### 3.4.3 Profibus DP cables

Profibus DP cables use terminating resistors at the beginning and end of the bus cable. For baud rates greater than 1.5 MBaud, special Profibus plugs that allow additional inductivity should be used.

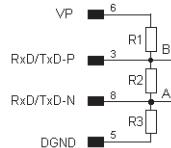

Figure 6: Terminating resistance - Profibus DP cable

The master can be connected anywhere in the Profibus DP network. Up to 32 Profibus devices can be connected to one another in a single segment.
