz 2MB 10W, 8GB-1333MHz	1,76	164

Table 47: Results for SiSoft Sandra 2011, Multi-Core Efficiency – APC2100/PPC2100

Figure 62: Results for SiSoft Sandra 2011, Multi-Core Efficiency – APC2100/PPC2100

#### 4.12.2.4 Cryptography

Measures the cryptography efficiency of the processor units: encryption, decryption and hashing. Shows how your processors handle cryptographic operations in comparison to other typical processors. Such operations are used by software in most operations that handle sensitive data.

Higher scores are better

#	Test device	Cryptographic Bandwidth (GB/s)	AES256-ECB iAES Cryptographic Bandwidth (GB/s)	SHA256 iAVX Hashing Bandwidth (GB/s)
<b>APC2100/PPC2100 with INTEL Bay Trail</b>				
60	E3815 1C 1.46GHz 512kB 5W, 1GB-1067MHz	0,035	0,034	0,036
61	E3825 2C 1.33GHz 1MB 6W, 1GB-1067MHz	0,062	0,061	0,064
62	E3826 2C 1.46GHz 1MB 7W, 2GB-1067MHz	0,095	0,1	0,096
63	E3827 2C 1.75GHz 1MB 8W, 4GB-1333MHz	0,117	0,12	0,115

65	E3845 4C 1.91GHz 2MB 10W, 8GB-1333MHz	0,256	0,262	0,251

Table 48: Results for SiSoft Sandra 2011, Cryptography – APC2100/PPC2100

Figure 63: Results for SiSoft Sandra 2011, Cryptography – APC2100/PPC2100

#### 4.12.2.5 Video Rendering

Benchmark the graphics performance of the video adapters (GFXs). Shows how your graphics processors handle rendering in comparison to other typical graphics processors. Such operations are used by all graphics software, image manipulation, video decoders/encoders, games and modern operating systems.

Higher scores are better

#	Test Device	Direct3D 9c			Direct3D 10

#### 4.12.2.8 Memory Latency

Benchmark the latency (response time) of processors caches and memory. Shows how your processors caches and memory sub-systems compare to other computers in terms of latency. The latency of caches is measured in processor clocks (i.e. how many clocks it takes for the data to be ready) as it is dependent on the processor clock speed. The latency of memory is measured in nanoseconds as it is typically independent on processor clock speed.

Lower scores are better

#	Test device	CPU1 Memory Latency Random (ns)	CPU1 Speed Factor Random (ns)	CPU1 Memory Latency Linear (ns)	CPU1 Speed Factor Linear (ns)
<b>APC2100/PPC2100 with INTEL Bay Trail</b>

## 4.13 Passmark Performance Test 7.0

### 4.13.1 APC910/PPC900

#### 4.13.1.1 Passmark Rating

The PassMark rating is weighted average of all the other test results and gives a single overall indication of the computers performance. The bigger the number, the faster the computer. The PassMark rating can only be calculated if the results from all other tests are available. The value is calculated using a series of weighted averages where some components are considered to be more important than others: Disk 21%, CD/DVD 5%, Memory 19%, 3D Graphics 12%, 2D Graphics 14% and CPU 29%.

Higher scores are better

#	Test device	Passmark Rating

#### 4.13.1.2 CPU Mark

This suite contains multi-process CPU tests. The number of CPU test processes is configurable in Preferences. The following tests make up the suite: Integer (addition, subtraction, multiplication, division), Floating Point (addition, subtraction, multiplication, division), Multimedia Instructions (128-bit SSE operations such as addition, subtraction and multiplication), Find Prime numbers, Compression, Encryption, Physics, Random String Sorting

Higher scores are better

#### 4.13.1.3 2D Graphics Mark

This suite contains a number of tests that exercise the standard Windows graphics functions. The results from this suite depend on the speed at which the video card can carry out 2D graphics operations and the color depth currently in use. This suite contains: Solid Vectors, Transparent Vectors, Complex Vectors, Fonts and Text, Windows Interface, Image Filters, Image Rendering.

Higher scores are better

#	Test device	2D Graphics Mark

#### 4.13.1.4 3D Graphics Mark

This test suite attempts to measure the performance of the 3D graphics hardware installed in the machine. This test suite makes full use of version 9 of the Microsoft DirectX 3D library. Without DirectX 9.0 or above it will not be possible to run these tests. Three standard tests have been defined: Simple, Medium, and Complex.

Higher scores are better

#### 4.13.1.5 Memory Mark

This test suite contains a number of tests that exercise the memory sub-system of the computer. All tests use a combination of 32-bit and 64-bit data when reading or writing from or to RAM. It contains: Memory-Allocate small block, Memory-Cached, Memory-UnCached, Memory-Write and Memory-Large RAM.

Higher scores are better

#### 4.13.1.6 Disk Mark

This suite contains a number of tests that exercise the mass storage units connected to the computer. By default, the current user's application directory is used for the test. This suite contains: Disk Sequential Read, Disk Sequential Write and Disk Random Seek RW.

Higher scores are better

## 4.13.2 APC910

### 4.13.2.1 Passmark Rating

The PassMark rating is weighted average of all the other test results and gives a single overall indication of the computers performance. The bigger the number, the faster the computer. The PassMark rating can only be calculated if the results from all other tests are available. The value is calculated using a series of weighted averages where some components are considered to be more important than others: Disk 21%, CD/DVD 5%, Memory 19%, 3D Graphics 12%, 2D Graphics 14% and CPU 29%.

Higher scores are better

#	Test device	Passmark Rating

#### 4.13.2.2 CPU Mark

This suite contains multi-process CPU tests. The number of CPU test processes is configurable in Preferences. The following tests make up the suite: Integer (addition, subtraction, multiplication, division), Floating Point (addition, subtraction, multiplication, division), Multimedia Instructions (128-bit SSE operations suchs as addition, subtraction and multiplication), Find Prime numbers, Compression, Encryption, Physics, Random String Sorting

#### 4.13.2.3 2D Graphics Mark

This suite contains a number of tests that exercise the standard Windows graphics functions. The results from this suite depend on the speed at which the video card can carry out 2D graphics operations and the color depth currently in use. This suite contains: Solid Vectors, Transparent Vectors, Complex Vectors, Fonts and Text, Windows Interface, Image Filters, Image Rendering.

Higher scores are better

#	Test device	2D Graphics Mark

#### 4.13.2.4 3D Graphics Mark

This test suite attempts to measure the performance of the 3D graphics hardware installed in the machine. This test suite makes full use of version 9 of the Microsoft DirectX 3D library. Without DirectX 9.0 or above it will not be possible to run these tests. Three standard tests have been defined: Simple, Medium, and Complex.

Higher scores are better

Table 68: Results for Passmark Performance Test 7.0, Memory Mark – APC910

#### Information:

The Passmark Performance Test 7 Memory Mark results are heavily dependent on the CPU frequency and the amount of installed main memory. Passmark already realized this fact and has done some improvements regarding the Memory Mark in Performance Test version 8 and 9. The actual test results shows this circumstances.

Figure 92: Results for Passmark Performance Test 7.0, Memory Mark – APC910

#### 4.13.2.6 Disk Mark

This suite contains a number of tests that exercise the mass storage units connected to the computer. By default, the current user's application directory is used for the test. This suite contains: Disk Sequential Read, Disk Sequential Write and Disk Random Seek RW.

Higher scores are better

### 4.13.3 APC2100/PPC2100

#### 4.13.3.1 Passmark Rating

The PassMark rating is weighted average of all the other test results and gives a single overall indication of the computers performance. The bigger the number, the faster the computer. The PassMark rating can only be calculated if the results from all other tests are available. The value is calculated using a series of weighted averages where some components are considered to be more important than others: Disk 21%, CD/DVD 5%, Memory 19%, 3D Graphics 12%, 2D Graphics 14% and CPU 29%.

Higher scores are better

Figure 94: Results for Passmark Performance Test 7.0, Passmark Rating – APC2100/PPC2100

#### 4.13.3.2 CPU Mark

This suite contains multi-process CPU tests. The number of CPU test processes is configurable in Preferences. The following tests make up the suite: Integer (addition, subtraction, multiplication, division), Floating Point (addition, subtraction, multiplication, division), Multimedia Instructions (128-bit SSE operations suchs as addition, subtraction and multiplication), Find Prime numbers, Compression, Encryption, Physics, Random String Sorting

#### 4.13.3.3 2D Graphics Mark

This suite contains a number of tests that exercise the standard Windows graphics functions. The results from this suite depend on the speed at which the video card can carry out 2D graphics operations and the color depth currently in use. This suite contains: Solid Vectors, Transparent Vectors, Complex Vectors, Fonts and Text, Windows Interface, Image Filters, Image Rendering.

#### 4.13.4.2 CPU Mark

This suite contains multi-process CPU tests. The number of CPU test processes is configurable in Preferences. The following tests make up the suite: Integer (addition, subtraction, multiplication, division), Floating Point (addition, subtraction, multiplication, division), Multimedia Instructions (128-bit SSE operations suchs as addition, subtraction and multiplication), Find Prime numbers, Compression, Encryption, Physics, Random String Sorting

Higher scores are better

Figure 101: Results for Passmark Performance Test 7.0, CPU Mark – APC3100/PPC3100

#### 4.13.4.3 2D Graphics Mark

This suite contains a number of tests that exercise the standard Windows graphics functions. The results from this suite depend on the speed at which the video card can carry out 2D graphics operations and the color depth currently in use. This suite contains: Solid Vectors, Transparent Vectors, Complex Vectors, Fonts and Text, Windows Interface, Image Filters, Image Rendering.

Higher scores are better

Figure 102: Results for Passmark Performance Test 7.0, 2D Graphics Mark – APC3100/PPC3100

#### 4.13.4.4 3D Graphics Mark

This test suite attempts to measure the performance of the 3D graphics hardware installed in the machine. This test suite makes full use of version 9 of the Microsoft DirectX 3D library. Without DirectX 9.0 or above it will not be possible to run these tests. Three standard tests have been defined: Simple, Medium, and Complex.

Figure 103: Results for Passmark Performance Test 7.0, 3D Graphics Mark – APC3100/PPC3100

#### 4.13.4.5 Memory Mark

This test suite contains a number of tests that exercise the memory sub-system of the computer. All tests use a combination of 32-bit and 64-bit data when reading or writing from or to RAM. It contains: Memory-Allocate small block, Memory-Cached, Memory-UnCached, Memory-Write and Memory-Large RAM.

Higher scores are better

#	Test device	Memory Mark

Figure 104: Results for Passmark Performance Test 7.0, Memory Mark – APC3100/PPC3100

#### 4.13.4.6 Disk Mark

This suite contains a number of tests that exercise the mass storage units connected to the computer. By default, the current user's application directory is used for the test. This suite contains: Disk Sequential Read, Disk Sequential Write and Disk Random Seek RW.

Higher scores are better

#### 4.13.5 Comparison PP500, APC810/PPC800, APC910/PPC900, APC2100/PPC2100 and APC3100/PPC3100

The PassMark rating is weighted average of all the other test results and gives a single overall indication of the computers performance. The bigger the number, the faster the computer. The PassMark rating can only be calculated if the results from all other tests are available. The value is calculated using a series of weighted averages where some components are considered to be more important than others: Disk 21%, CD/DVD 5%, Memory 19%, 3D Graphics 12%, 2D Graphics 14% and CPU 29%.

## 7 Index

### 3

- 3D Mark 2000 ..... 11, 42, 43  
3D Mark 2001SE ..... 11, 44, 45

### A

- AMD 486DX2 ..... 7, 12, 14, 16, 28, 30, 32  
AMD 486DX5 ..... 7, 12, 14, 16, 28, 30, 32  
ATI  
    Radeon 9600 ..... 7  
    Rage Mobility ..... 7

### B

- B&R  
    Automation Runtime AR010 Version E2.82 ..... 46, 47  
    Automation Runtime AR106 Version B2.83 ..... 48, 49  
Benchmark programs ..... 11

### C

- Chips & Technologies 65535 ..... 7  
Chips & Technologies 69000 ..... 7

### D

- Devices being tested ..... 7  
Distribution ..... 2

### F

- Figure Index ..... 146

### G

- Geode ..... 7, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 42, 44

### H

- Hardware ..... 7  
HDTach V2.70 ..... 11, 40

### I

- Intel  
    82815 Graphics ..... 7  
    82855 GME Graphic ..... 7  
    82865G Graphics ..... 7

Celeron 3 ... 7, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 42, 44, 46, 49

Celeron M .. 7, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 42, 44, 46, 49, 50, 52, 54, 56

Pentium 3 .. 7, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 42, 44

Pentium 4 .. 7, 12, 14, 16, 18, 20, 22, 24, 26, 28, 29, 30, 31, 32, 33, 42, 44

Pentium M . 7, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 42, 44, 46, 49, 50, 52, 54, 56

### L

- Listing Index ..... 151

### O

- Operating system ..... 11

### P

- Passmark Performance Test 7.0 ..... 108  
PCMark04 ..... 11, 26  
PCMark2002 ..... 11, 24

### R

- Results ..... 12

### S

- Safety Notices ..... 3  
Sisoft  
    Sandra 2002 Prof ..... 12, 13, 14, 15, 16, 17  
    Sandra 2005 SR1 ..... 18, 19, 20, 21, 22, 23  
    Sandra 2011 Lite ..... 60  
    Sandra Pro Business 2007 ..... 50  
Software ..... 11

### T

- Table Index ..... 149  
Test location ..... 3

### V

- Versions ..... 2

### W
