Chapter 1 • General information

1 Manual history

Version	Date	Change
0.10 Preliminary	26-Aug-11	<ul style="list-style-type: none"> • First version
1.00	12-Apr-12	<ul style="list-style-type: none"> • - Chapter Chapter 4 "Software" updated. • - Chapter Chapter 6 "Maintenance / Servicing" updated. • The terminal block 0TB1208.3100 (interface board plug) was updated in Chapter 5 "Accessories". • New CompactFlash cards 5CFCRD.xxxx-06 added to Chapter 5 "Accessories" - CompactFlash cards 5CFCRD.xxxx-04 discontinued. • Drilling template for the system unit corrected. • Interface board 5PP5IF.FETH-00 updated. • Section "Power management" on page 20 added to the chapter "Technical data". • Sections "Mounting orientation" on page 59 and "Spacing for air circulation." on page 61 added to chapter "Commissioning". • Section "Maintenance Controller Extended (MTCX)" on page 186 added to the chapter "".

Table 1: Manual history

2 Safety notices

2.1 Intended use

Programmable logic controllers (PLCs), operating and monitoring devices (industrial PCs, Power Panels, Mobile Panels, etc.), and B&R uninterruptible power supplies have been designed, developed, and manufactured for conventional use in industry. They were not designed, developed and manufactured for any use involving serious risks or hazards that could lead to death, injury, serious physical damage or loss of any kind without the implementation of exceptionally stringent safety precautions. In particular, such risks and hazards include the use of these devices to monitor nuclear reactions in nuclear power plants, as well as flight control systems, flight safety, the control of mass transit systems, medical life support systems and the control of weapons systems.

2.2 Protection against electrostatic discharge

Electrical components that can be damaged by electrostatic discharge (ESD) must be handled accordingly.

2.2.1 Packaging

- **Electrical components with housing**
... do not require special ESD packaging, but must be handled properly (see "Electrical components with housing").
- **Electrical components without housing**
must be protected by ESD-suitable packaging.

2.2.2 Guidelines for proper ESD- Proper handling

Electrical components with housing

- Do not touch the connector contacts on connected cables.
- Do not touch the contact tips on the circuit boards.

Electrical components without housing

The following applies in addition to "Electrical components with housing"

- Any persons handling electrical components or devices that will be installed in the electrical components must be grounded.
- Components can only be touched on the small sides or on the front plate.
- Components should always be stored in a suitable medium (ESD packaging, conductive foam, etc.). Metallic surfaces are not suitable storage surfaces!
- Electrostatic discharges should be avoided on the components (e.g. through charged plastics).
- A minimum distance of 10 cm must be kept from monitors and TV sets.
- Measurement devices and equipment must be grounded.
- Measurement probes on potential-free measurement devices must be discharged on sufficiently grounded surfaces before taking measurements.

Individual components

- ESD protective measures for individual components are thoroughly integrated at B&R (conductive floors, footwear, arm bands, etc.).
- The increased ESD protective measures for individual components are not necessary for our customers for handling B&R products.

2.3 Policy and procedures

Electronic devices are generally not failsafe. In the event of a failure on the programmable control system, operating or monitoring device, or uninterruptible power supply, the user is responsible for ensuring that other devices that may be connected, e.g. motors, are in a secure state.

Both when using programmable logic controllers and when using operating and monitoring devices as control systems in conjunction with a soft PLC (e.g. B&R Automation Runtime or comparable products) or a slot PLC (e.g. B&R LS251 or comparable products), the safety precautions applying to industrial control systems (e.g. the provision of safety devices such as emergency stop circuits, etc.) must be observed in accordance with applicable national and international regulations. The same applies for all other devices connected to the system, such as drives.

All tasks such as installation, commissioning, and maintenance are only permitted to be carried out by qualified personnel. Qualified personnel are persons familiar with transport, mounting, installation, commissioning, and operation of the product who also have the respective qualifications (e.g. IEC 60364). National accident prevention guidelines must be followed.

The safety guidelines, connection descriptions (type plate and documentation), and limit values listed in the technical data are to be read carefully before installation and commissioning and must be observed.

2.4 Transport and storage

During transport and storage, devices must be protected against impermissible stress (mechanical loads, temperature, humidity, aggressive atmospheres, etc.).

2.5 Installation

- Installation must be performed according to the documentation using suitable equipment and tools.
- Devices must be installed by qualified personnel without voltage applied. Before installation, voltage to the control cabinet should be switched off and prevented from being switched on again.
- General safety regulations and nationally applicable accident prevention guidelines must be observed.
- Electrical installation must be carried out according to the relevant guidelines (e.g. line cross section, fuse, protective ground connection).

2.6 Operation

2.6.1 Protection against touching electrical parts

To operate programmable logic controllers, operating and monitoring devices or uninterruptible power supplies, certain components must carry dangerous voltage levels of over 42 VDC. Touching one of these parts can result in a life-threatening electric shock. This could lead to death, severe injury or damage to equipment.

Before turning on the programmable logic controller, the operating and monitoring devices and the uninterruptible power supply, ensure that the housing is properly grounded (PE rail). The ground connection must be established when testing the operating and monitoring devices or the uninterruptible power supply, even when operating them for only a short time.

Before turning the device on, all parts that carry voltage must be securely covered. During operation, all covers must remain closed.

2.6.2 Environmental conditions - dust, humidity, aggressive gases

Use of operating and monitoring devices (e.g. industrial PCs, power panels, mobile panels, etc.) and uninterruptible power supplies in very dusty environments should be avoided. Dust collection on the devices influences their function and, especially in systems with active cooling (fans), sufficient cooling cannot be guaranteed.

The presence of aggressive gases in the environment can also lead to malfunctions. When combined with high temperature and humidity, aggressive gases - e.g. with sulfur, nitrogen and chlorine components - start chemical processes that can damage electronic components very quickly. Signs of the presence of aggressive gases are blackened copper surfaces and cable ends on existing installations.

For operation in dusty or humid conditions, correctly installed (cutout installation) operating and monitoring devices like Automation Panel or Power Panel are protected on the front side. The rear side of all devices must be protected from dust and humidity and must be cleaned at suitable intervals.

2.6.3 Programs, viruses, and dangerous programs

The system is subject to potential danger each time data is exchanged or software is installed from a data medium (e.g. diskette, CD-ROM, USB flash drive, etc.), a network connection, or the Internet. The user is responsible for assessing these dangers, implementing preventative measures such as virus protection programs, firewalls, etc. and obtaining software from reliable sources.

2.7 Environmentally-friendly disposal

All B&R programmable controllers, operating and monitoring devices, and uninterruptible power supplies are designed to inflict as little harm on the environment as possible.

2.7.1 Separation of materials

It is necessary to separate different materials so the device can undergo an environmentally-friendly recycling process.

Component	Disposal
Programmable logic controllers	Electronics recycling
Operating and monitoring devices	
Uninterruptible power supply	
Batteries & rechargeable batteries	
Cables	
Cardboard box / paper packaging	Paper / cardboard recycling
Plastic packaging	Plastic recycling

Table 2: Environmentally-friendly separation of materials

Disposal must comply with the respective legal regulations.

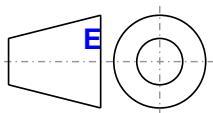

3 Organization of safety notices

The safety notices in this manual are organized as follows:

Safety notice	Description
Danger!	Disregarding safety regulations and notices can be life-threatening.
Caution!	Disregarding safety regulations and notices can result in severe injury or substantial damage to equipment.
Warning!	Disregarding safety guidelines and notices can result in injury or damage to equipment.
Information:	Important information for preventing errors.

Table 3: Organization of safety notices

4 Guidelines

European dimension standards apply to all dimension diagrams in this document.

All dimensions in mm.

Nominal measurement area	General tolerance according to DIN ISO 2768 medium
Up to 6 mm	± 0.1 mm
for 6 to 30 mm	± 0.2 mm
for 30 to 120 mm	± 0.3 mm
for 120 to 400 mm	± 0.5 mm
for 400 to 1000 mm	± 0.8 mm

Table 4: Nominal measurement areas

5 Overview

Product ID	Short description	on page
5CFCRD.016G-04	CompactFlash 16 GByte B&R	154
5CFCRD.0512-04	CompactFlash 512 MByte B&R	154
5CFCRD.1024-04	CompactFlash 1 GByte B&R	154
5CFCRD.2048-04	CompactFlash 2 GByte B&R	154

Chapter 2 • Technical data

1 Introduction

The APC510 and APC511 are the first choice when it comes to running applications where good performance needs to be combined with particularly compact dimensions. These devices are based on Intel Atom processors that are optimized for minimum power dissipation. In the consumer area, this means extended battery life for laptops, but for usage in industrial environments, the strength of Atom processors lies in their ability to reach the upper end of the temperature scale without requiring the use of fans. B&R is able to draw on many years of experience in the area of heat balancing, which even makes it possible to operate selected Core2 Duo processors fan-free. The most important factor when designing the APC510 and APC511 was keeping the dimensions to an absolute minimum, and this meant doing away with the space taken up by fans. Another step that contributes to their compact design is the absence of slots for PCI and PCI Express cards, as well as for standard drives such as DVD. Despite this, these Automation PCs are not limited in terms of modularity and flexibility. A Gigabit Ethernet interface, USB 2.0 ports and serial interfaces are all part of the standard package, as are the sound output (High Definition Audio) and removable external CompactFlash card.

The APC511 is the optimal solution whenever flush mounting is required. With a minimum installation depth of only 63.25 mm, you can have the advantages of a complete PC system even in extremely tight spaces.

1.1 Features

- Intel® Atom™ Z510, Z520 or Z530 processor
- Up to 2 GB SDRAM
- 2x USB 2.0
- 1x RS232
- 1x Ethernet 10/100/1000 MBit/s
- Optional interface and I/O boards
- CompactFlash slot (type I)
- 24 VDC supply voltage
- Operation without fan or heatsink
- BIOS (Insyde)
- Real-time clock, RTC (battery-buffered)

1.2 System components / configuration

The APC511 system can be assembled to meet individual requirements and operating conditions.

The following components are absolutely essential for operation:

- system unit
- CPU board
- Main memory
- Drive (mass memory such as CompactFlash card) for the operating system
- Supply voltage connector (terminal block)

1.2.1 Configuration - Basic system

2 Entire device

2.1 Temperature specifications

Temperature specifications must account for the permissible temperature range of the system unit as well as the installed components. The respective information can be found in the technical data of the individual components.

The permissible temperature ranges based on the type of installation must also be taken into consideration. For more information about this, please refer to the section "Mounting orientation" on page 59.

Information regarding worst-case conditions

- Thermal Analysis Tool (TAT V2.02) from Intel for simulating 100% processor load
- BurnIn testing tool (BurnIn V4.0 Pro from Passmark Software) to simulate a 100% load on the interface via loop-back adapters (serial interfaces, USB ports)
- Maximum system extension and power consumption

2.1.1 Temperature sensor locations

Sensors indicate temperature values in a variety of locations (USB ports, main memory) in the APC511. The temperatures¹⁾ can be read in BIOS in approved Microsoft Windows operating systems using the B&R Control Center. The ADI driver containing²⁾, or in Automation Runtime via data points in Automation Studio.

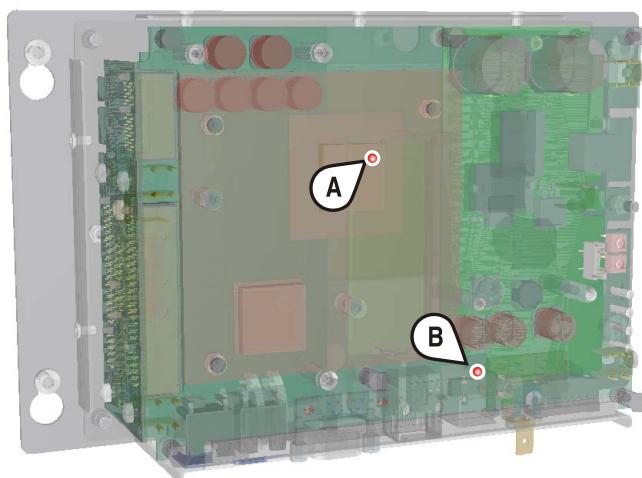

Image 3: Temperature sensor locations

Position	Measurement point for	Measurement	Max. specified
A	CPU	Processor temperature (sensor integrated on the processor).	100°C: 5PP5CP.US15-00, 5PP5CP.US15-01 90°C: 5PP5CP.US15-02
A	Main memory	Ambient temperature of the main memory (sensor integrated in processor).	80°C
B	Interfaces	Temperature of the interfaces (sensor integrated beside USB ports).	80°C
	Interface board	Temperature of an interface board (sensor integrated on the interface board).	dependent on the board
	I/O board	Temperature of an I/O board (sensor integrated on the I/O board).	dependent on the board

Table 5: Temperature sensor locations

2.1.2 Temperature monitoring

Sensors monitor temperature values in various places (CPU, interfaces, interface board, I/O board) in the APC511. The locations of the temperature sensors can be found in the figure "Image 3: Temperature sensor locations" on page 18. The value listed in the table represents the defined maximum temperature³⁾ for this measurement point. An alarm is not triggered when this temperature is exceeded. The temperatures can be read in BIOS or in approved Microsoft Windows operating system and Automation Runtime, using B&R Control Center.

1) The measured temperature approximates the immediate ambient temperature, but can be influenced by neighboring components.

2) the B&R Control Center is available in the Downloads section of the B&R website (www.br-automation.com)

3) The measured temperature approximates the immediate ambient temperature, but can be influenced by neighboring components.

2.2 Humidity specifications

The following table displays the minimum and maximum relative humidity for the individual components that are relevant for the humidity limitations of the entire device. The lowest and highest common values are always used when establishing these limits.

Component		Operation ¹⁾	Storage / Transport ¹⁾
System units		5 to 90%	5 to 95%
US15W - CPU boards		5 to 90%	5 to 95%
Main memory for CPU boards		10 to 90%	5 to 95%
Interface boards	5PP5IF.CETH-00	5 to 90%	5 to 95%
	5PP5IF.CHDA-00	5 to 90%	5 to 95%
	5PP5IF.FETH-00	5 to 90%	5 to 95%
	5PP5IF.FPLM-00	5 to 90%	5 to 95%
	5PP5IF.FCAN-00	5 to 90%	5 to 95%
	5PP5IF.FX2X-00	5 to 90%	5 to 95%
I/O board	5PP5IO.FXCM-00	5 to 90%	5 to 95%
	5PP5IO.GNAC-00	5 to 90%	5 to 95%
Accessories	CompactFlash cards - 5CFCRD.xxxx-06	85%	85%
	CompactFlash cards 5CFCRD.xxxx-04	85%	85%
	CompactFlash cards - 5CFCRD.xxxx-03	8 to 95%	8 to 95%
	Flash drive 5MMUSB.2048-01	10 to 90%	5 to 90%

Table 6: Overview of humidity specifications for individual components

1) Specifications correspond to the relative humidity, non-condensing.

The listed specifications correspond to the relative humidity at an ambient temperature of 30°C. More detailed information about the specific temperature-dependent humidity values can be found in the technical data for the individual components.

2.3 Power management

2.3.1 Block diagram - Supply voltage

The following block diagram presents the simplified structure of the supply voltage for system units.

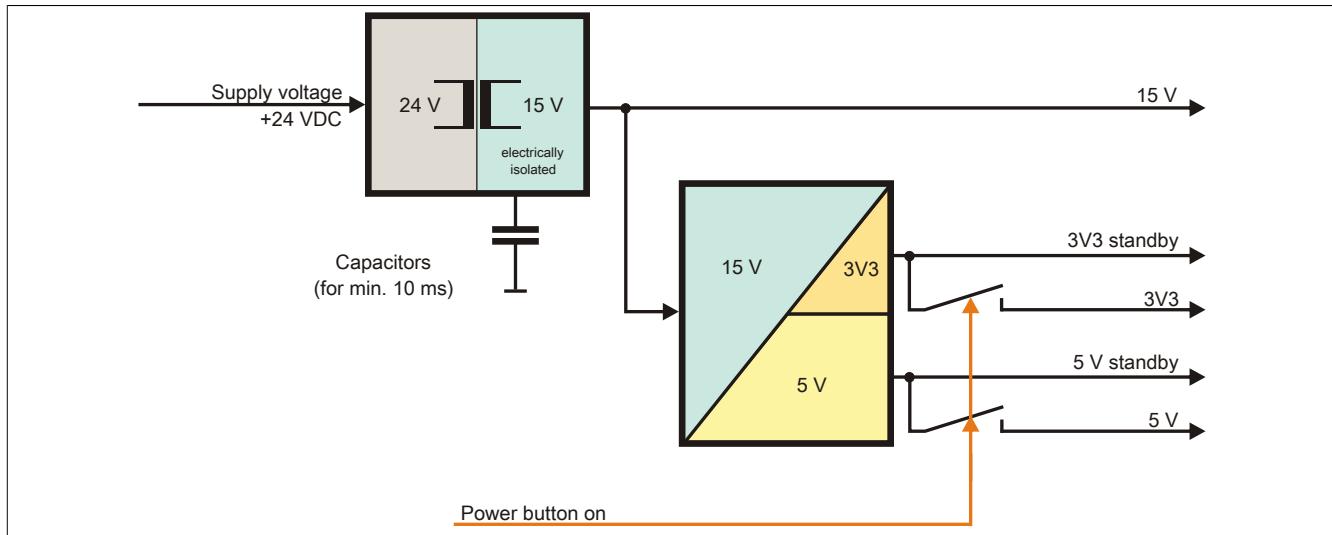

Image 4: Supply voltage for system units

Description

The supply voltage is converted to 15 V with a DC/DC converter. These electrically isolated 15 V feed further DC/DC converters, which generate the remaining voltages.

After the system is turned on (e.g. using the power button), the voltages 3V3 and 5 V are active on the system.

2.4 Device interfaces

2.4.1 Overview of device interfaces

Interfaces for system units with interface and I/O boards

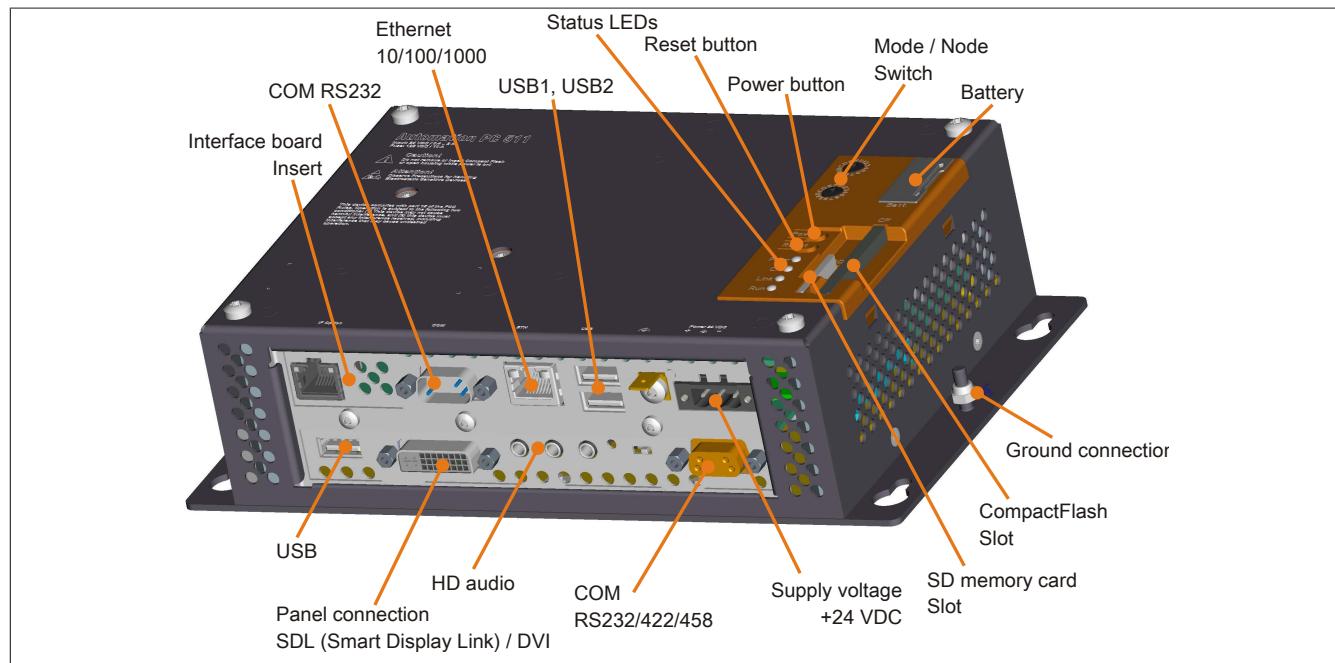

Image 5: Overview of interfaces with interface and I/O boards

Back cover of the system units

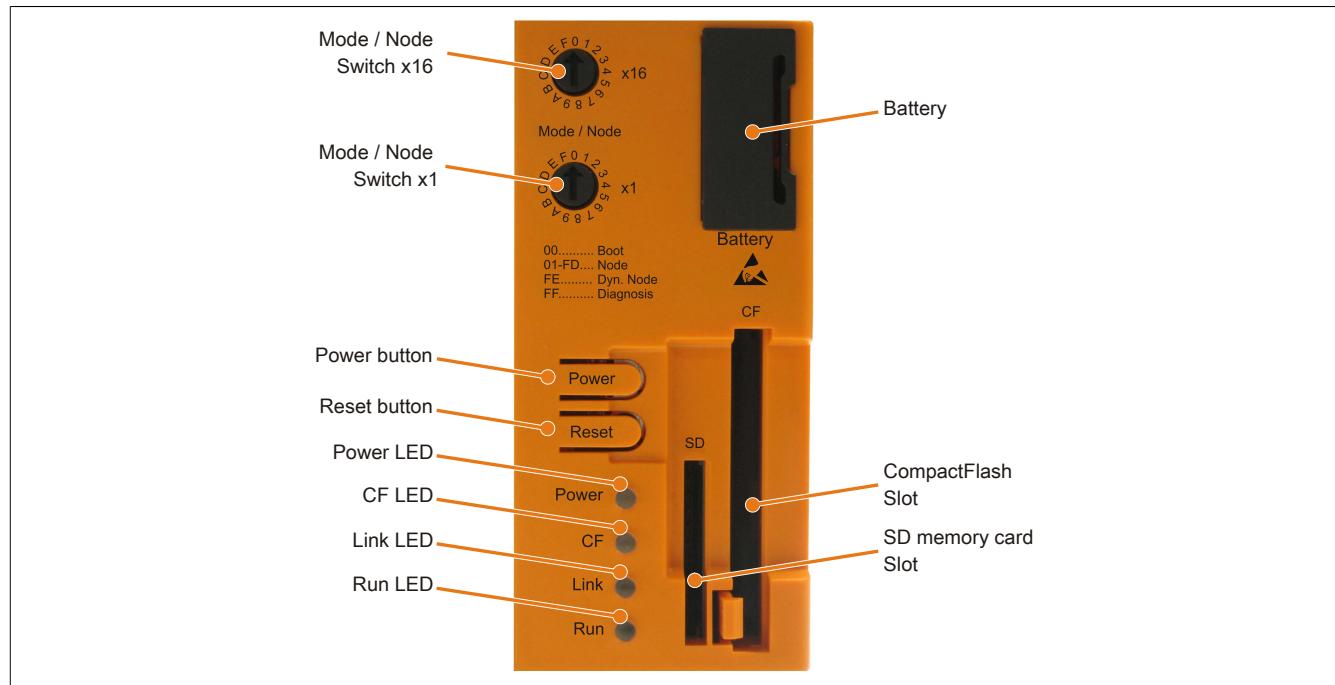

Image 6: Back cover

2.4.2 Supply voltage +24 VDC

The 3-pin socket required for the supply voltage connection is not included in delivery. This can be ordered from B&R using the model number 0TB103.9 (screw clamp) or 0TB103.91 (cage clamp).

The pin assignments can be found either in the following table or printed on the housing. The supply voltage is protected internally by a soldered fuse (10 A, fast-acting), so that the device cannot be damaged if there is an overload (fuse replacement necessary) or if the voltage supply is connected incorrectly (reverse polarity protection - fuse replacement not necessary). The device must be returned to B&R for repairs if the fuse is blown because of an error.

Supply voltage	
Protected against reverse polarity	
Pin	Description
1	+
2	Functional ground
3	-
Model number	Short description
Terminal blocks	
0TB103.9	Plug 24 V 5.08 3-pin screw clamp
0TB103.91	Plug 24 V 5.08 3-pin cage clamp

3-pin, male

Table 7: Supply voltage connection + 24VDC

Ground

Caution!

The pin's connection to the functional ground (pin 2) should be as short as possible (e.g. in the control cabinet). We recommend using the largest possible conductor cross section on the supply plug.

The system units have a ground connection located on the mounting plate.

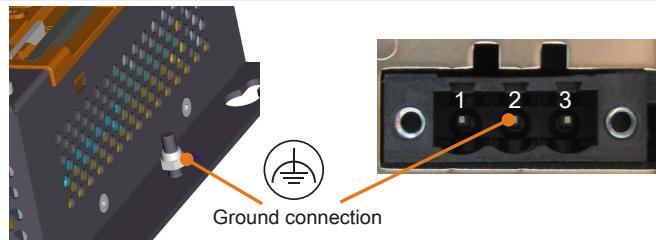

Image 7: Ground connection

The M4 self-locking nut can be used, for example, to fasten a copper strip that is built into the device at a central grounding point in the control cabinet or system. The largest possible conductor cross section should be used (at least 2.5 mm²).

2.4.3 Serial interface COM

Serial interface COM	
	RS232
Type	RS232, modem-capable, not electrically isolated
UART	16550-compatible, 16-byte FIFO
Transfer rate	Max. 115 kBaud
Cable length	Max. 15 meters
Pin	Assignment
1	DCD
2	RXD
3	TXD
4	DTR
5	GND
6	DSR
7	RTS
8	CTS
9	RI

9-pin DSUB plug

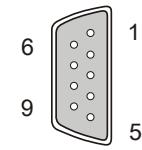

Table 8: Pin assignments - Serial interface (COM)

2.4.4 Ethernet (ETH)

This Ethernet controller is integrated in the CPU board and is fed outwards via the CPU board.

Ethernet connection (ETH)		
Controller	Intel 82574	
Cabling	S/STP (Cat5e)	
Transfer rate	10/100/1000 Mbit/s ¹⁾	
Cable length	max. 100 m (min. Cat5e)	
Speed LED	On	Off
Green	100 Mbit/s	10 Mbit/s ²⁾
Orange	1000 Mbit/s	-
Link LED	On	Off
Orange	Link (Ethernet network connection available)	Activity (blinking - data transfer in progress)

The diagram shows a top-down view of an RJ45 port. Above the port, the number '1' is centered. Below the port, two orange arrows point from the text labels 'Link LED' and 'Speed LED' to the respective LEDs located on the left and right sides of the port's housing.

Table 9: Ethernet connection (ETH)

1) Switching takes place automatically.

2) The 10 Mbit/s transfer speed / connection is only present if the Link LED is simultaneously active.

Driver support

A special driver is necessary for operating the Intel Ethernet controller 82574. The necessary drivers can be downloaded from the download area on the B&R homepage (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R homepage, not from manufacturers' pages.

2.4.5 USB ports

PP511 devices have a USB 2.0 (Universal Serial Bus) host controller with multiple USB ports, two of which are on the outside for easy user access.

Warning!

Peripheral USB devices can be connected to the USB interfaces. Due to the vast number of USB devices available on the market, B&R cannot guarantee their performance. B&R does ensure the performance of all USB devices that they provide.

Caution!

Because of the general PC specifications, this interface should be handled with extreme care with regard to EMC, location of cables, etc.

USB1, 2

Universal Serial Bus (USB1, USB2) ¹⁾	
Type	USB 2.0
Design	Type A
Transfer rate	Low speed (1.5 Mbit/s), full speed (12 Mbit/s), to high speed (480 Mbit/s)
Current load ²⁾ USB1, USB2	Max. 1 A
Cable length	max. 5 m (without hub)

The photograph shows a metal front panel with two rectangular ports. Each port has a small orange circle at its top edge. Orange lines extend from these circles to the labels "USB1" and "USB2" respectively, indicating the position of each port.

Table 10: USB1, USB2 port

- 1) The interfaces, etc. available on the device or module were numbered accordingly for easy identification. This numbering can differ from the numbering used by the particular operating system.
- 2) For safety, every USB port is equipped with a maintenance free "USB current-limiting circuit breaker" (max. 500 mA or 1 A).

2.4.6 Battery

The lithium battery located behind the black cover (3 V, 950 mAh) buffers the internal real-time clock (RTC) as well as the data in the SRAM of interface cards. The buffer duration of the battery is at least 4 years (at 50°C, 8.5 µA current requirements of the supplied components and a self discharge of 40%; if an interface board with SRAM is installed, then the service life equals 2½ years). The battery is subject to wear and should be replaced regularly (at least following the specified lifespan).

Battery	
Battery Type Removable Service life	Renata 950 mAh Yes, accessible from the outside 4 years ¹⁾
Model number	Short description
	Batteries
0AC201.91	Lithium batteries, 4 pcs., 3 V / 950 mAh, button cell
4A0006.00-000	Lithium batteries, 1 pcs., 3 V / 950 mAh, button cell

Table 11: Battery

- 1) At 50°C, 8.5 µA current requirements of the supplied components and a self discharge of 40%. If an interface board with SRAM is installed, then the service life equals 2½ years.

Battery status evaluation

The battery status is evaluated immediately following start-up of the device and is subsequently checked by the system every 24 hours. The battery is subjected to a brief load (1 second) during the measurement and then evaluated. The evaluated battery status is displayed in the BIOS Setup pages (under OEM Features - CPU Board Features - CPU Board Monitor) and in the B&R Control Center (ADI driver), but can also be read in a customer application via the ADI Library.

Battery status	Meaning
N/A	Hardware, i.e. firmware used is too old and does not support read.
GOOD	Data buffering is guaranteed.
BAD	Data buffering is guaranteed for approx. another 500 hours from the point in time that the battery capacity is determined to be BAD (insufficient).

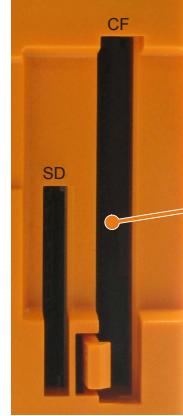

Table 12: Meaning of battery status

From the point when battery capacity is recognized as insufficient, data buffering is guaranteed for approximately another 500 hours. When changing the battery, data is buffered for approximately another 10 minutes by a gold leaf capacitor.

2.4.7 CompactFlash Slot

This CompactFlash slot is connected to the chipset internally via IDE PATA. Type I CompactFlash cards are supported.

CompactFlash slot	
Connection	PATA Master
CompactFlash Type	Type I
Model number	Short description
	CompactFlash
5CFCRD.0512-06	CompactFlash 512 MB B&R
5CFCRD.1024-06	CompactFlash 1024 MB B&R
5CFCRD.2048-06	CompactFlash 2048 MB B&R
5CFCRD.4096-06	CompactFlash 4096 MB B&R
5CFCRD.8192-06	CompactFlash 8192 MB B&R
5CFCRD.016G-06	CompactFlash 16 GB B&R

CompactFlash Slot

Table 13: CompactFlash slot

Warning!

Turn off power before inserting or removing the CompactFlash card!

2.4.8 SD Memory Card Slot

The SD memory card slot only supports SD memory cards, and not SDHC cards. SD memory cards are only permitted for use as mass memory. It is not possible to boot from an SD card.

SD Memory Card Slot	

SD memory card Slot

Table 14: SD Memory Card Slot

2.4.9 Power button

The power button has a variety of functions due to full ATX power supply support.

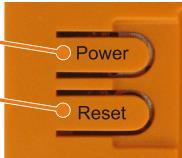

Power button	
<p>The power button acts like the on/off switch on a normal desktop PC with ATX power supply:</p> <p>Press and release ... Switches on the device or shuts down operating system and switches off the device.</p> <p>Press and hold ... ATX power supply switches off without shutting down the device (data could be lost!).</p> <p>Pressing the power button does not reset the MTCX processor.</p>	

Table 15: Power button

2.4.10 Reset button

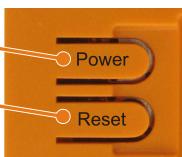

Reset button	
<p>Pushing the reset button triggers a hardware and PCI reset.</p> <p>The device restarts (cold restart). The MTCX processor is not reset when the reset button is pressed.</p>	

Table 16: Reset button

Warning!

A system reset can result in data loss!

2.4.11 Mode / Node switch

On the back of the system units there are two 16-digit hex selection switches. These can be used as operating mode switches. The switch positions 01 to FD are available for any purpose in an application and can be evaluated by the application program.

Mode / Node switch		
Switch position		
x16	x1	Description
0	0	Boot Default switch position - No Terminal Node switch position
0...1	F...D	Node Automation Runtime run mode with node 01-FD (CompactFlash Automation Runtime or terminal operation). Freely available for use in an application, e.g. setting the INA2000 node number for the Ethernet interface.
F	E	Dyn. node Automation Runtime run mode with dynamic node assignment (CompactFlash Automation Runtime or terminal operation). Device addresses can be assigned through the software.
F	F	Diagnostics The device boots in Diagnostics mode. Program sections in User RAM and User FlashPROM are not initialized. After diagnostics mode, the CPU always boots with a cold restart.

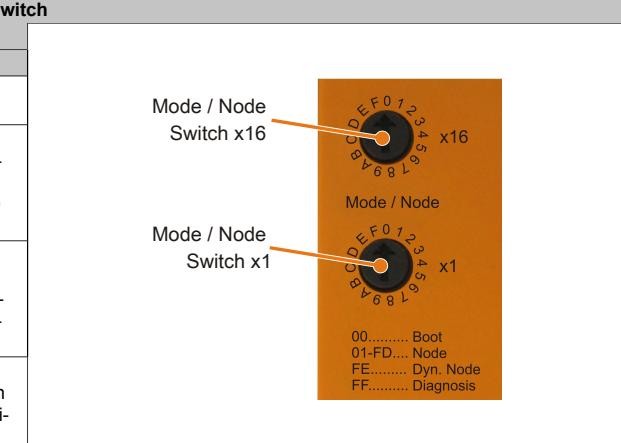

Table 17: Mode / Node switch

2.4.12 Status LEDs

The status LEDs are located on the back of the system unit.

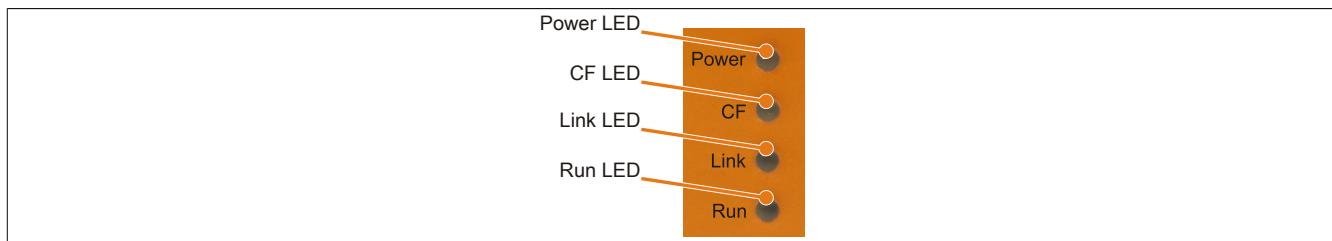

Image 8: Status LEDs

The following timing is used for the status LEDs:

Block size: 250 ms

Repeat interval: 500 ms; 2 boxes represent one interval

LED	Color	Status	Meaning	LED indicator	
Power	Green	On	Supply voltage OK		
		Blinking	The device has booted, the battery status is "BAD".		
Information:					
For more information, see see " Battery" on page 26.					
Red	On	The system is in standby mode (S5: soft-off mode or S4: hibernate mode - suspend-to-disk)			
	Blinking	The MTCX is running, the battery status is "BAD". The system is in standby mode (S5: soft-off mode or S4: hibernate mode - suspend-to-disk)			
Red / green	Blinking	Faulty or incomplete BIOS, MTCX or I/O FPGA update, battery status OK, power supply OK			
		Faulty or incomplete BIOS, MTCX or I/O FPGA update, battery status OK, standby mode (S5: soft-off mode or S4: hibernate mode - suspend-to-disk)			
		Faulty or incomplete BIOS, MTCX or I/O FPGA update, battery status BAD, power supply OK			
		Faulty or incomplete BIOS, MTCX or I/O FPGA update, battery status BAD, standby mode (S5: soft-off mode or S4: hibernate mode - suspend-to-disk)			
	Information:				
	An update must be performed again.				
CF	Yellow	On	Indicates IDE drive access (CF)		
Link	Yellow	On	Indicates an active SDL connection on the panel plug.		
		Blinking	An active SDL connection has been interrupted by a loss of power in the display unit.		
Information:					
Check the power supply / power connector of the connected display unit.					
Run	Green	Blinking	Automation Runtime booting Handled by Automation Runtime (ARemb and ARwin).		
	Green	On	Application running Handled by Automation Runtime (ARemb and ARwin).		
	Red	On	Application in service mode Handled by Automation Runtime (ARemb and ARwin).		

Table 18: Data - status LEDs

2.4.13 Interface board Insert

Interface board insert	
Model number	Short description
Interface boards	
5PP5IF.CETH-00	PP500 interface board; connection for 1x Ethernet 10/100/1000
5PP5IF.CHDA-00	PP500 interface board; connection for 1x MIC, 1x Line IN, 1x Line OUT
5PP5IF.FETH-00	PP500 interface board; connection for 1x Ethernet 10/100/1000, 512 kB SRAM
5PP5IF.FPLM-00	PP500 interface board; connections for 2x POWERLINK
5PP5IF.FCAN-00	PP500 interface board; connection for 1x CAN master, 512 kB SRAM

Product ID	5PC511.SX01-00
Storage	-20 to 60°C
Transport	-20 to 60°C
Relative humidity	
Operation	5 to 90%, non-condensing
Storage	5 to 95%, non-condensing
Transport	5 to 95%, non-condensing
Vibration	
Operation (continuous)	2 to 9 Hz: 1.75 mm amplitude / 9 to 200 Hz: 0.5 g
Operation (occasional)	2 to 9 Hz: 3.5 mm amplitude / 9 to 200 Hz: 1 g
Storage	2 to 8 Hz: 7.5 mm amplitude / 8 to 200 Hz: 2 g / 200 to 500 Hz: 4 g
Transport	2 to 8 Hz: 7.5 mm amplitude / 8 to 200 Hz: 2 g / 200 to 500 Hz: 4 g
Shock	
Operation	15 g, 11 ms
Storage	30 g, 15 ms
Transport	30 g, 15 ms
Altitude	
Operation	Max. 3000 m (component-dependent) ⁵⁾
Mechanical characteristics	
Housing	
Material	Galvanized plate, plastic
Paint	Dark gray (similar to Pantone 432CV)
Dimensions	
Width	230 mm
Height	140 mm
Depth	63.25 mm
Weight	Approx. 1500 g

Table 22: 5PC511.SX01-00 - Technical data

- 1) At 50°C, 8.5 µA for the supplied components and a self-discharge of 40%. If an interface board with SRAM is installed, then the service life equals 2½ years.
- 2) Maintenance Controller Extended
- 3) The value specified is valid for a nominal voltage of 24 VDC.
- 4) The specified value applies to a system unit with a CPU board and I/O board, but without an interface board.
- 5) Derating the maximum ambient temperature - typically 1°C per 1000 meters (from 500 meters above sea level).

3.2 US15W - CPU boards

3.2.1 General information

CPU boards are based on the Intel® US15W chipset and contain one DDR2 memory location for a maximum of 2 GB. Additionally, the Intel® GMA 500 with 128 MB RAM is also integrated.

- Intel® Atom™ technology
- Intel® US15W chipset
- Insyde BIOS
- 1x DDR2 memory socket
- Intel® GMA 500
- Gigabit Ethernet

3.4 Interface Boards

Information:

Installation and replacement of interface boards ONLY possible at the B&R plant.

3.4.1 5PP5IF.CETH-00

General information

The interface board 5PP5IF.CETH-00 has a 10/100/1000 Mbit/sec network connection as well as 512 kB SRAM and can be used as an additional network interface in a Power Panel 500, Automation PC 510 or Automation PC 511.

- 1 network connection (10/100/1000 Mbit/s)
- Compatible with PP500, APC510, APC511

The interface board can be operated using Automation Runtime in Automation Studio 3.0.90.18 or higher and Automation Runtime D4.01.

1) Switching takes place automatically.

2) The 10 Mbit/s transfer speed / connection is only present if the IF slot Link LED is simultaneously active.

A special driver is necessary for operating the Intel Ethernet controller 82574. The necessary drivers can be downloaded from the download area on the B&R homepage (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R homepage, not from manufacturers' pages.

3.4.2 5PP5IF.CHDA-00

General information

The interface board 5PP5IF.CHDA-00 has an HDA sound chip with externally accessible MIC, Line IN and Line OUT channels.

- 1x MIC
- 1x Line IN
- 1x Line OUT
- Compatible with PP500, APC510, APC511

The interface board can be run using Automation Runtime in Automation Studio 3.0.90.18 or higher and Automation Runtime A4.01.

3.4.4 5PP5IF.FPLM-00

General information

The interface board 5PP5IF.FPLM-00 has two POWERLINK connections and 512 kB SRAM.

The integrated hub allows for the easiest possible implementation of a simple tree structure or optional ring-redundancy without extra effort.

With pollresponse chaining, the module also offers a solution for the highest demands in regard to response time and the shortest cycle times. When combined with the B&R control system, poll response chaining provides ideal performance, particularly for central control tasks.

- 2x POWERLINK V1/V2 connections
- 512 kB SRAM
- Integrated hub for efficient cabling
- Configurable ring redundancy
- Poll response chaining
- Compatible with PP500, APC510, APC511

The interface board can only be operated under Automation Runtime.

The diagram shows a top-down view of the POWERLINK Interface Board 2. A callout points to the bottom-left corner with the label 'Link LED'. Another callout points to the bottom-right corner with the label 'Speed LED'. The board has a dark grey metal frame with various electronic components visible.

Table 38: POWERLINK Interface Board 2port connection

LED STATUS

The status/error LED is a green/red dual LED. The status LEDs can have different meanings depending on operating mode.

Ethernet TCP/IP mode

The interface can be operated purely as an Ethernet TCP/IP interface.

Green - status	Description
On	The POWERLINK interface is operated purely as an Ethernet TCP/IP interface.

Table 39: Status/Error LED - Ethernet TCP/IP operating mode

POWERLINK V1

Status LED		Status of the POWERLINK station
Green	Red	
On	Off	The POWERLINK station is running with no errors.
Off	On	A fatal system error has occurred. The error type can be read using the PLC logbook. An irreparable problem has occurred. The system cannot properly carry out its tasks. This status can only be changed by resetting the module.
Blinking alternately		The POWERLINK managing node failed. This error code can only occur in controlled node operation.
Off	Blinking	System failure. The red blinking LED signals a certain type of error using a blink code (see section " System failure error codes" on page 46).

Table 40: Status/error LED - POWERLINK V1 operating mode

POWERLINK V2

Red - error	Description
On	<p>The POWERLINK interface has encountered an error (failed Ethernet frames, increased number of collisions on the network, etc.).</p> <p>If an error occurs in the following states, then the green LED blinks over the red LED:</p> <ul style="list-style-type: none"> • BASIC_ETHERNET • PRE_OPERATIONAL_1 • PRE_OPERATIONAL_2 • READY_TO_OPERATE <p>The figure consists of three horizontal timelines sharing a common time axis labeled 't'. 1. The top timeline shows the 'Status Green' signal as a series of short green vertical bars. 2. The middle timeline shows the 'Error Red' signal as a single long solid red horizontal bar. 3. The bottom timeline shows the 'LED S/E' signal as a sequence of alternating green and red vertical bars. The red bars in the 'Error Red' and 'LED S/E' signals align with the gaps between the green bars in the 'Status Green' signal, indicating simultaneous activity.</p>

Table 41: Status / Error LED as error LED - POWERLINK operating mode

Green - status	Description
Off NOT_ACTIVE	<p>Managing Node (MN) The bus is monitored for POWERLINK frames. If a frame is not received within the configured time window (timeout), the interface goes directly into PRE_OPERATIONAL_1 status (single flash). If, however, POWERLINK communication is detected before this time passes, the interface goes directly into the BASIC_ETHERNET status (flickering).</p> <p>Controlled Node (CN) The bus is monitored for POWERLINK frames. If a frame is not received within the configured time window (timeout), the interface goes directly into BASIC_ETHERNET status (flickering). If, however, POWERLINK communication is detected during this time, the interface goes directly into the PRE_OPERATIONAL_1 status (single flash).</p>
Green flickering (approx. 10 Hz) BASIC_ETHERNET	<p>The interface is in BASIC_ETHERNET status, and is operated purely as an Ethernet TCP/IP interface.</p> <p>Managing Node (MN) This status can only be changed by resetting the interface.</p> <p>Controlled Node (CN) If POWERLINK communication is detected while in this status, the interface goes into the PRE_OPERATIONAL_1 state (single flash).</p>
Single flash (approx. 1 Hz) PRE_OPERATIONAL_1	<p>The interface status is PRE_OPERATIONAL_1.</p> <p>Managing Node (MN) The MN starts the operation of the "reduced cycle". Collisions are allowed on the bus. There is not yet any cyclic communication.</p> <p>Controlled Node (CN) The CN waits until it receives an SoC frame and then switches to PRE_OPERATIONAL_2 status (double flash).</p>
Double flash (approx. 1 Hz) PRE_OPERATIONAL_2	<p>The interface status is PRE_OPERATIONAL_2.</p> <p>Managing Node (MN) The MN begins with the cyclic communication (cyclic input data is not yet evaluated). The CNs are configured in this status.</p> <p>Controlled Node (CN) In this status, the interface is normally configured by the manager. After this, a command changes the status to PRE_OPERATIONAL_3 (triple flash).</p>
Triple flash (approx. 1 Hz) READY_TO_OPERATE	<p>The interface status is READY_TO_OPERATE.</p> <p>Managing Node (MN) Normal cyclic and asynchronous communication. Received PDO data is ignored.</p> <p>Controlled Node (CN) The configuration of the interface is complete. Normal cyclic and asynchronous communication. The PDO data sent corresponds to the PDO mapping used. However, cyclic data is not yet evaluated.</p>
On OPERATIONAL	<p>The interface status is OPERATIONAL.</p>
Blinking (approx. 2.5 Hz) STOPPED	<p>The interface status is STOPPED.</p> <p>Managing Node (MN) This status is not possible for the MN.</p> <p>Controlled Node (CN) No output data is produced and no input data is received. Only the appropriate command from the manager can enter or leave this state.</p>

Table 42: Status/Error LED as status LED - POWERLINK operating mode

System failure error codes

Incorrect configuration or defective hardware can cause a system failure error.

The error is displayed via the red error LED using four switch-on phases. The switch-on phases are either 150 ms or 600 ms long. Error code outputs are repeated cyclically after 2 seconds.

Legend:

• ...	150 ms
- ...	600 ms
Delay ...	2 sec. delay

Error description	Error code displayed by red status LED									
RAM Errors	•	•	•	-	Break	•	•	•	-	Break
Hardware errors	-	•	•	-	Break	-	•	•	-	Break

Table 43: Status/error LED as error LED - system failure error codes

Firmware update

The firmware is a component of Automation Studio. The module is automatically changed to this version.

To update the firmware included in Automation Studio, you must upgrade the hardware (see the Help system under "Project Management - Automation Studio Upgrade").

3.4.5 5PP5IF.FCAN-00

General information

The interface board 5PP5IF.FCAN-00 contains one CAN master interface and 512 kB SRAM.

- 1x CAN master interface
- 512 KB SRAM
- Compatible with PP500, APC510, APC511

The interface board can only be operated under Automation Runtime.

Order data

To update the firmware included in Automation Studio, you must upgrade the hardware (see the Help system under "Project Management - Automation Studio Upgrade").

3.5 I/O boards

Information:

Installation and replacement of I/O boards ONLY possible at the B&R plant.

3.5.1 5PP5IO.GNAC-00

General information

The I/O board 5PP5IO.GNAC-00 has 1x RS232/422/485 interface, 1x USB 2.0 connection, 1x HDA sound connection and 1x Smart Display Link/DVI socket. The I/O board can be connected to and operated on Power Panel 500 and Automation PC 511 devices with an I/O board slot.

- 1x USB 2.0
- 1x RS232/422/485
- 1x HDA Sound
- 1x Smart Display Link/DVI
- Mounting is compatible with the PP500, APC511

Order data

1) If these settings are not already used in the system.

Bus length and cable type RS232

The maximum transfer rate of 115 kBit/s depends on the cable type being used.

Extension	Transfer rate
≤ 15 m	typ. 64 kbit/s
≤ 10 m	typ. 115 kbit/s
≤ 5 m	typ. 115 kbit/s

Table 62: RS232 - Bus length and transfer rate

The material used for the cable should preferably have all or most of the following properties in order to reach an optimal transfer rate.

RS232 cable	Property
Signal lines	
Cable cross section	4x 0.16 mm ² (26AWG), tinned Cu wire
Wire insulation	PE
Conductor resistance	≤ 82 Ω/ km
Stranding	Wires stranded in pairs
Shielding	Paired shield with aluminum foil

Table 63: RS232 - Cable requirements

RS232 cable	Property
Grounding line	
Cable cross section Wire insulation Conductor resistance	1x 0,34 mm ² (22AWG/19), tinned Cu wire PE ≤ 59 Ω/km
Outer sheathing	
Material Properties Cable shielding	PUR mixture Halogen free From tinned cu wires

Table 63: RS232 - Cable requirements

RS422 - Bus length and cable type

The RTS line must be switched on to activate the sender.

The maximum transfer rate of 115 kBit/s depends on the cable type being used.

Extension	Transfer rate
1200 m	typ. 115 kbit/s

Table 64: RS422 - Bus length and transfer rate

The material used for the cable should preferably have all or most of the following properties in order to reach an optimal transfer rate.

RS422 cable	Property
Signal lines	
Cable cross section Wire insulation Conductor resistance Stranding Shielding	4x 0.25 mm ² (24AWG/19), tinned Cu wire PE ≤ 82 Ω/km Wires stranded in pairs Paired shield with aluminum foil
Grounding line	
Cable cross section Wire insulation Conductor resistance	1x 0,34 mm ² (22AWG/19), tinned Cu wire PE ≤ 59 Ω/km
Outer sheathing	
Material Properties Cable shielding	PUR mixture Halogen free From tinned cu wires

Table 65: RS422 - Cable requirements

Operation as RS485 Interface

The pins of the RS422 default interface (1, 4, 6 and 9) should be used for operation. The pins should be connected as shown.

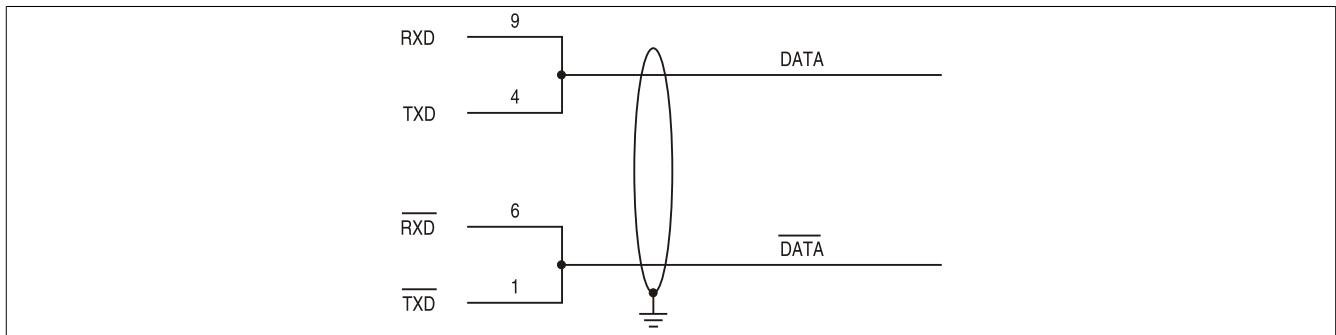

Image 13: RS232/422/485 interface - operated in RS485 mode

The RTS line must be switched each time the driver is sent and received; there is no automatic switch back. This cannot be configured in Windows.

The voltage drop caused by long line lengths can lead to greater potential differences between the bus stations, which can hinder communication. This can be improved by running ground wire with the others.

The line ends of the RS485 interface should (at least for longer line lengths or larger transfer rates) be closed. Normally a passive terminator can be used on the bus ends by connecting each of the signal lines with 120 Ω resistor.

RS485 - Bus length and cable type

The maximum transfer rate of 115 kBit/s depends on the cable type being used.

Extension	Transfer rate
1200 m	typ. 115 kbit/s

Table 66: RS485 - Bus length and transfer rate

The material used for the cable should preferably have all or most of the following properties in order to reach an optimal transfer rate.

RS485 cable	Property
Signal lines	<ul style="list-style-type: none"> Cable cross section 4x 0.25 mm² (24AWG/19), tinned Cu wire Wire insulation PE Conductor resistance ≤ 82 Ω/km Stranding Wires stranded in pairs Shielding Paired shield with aluminum foil
Grounding line	<ul style="list-style-type: none"> Cable cross section 1x 0,34 mm² (22AWG/19), tinned Cu wire Wire insulation PE Conductor cross section ≤ 59 Ω/km
Outer sheathing	<ul style="list-style-type: none"> Material PUR mixture Properties Halogen free Cable shielding From tinned cu wires

Table 67: RS485 - Cable requirements

Terminating resistor

There is a terminating resistor for the serial interface integrated directly on the I/O board. It can be enabled and disabled with a switch between the serial interface and the audio port. An active terminating resistor is indicated by a yellow LED.

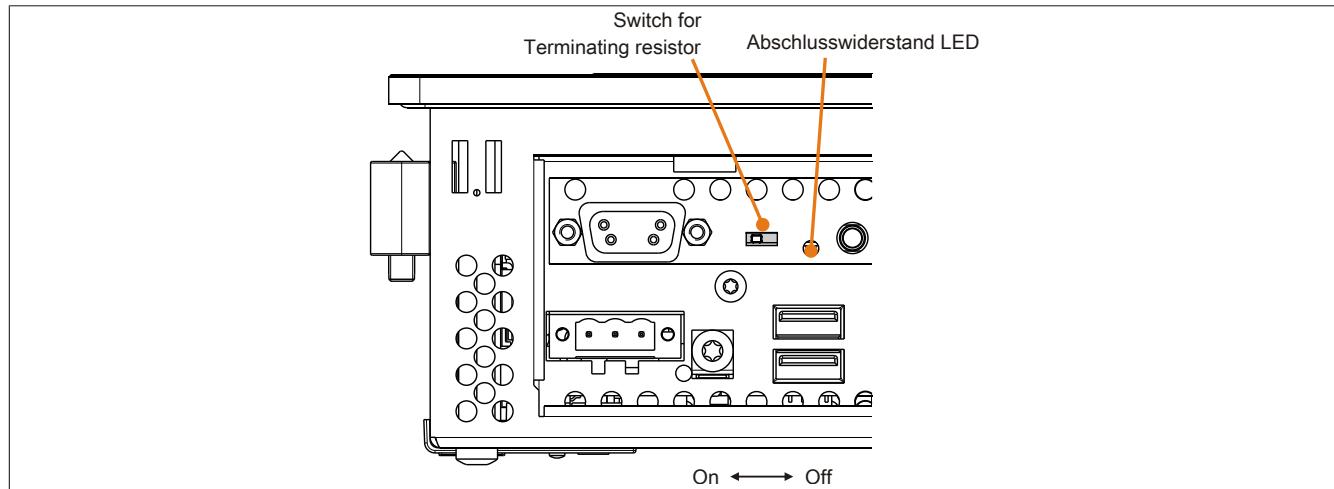

Image 14: Serial interface (COM) terminating resistor

USB port (USB4)

The I/O board has a USB 2.0 (Universal Serial Bus) host controller with multiple USB ports, one of which is on the outside for easy access.

Warning!

Peripheral USB devices can be connected to the USB interfaces. Due to the vast number of USB devices available on the market, B&R cannot guarantee their performance. B&R does ensure the performance of all USB devices that they provide.

Caution!

Because of the general PC specifications, this interface should be handled with extreme care with regard to EMC, location of cables, etc.

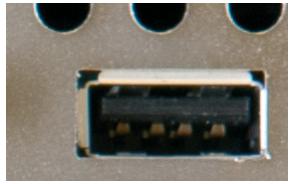

Universal Serial Bus (USB4) ¹⁾		
Transfer rate	Low speed (1.5 Mbit/s), full speed (12 Mbit/s), to high speed (480 Mbit/s)	1x USB type A, female
Power supply ²⁾ USB4	Max. 1 A	
Cable length	max. 5 m (without hub)	
		

Table 68: USB4 connection

- 1) The interfaces, etc. available on the I/O board were numbered accordingly for easy identification. This numbering can differ from the numbering used by the particular operating system.
- 2) For safety, every USB port is equipped with a maintenance free "USB current-limiting circuit breaker" (max. 1 A)

MIC, Line IN, Line OUT

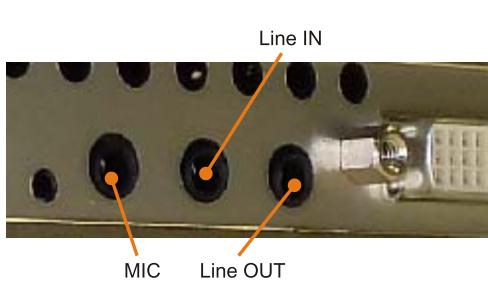

MIC, Line IN, Line OUT		
Controller	Realtek ALC 662	3.5 mm jack, female
MIC	Connection of a mono microphone with a 3.5 mm stereo (headphone) jack.	
Line IN	Stereo Line IN signals supplied via 3.5 mm jack.	
Line OUT	Connection of a stereo sound device (e.g. amplifier) via a 3.5 mm jack.	
		

Table 69: MIC, Line IN, Line OUT

A special driver is necessary for operating the audio controller. The necessary drivers can be downloaded from the download area on the B&R homepage (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R homepage, not from manufacturers' pages.

Chapter 3 • Commissioning

1 Installation

The devices are installed using the mounting plates found on the housing. The plates are designed for M5 screws.

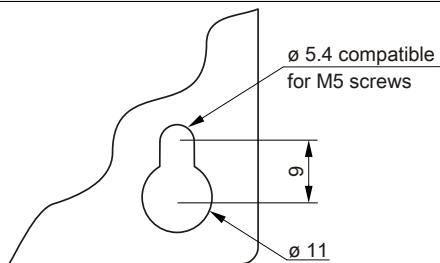

Image 15: Mounting plates

The exact positioning of the mounting holes can be seen in the following drilling templates.

1.1 Procedure

1. Drill the necessary holes in the control cabinet. The exact positioning of the mounting holes can be seen in the drilling templates.
2. Mount the B&R Industrial PC to the control cabinet using M5 screws.

1.2 Important mounting information

- The environmental conditions must be taken into consideration.
- This device must be mounted to a flat surface.
- This device is only certified for operation in closed rooms.
- This device must not be subjected to direct sunlight.
- The ventilation holes must not be covered.
- This device must be mounted in one of the specified approved orientations.
- Be sure the wall or control cabinet can withstand four times the total weight of the device.
- When connecting cables (DVI, SDL, USB, etc.) do not exceed the flex radius.

1.3 Mounting orientation

The following diagrams show the specified mounting orientation for the Automation PC 511 device.

1.3.1 Mounting orientation 0°

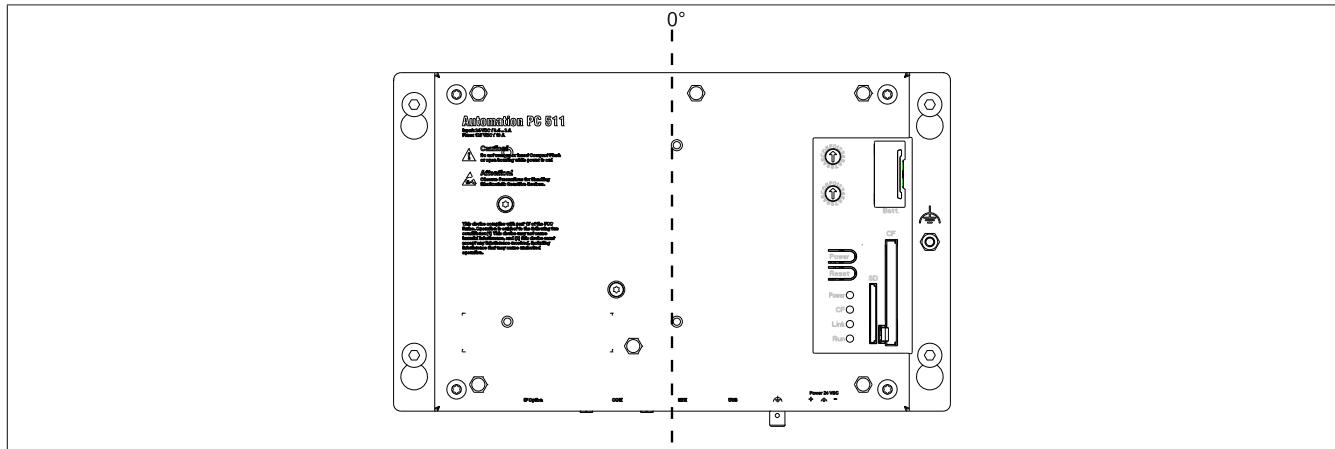

Image 16: Mounting orientation 0°

Mount the device so that the spacing is as indicated in section "Spacing for air circulation." on page 61 in order to facilitate natural air circulation.

1.3.2 Mounting orientation 90°

The maximum ambient temperature specification at a mounting orientation of 90° (horizontal) is 45°C.

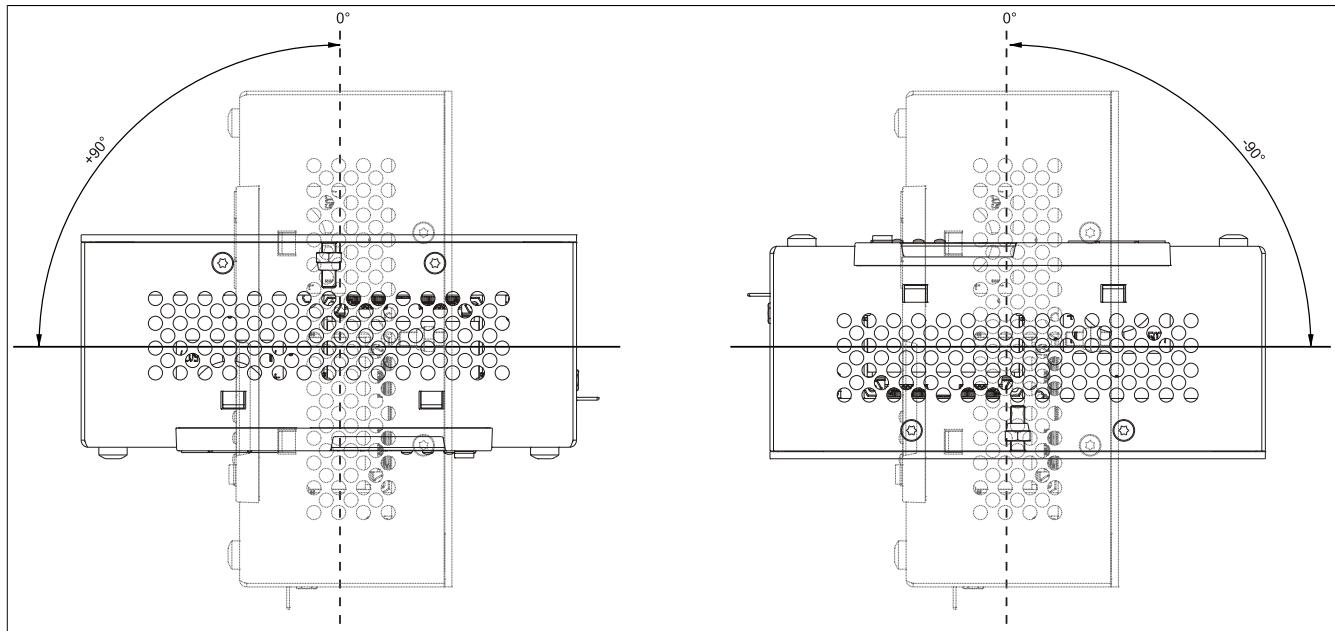

Image 17: Mounting orientation -90° or +90°.

Mount the device so that the spacing is as indicated in section "Spacing for air circulation." on page 61 in order to facilitate natural air circulation.

1.3.3 Mounting orientation 90° vertical

There are no limitations regarding ambient temperature when mounted at 90° vertical.

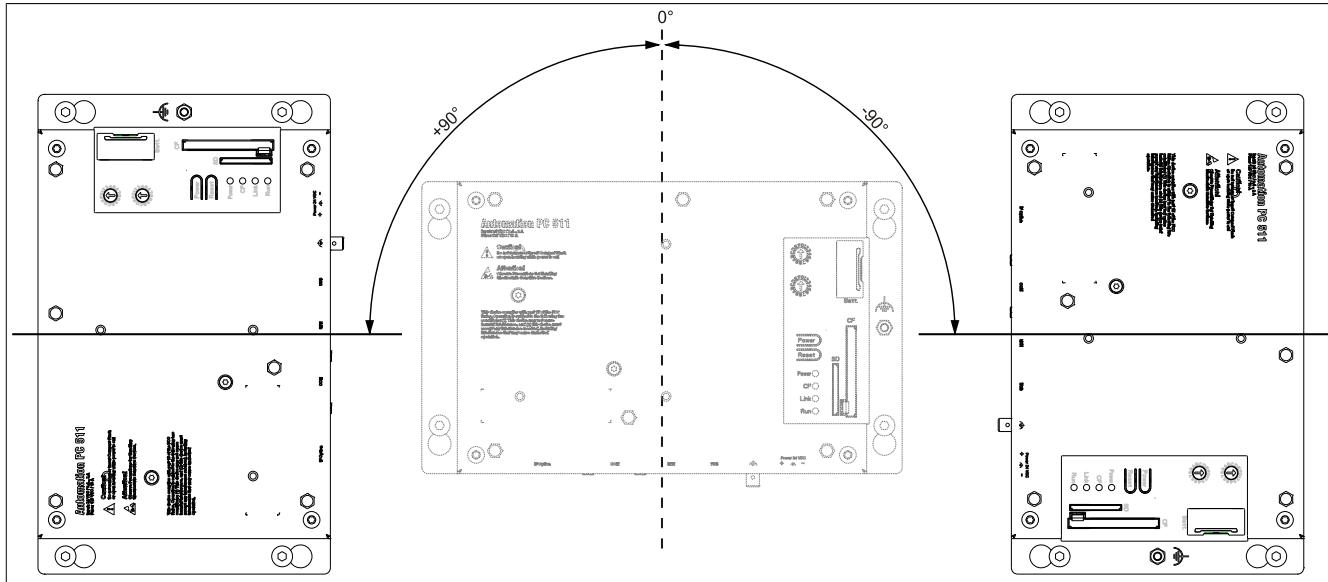

Image 18: Mounting orientation -90° or +90° vertical

Mount the device so that the spacing is as indicated in section "Spacing for air circulation." on page 61 in order to facilitate natural air circulation.

1.3.4 Mounting orientation 180°

There are no limitations regarding ambient temperature when mounted at 180°.

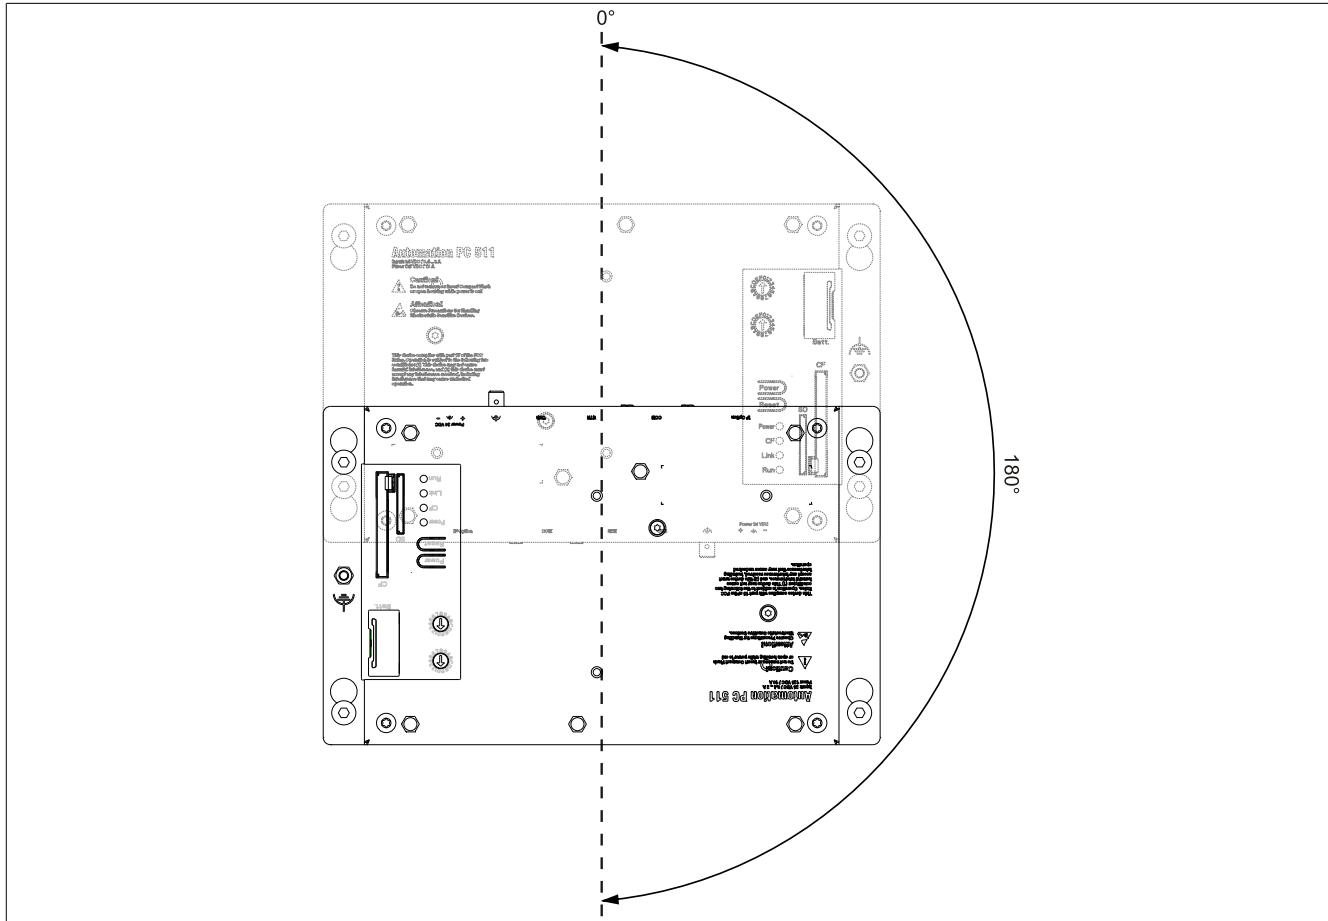

Image 19: Mounting orientation 180°

Mount the device so that the spacing is as indicated in section "Spacing for air circulation." on page 61 in order to facilitate natural air circulation.

1.4 Spacing for air circulation.

To ensure sufficient air circulation, allow the specified amount of space above, below, to the side of and behind the Automation PC 511. The minimum specified spacing is indicated in the following diagrams.

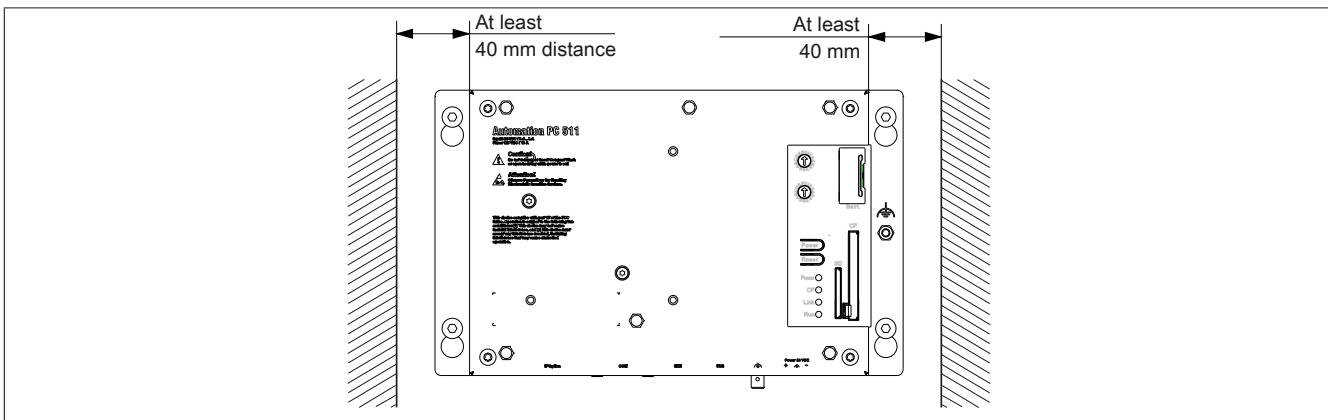

Image 20: Air circulation spacing - Rear view

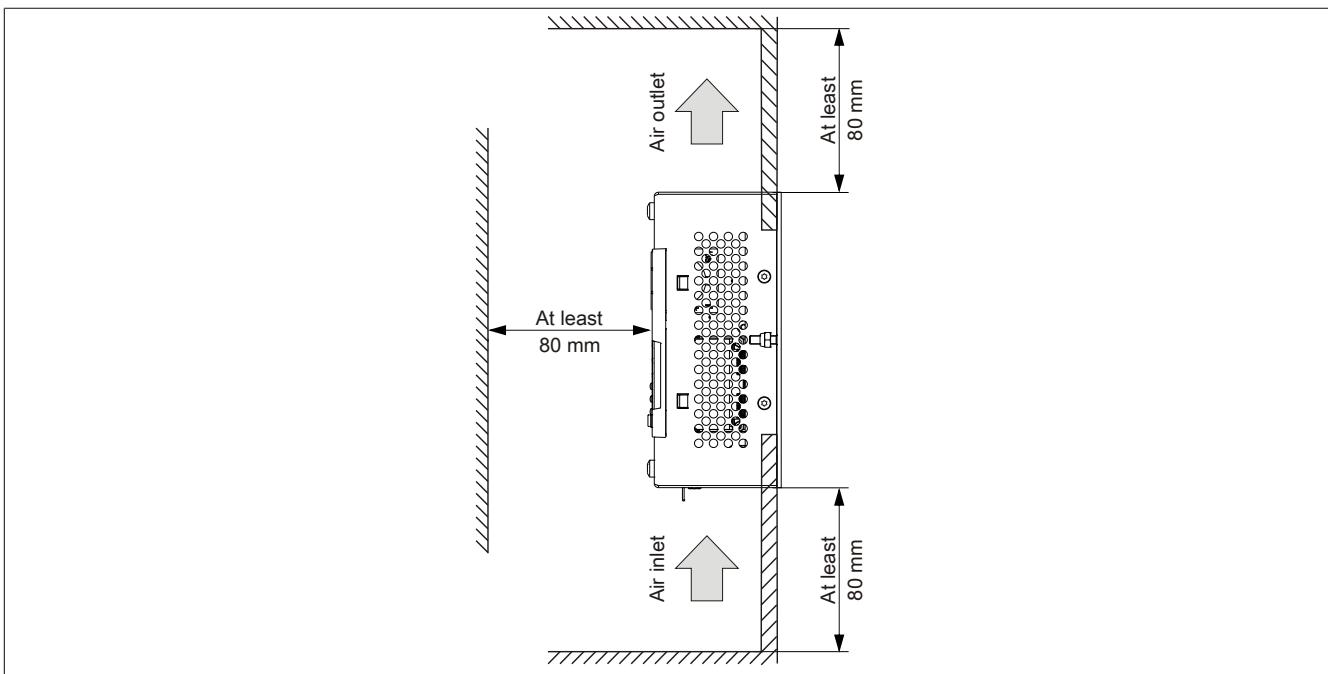

Image 21: Air circulation spacing - Side view

2 Cable connections

When making cable connections and installing cables, it is not permitted to have a Flex radius smaller than the minimum value specified.

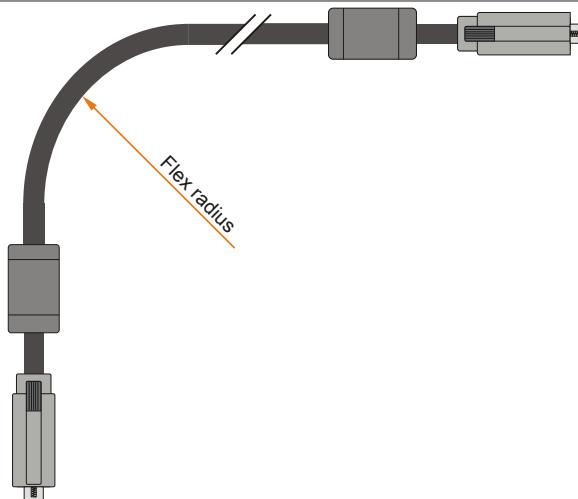

Image 22: Flex radius - Cable connection

Information:

The specified flex radius can be found in the Automation Panel 800 or Automation Panel 900 user's manual, which can be downloaded as a .pdf file from the B&R homepage www.br-automation.com.

3 Grounding concept

The functional ground is a current path with low impedance between isolated circuits and ground, which is not a protective measure, but rather provides e.g. increased immunity to disturbances. It serves only as disturbance dissipation and not as contact protection for persons.

The functional ground on the device has 2 connections:

- Supply voltage
- Ground connection

To guarantee secure dissipation of electric disturbances, the following points should be observed:

- The device should be connected to the ground using the shortest route possible.
- Use cable with a minimum cross section of 2.5 mm^2 per connection.
- Note the line shielding concept, all connected data cables are used as shielded lines.

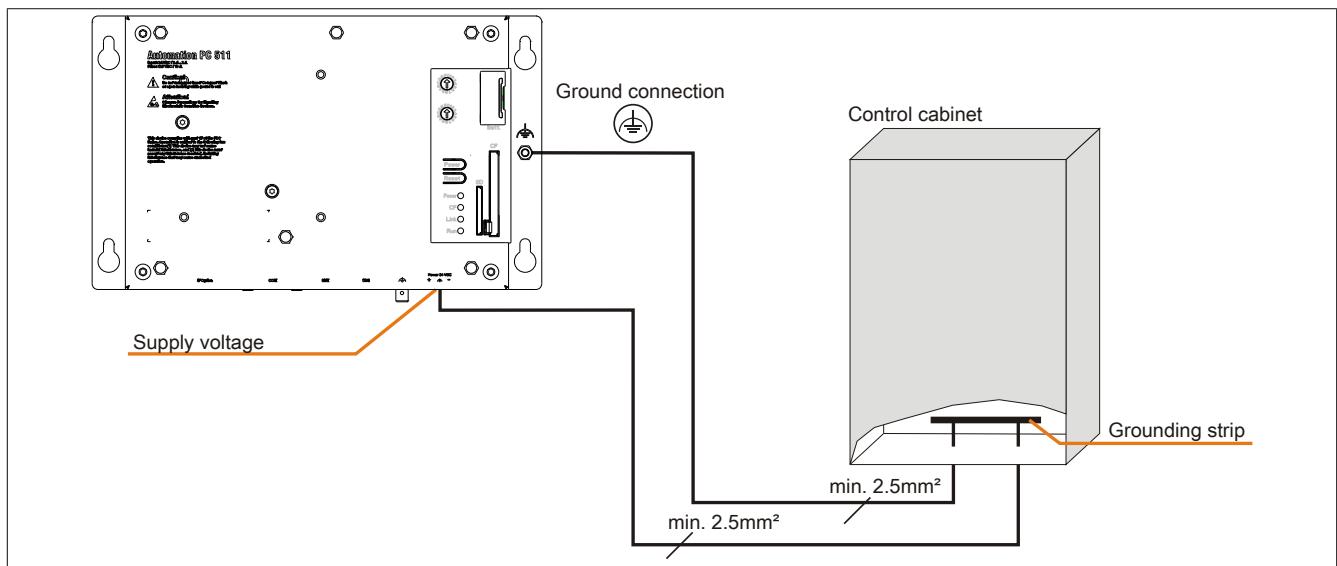

Image 23: Grounding concept

4 Operation with and without I/O board

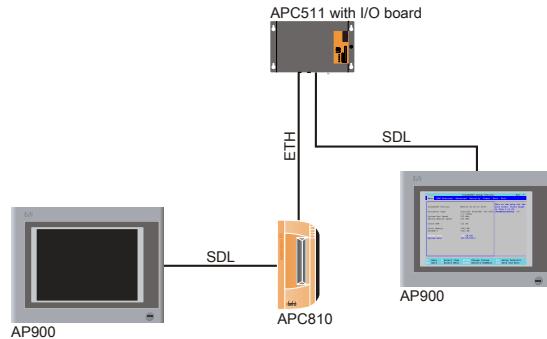

4.1 APC511 Operation with I/O board

Operating the Automation PC 511 **with** an I/O board enables a panel to be connected to the SDL / panel interface for graphical output. When ordering the system unit, the I/O board must be ordered separately and can only be installed at the B&R plant.

The APC511 can also be connected to a PC via Ethernet for remote operation.

BIOS

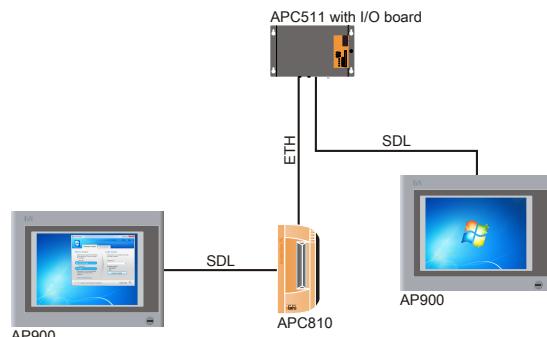

Graphics are output on the panel connected to the APC511. In BIOS under Advanced - Video configuration, the option "Remote Panel" is "Disabled" by default.

Windows

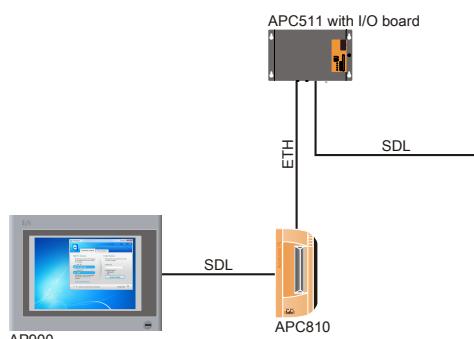

Initial hardware setup: Automation PC 511 with connected SDL (DVI) panel; second PC with connected panel or integrated display

If an APC511 **with** SDL (DVI) panel is operated remotely by another PC (e.g. remote desktop connection, UltraVNC, TeamViewer, etc), the graphic properties of the panel that is connected to the Automation PC 511 will be detected automatically.

Initial hardware setup: Automation PC 511; second PC with connected panel or integrated display

If an APC511 **without** SDL (DVI) panel is operated remotely by another PC (e.g. remote desktop connection, UltraVNC, TeamViewer, etc), graphics are output on the PC display in only 16 colors because information is not transferred from the Automation PC 511 graphics driver.

If an APC511 without SDL (DVI) panel is operated remotely by another PC (e.g. remote desktop connection, UltraVNC, TeamViewer, etc), but a panel was connected to the Automation PC 511 the first time it was booted, then the BIOS setting Advanced - Video configuration "Remote Panel" must be manually set to "Enabled".

Information:

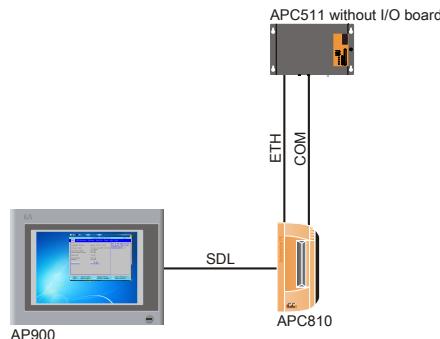

If the Automation PC 511 is no longer being operated remotely, then the BIOS setting Advanced - Video configuration "Remote Panel" must be manually set back to "Disabled". If this setting is not made, then the connected panel will remain blank.

4.2 APC511 Operation with I/O board (Headless Option)

Operating the Automation PC 511 **without** I/O board means that a panel cannot be connected for graphical output because the standard Automation PC 511 does not have its own SDL / panel interface. When ordering the system unit, the I/O board must be ordered separately and can only be installed at the B&R plant.

BIOS

To view and configure the BIOS on the Automation PC 511, a second PC must be connected via the APC511's serial interface. The connected PC must be operated using a panel (e.g. an Automation PC 810 with Automation Panel 900) or have its own display (e.g. a Panel PC 800). The Remote Console is enabled when the Mode/Node switch of the Automation PC 511 is set to "00" (default setting). A terminal emulator⁴⁾ can then be used to access the Automation PC 511 BIOS via the serial interface. In BIOS under Advanced - Video configuration, the option "Remote Panel" is "Enabled" by default. No other settings are required.

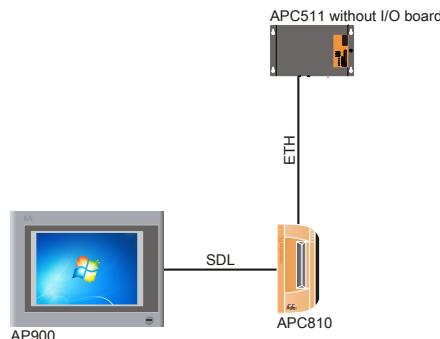

Information:

The default setting must be used the first time the terminal emulator is configured. Information about the BIOS settings can be found under "Console Redirection" on page 102.

Windows

To use and output content on Windows operating systems, the APC511 must be connected to a PC (with connected or integrated display) via the Ethernet port. The Automation PC 511 can then be operated remotely (e.g. remote desktop connection, TeamViewer, UltraVNC).

4) such as PuTTY (freeware) or HyperTerminal (not included in Windows since Windows Vista)

Chapter 4 • Software

1 BIOS options

Information:

The following diagrams, BIOS menu items and their descriptions refer to BIOS version 1.00. It is therefore possible that these diagrams and BIOS descriptions do not correspond with the installed BIOS version.

1.1 General information

BIOS stands for "Basic Input Output System". It is the most basic standardized communication between the user and the system (hardware). The BIOS system used in this B&R industrial PC is produced by Insyde.

The BIOS Setup Utility lets you modify basic system configuration settings. These settings are stored in CMOS and in EEPROM (as a backup).

The CMOS data is buffered by a battery (if present), and remains in the B&R industrial PC even when the power is turned off (no 24 VDC supply).

1.2 BIOS setup and start procedure

BIOS is immediately activated when switching on the power supply of the B&R industrial PC or pressing the power button. The system checks if the setup data from the EEPROM is "OK". If the data is "OK", then it is transferred to the CMOS. If the data is "not OK", then the CMOS data is checked for validity. An error message is output if the CMOS data contains errors and the boot procedure can be continued by pressing the <F1> key. To prevent the error message from appearing at each restart, open the BIOS setup by pressing the key and re-save the settings.

BIOS reads the system configuration information in CMOS RAM, checks the system, and configures it using the Power On Self Test (POST).

When these "preliminaries" are finished, BIOS seeks an operating system in the data storage devices available (hard drive, floppy drive, etc.). BIOS launches the operating system and hands over control of system operations to it.

To enter BIOS Setup, the <F2> key must be pressed after the USB controller has been initialized as soon as the following message appears on the monitor (during POST): "Press F2 go to Setup Utility"

Information:

The POST screen is only displayed for a fraction of a second due to optimized boot procedures. It is however, still possible to enter BIOS.

```
Processor Type : Intel(R) Atom(TM) CPU Z520 @ 1.33GHz
System Memory Speed : 533 MHz

CPUID : 106C2
F2 is pressed. Go to Setup Utility.
Other Device    1 : BR-SSD-C004G-01-0101
```

Image 24: Boot screen

1.2.1 BIOS setup keys

The following keys are enabled during the POST:

Information:

The key signals from the USB keyboard are only registered after the USB controller has been initialized.

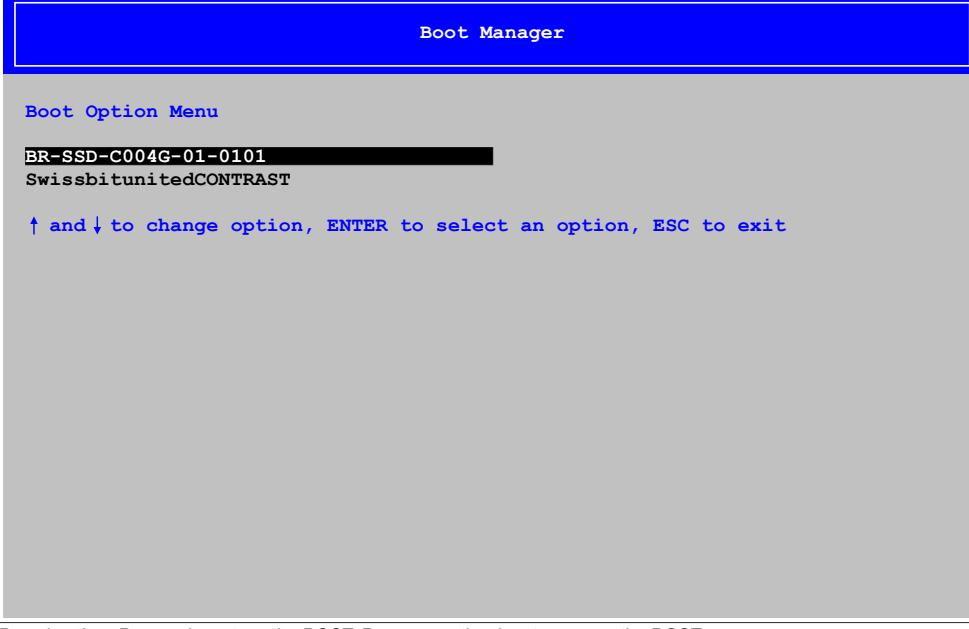

Keys	Function
F2	Enters the BIOS setup menu.
F12	Cues the boot menu. Lists all bootable devices that are connected to the system. Select the device to boot from with cursor ↑, cursor ↓ and <ENTER>. Use the ESC key to exit the boot menu. 
<Pause>	Pressing the <Pause> key stops the POST. Press any other key to resume the POST.

Table 70: BIOS-relevant keys for POST

The following keys can be used after entering the BIOS setup:

Key	Function
F1	General help.
Cursor ↑	Moves to the previous item.
Cursor ↓	Go to the next item.
Cursor ←	Moves to the previous menu.
Cursor →	Go to the next menu.
F5/F6	Change BIOS settings.
Enter	Changes to the selected menu.
F9	These settings are loaded for all BIOS configurations.
F10	Save and close.
Esc	Exits the submenu.

Table 71: BIOS-relevant keys in the BIOS menu

1.3 Main

Immediately after the <F2> key is pressed during startup, the main BIOS setup menu appears.

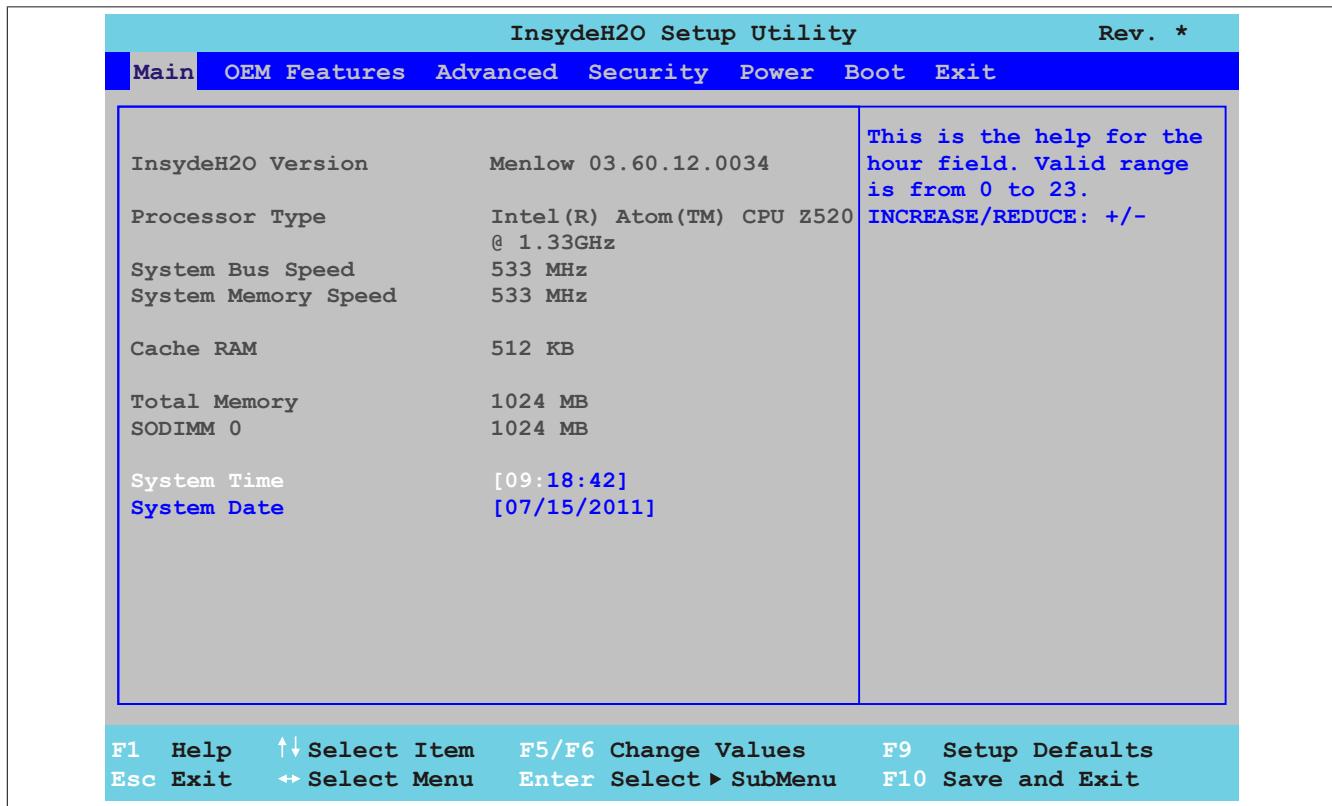

Image 25: US15W Main - Menu

BIOS setting	Meaning	Setting options	Effect
InsydeH2O Version	Displays the BIOS InsydeH2O version.	None	-
Processor type	Displays the processor type.	None	-
System Bus Speed	Displays the System Bus speed		
System Memory Speed	Displays the system memory speed.	None	-
Cache RAM	Displays the Cache RAM in the system.	None	-
Total Memory	Displays the entire system memory size.	None	-
SODIMM 0	Displays the amount of RAM in the SODIMM 0 slot.	None	-
System Time	This is the current system time setting. The time is buffered by a battery (CMOS battery) after the system has been switched off.	Adjustment of the system time	Set the system time in the format Hour:Minute:Second (hh:mm:ss).
System Date	This is the current system date setting. The time is buffered by a battery (CMOS battery) after the system has been switched off.	Changes to the system date	Sets the system date in the format Month:Day:Year (mm:dd:yyyy).

Table 72: US15W Main - Menu setting options

1.4 OEM Features

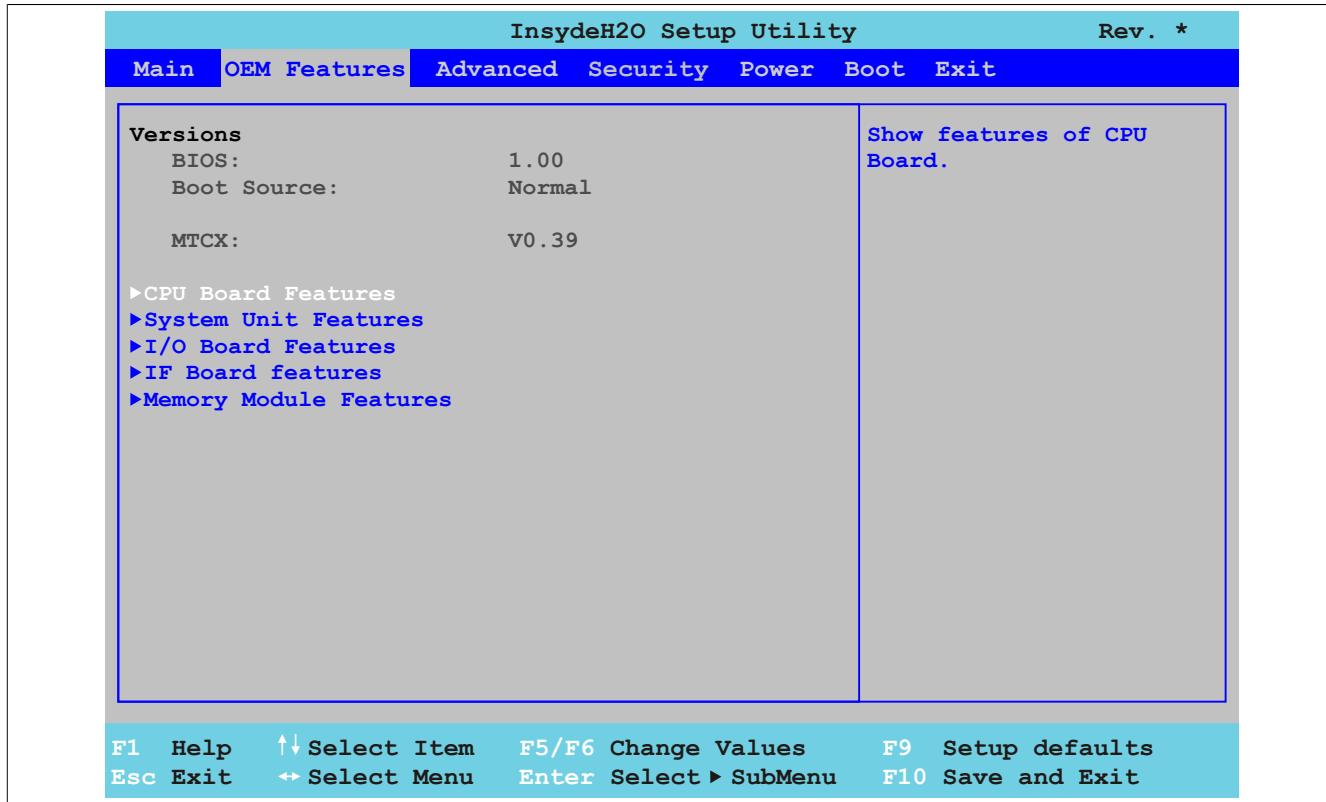

Image 26: US15W OEM Features - Menu

BIOS setting	Meaning	Setting options	Effect
BIOS	Displays the B&R BIOS boot version.	None	-
Boot Source	Displays whether boot source is "normal" BIOS version (Normal) or the Backup BIOS version (Backup).		Information: If a BIOS update failed, then the backup BIOS will be loaded automatically. The BIOS update can then be attempted again.
MTCX	Displays the MTCX version that is installed.	None	-
CPU Board Features	Displays device specific information and setup of device specific values for the CPU board.	Enter	Opens the submenu See "CPU Board Features" on page 71
System Unit Features	Displays device specific information and setup of device specific values for the system unit.	Enter	Opens the submenu See "System Unit Features" on page 76
I/O board features¹⁾	Displays device specific information for the I/O board.	Enter	Opens the submenu See "I/O Board Features" on page 80
IF board features²⁾	Displays device specific information for the IF board.	Enter	Opens the submenu See "IF Board Features" on page 85
Memory Module Features	Displays device specific information for the main memory.	Enter	Opens the submenu See "Memory Module Features" on page 87

Table 73: US15W OEM Features - Menu setting options

- 1) This submenu is only displayed when there is an I/O board connected to the system unit.
 2) This submenu is only displayed when there is an interface board connected to the system unit.

1.4.1 CPU Board Features

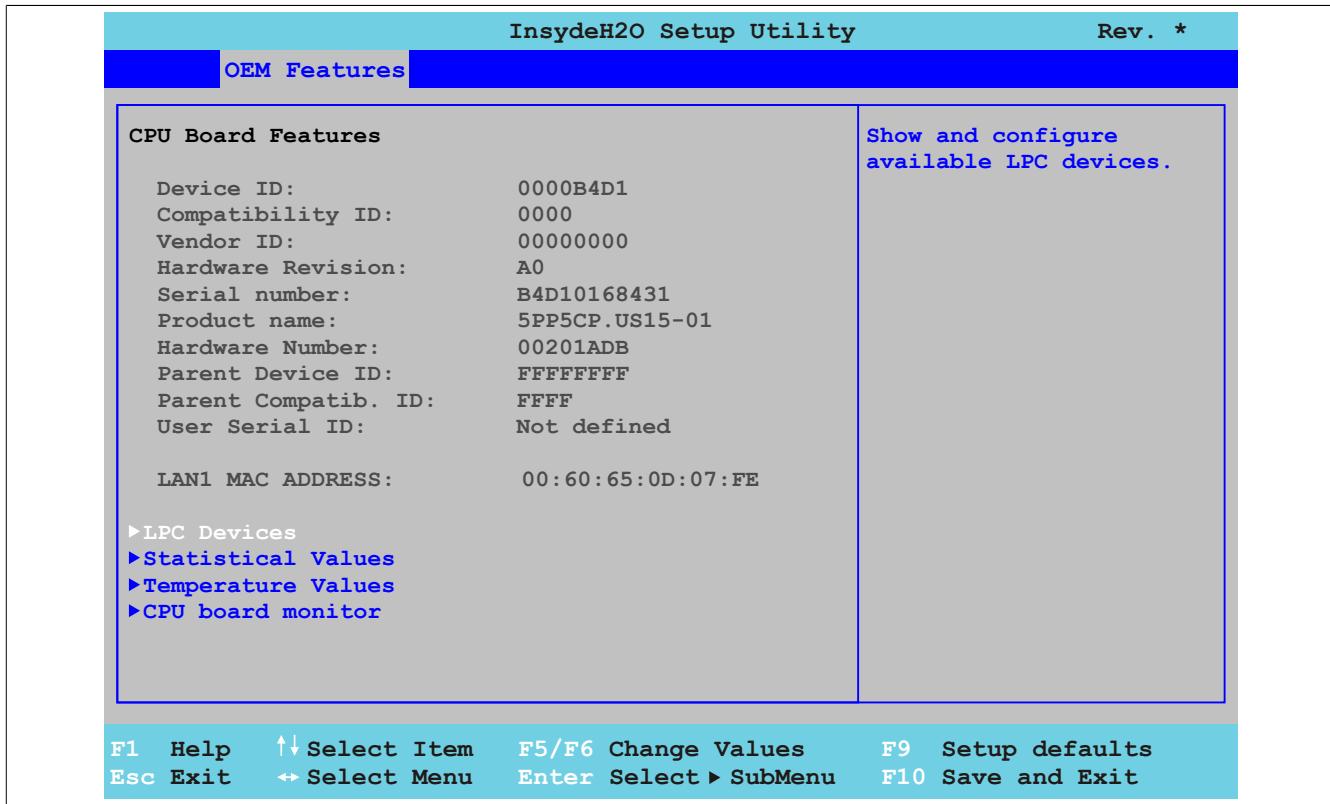

Image 27: US15W OEM Features - CPU Board Features

BIOS setting	Meaning	Setting options	Effect
Device ID	Displays the device ID of the CPU board.	None	-
Compatibility ID	Displays the version of the device within the same B&R device code. This ID is needed for Automation Runtime.	None	-
Vendor ID	Displays the Vendor ID.	None	-
Hardware revision	Displays the CPU board hardware revision.	None	-
Serial number	Displays the B&R serial number.	None	-
Product name	Displays the B&R model number.	None	-
Hardware Number	Displays the CPU board hardware number.	None	-
Parent Device ID	Displays the manufacturer number.	None	-
Parent Compatib. ID	Displays the manufacturer ID.	None	-
User serial ID	Displays the user serial ID. This 8 digit hex value can be freely assigned by the user (e.g. to give the device a unique ID) and can only be changed with using the "B&R Control Center" via the ADI driver.	None	-
LAN1 MAC ADDRESS	Displays the MAC addresses assigned for the ETH interface.	None	-
LPC Devices	Configuration of the LPC Devices.	Enter	Opens the submenu See "LPC Devices" on page 72
Statistical Values	Displays the statistical values.	Enter	Opens the submenu See "Statistical Values" on page 73
Temperature Values	Displays the current temperature values.	Enter	Opens the submenu See "Temperature Values" on page 74
CPU board monitor	Displays the current voltage values on the CPU board being used.	Enter	Opens the submenu See "CPU Board Monitor" on page 75

Table 74: US15W OEM Features - Baseboard Features setting options

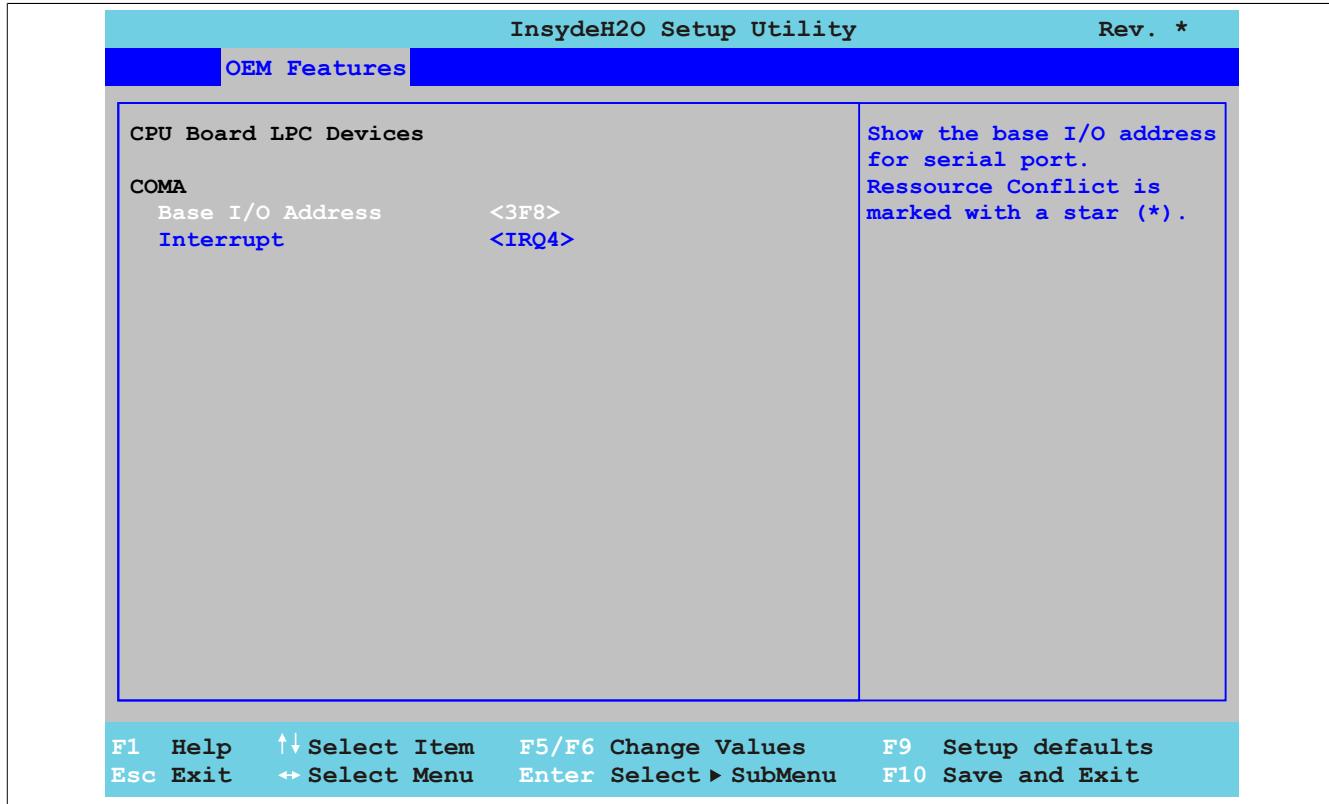

LPC Devices

Image 28: US15W OEM Features - CPU Board Features - LPC Devices

BIOS setting	Meaning	Setting options	Effect
COMA	Settings for the COM serial interface in the system.	None	-
Base I/O Address	Selection of the base I/O address for the COM port.	Disabled, 238, 2E8, 2F8, 328, 338, 3E8, 3F8	Disables or assigns the selected base I/O address.
Interrupt	Selection of the interrupt for the COM port.	IRQ3, IRQ4, IRQ5, IRQ6, IRQ10, IRQ11, IRQ12	Selected interrupt is assigned.

Table 75: US15W OEM Features - Baseboard Features - LPC Devices setting options

Information:

A resource conflict can occur regarding the Base I/O address or Interrupt settings, which will cause a warning. In order to make the settings anyways, the setting must first be made on the Base I/O address or Interrupt being that is used.

Statistical Values

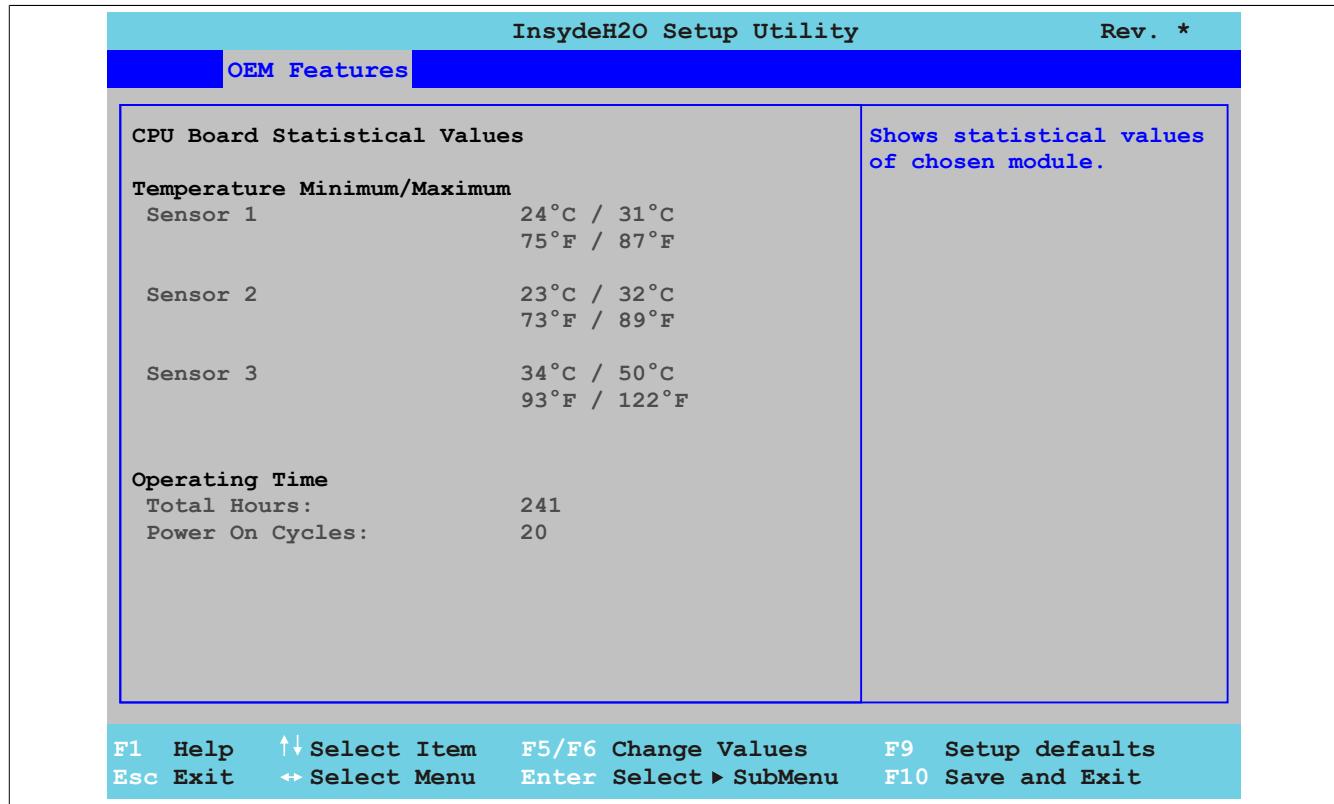

Image 29: US15W OEM Features - CPU Board Features- Statistical Values

BIOS setting	Meaning	Setting options	Effect
Sensor 1	Displays the minimum and maximum temperature of sensor 1 (interfaces) in °C and °F.	None	-
Sensor 2	Displays the minimum and maximum temperature of sensor 2 (CPU) in °C and °F.	None	-
Sensor 3	Displays the minimum and maximum temperature of sensor 3 (main memory) in °C and °F.	None	-
Total Hours	Displays the runtime in whole hours.	None	-
Power on cycles	Displays the Power On Cycles - each restart increases the counter by one.	None	-

Table 76: US15W OEM Features - Baseboard Features - Statistical Values setting options

Temperature Values

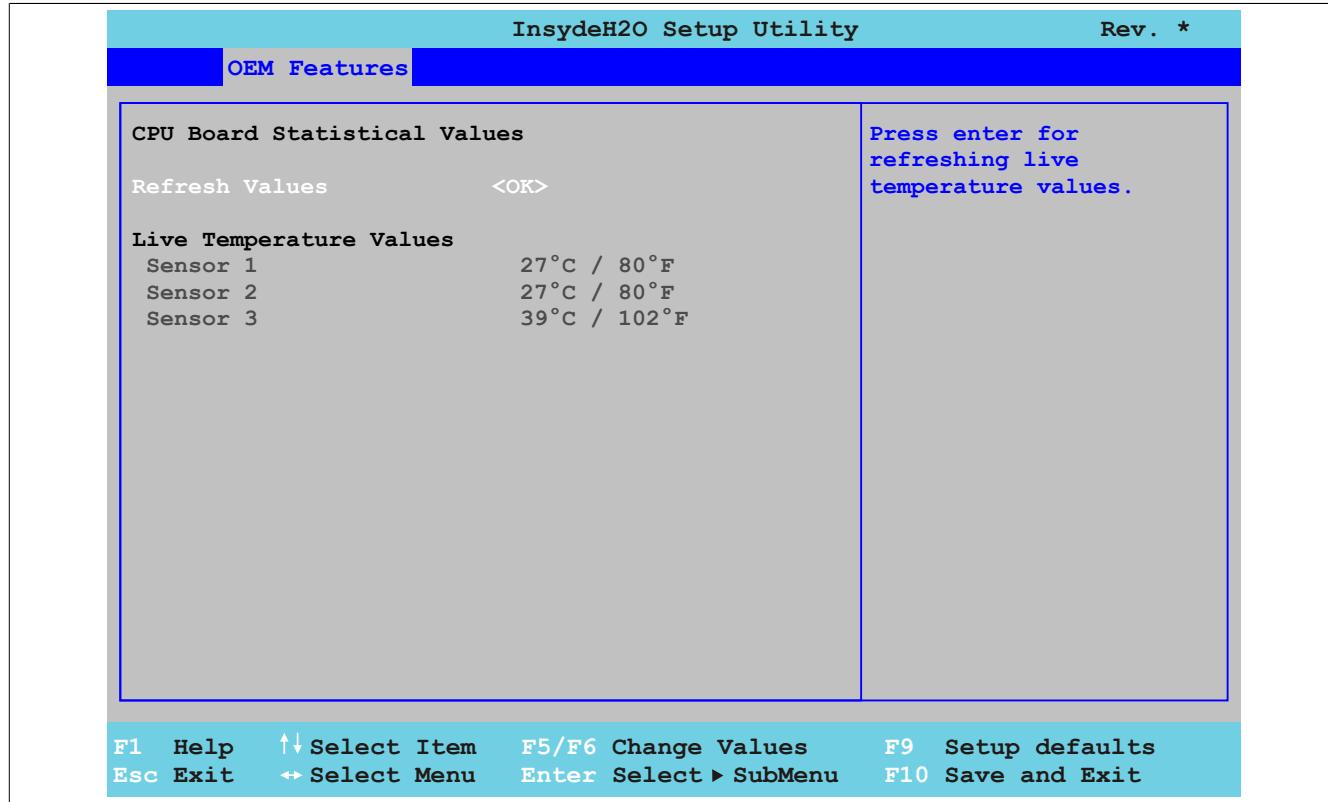

Image 30: US15W OEM Features - CPU Board Features- Temperature Values

BIOS setting	Meaning	Setting options	Effect
Refresh Values	Option for refreshing the temperature values.	OK	Refreshes the temperature values shown below.
Sensor 1	Displays the current temperature of Sensor 1 (interfaces) in °C and °F.	None	-
Sensor 2	Displays the current temperature of sensor 2 (CPU) in °C and °F.	None	-
Sensor 3	Displays the current temperature of sensor 3 (main memory) in °C and °F.	None	-

Table 77: US15W OEM Features - Baseboard Features - Temperature Values setting options

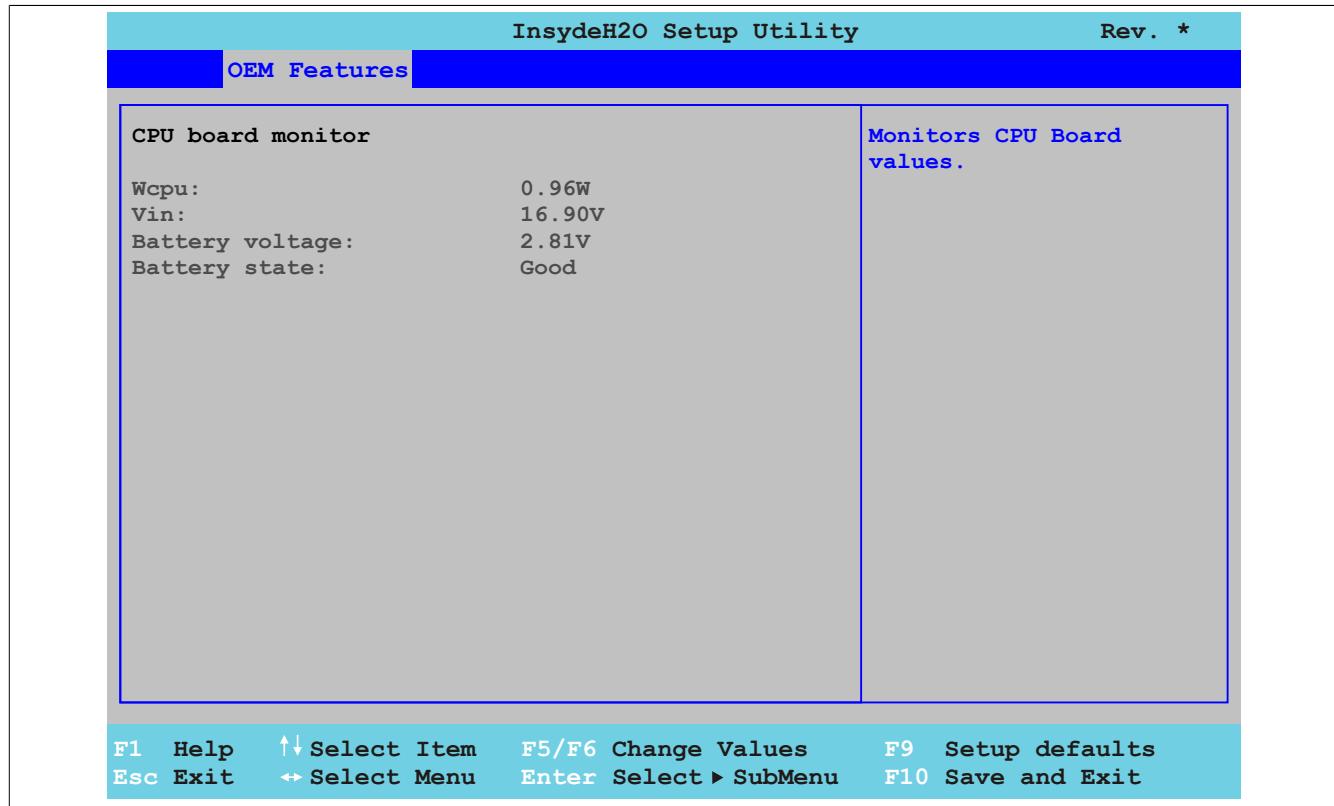

CPU Board Monitor

Image 31: US15W OEM Features - CPU Board Features - CPU Board Monitor

BIOS setting	Meaning	Setting options	Effect
Wcpu:	Displays the CPU power consumption in watts.	None	-
Vin:	Displays the current voltage of the power supply in volts.	None	-
Battery voltage:	Displays the battery voltage (in volts).	None	-
Battery state:	Displays the battery status.	None	-

Table 78: US15W OEM Features - Baseboard Features - Baseboard Monitor setting options

1.4.2 System Unit Features

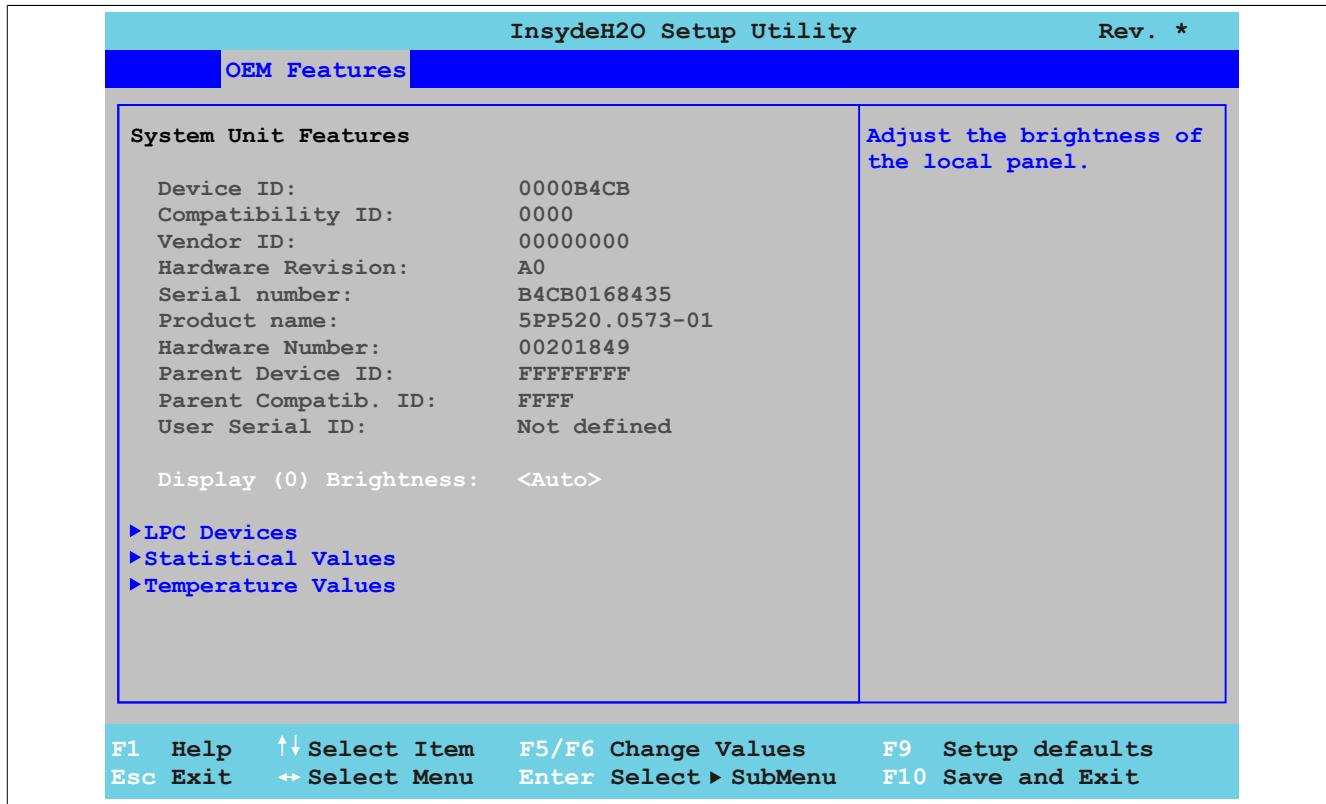

Image 32: US15W OEM Features - System Unit Features

BIOS setting	Meaning	Setting options	Effect
Device ID	Displays the device code of the Power Panel device.	None	-
Compatibility ID	Displays the version of the device within the same B&R device code. This ID is needed for Automation Runtime.	None	-
Vendor ID	Displays the Vendor ID.	None	-
Hardware revision	Displays the system unit hardware revision.	None	-
Serial number	Displays the B&R serial number.	None	-
Product name	Displays the B&R model number.	None	-
Hardware Number	Displays the system unit hardware number.	None	-
Parent Device ID	Displays the manufacturer number.	None	-
Parent Compatib. ID	Displays the manufacturer ID.	None	-
User serial ID	Displays the user serial ID. This 8 digit hex value can be freely assigned by the user (e.g. to give the device a unique ID) and can only be changed with using the "B&R Control Center" via the ADI driver.	None	-
Display (0) Brightness ¹⁾	Option for setting the background lighting of the display.	Auto 0%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 100%	The optimal brightness is automatically configured using the factory settings. A brightness value between 100% and 0% is set. Manual setting of the desired brightness within factory settings limits.
LPC Devices	Configuration of the LPC Devices.	Enter	Opens the submenu See "LPC Devices" on page 77
Statistical Values	Displays the statistical values.	Enter	Opens the submenu See "Statistical Values" on page 78
Temperature Values	Displays the current temperature values.	Enter	Opens the submenu See "Temperature Values" on page 79

Table 79: US15W OEM Features - Display Features setting options

1) This setting is only available for PP500 system units.

LPC Devices

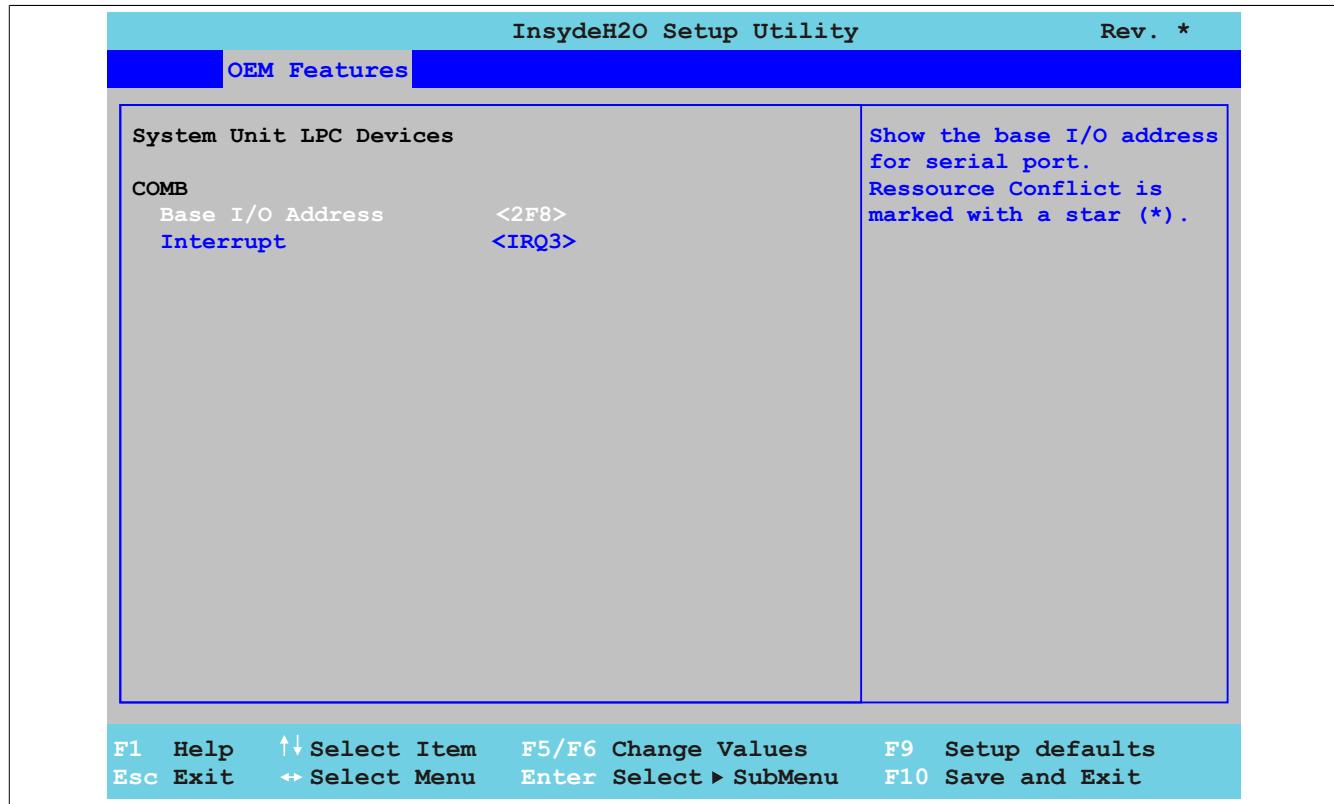

Image 33: US15W OEM Features - System Unit Features - LPC Devices

BIOS setting	Meaning	Setting options	Effect
COMB	Settings for the COM serial interface in the system.	None	-
Base I/O Address	Selection of the base I/O address for the COM port.	Disabled, 238, 2E8, 2F8, 328, 338, 3E8, 3F8	Disables or assigns the selected base I/O address.
Interrupt	Selection of the interrupt for the COM port.	IRQ3, IRQ4, IRQ5, IRQ6, IRQ10, IRQ11, IRQ12	Selected interrupt is assigned.

Table 80: US15W OEM Features - Display Features - LPC Devices setting options

Information:

A resource conflict can occur regarding the Base I/O address or Interrupt settings, which will cause a warning. In order to make the settings anyways, the setting must first be made on the Base I/O address or Interrupt being that is used.

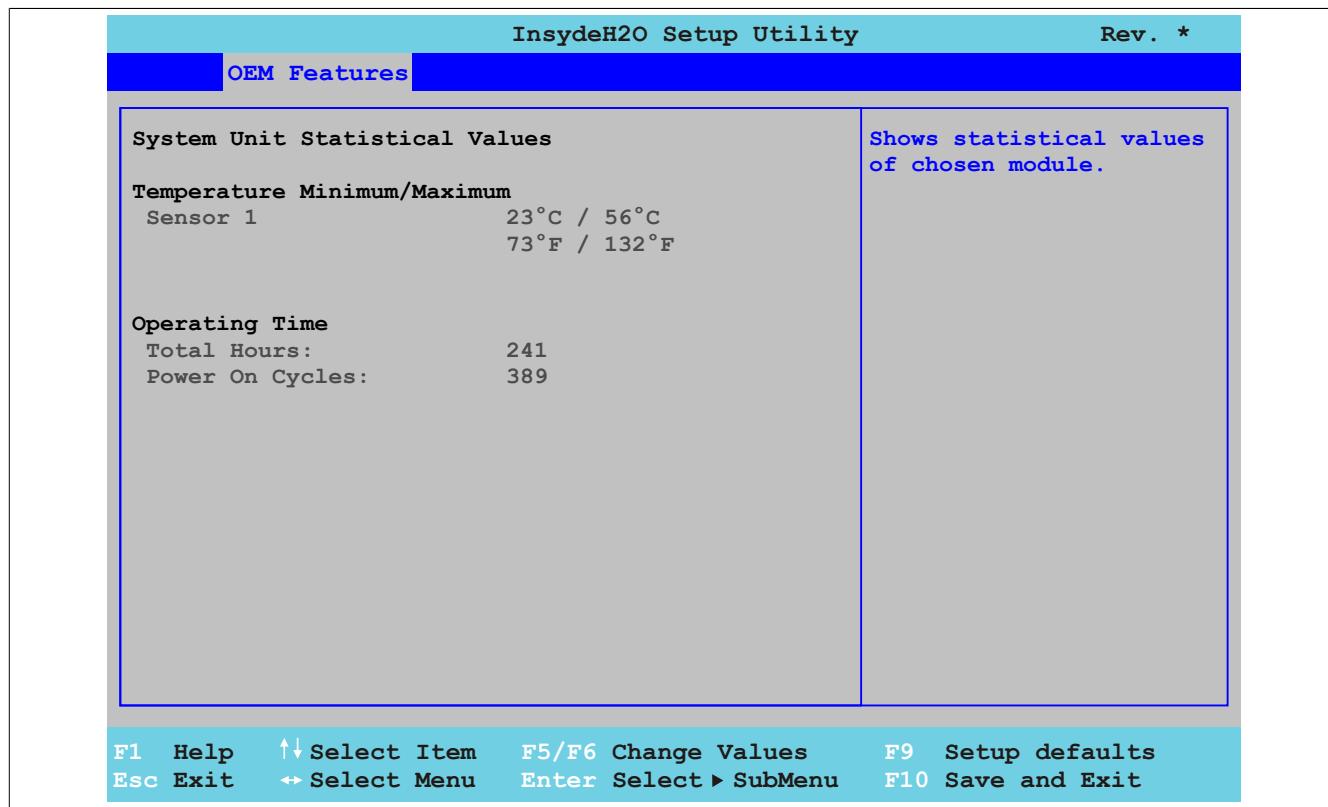

Statistical Values

Image 34: US15W OEM Features - System Unit Features- Statistical Values

BIOS setting	Meaning	Setting options	Effect
Sensor 1	Displays the minimum and maximum sensor temperature 1 in °C and °F.	None	-
Total Hours	Displays the runtime in whole hours.	None	-
Power on cycles	Displays the Power On Cycles - each restart increases the counter by one.	None	-

Table 81: US15W OEM Features - Display Features - Statistical Values setting options

Temperature Values

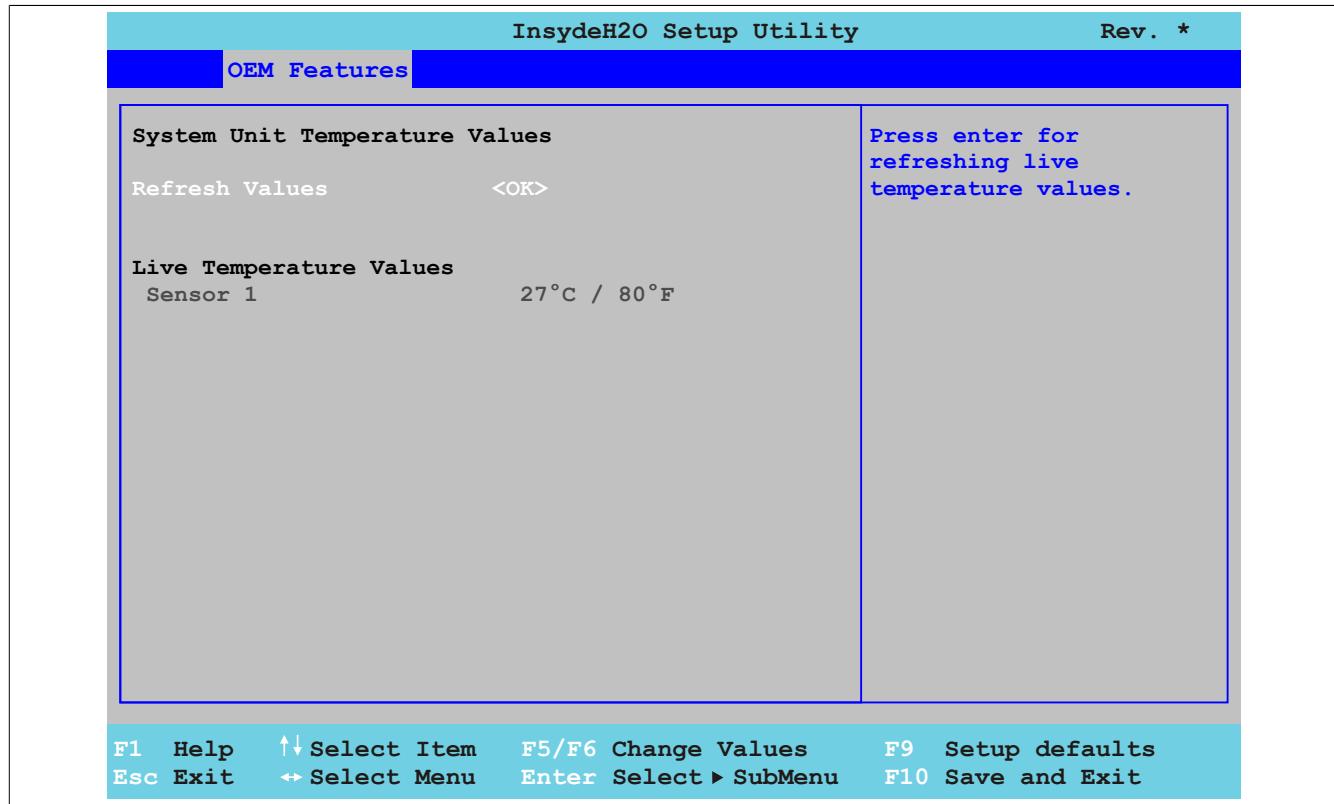

Image 35: US15W OEM Features - System Unit Features- Temperature Values

BIOS setting	Meaning	Setting options	Effect
Refresh Values	Option for refreshing the temperature values.	OK	Refreshes the temperature values shown below.
Sensor 1	Displays the current sensor temperature 1 in °C and °F.	None	-

Table 82: US15W OEM Features - Display Features - Temperature Values setting options

1.4.3 I/O Board Features

Information:

The values and menus shown may vary depending on which I/O board is connected.

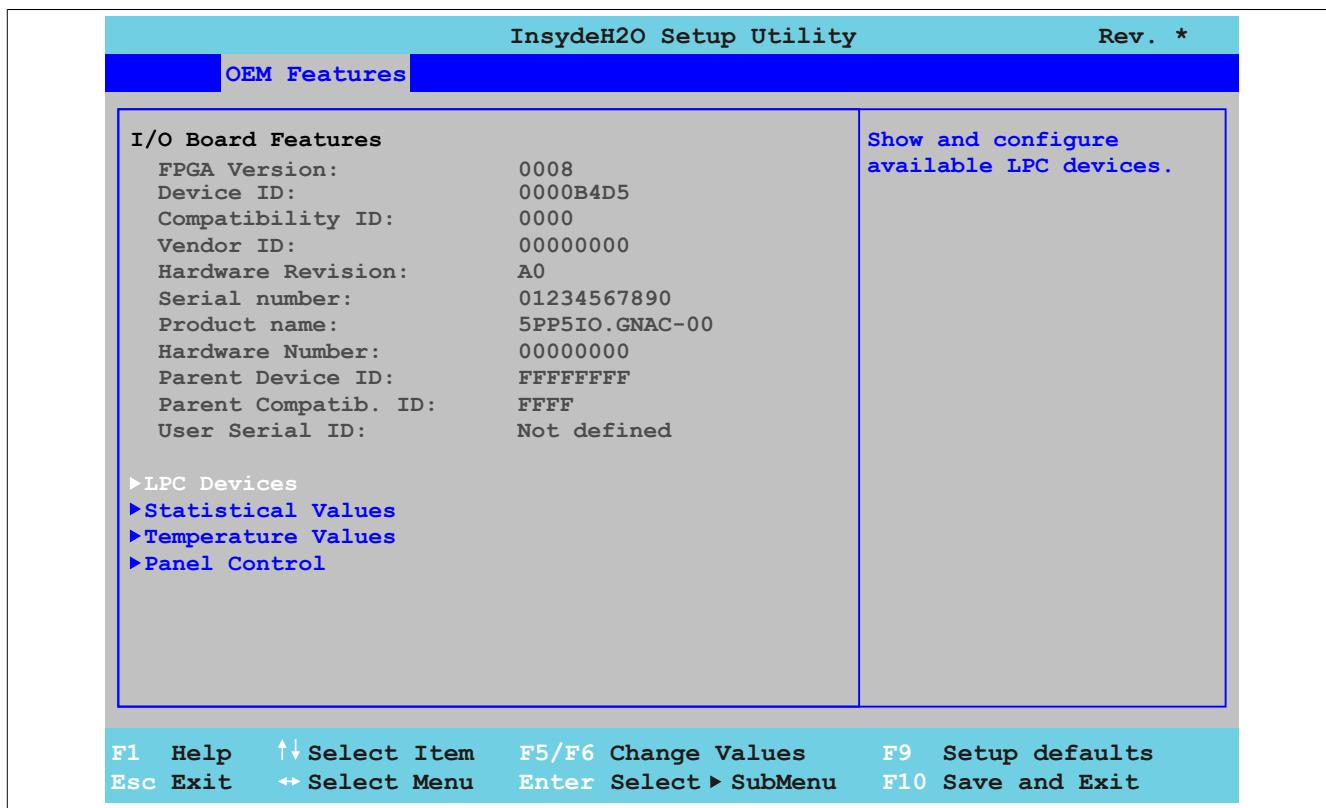

Image 36: US15W OEM Features - I/O Board Features

BIOS setting	Meaning	Setting options	Effect
FPGA Version	Shows the FPGA version of the I/O board.	None	-
Device ID	Displays the device ID of the I/O board.	None	-
Compatibility ID	Displays the version of the device within the same B&R device code. This ID is needed for Automation Runtime.	None	-
Vendor ID	Displays the Vendor ID.	None	-
Hardware revision	Displays the hardware revision of the I/O board.	None	-
Serial number	Displays the B&R serial number.	None	-
Product name	Displays the B&R model number.	None	-
Hardware Number	Displays the hardware number of the I/O board.	None	-
Parent Device ID	Displays the manufacturer number.	None	-
Parent Compatib. ID	Displays the manufacturer ID.	None	-
User serial ID	Displays the user serial ID. This 8 digit hex value can be freely assigned by the user (e.g. to give the device a unique ID) and can only be changed with using the "B&R Control Center" via the ADI driver.	None	-
LPC Devices	Configuration of the LPC Devices.	Enter	Opens the submenu See "LPC Devices" on page 81
Statistical Values	Displays the statistical values.	Enter	Opens the submenu See "Statistical Values" on page 82
Temperature values	Displays the current temperature values.	Enter	Opens the submenu See "Temperature values" on page 83
Panel control	For special setup of connected panels (display units).	Enter	Opens the submenu See "Panel control" on page 84

Table 83: US15W OEM Features - IO Module Features setting options

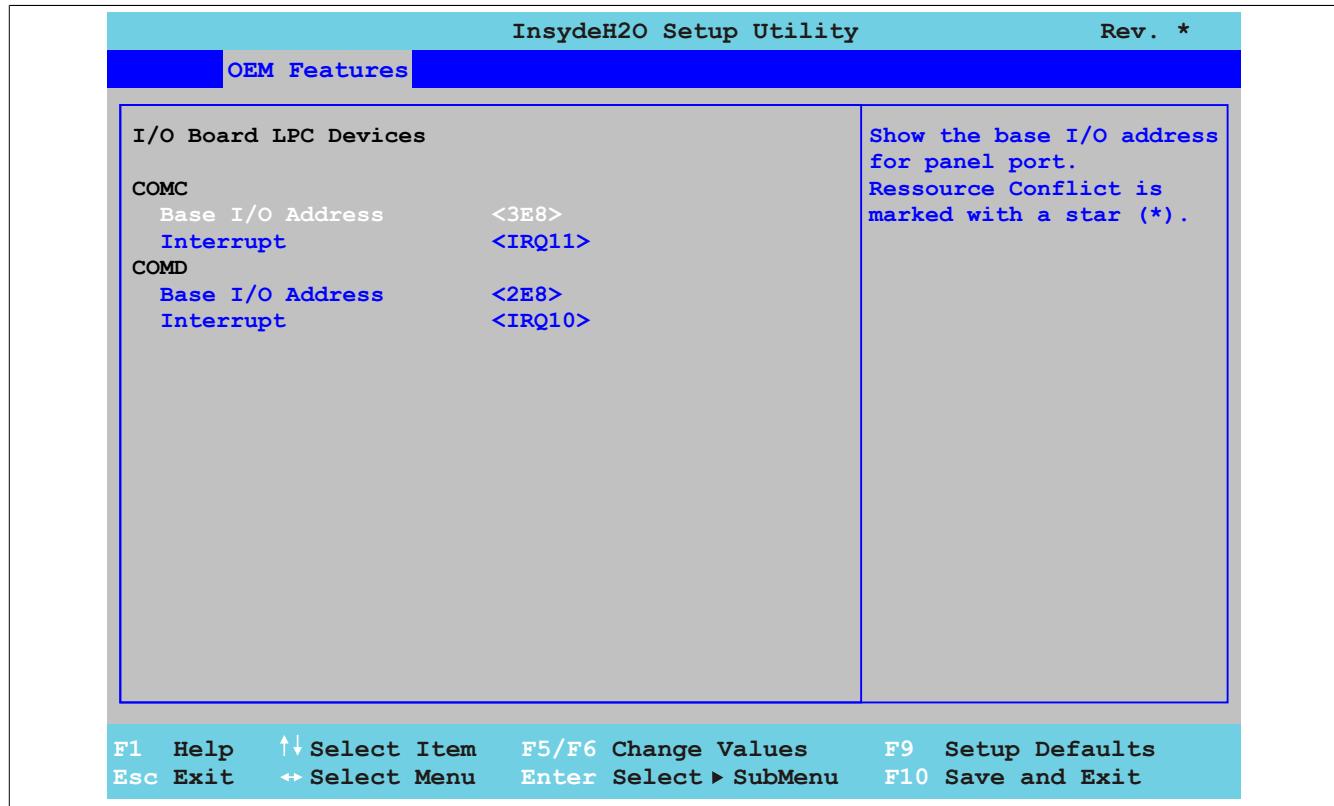

LPC Devices

Image 37: US15W OEM Features - I/O Board Features - LPC Devices

BIOS setting	Meaning	Setting options	Effect
COMC	Setting for the panel interface on the I/O board.	None	-
Base I/O Address	Selection of the base I/O address for the COM port.	Disabled, 238, 2E8, 2F8, 328, 338, 3E8, 3F8	Disables or assigns the selected base I/O address.
Interrupt	Selection of the interrupt for the COM port.	IRQ3, IRQ4, IRQ5, IRQ6, IRQ10, IRQ11, IRQ12	Selected interrupt is assigned.
COMD	Setting for the serial interface (COM) on the I/O board.	None	-
Base I/O Address	Selection of the base I/O address for the COM port.	Disabled, 238, 2E8, 2F8, 328, 338, 3E8, 3F8	Disables or assigns the selected base I/O address.
Interrupt	Selection of the interrupt for the COM port.	IRQ3, IRQ4, IRQ5, IRQ6, IRQ10, IRQ11, IRQ12	Selected interrupt is assigned.

Table 84: US15W OEM Features - I/O Board Features - LPC Devices setting options

Information:

A resource conflict can occur regarding the Base I/O address or Interrupt settings, which will cause a warning. In order to make the settings anyways, the setting must first be made on the Base I/O address or Interrupt being that is used.

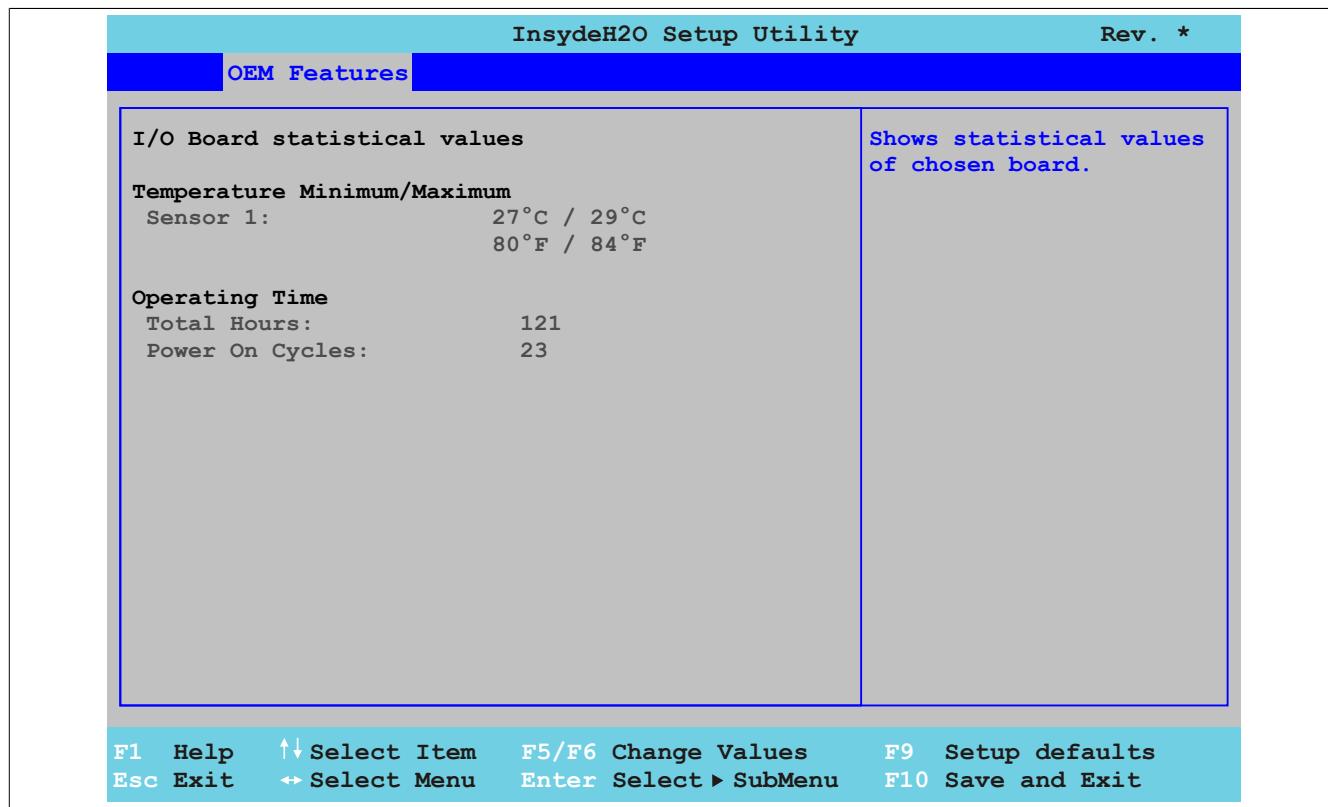

Statistical Values

Image 38: US15W OEM Features - I/O Board Features - Statistical Values

BIOS setting	Meaning	Setting options	Effect
Sensor 1	Displays the minimum and maximum sensor temperature 1 in °C and °F.		
Total Hours	Displays the runtime in whole hours.	None	-
Power on cycles	Displays the Power On Cycles - each restart increases the counter by one.	None	-

Table 85: US15W OEM Features - IO Module Features - Statistical Values setting options

Temperature values

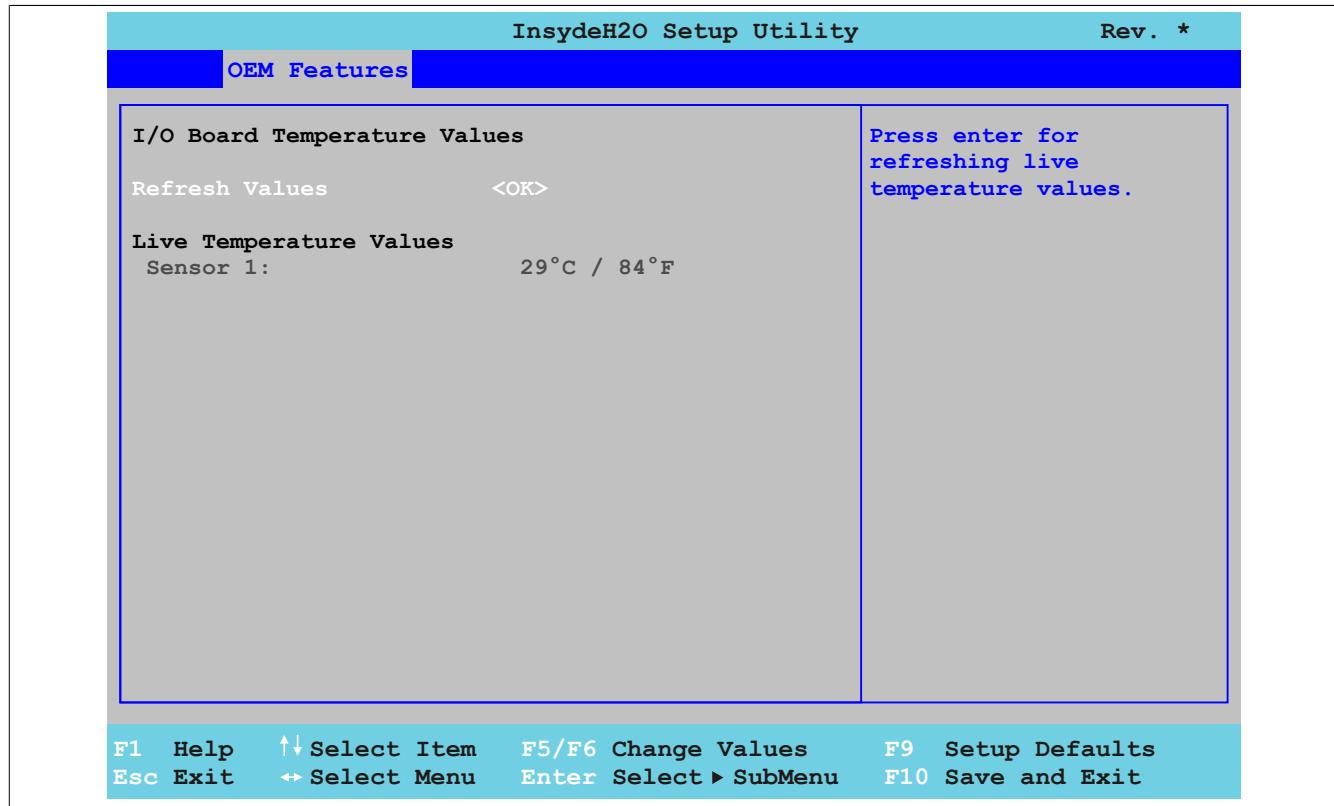

Image 39: US15W OEM Features - I/O Board Features - Temperature Values

BIOS setting	Meaning	Setting options	Effect
Refresh values	Option for refreshing the temperature values.	OK	Refreshes the temperature values shown below.
Sensor 1	Displays the current temperature of Sensor 1 (interfaces) in °C and °F.	None	-

Table 86: US15W OEM Features - I/O Board Features - Temperature Values setting options

Panel control

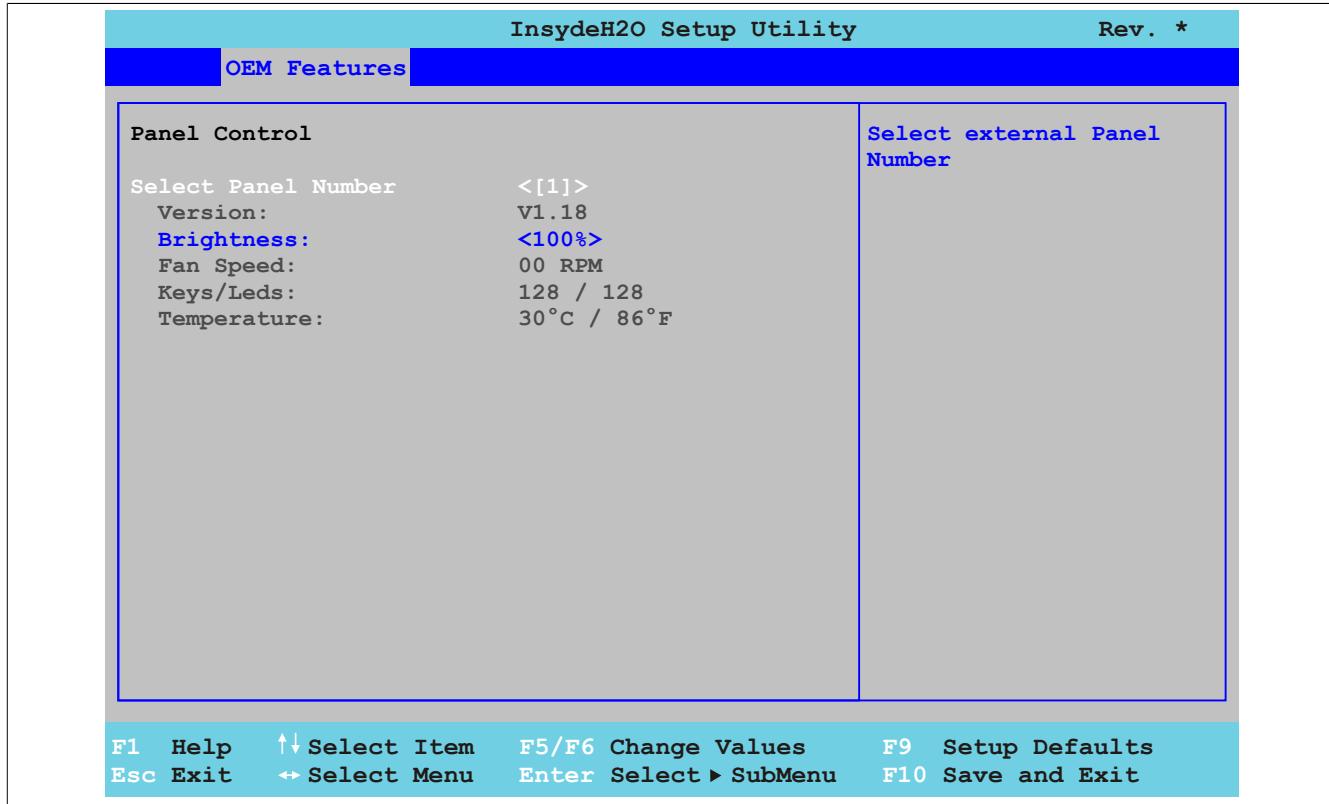

Image 40: US15W OEM Features - I/O Board Features - Panel Control

BIOS setting	Meaning	Setting options	Effect
Select panel number	Selection of the panel number for which the values should be read out and/or changed.	0...15	Selection of panel 0 ... 15.
Version	Displays the firmware version of the SDLR controller.	None	-
Brightness	For setting the brightness of the selected panel.	0%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 100%	For setting the brightness (in %) of the selected panel. Changes take effect after saving and restarting the system (e.g. by pressing <F10>).
Fan Speed	Displays the fan speed of the selected panel.	None	-
Keys/LEDs	Displays the available keys and LEDs on the selected panel.	None	-
Temperature	Displays the selected panel's temperature (in °C and °F).	None	-

Table 87: US15W OEM Features - I/O Board Features - Panel Control setting options

1.4.4 IF Board Features

Information:

The values and menus shown may vary depending on which interface board is connected.

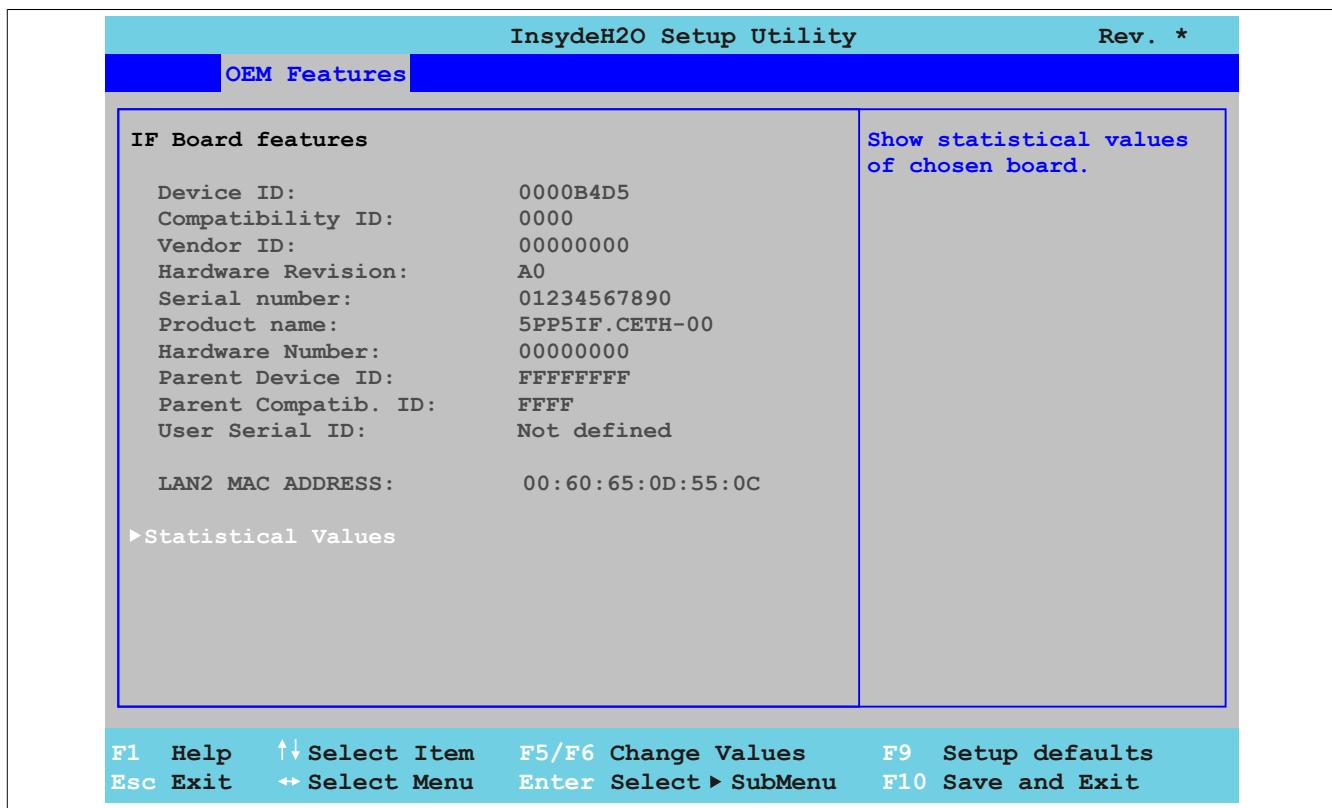

Image 41: US15W OEM Features - IF Board Features

BIOS setting	Meaning	Setting options	Effect
Device ID	Displays the device ID of the IF board.	None	-
Compatibility ID	Displays the version of the device within the same B&R device code. This ID is needed for Automation Runtime.	None	-
Vendor ID	Displays the Vendor ID.	None	-
Hardware revision	Displays the IF board hardware revision.	None	-
Serial number	Displays the B&R serial number.	None	-
Product name	Displays the B&R model number.	None	-
Hardware Number	Displays the IF board hardware number.	None	-
Parent Device ID	Displays the manufacturer number.	None	-
Parent Compatib. ID	Displays the manufacturer ID.	None	-
User serial ID	Displays the user serial ID. This 8 digit hex value can be freely assigned by the user (e.g. to give the device a unique ID) and can only be changed with using the "B&R Control Center" via the ADI driver.	None	-
LAN2 MAC ADDRESS ¹⁾	Displays the MAC addresses assigned for the ETH interface.	None	-
Statistical Values	Displays the statistical values.	Enter	Opens the submenu See " Statistical Values" on page 86

Table 88: US15W OEM Features - IF Module Features setting options

1) The *LAN2 MAC ADDRESS* is only displayed with the interface board 5PP5IF.CETH-00.

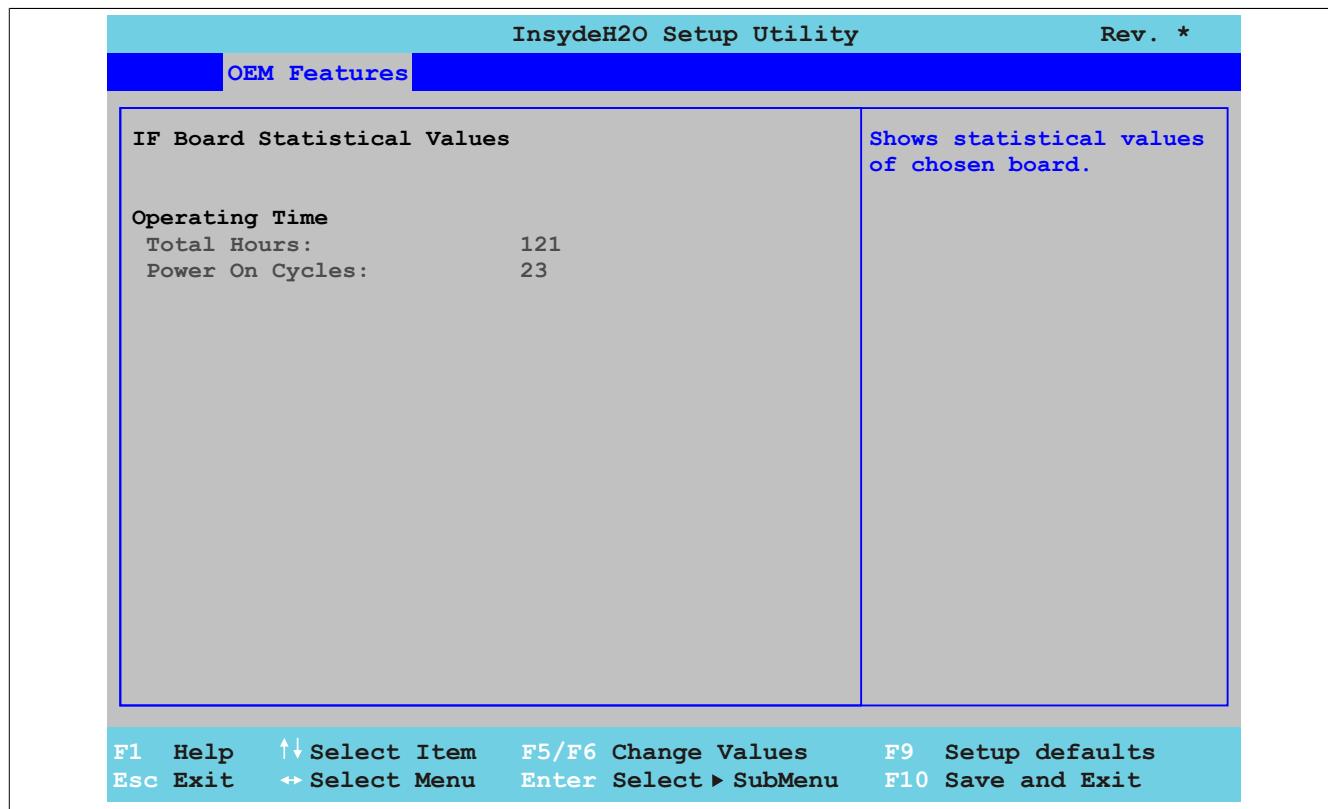

Statistical Values

Image 42: US15W OEM Features - IF Board Features - Statistical Values

BIOS setting	Meaning	Setting options	Effect
Total Hours	Displays the runtime in whole hours.	None	-
Power on cycles	Displays the Power On Cycles - each restart increases the counter by one.	None	-

Table 89: US15W OEM Features - IF Module Features - Statistical Values setting options

1.4.5 Memory Module Features

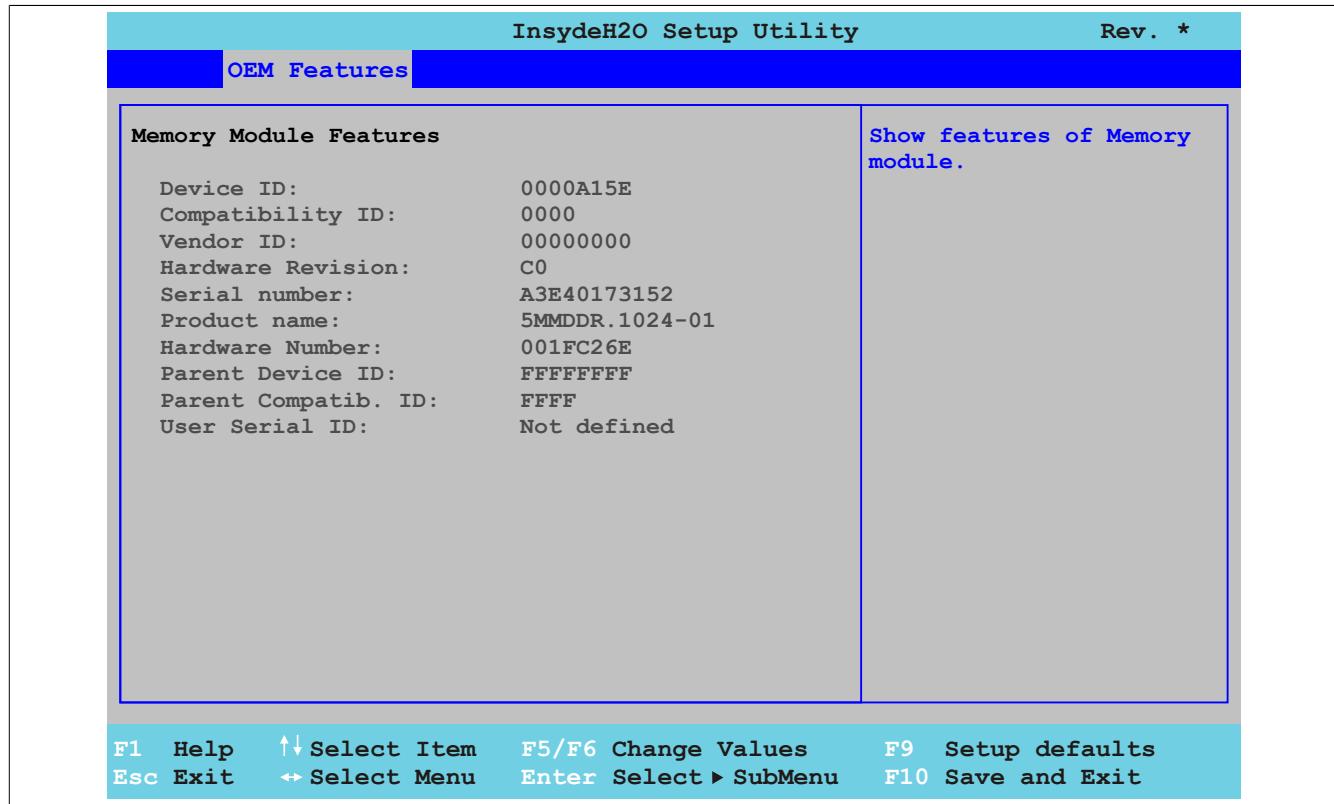

Image 43: US15W OEM Features - Memory Module Features

BIOS setting	Meaning	Setting options	Effect
Device ID	Displays the device ID of the RAM.	None	-
Compatibility ID	Displays the version of the device within the same B&R device code. This ID is needed for Automation Runtime.	None	-
Vendor ID	Displays the Vendor ID.	None	-
Hardware revision	Displays the main memory hardware revision.	None	-
Serial number	Displays the B&R serial number.	None	-
Product name	Displays the B&R model number.	None	-
Hardware Number	Displays the main memory hardware number.	None	-
Parent Device ID	Displays the manufacturer number.	None	-
Parent Compatib. ID	Displays the manufacturer ID.	None	-
User serial ID	Displays the user serial ID. This 8 digit hex value can be freely assigned by the user (e.g. to give the device a unique ID) and can only be changed with using the "B&R Control Center" via the ADI driver.	None	-

Table 90: US15W OEM Features - RAM Features setting options

1.5 Advanced

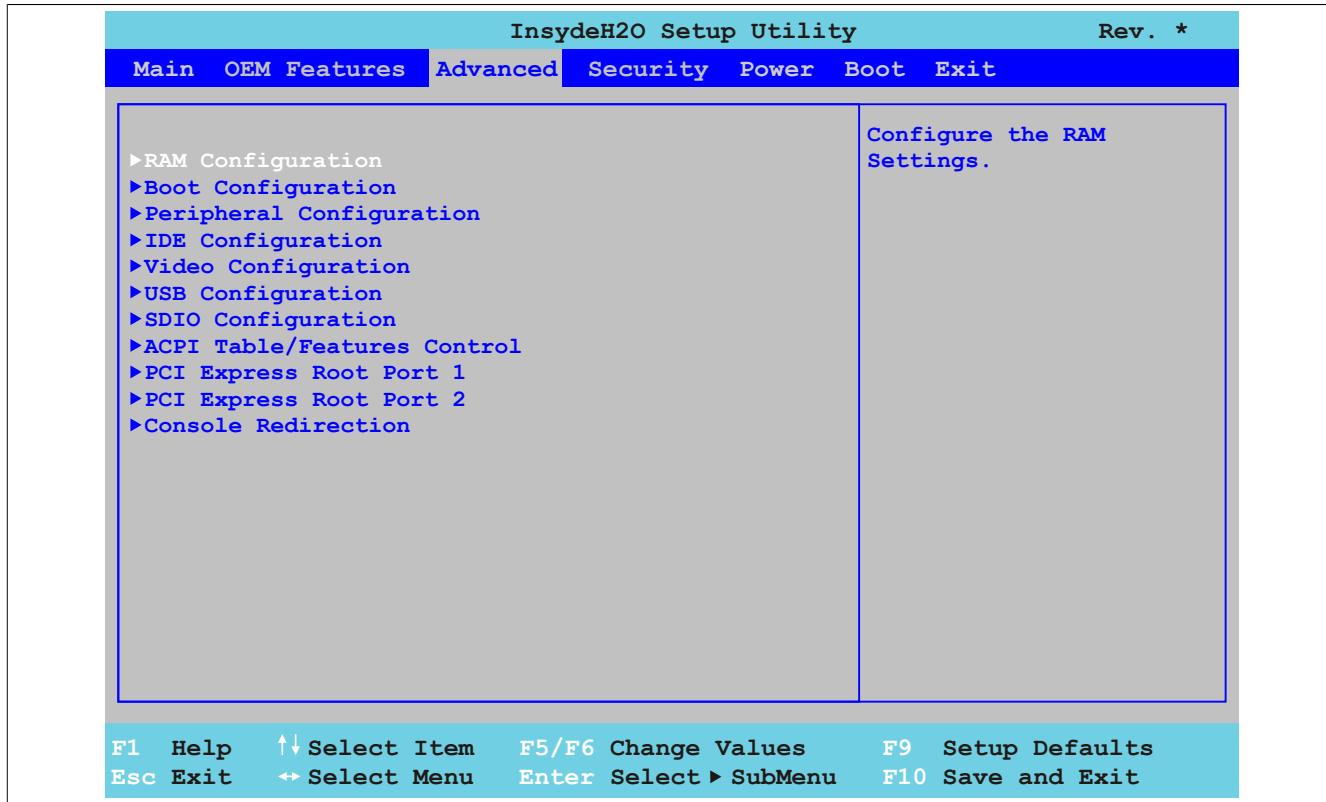

Image 44: US15W Advanced - Menu

BIOS setting	Meaning	Setting options	Effect
RAM Configuration	Configures the RAM settings.	Enter	Opens the submenu See " RAM configuration" on page 89
Boot Configuration	Configures the boot settings.	Enter	Opens the submenu See " Boot Configuration" on page 90
Peripheral Configuration ¹⁾	Configures the peripheral settings.	Enter	Opens the submenu See " Peripheral Configuration" on page 91
IDE Configuration	Configures the IDE functions.	Enter	Opens the submenu See " IDE Configuration" on page 92
Video Configuration	Configures the graphics settings.	Enter	Opens the submenu See " Video Configuration" on page 95
USB configuration	Configures the USB settings.	Enter	Opens the submenu See " USB Configuration" on page 96
SDIO Configuration ¹⁾	Configures the SDIO settings.	Enter	Opens the submenu See " SDIO Configuration" on page 97
ACPI Table/Features Control Configuration	Configures the ACPI Table/Features.	Enter	Opens the submenu See " ACPI Table/Features Control" on page 98
PCI Express Root Port 1	Configures the PCI Express settings on Port 1. Warning! Making settings carelessly can cause instability or device problems. Therefore, it is strongly recommended that these settings only be changed by experienced users.	Enter	Opens the submenu See " PCI Express Root Port 1" on page 98

Table 91: US15W Advanced - Menu setting options

BIOS setting	Meaning	Setting options	Effect
PCI Express Root Port 2	Configures the PCI Express settings on Port 2. Warning! Making settings carelessly can cause instability or device problems. Therefore, it is strongly recommended that these settings only be changed by experienced users.	Enter	Opens the submenu See " PCI Express Root Port 2" on page 101
Console Redirection ³⁾	Remote Console configuration.	Enter	Opens the submenu See " Console Redirection" on page 102

Table 91: US15W Advanced - Menu setting options

- 1) This menu option is only present if there is an Audio connection.
 2) SDIO - Secure Digital Input Output
 3) These settings are only visible to Automation PC 511 system units without I/O board. The node/node switches must be set to "00" (default).

1.5.1 RAM configuration

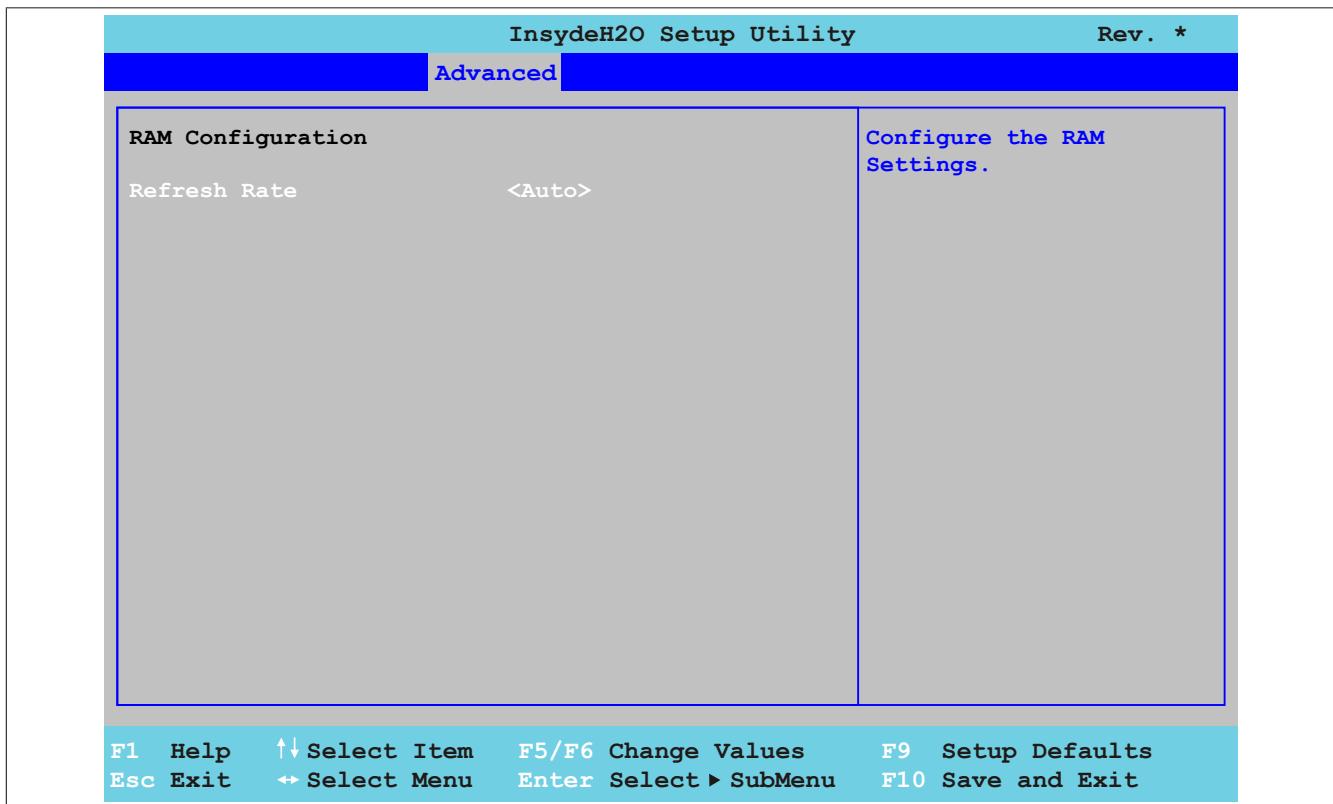

Image 45: US15W Advanced - RAM Configuration

BIOS setting	Meaning	Setting options	Effect
Refresh rate	Option for setting the DRAM refresh rate.	Auto	DRAM Refresh Rate is read from the SPD data of the DRAM module.
		7.8 µs	Manual setting for the DRAM refresh rate.
		3.9 µs	Manual setting for the DRAM refresh rate.

Table 92: US15W Advanced - RAM Configuration setting options

1.5.2 Boot Configuration

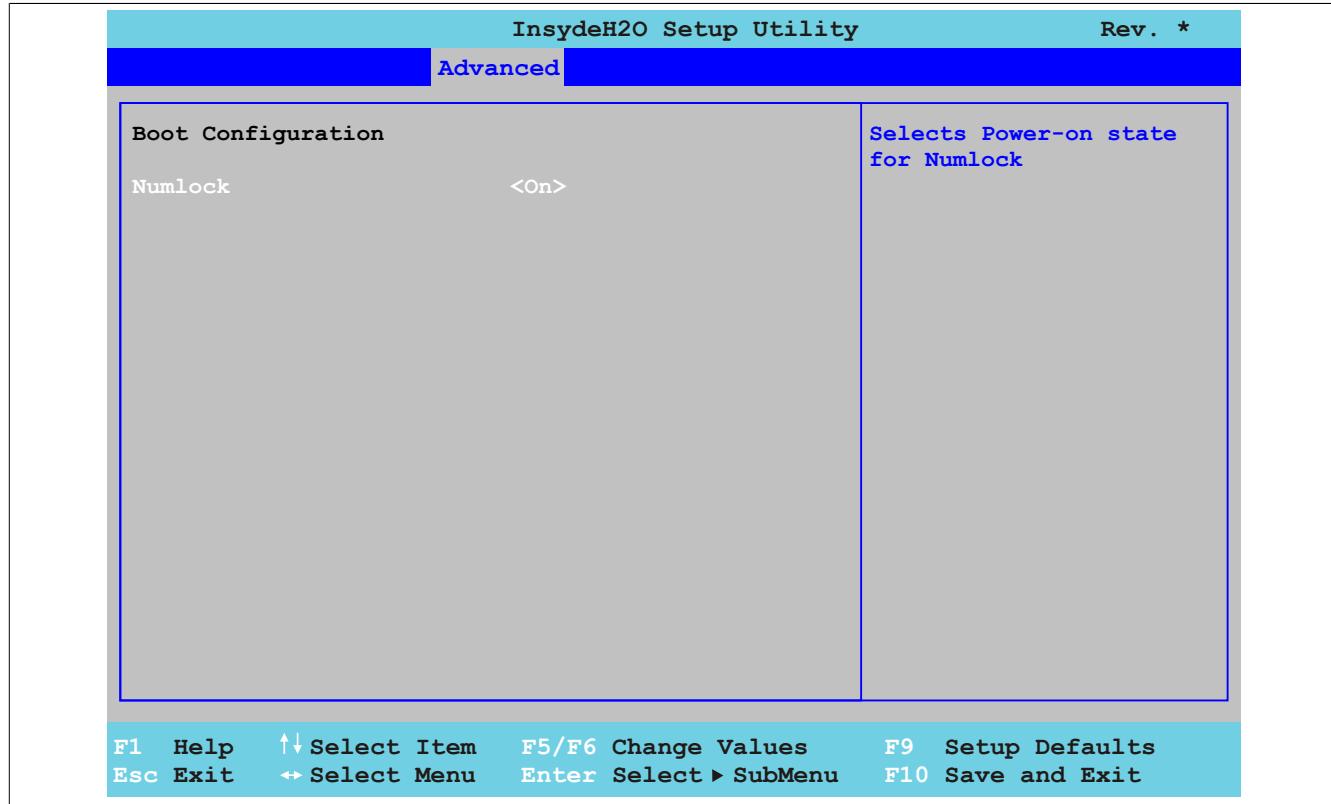

Image 46: US15W Advanced - Boot Configuration

BIOS setting	Meaning	Setting options	Effect
NumLock	With this field you can define the state of the Num-Lock key when booting.	On	Numeric keypad is enabled.
		Off	Only the cursor functions of the numerical keypad are activated.

Table 93: US15W Advanced - Boot Configuration setting options

1.5.3 Peripheral Configuration

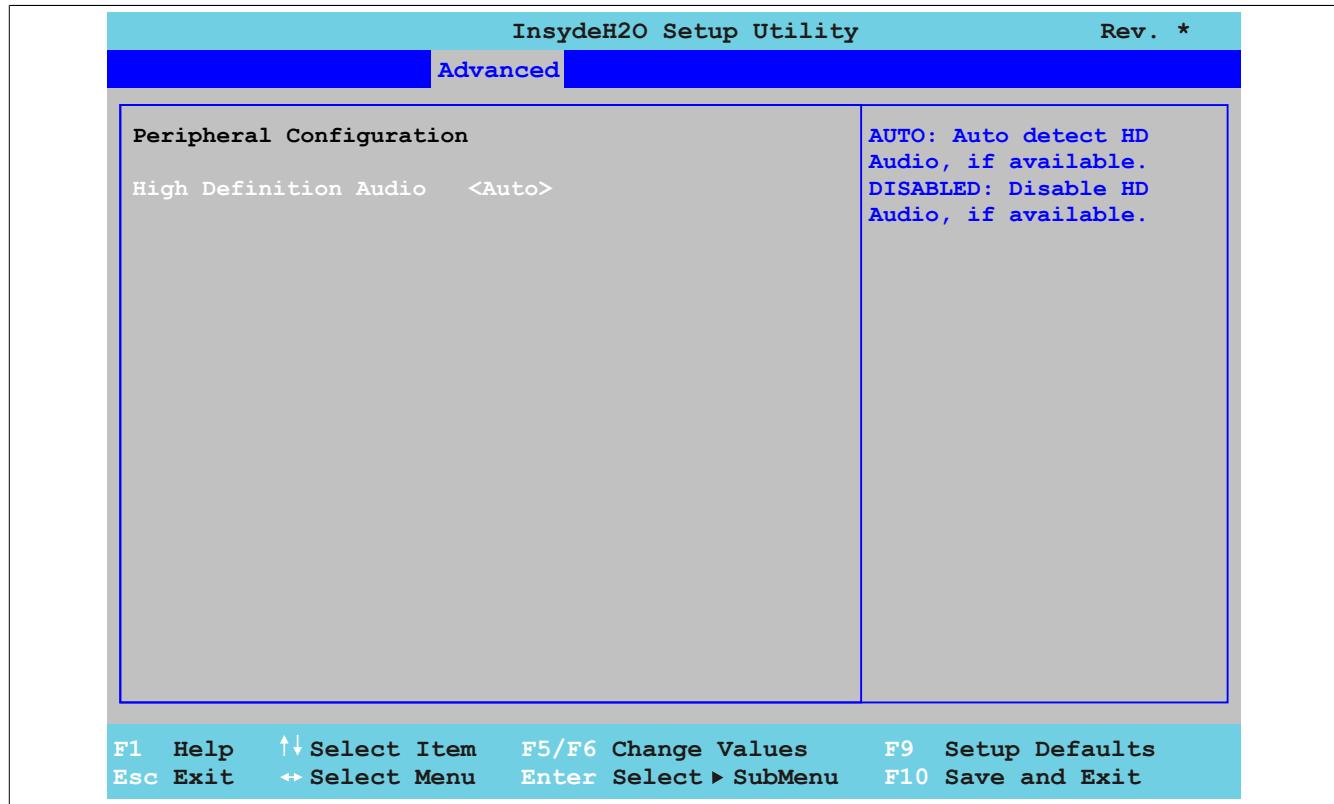

Image 47: US15W Advanced - Peripheral Configuration

BIOS setting	Meaning	Setting options	Effect
High Definition Audio	The audio mode support can be turned on or off here.	Disabled	Disables the audio controller.
		Auto	Enables High Definition Audio (HDA) Sound. The HDA controller automatically detects installed audio devices.

Table 94: US15W Advanced - Peripheral Configuration setting options

Information:

The menu option "Peripheral Configuration" is only shown if there is an Audio connection.

1.5.4 IDE Configuration

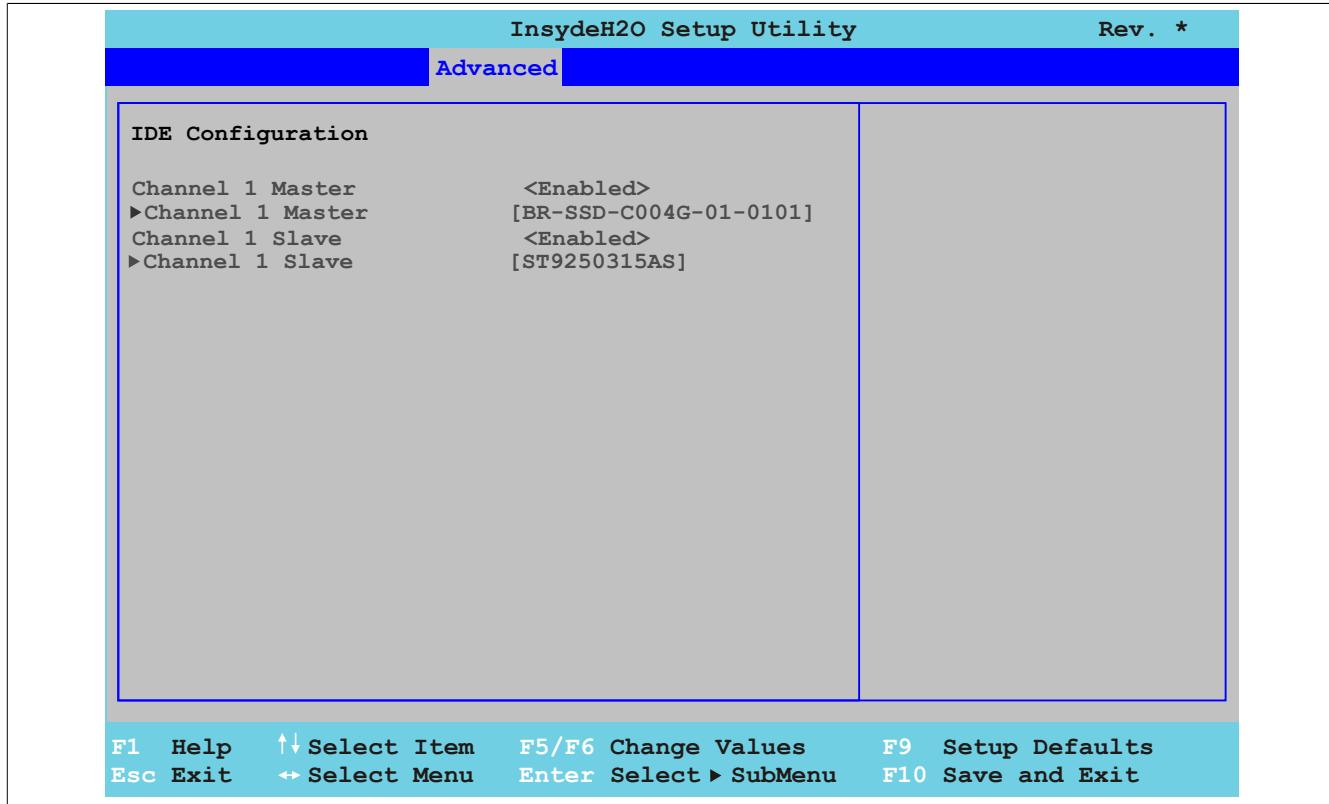

Image 48: US15W Advanced - IDE Configuration

BIOS setting	Meaning	Setting options	Effect
Channel 1 Master	Option to enable/disable the drive connected to the Channel 1 Master.	Disabled	Disables mass memory
		Enabled	Enables mass memory
Channel 1 Master	Displays the drive that is connected to Channel 1 Master.	Enter	Opens the submenu See " Channel 1 Master" on page 93
Channel 1 Slave	Option to enable/disable the drive connected to the Channel 1 Slave.	Disabled	Disables mass memory
		Enabled	Enables mass memory
Channel 1 Slave	Displays the drive that is connected to Channel 1 Slave.	Enter	Opens the submenu See " Channel 1 slave" on page 94

Table 95: US15W Advanced - IDE Configuration setting options

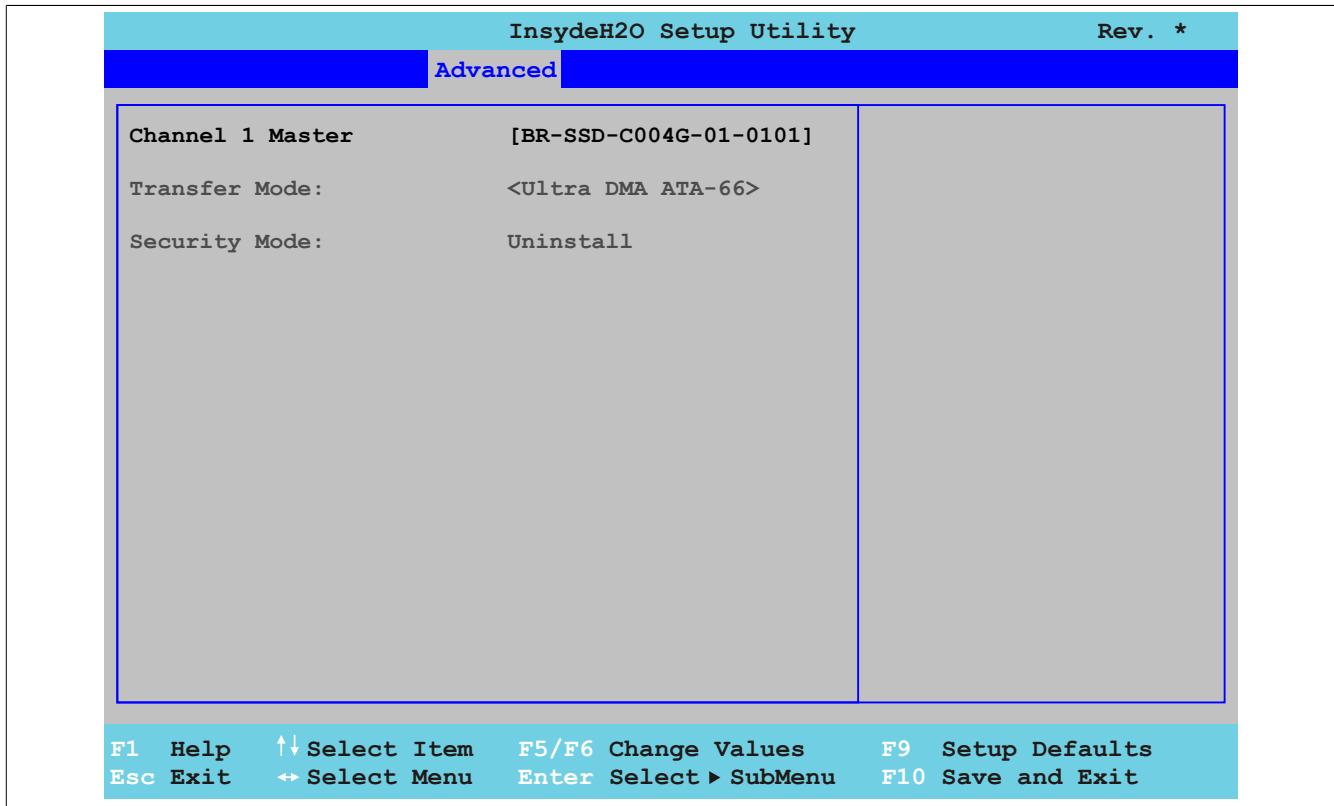

Channel 1 Master

Image 49: US15W Advanced - IDE Configuration - Channel 1 Master

BIOS setting	Meaning	Setting options	Effect
Transfer mode	Displays the communication path between the Channel 1 Master drive and the system memory.	None	-
Security Mode		None	-

Table 96: US15W Advanced - IDE Configuration - Channel 1 Master setting options

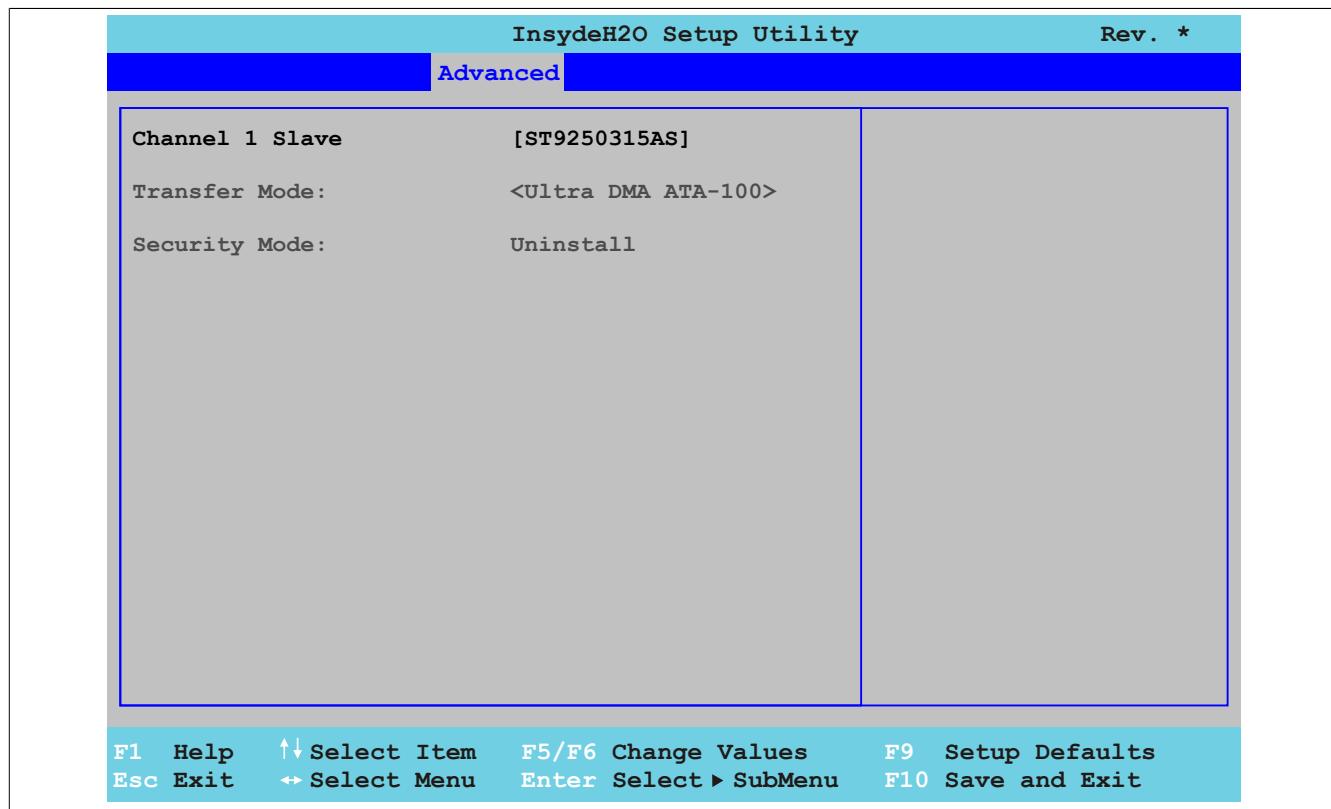

Channel 1 slave

Image 50: US15W Advanced - IDE Configuration - Channel 1 Slave

BIOS setting	Meaning	Setting options	Effect
Transfer mode	Displays the communication path between the Channel 1 Slave drive and the system memory.	None	-
Security Mode		None	-

Table 97: US15W Advanced - IDE Configuration - Channel 1 Slave setting options

1.5.5 Video Configuration

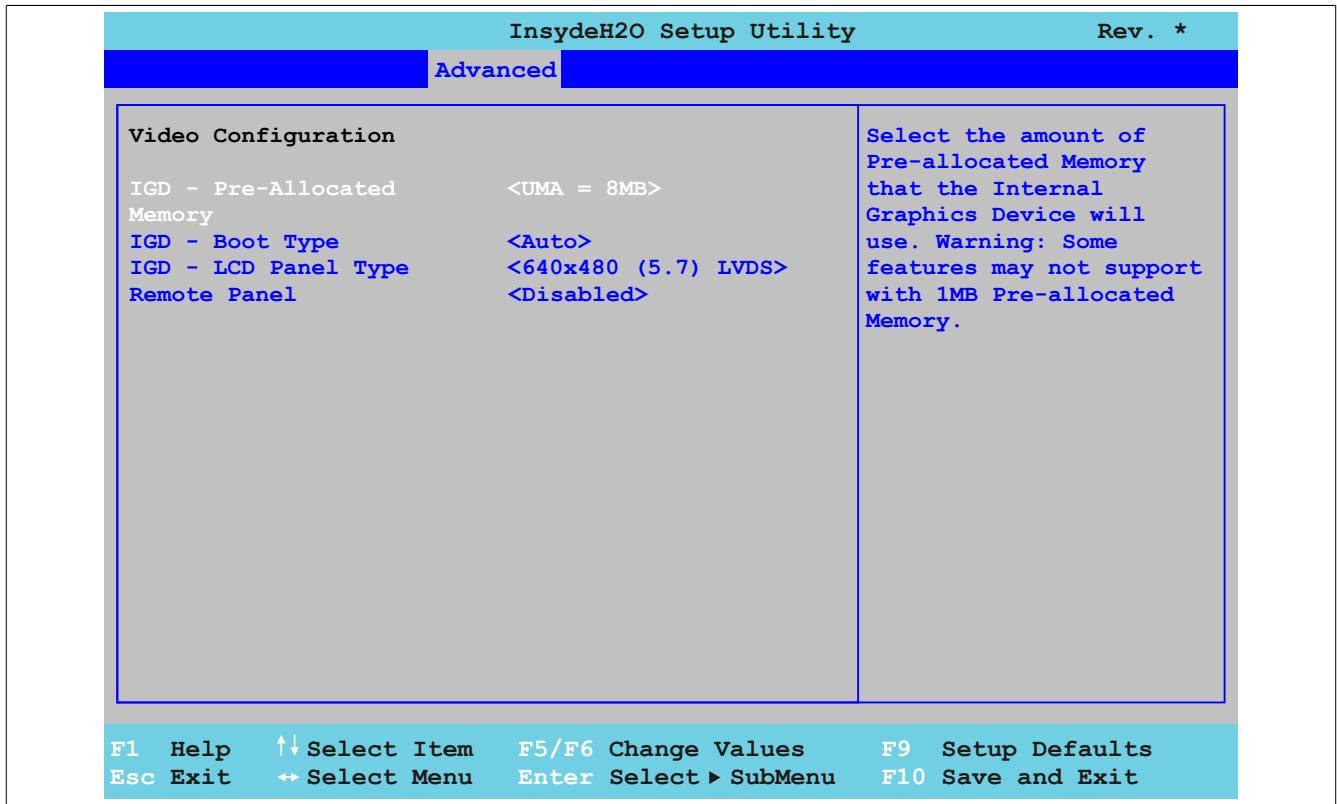

Image 51: US15W Advanced - Video Configuration

BIOS setting	Meaning	Setting options	Effect
IGD - Pre-allocated memory	Option for setting the memory size that can be used for the internal graphics controller.	UMA = 1MB UMA = 4MB UMA = 8MB	1 MByte main memory provided. 4 MByte main memory provided. 8 MByte main memory provided.
	Information: Some functions are not supported with the setting "UMA = 1MB".		
IGD - Boot Type	Option to define the enabled panel during the POST.	Auto LFP(LVDS) EFP(SDL or DVI)	One of the panels listed under "IGD - LCD Panel Type" will be automatically selected. The POST is shown on the display of the Power Panel 500 (LFP = Local Flat Panel). The POST is shown on an external panel (EFP = External Flat Panel).
IGD - LCD Panel Type ¹⁾	Option for setting the display resolution.	640x480 (5.7) LVDS 800x480 (7.0) LVDS 800x600 (8.4) LVDS 640x480 (10.4) LVDS 800x600 (12.0) LVD 1024x768 (15.0) LVDS	Resolution at 640 x 480 pixels (for 5.7" display) Resolution at 800 x 480 pixels (for 7" display) Resolution at 800 x 600 pixels (for 8.4" display) Resolution at 640 x 480 pixels (for 10.4" display) Resolution at 800 x 600 pixels (for 12.0" display) Resolution at 1024 x 768 pixels (for 15" display)
Remote Panel ²⁾	Option to control the device remotely (with no display connected) from another PC via the Ethernet interface. This makes it possible to make BIOS settings.	Enabled Disabled	Enables this function. Disables this function.

Table 98: US15W Advanced - Video Configuration setting options

- 1) This setting is only available for PP500 system units.
- 2) This setting is hidden unless an I/O board is installed. This option does not appear if a display is connected or integrated. On APC511 system units it is also shown even if no I/O board is installed.

1.5.6 USB Configuration

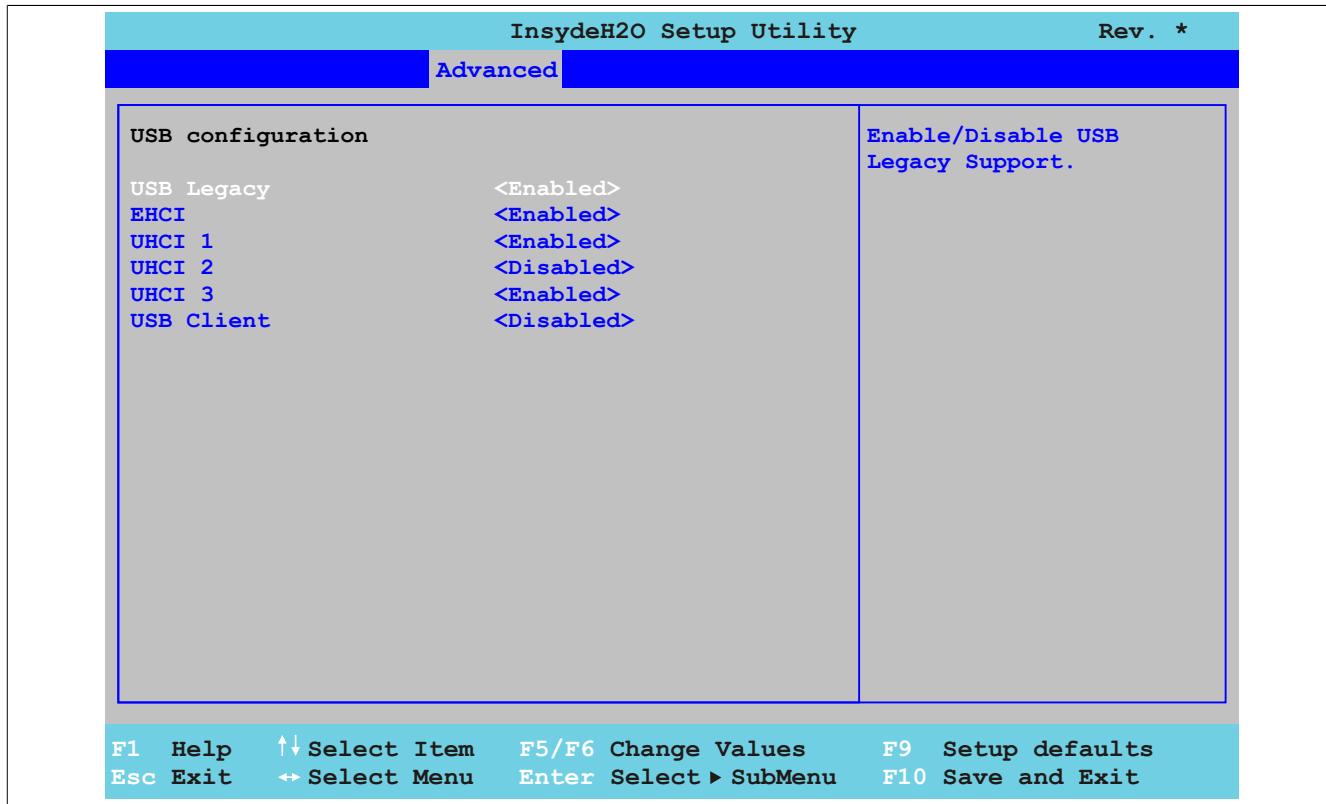

Image 52: US15W Advanced - USB Configuration

BIOS setting	Meaning	Setting options	Effect	
USB Legacy	Legacy USB support can be enabled/disabled here. USB ports do not function during startup. USB is supported again after the operating system has started. A USB keyboard is still recognized during the POST.	Enabled	Enables this function.	
		Disabled	Disables this function.	
EHCI	The support for the operating system can be set up without the fully automatic EHCI function.	Enabled	Enables USB support. USB 2.0 support is enabled as soon as a USB 2.0 device is connected to the interface.	
		Disabled	Disables USB 2.0 support.	
UHCI 1	Configuration of the USB UHCI controller 1 for USB port 2 and 3.	Enabled	Enables USB support.	
		Disabled	Deactivates the USB support.	
Warning!				
If this setting is <i>Disabled</i> , then the settings <i>UHCI 2</i> and <i>UHCI 3</i> will be set to <i>Disabled</i> and all USB ports will be disabled. As a result, it will no longer be possible to enter BIOS.				
However, if UHCI 1 has been disabled, then you can use the Backup BIOS to once again enter BIOS. For more information, see "OEM Features" on page 70				
UHCI 2 ¹⁾	Configuration of the USB UHCI controller 2 for USB ports on the I/O board.	Enabled	Enables USB support.	
UHCI 3 ¹⁾	Configuration of the USB UHCI controller 3 for USB port 3.	Enabled	Enables USB support.	
		Disabled	Deactivates the USB support.	
USB client	Setting for USB Client support.	Enabled	Enables USB Client support.	
		Disabled	Disables USB Client support.	

Table 99: US15W Advanced - USB Configuration setting options

1) These settings are only possible if *UHCI 1* is set to *Enabled*.

1.5.7 SDIO Configuration

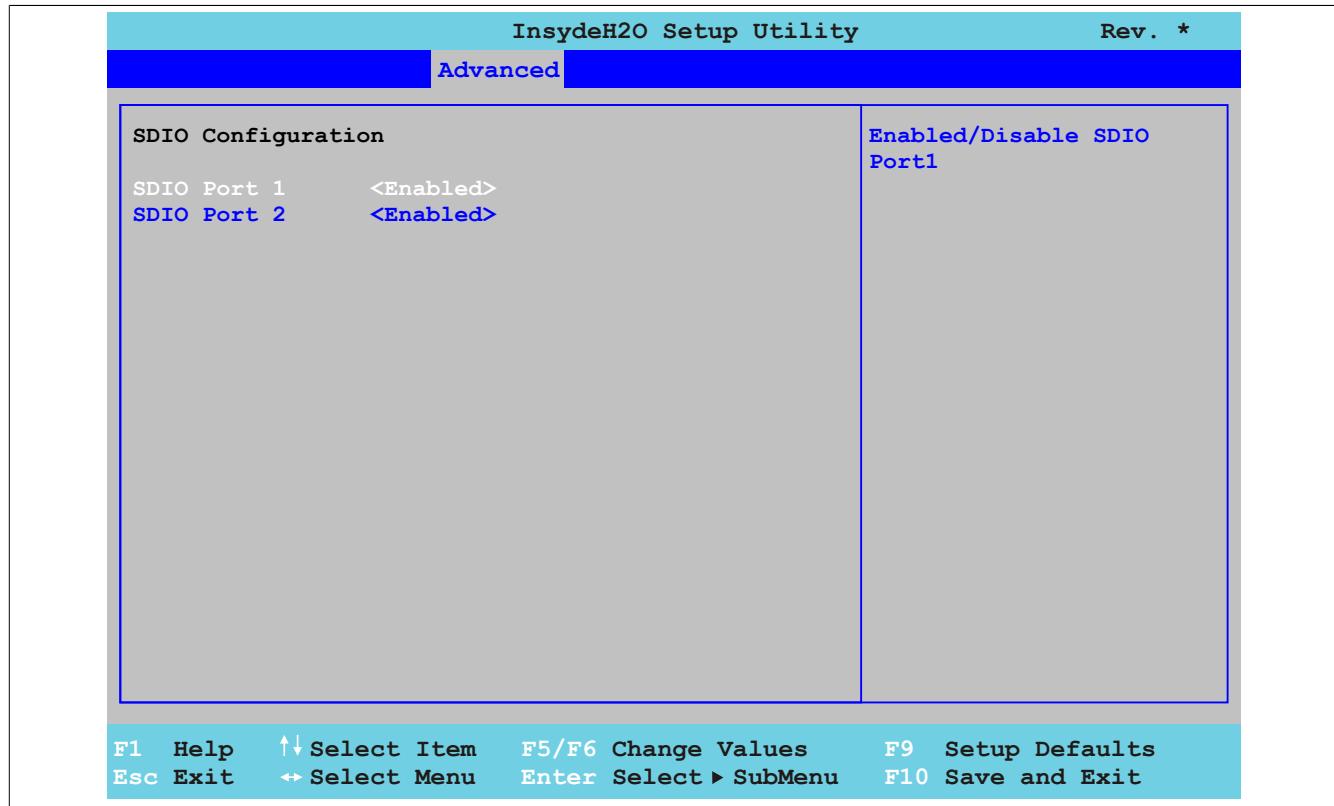

Image 53: US15W Advanced - SDIO Configuration

BIOS setting	Meaning	Setting options	Effect
SDIO Port 1	SDIO Port 1 (Secure Digital Input Output - SD Memory Card Slot) can be enabled/ disabled here.	Enabled	Enables this function.
		Disabled	Disables this function.
SDIO Port 2	SDIO Port 2 (Secure Digital Input Output - SD Memory Card Slot) can be enabled/ disabled here.	Enabled	Enables this function.
		Disabled	Disables this function.

Table 100: US15W Advanced - SDIO Configuration setting options

1.5.8 ACPI Table/Features Control

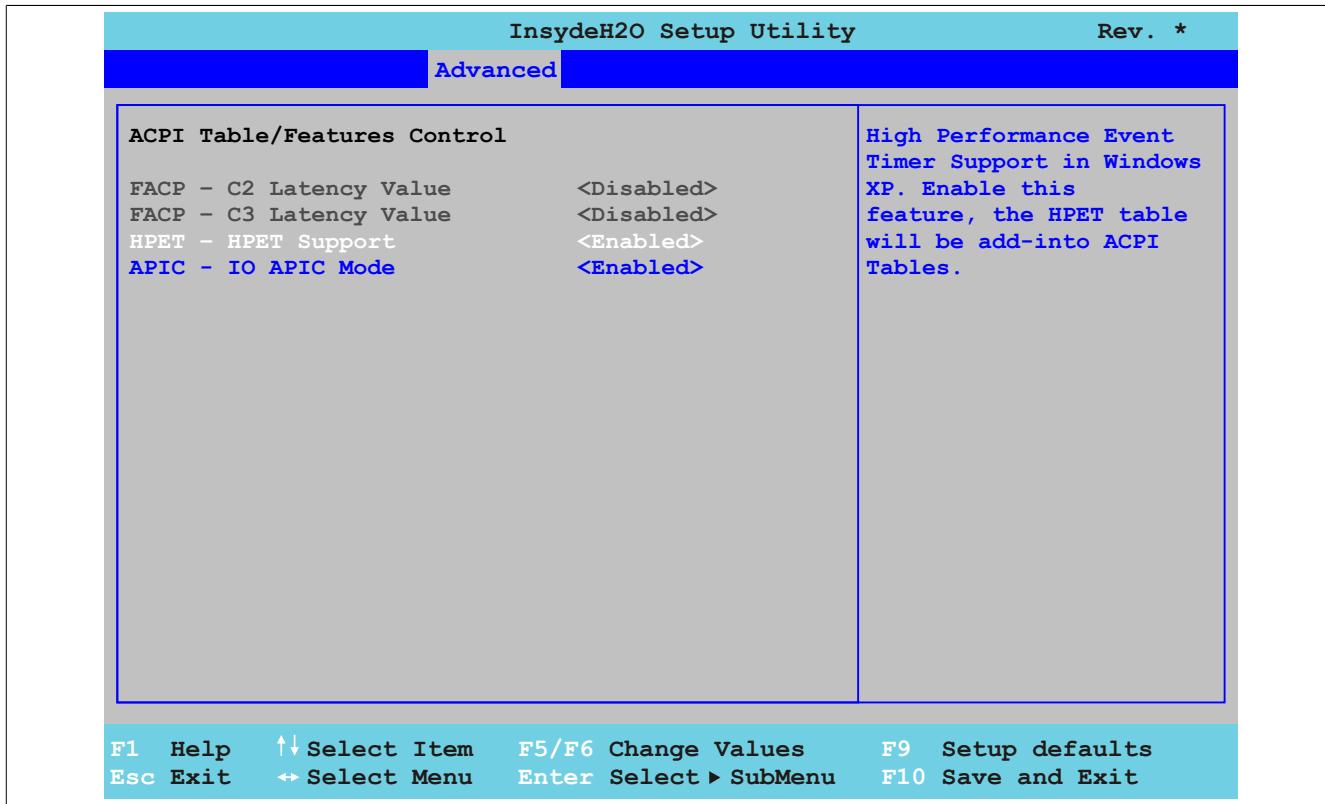

Image 54: US15W Advanced - ACPI Table/Features Control

BIOS setting	Meaning	Setting options	Effect
FACP – C2 Latency Value ¹⁾	Option for setting a latency period in the C2 state.	Enabled	Enables this function. A latency of 1 µs is set (i.e. the C2 state will be entered within 1 µs and exited again within 1 µs).
		Disabled	Disables this function.
FACP – C3 Latency Value ¹⁾	Option for setting a latency period in the C3 state.	Enabled	Enables this function. A latency of 85 µs is set (i.e. the C3 state will be entered within 85 µs and exited again within 85 µs).
		Disabled	Disables this function.
HPET – HPET Support	The HPET is a timer inside the PC. It is able to trigger an interrupt with a high degree of accuracy, which allows other programs to better synchronize a variety of applications.	Enabled	Enables this function. This function is recommended for multimedia applications.
		Disabled	Disables this function.
APIC - I/O APIC mode	This option controls the support of the advanced programmable interrupt controller in the processor.	Enabled	Enables this function.
		Disabled	Disables this function.

Warning!

Windows XP will not be started if this setting is disabled.

Table 101: US15W Advanced - ACPI Table/Features Control setting options

1) These settings are only possible if C-States is set to *Enabled* in the menu item Power - Advanced CPU Control.

1.5.9 PCI Express Root Port 1

Warning!

Making settings carelessly can cause instability or device problems. Therefore, it is strongly recommended that these settings only be changed by experienced users.

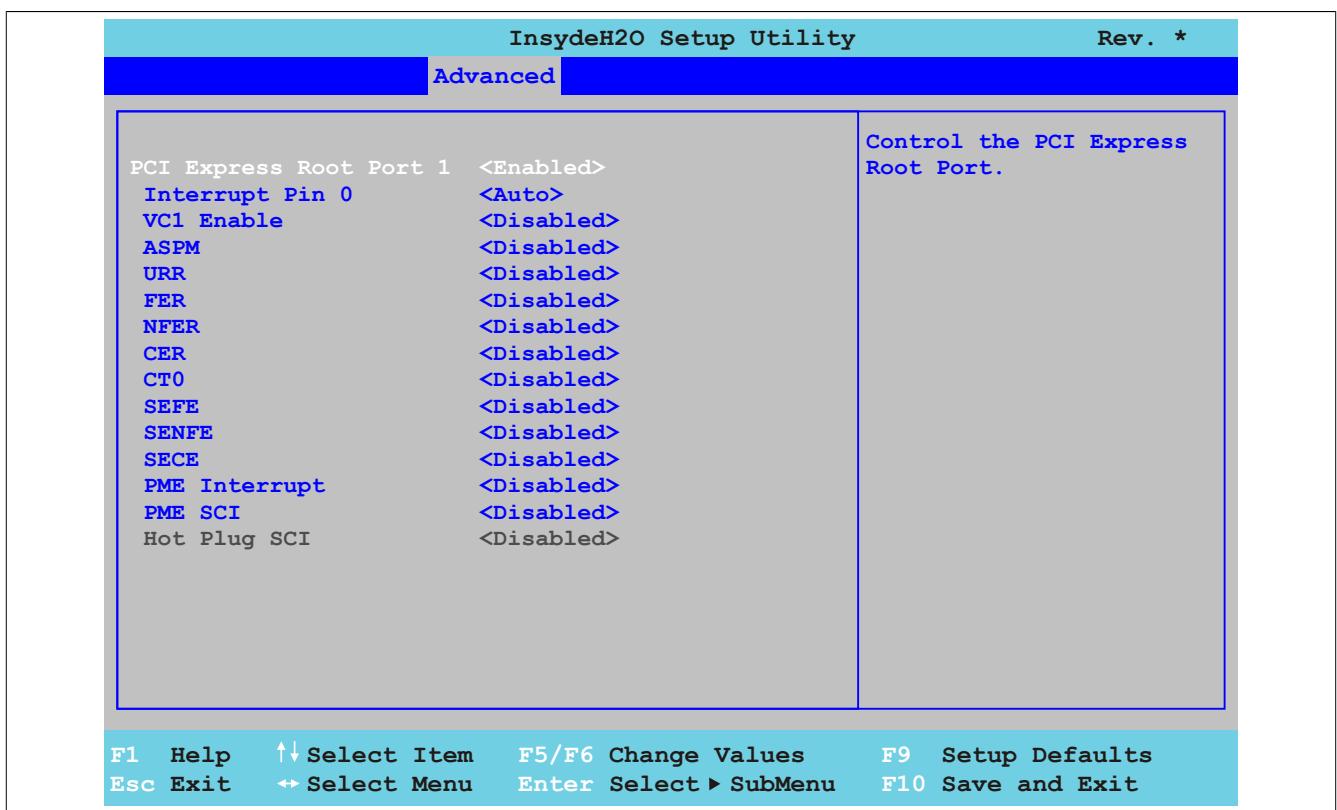

Image 55: US15W Advanced - PCI Express Root Port 1

BIOS setting	Meaning	Setting options	Effect
PCI Express Root Port 1	This option is used to enable/disable PCI Express Root Port 1.	Enabled	PCI Express Root Port 1 enabled.
		Disabled	PCI Express Root Port 1 and 2 disabled.
Interrupt pin 0		Auto	IRQ enabled for Root Port 1.
		Disabled	IRQ disabled for Root Port 1.
VC1 Enable	Virtual Channel 1	Auto	Setting the mapping via the BIOS setting "VC1/TC Mapping".
		Disabled	Disables this function. The TC0 Traffic class is automatically used and mapped to the VC0 Virtual Channel.
VC1/TC Mapping ¹⁾	This option is used to define which traffic will be mapped to which Virtual Channel.	TC0	TBD
		TC1	The TC1 traffic class is mapped manually to the VC1 Virtual Channel.
		TC2	The TC2 traffic class is mapped manually to the VC1 Virtual Channel.
		TC3	The TC3 traffic class is mapped manually to the VC1 Virtual Channel.
		TC4	The TC4 traffic class is mapped manually to the VC1 Virtual Channel.
		TC5	The TC5 traffic class is mapped manually to the VC1 Virtual Channel.
		TC6	The TC6 traffic class is mapped manually to the VC1 Virtual Channel.
		TC7	The TC7 traffic class is mapped manually to the VC1 Virtual Channel.
ASPM	<i>Active State Power Management</i> Option for setting a power saving function (L0s/L1) for PCIE links if they do not require full power.	Enabled	Enables this function.
		Disabled	Disables this function.
Automatic ASPM ²⁾	Option for configuring automatic or manual assignment of the ASPM.	Auto	Automatic assignment by the BIOS and operating system.
		Manual	Setting for assignment under the BIOS setting "ASPM L0s" and "ASPM L1".
ASPM L0s ³⁾	Option for setting the L0 power saving function.	Disabled	Disables this function.
		Root Port Only	Enables the power saving function for the Root port.
		Endpoint Port Only	Enables the power saving function for the Endpoint port.
		Root&Endpoint Ports	Enables the power saving function for the Root and Endpoint ports.
ASPM L1 ³⁾	Option for setting the L1 power saving function. Power consumption is lower than with L0, but the exit latency higher.	Enabled	Enables this function.
		Disabled	Disables this function.
URR	Unsupported Request (UR) Reporting	Enabled	Enables this function.

Table 102: US15W Advanced - PCI Express Root Port 1 setting options

BIOS setting	Meaning	Setting options	Effect
	Option for reporting unsupported requests. Logging of error messages received by the Root Port is controlled exclusively by the Root Control Register.	Disabled	Disables this function.
FER	<p><i>Fatal Error Reporting</i></p> <p>Option for reporting fatal errors. All of the functions in a multifunction device will be monitored. The report for the Root Port takes place internally inside the Root Complex.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function.</p> <p>Disables this function.</p>
NFER	<p><i>Non-Fatal Error Reporting</i></p> <p>Option for reporting non-fatal errors. All of the functions in a multifunction device will be monitored. The report for the Root Port takes place internally inside the Root Complex.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function.</p> <p>Disables this function.</p>
CER	<p><i>Correctable Error Reporting</i></p> <p>Option for reporting non-fatal errors. All of the functions in a multifunction device will be monitored. The report for the Root Port takes place internally inside the Root Complex.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function.</p> <p>Disables this function.</p>
CT0	<p><i>PCI Express Completion Timer T0</i></p> <p>This option is used to enable/disable PCI Express Completion Timer.</p> <p>Information: If the system detected an ROB (Processor Reorder Buffer) Timeout, then this setting should be set to Enabled.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function.</p> <p>Disables this function.</p>
SEFE	<p><i>System Error on Fatal Error</i></p> <p>Option for generating a System Error, if a fatal error is registered by a device on the Root Port or on the Root Port itself.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function.</p> <p>Disables this function.</p>
SENFE	<p><i>System Error on Non-Fatal Error</i></p> <p>Option for generating a System Error, if a non-fatal error is registered by a device on the Root Port or on the Root Port itself.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function.</p> <p>Disables this function.</p>
SECE	<p><i>System Error on Correctable Error</i></p> <p>Option for generating a System Error, if a correctable error is registered by a device on the Root Port or on the Root Port itself.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function.</p> <p>Disables this function.</p>
PME Interrupt	<p><i>Power Management Event Interrupt</i></p> <p>Option for generating a PME Interrupt. An Interrupt is generated when a PME Message is received from a PCIe device.</p>	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function. A PME Interrupt is generated when a PME message is received.</p> <p>Disables this function.</p>
PME SCI	Option for generating an SCI if Power Management is detected.	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function. The Root Port is enabled to generate SCI if Power Management is detected.</p> <p>Disables this function.</p>
Hot Plug SCI	Option for generating an SCI if a Hot-Plug is detected.	<p>Enabled</p> <p>Disabled</p>	<p>Enables this function. The Root Port is enabled to generate SCI if a Hot-Plug is detected.</p> <p>Disables this function.</p>

Table 102: US15W Advanced - PCI Express Root Port 1 setting options

- 1) These settings are only possible if VC1 Enable is set to *Auto*.
- 2) These settings are only possible if ASPM is set to *Enabled*.
- 3) These settings are only possible if *Automatic ASPM* is set to *Manual*.

1.5.10 PCI Express Root Port 2

Warning!

Making settings carelessly can cause instability or device problems. Therefore, it is strongly recommended that these settings only be changed by experienced users.

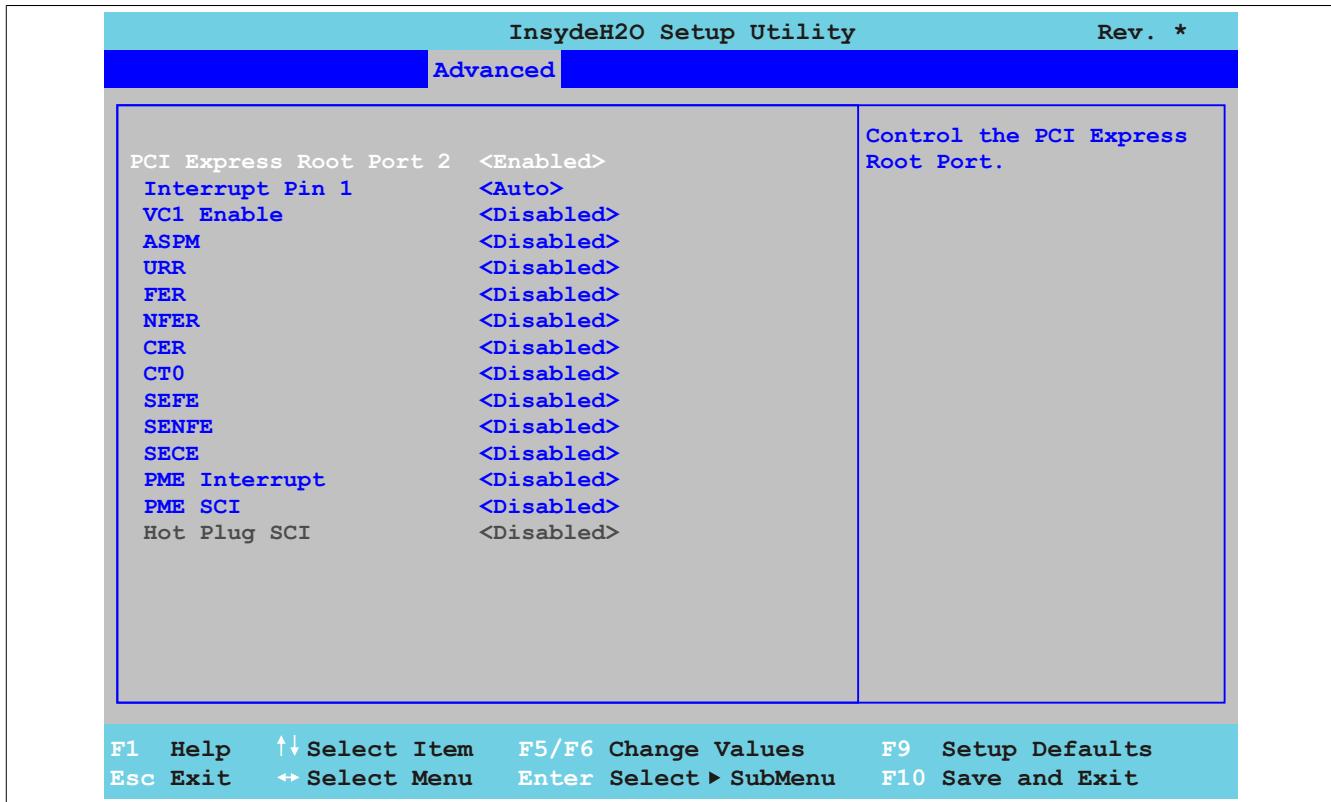

Image 56: US15W Advanced - PCI Express Root Port 2

BIOS setting	Meaning	Setting options	Effect
PCI Express Root Port 2	This option is used to enable/disable PCI Express Root Port 2.	Enabled	PCI Express Root Port 2 enabled.
		Disabled	PCI Express Root Port 2 disabled.
Interrupt pin 1	Information: This function is disabled by default when using ARwin and/or a fieldbus card. The function must be disabled in order to use a fieldbus card.	Auto	IRQ enabled for Root Port 2.
		Disabled	IRQ disabled for Root Port 2.
VC1 Enable	Virtual Channel 1	Auto	Setting the mapping via the BIOS setting "VC1/TC Mapping".
		Disabled	Disables this function. The TC0 Traffic class is automatically used and mapped to the VC0 Virtual Channel.
VC1/TC Mapping ¹⁾	This option is used to define which traffic will be mapped to which Virtual Channel.	TC0	TBD
		TC1	The TC1 traffic class is mapped manually to the VC1 Virtual Channel.
		TC2	The TC2 traffic class is mapped manually to the VC1 Virtual Channel.
		TC3	The TC3 traffic class is mapped manually to the VC1 Virtual Channel.
		TC4	The TC4 traffic class is mapped manually to the VC1 Virtual Channel.
		TC5	The TC5 traffic class is mapped manually to the VC1 Virtual Channel.
		TC6	The TC6 traffic class is mapped manually to the VC1 Virtual Channel.
		TC7	The TC7 traffic class is mapped manually to the VC1 Virtual Channel.
ASPM	<i>Active State Power Management</i> Option for setting a power saving function (L0s/L1) for PCIE links if they do not require full power.	Enabled	Enables this function.
		Disabled	Disables this function.
Automatic ASPM ²⁾	Option for configuring automatic or manual assignment of the ASPM.	Auto	Automatic assignment by the BIOS and operating system.

Table 103: US15W Advanced - PCI Express Root Port 2 setting options

BIOS setting	Meaning	Setting options	Effect
		Manual	Setting for assignment under the BIOS setting "ASPM L0s" and "ASPM L1".
ASPM L0s ³⁾	Option for setting the L0 power saving function.	Disabled	Disables this function.
		Root Port Only	Enables the power saving function for the Root port.
		Endpoint Port Only	Enables the power saving function for the Endpoint port.
		Root&Endpoint Ports	Enables the power saving function for the Root and Endpoint ports.
ASPM L1 ³⁾	Option for setting the L1 power saving function. Power consumption is lower than with L0, but the exit latency higher.	Enabled	Enables this function.
		Disabled	Disables this function.
URR	<i>Unsupported Request (UR) Reporting</i> Option for reporting unsupported requests. Logging of error messages received by the Root Port is controlled exclusively by the Root Control Register.	Enabled	Enables this function.
		Disabled	Disables this function.
FER	<i>Fatal Error Reporting</i> Option for reporting fatal errors. All of the functions in a multifunction device will be monitored. The report for the Root Port takes place internally inside the Root Complex.	Enabled	Enables this function.
		Disabled	Disables this function.
NFER	<i>Non-Fatal Error Reporting</i> Option for reporting non-fatal errors. All of the functions in a multifunction device will be monitored. The report for the Root Port takes place internally inside the Root Complex.	Enabled	Enables this function.
		Disabled	Disables this function.
CER	<i>Correctable Error Reporting</i> Option for reporting non-fatal errors. All of the functions in a multifunction device will be monitored. The report for the Root Port takes place internally inside the Root Complex.	Enabled	Enables this function.
		Disabled	Disables this function.
CT0	<i>PCI Express Completion Timer T0</i> This option is used to enable/disable PCI Express Completion Timer.	Enabled	Enables this function.
		Disabled	Disables this function.
SEFE	<i>System Error on Fatal Error</i> Option for generating a System Error, if a fatal error is registered by a device on the Root Port or on the Root Port itself.	Enabled	Enables this function.
		Disabled	Disables this function.
SENFE	<i>System Error on Non-Fatal Error</i> Option for generating a System Error, if a non-fatal error is registered by a device on the Root Port or on the Root Port itself.	Enabled	Enables this function.
		Disabled	Disables this function.
SECE	<i>System Error on Correctable Error</i> Option for generating a System Error, if a correctable error is registered by a device on the Root Port or on the Root Port itself.	Enabled	Enables this function.
		Disabled	Disables this function.
PME Interrupt	<i>Power Management Event Interrupt</i> Option for generating a PME Interrupt. An Interrupt is generated when a PME Message is received from a PCIe device.	Enabled	Enables this function. A PME Interrupt is generated when a PME message is received.
		Disabled	Disables this function.
PME SCI	Option for generating an SCI if Power Management is detected.	Enabled	Enables this function. The Root Port is enabled to generate SCI if Power Management is detected.
		Disabled	Disables this function.
Hot Plug SCI	Option for generating an SCI if a Hot-Plug is detected.	Enabled	Enables this function. The Root Port is enabled to generate SCI if a Hot-Plug is detected.
		Disabled	Disables this function.

Table 103: US15W Advanced - PCI Express Root Port 2 setting options

- 1) These settings are only possible if VC1 *Enable* is set to *Auto*.
- 2) These settings are only possible if ASPM is set to *Enabled*.
- 3) These settings are only possible if *Automatic ASPM* is set to *Manual*.

1.5.11 Console Redirection

Information:

These settings are only visible to Automation PC 511 system units without I/O board. The node/node switches must be set to "00" (default).

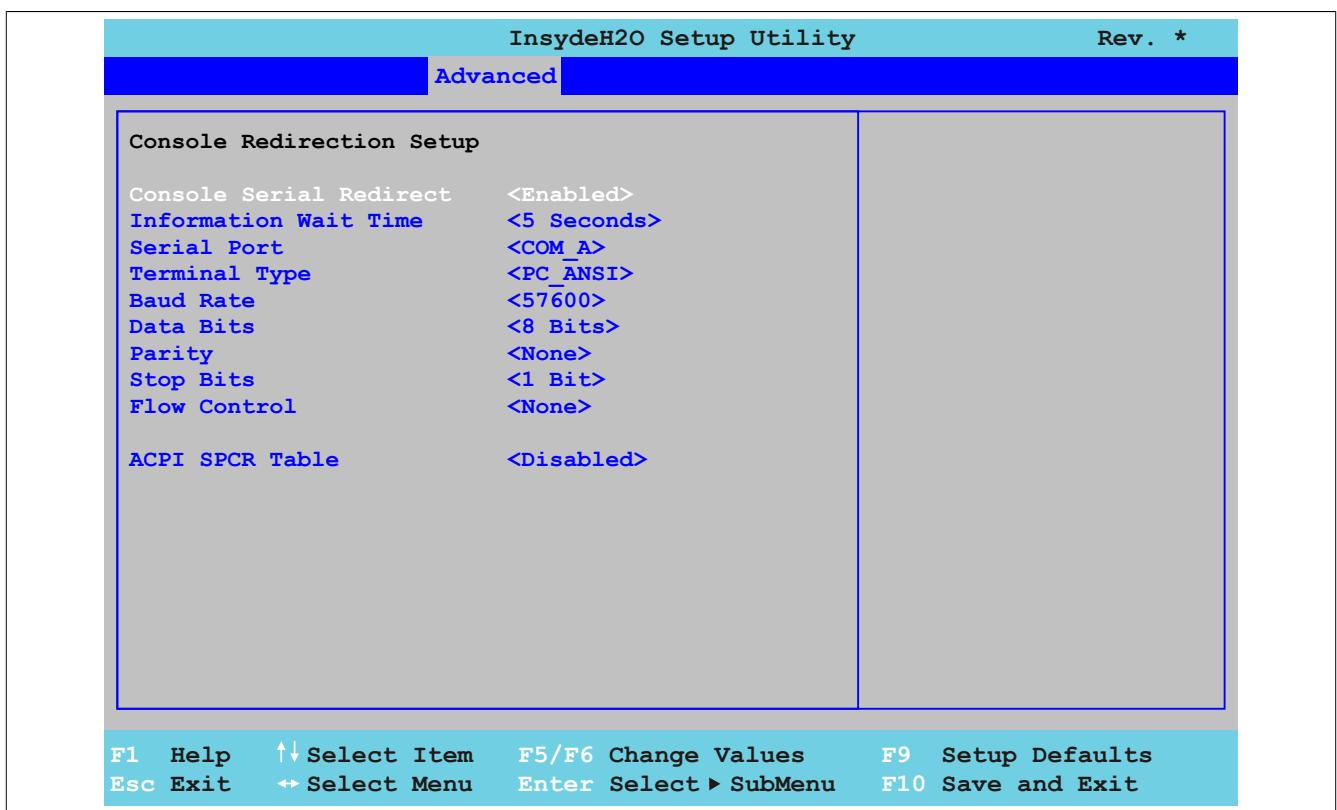

Image 57: US15W Advanced - Console Redirection

BIOS setting	Meaning	Setting options	Effect
Console Serial Redirect	Option for setting the remote console. The Remote Console enables you to access the BIOS setup via the serial interface using a terminal emulator (PuTTY or HyperTerminal).	Enabled Disabled	Enables this function. Disables this function.
	Information: This setting is automatically enabled when using an APC511 without I/O board and the mode/node switch position "00" (default).		
Information Wait Time	Option for setting the amount of time for the Remote Console to wait before accessing the BIOS for the first time.	0 Seconds, 2 Seconds, 5 Seconds, 10 Seconds, 30 Seconds	The Remote Console waits x seconds before accessing the BIOS for the first time.
Serial port	Option for setting the serial interface.	COM_A COM_B COM_C COM_D All Ports	Access via the COMA serial interface. Access via the COMB serial interface. Access via the COMC serial interface. Access via the COMD serial interface. TBD
Terminal type	Option for setting the keyboard input.	VT_100 VT_100+ VT_UTF8 PC_ANSI	Disables the VT100 convention (ASCII character set). Enables the VT100+ convention (ASCII character set and support for color, function keys, etc). Enables the VT-UTF8 convention (uses UTF8-coding, to assign Unicode characters one or more bytes). Enables the PC ANSI convention (extended ASCII character set).
Baud rate	Option for setting the transfer rate of the serial interface (bits per second).	1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200	A transfer rate of x bit is enabled.
Data bits	Option for setting the character length (data bits) to use for serial communication.	7 bits 8 bits	Character length with 7 bits Character length with 8 bits
Parity	Option for setting the parity bit to use for serial communication.	None Even Odd	No parity bit used. An even number of parity bits is used. An odd number of parity bits is used.
Stop bits	Option for setting the stop bits to use for serial communication.	1-bit 2-bit	1 bit is used as stop bit. 2 bits are used as stop bit.
Flow control	Option for configuring the data flow control.	None	Data flow control not enabled.

Table 104: US15W Advanced - Console Redirection setting options

BIOS setting	Meaning	Setting options	Effect
ACPI SPCR Table	Option for setting ACPI Serial Port Console Redirection (SPCR).	RTS/CTS	Hardware handshake enabled.
		XON/XOFF	Software handshake enabled.
ACPI SPCR Table	Option for setting ACPI Serial Port Console Redirection (SPCR).	Enabled	Enables this function.
		Disabled	Disables this function.

Table 104: US15W Advanced - Console Redirection setting options

1.6 Security

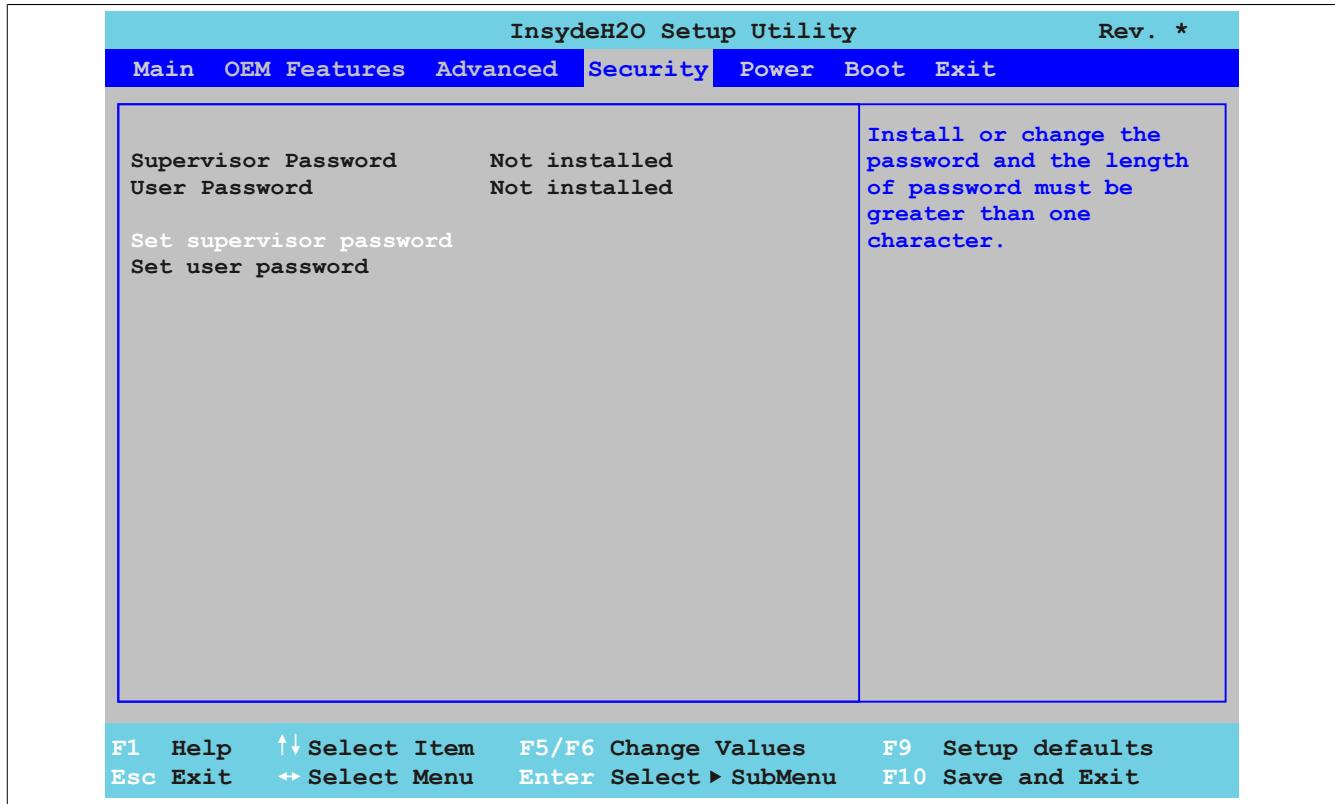

Image 58: US15W Security - Menu

BIOS setting	Meaning	Setting options	Effect
Supervisor Password	Displays whether or not a supervisor password has been set.	None	-
User Password	Displays whether or not a user password has been set.	None	-
Set supervisor password	Option for entering/changing a supervisor password. A supervisor password is necessary to edit all BIOS settings.	Enter	Enter password.
Set user password	Option for entering/changing a user password. A user password allows the user to edit only certain BIOS settings.	Enter	Enter password.

Table 105: US15W Security - Menu setting options

1.6.1 Set Supervisor Password

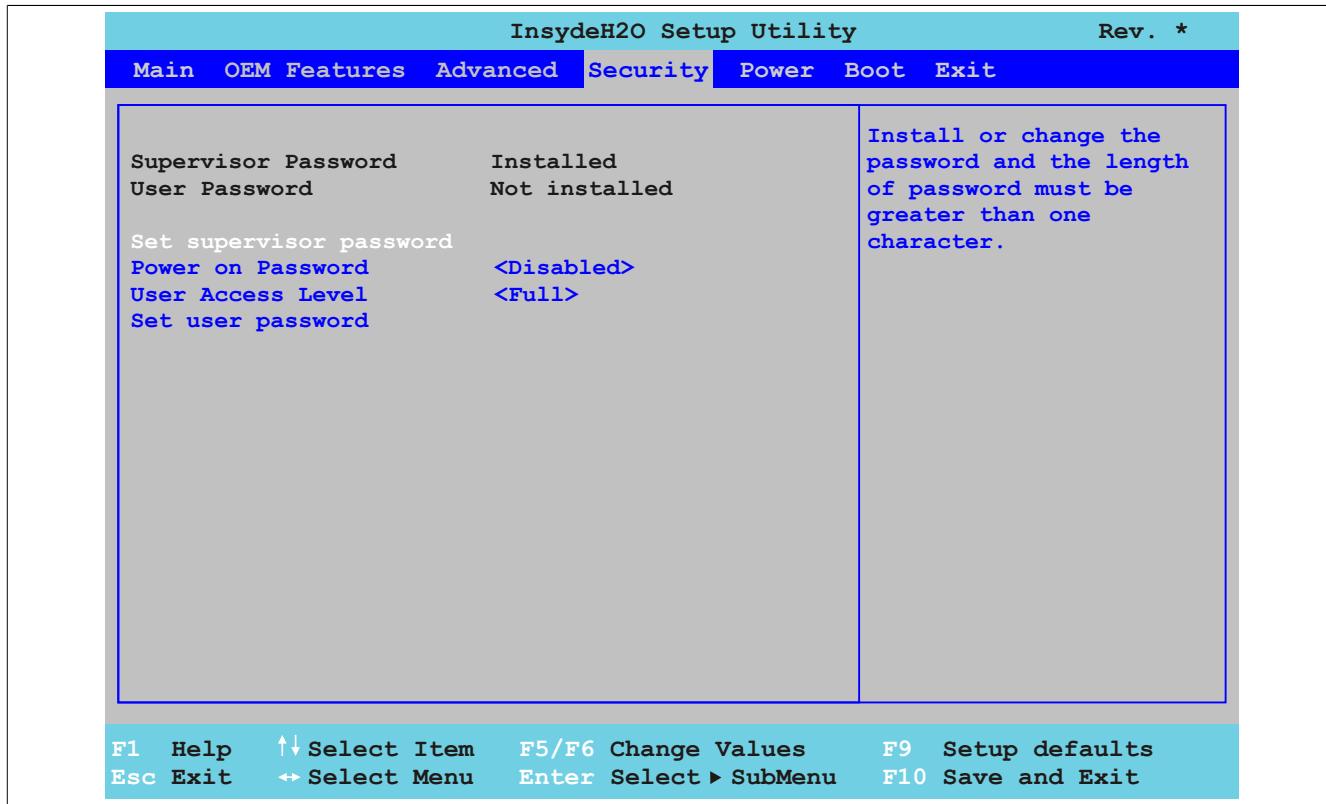

Image 59: US15W Security - Set Supervisor Password

BIOS setting	Meaning	Setting options	Effect
Supervisor Password	Displays whether or not a supervisor password has been set.	None	-
User Password	Displays whether or not a user password has been set.	None	-
Set supervisor password	Option for entering/changing a supervisor password. A supervisor password is necessary to edit all BIOS settings.	Enter	Enter password.
Power on Password	Entering BIOS or starting the operating system requires a password to be entered.	Enabled Disabled	POST requires the Supervisor Password to be entered. Entering BIOS requires the Supervisor Password to be entered, but the operating system can be started without a password.
User Access Level	Assigning editing permissions in BIOS. These settings are only relevant if a user password has been created.	View Only Limited Full	User can only view BIOS settings (cannot make any changes). User can view all BIOS settings, but only make some changes. Settings that the user can change: Main - System Time, Main - System Date, Advanced - Boot Configuration - Numlock User has full access to BIOS and can make any changes.

Table 106: US15W Security - Set Supervisor Password setting options

1.6.2 Set User Password

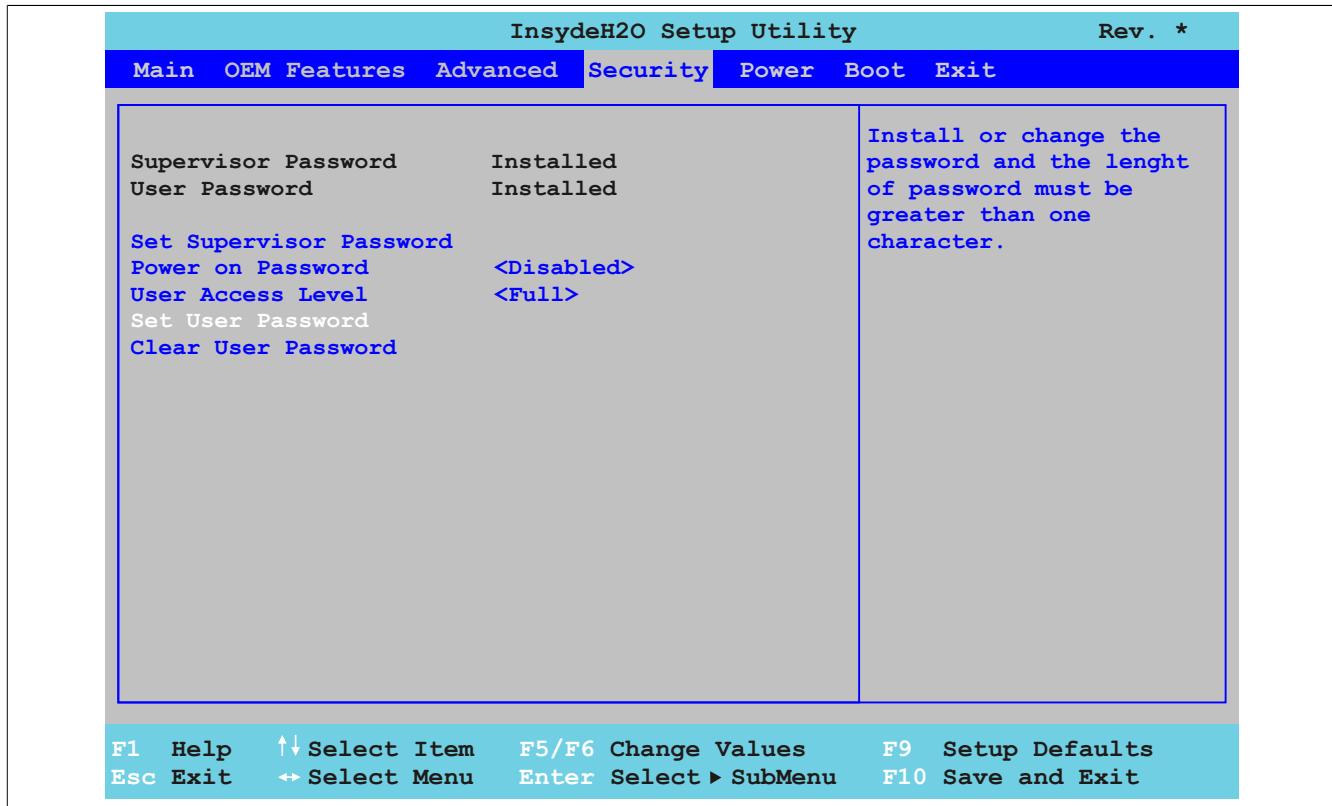

Image 60: US15W Security - Set User Password

BIOS setting	Meaning	Setting options	Effect
Supervisor Password	Displays whether or not a supervisor password has been set.	None	-
User Password	Displays whether or not a user password has been set.	None	-
Set User Password	Option for entering/changing a user password. A user password allows the user to edit only certain BIOS settings.	Enter	Enter password.
Clear User Password ¹⁾	Option for clearing the user password.		Clears user password.

Table 107: US15W Security - Set User Password - Setting options

1) This setting is only shown if *Set User Password* was used to create a user password.

1.7 Power

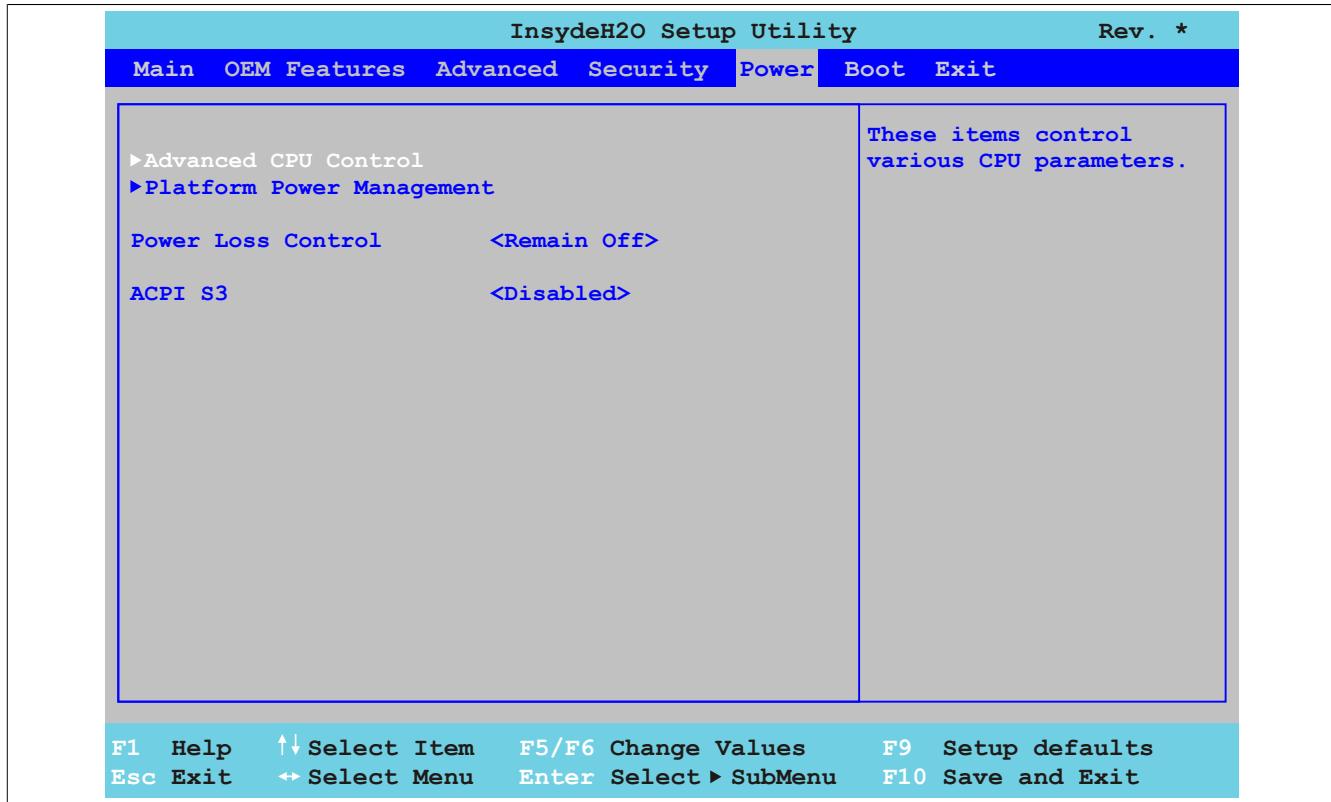

Image 61: US15W Power - Menu

BIOS setting	Meaning	Setting options	Effect
Advanced CPU Control	Configuration of the Advanced CPU Control settings.	None	Opens the submenu See " Advanced CPU Control" on page 109
Platform Power Management	Configuration of the Platform Power Management settings.	None	Opens the submenu See " Platform Power Management" on page 112
Power Loss Control	This option determines what should occur after a power failure.	Remain Off Turn On	Device remains off. The device turns back on.
ACPI S3	This option is used to determine whether or not the operating system should be written to the RAM, in which case only the RAM should be supplied with power.	Enabled Disabled	Enables this function. Disables the function

Table 108: US15W Power - Menu setting options

1.7.1 Advanced CPU Control

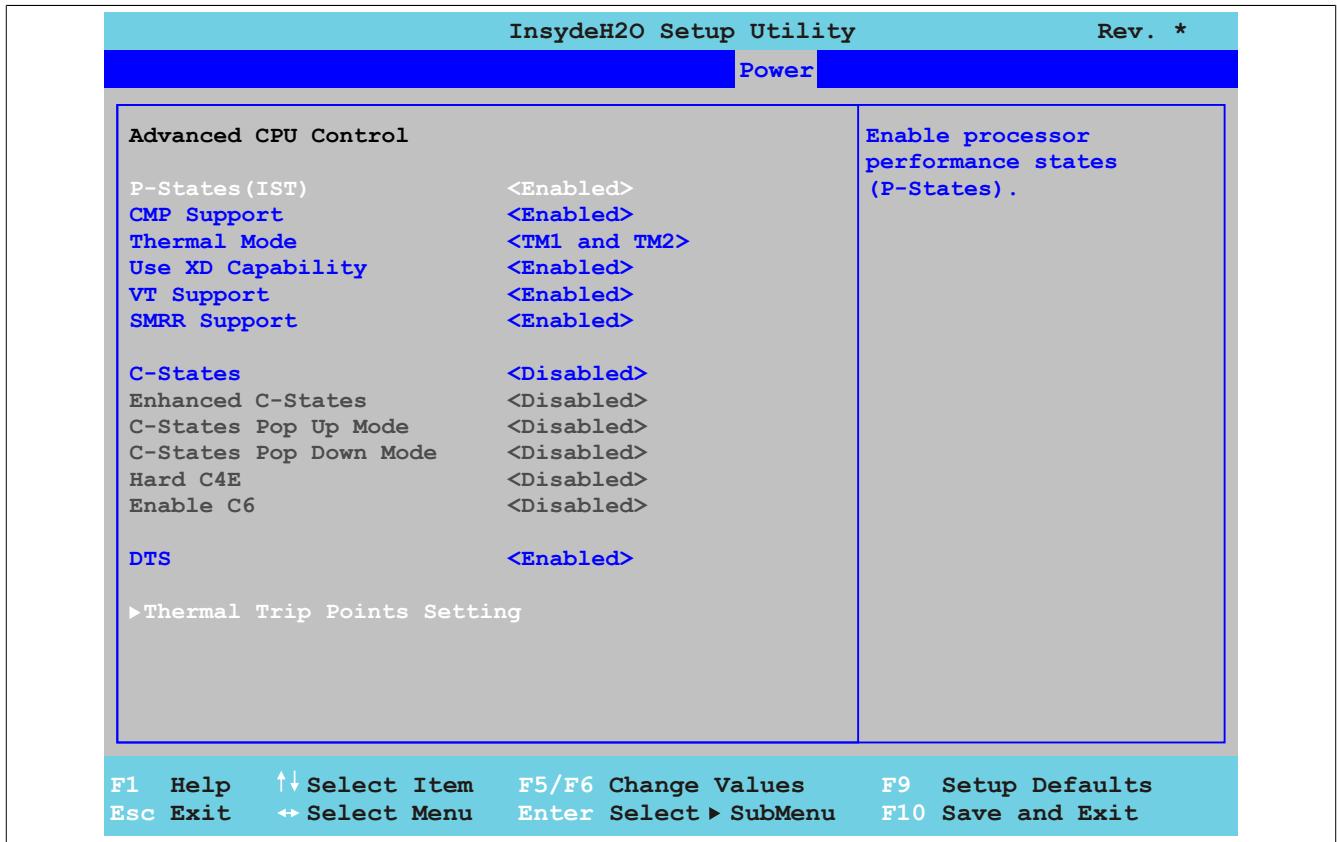

Image 62: US15W Power - Advanced - CPU Control

BIOS setting	Meaning	Setting options	Effect
P-States(IST)	Option for controlling the Intel(R) SpeedStep(TM) technology. The processor clock speed is increased or decreased according to the amount of calculations that must be made. As a result, the power consumption depends largely on the processor load.	Enabled Disabled	The processor speed is regulated by the operating system. Disables SpeedStep technology.
CMP Support	This option supports the use of multiple CPUs (CMP=core multi-processing). Information: In order to use ARwin, CMP Support must be switched off to avoid runtime violations.	Enabled Disabled	Enables this function. Disables this function.
Thermal Mode ¹⁾	Option for configuring the temperature monitoring. Information: To operate the processor within the specified values, we recommend not changing the default setting (TM1 and TM2).	Disabled TM1 TM2 TM1 and TM2	Temperature monitoring disabled. Intel Thermal Mode 1 enabled. If the CPU reaches excessive temperatures, the processor speed will be reduced by 50%. Intel Thermal Mode 2 enabled. If the CPU reaches excessive temperatures, the Intel SpeedStep technology will be activated. Intel Thermal Mode 1 and 2 enabled. If the CPU reaches excessive temperatures, TM1 reduces the processor speed by 50% and TM2 activates the Intel SpeedStep technology.
Use XD Capability	This option is a safety feature that protects specific data regions of the system memory from potentially damaging code.	Enabled Disabled	Enables this function. Disables this function.
VT Support	Option for activating or deactivating a virtual machine. Information: You must restart in order to apply changes made to this setting.	Enabled Disabled	If the function is enabled, a virtual machine can use the additional hardware capacity. Disables this function.

Table 109: US15W Power - Advanced CPU Control setting options

BIOS setting	Meaning	Setting options	Effect
SMRR Support	The SMRR (System Management Range Register) limits cacheable references of addresses in SMRAM in order to keep the code running in SMM (System Management Mode). In some circumstances, an intruder who is logged on as administrator could configure the Intel processor to gain access to the SMM. Implementation of SMRR reduces this risk of unauthorized access.	Enabled	Enables this function.
		Disabled	Disables this function.
C-States	This setting allows the operating system to set processor clock rates on its own, thereby saving energy.	Enabled	Enables this function. The processors are run at different frequencies, thereby saving energy.
		Disabled	Disables this function. Both processors are run at the same frequency.
Enhanced C-States ²⁾	This setting allows the operating system to set processor clock rates on its own, thereby saving energy.	Enabled	Enables this function.
		Disabled	Disables this function.
C-State Pop Up Mode	This setting makes it possible to detect Bus Master requests and to assign processor clock frequencies. This can be done to save energy.	Enabled	If ICH receives a Bus Master request, then the system changes from C3/C4 state to C2 state and the Bus Master is automatically activated.
		Disabled	Bus Master data transfer is a Break Event and ICH will attempt to return to the C0 state.
C-State Pop Down Mode ³⁾	This setting makes it possible to detect Bus Master requests and to assign processor clock frequencies. This can be done to save energy.	Enabled	If ICH does not receive a Bus Master request, then the system will be set back to C3/C4 state.
		Disabled	ICH will not attempt to automatically return to C3/C4 state.
Hard C4E ⁴⁾	Power Management for the Intel Atom processor - Enhanced C4 support.	Enabled	Enables this function. CPU voltage is reduced and the Memory Cache is turned off.
		Disabled	Disables this function.
Enable C6	Power Management for the Intel Atom processor - C6 support.	Enabled	Enables this function. The internal CPU voltage is reduced (can also be 0 V).
		Disabled	Disables this function.
DTS	Option for enabling or disabling the CPU Digital Thermal Sensor function.	Enabled	Enables this function.
		Disabled	Disables this function.
Thermal Trip Points Setting ⁵⁾	Configuration of the Thermal Trip Points settings.	Enter	Opens the submenu See " Thermal Trip Points Settings" on page 111

Table 109: US15W Power - Advanced CPU Control setting options

- 1) These settings are only possible if *P-States(IST)* is set to *Enabled*.
- 2) These settings are only possible if *C-States* is set to *Enabled*.
- 3) These settings are only possible if *C-States Pop Up Mode* is set to *Enabled*.
- 4) These settings are only possible if *Enhanced C-States* is set to *Enabled*.
- 5) These settings are only possible if *DTS* is set to *Enabled*.

Thermal Trip Points Settings

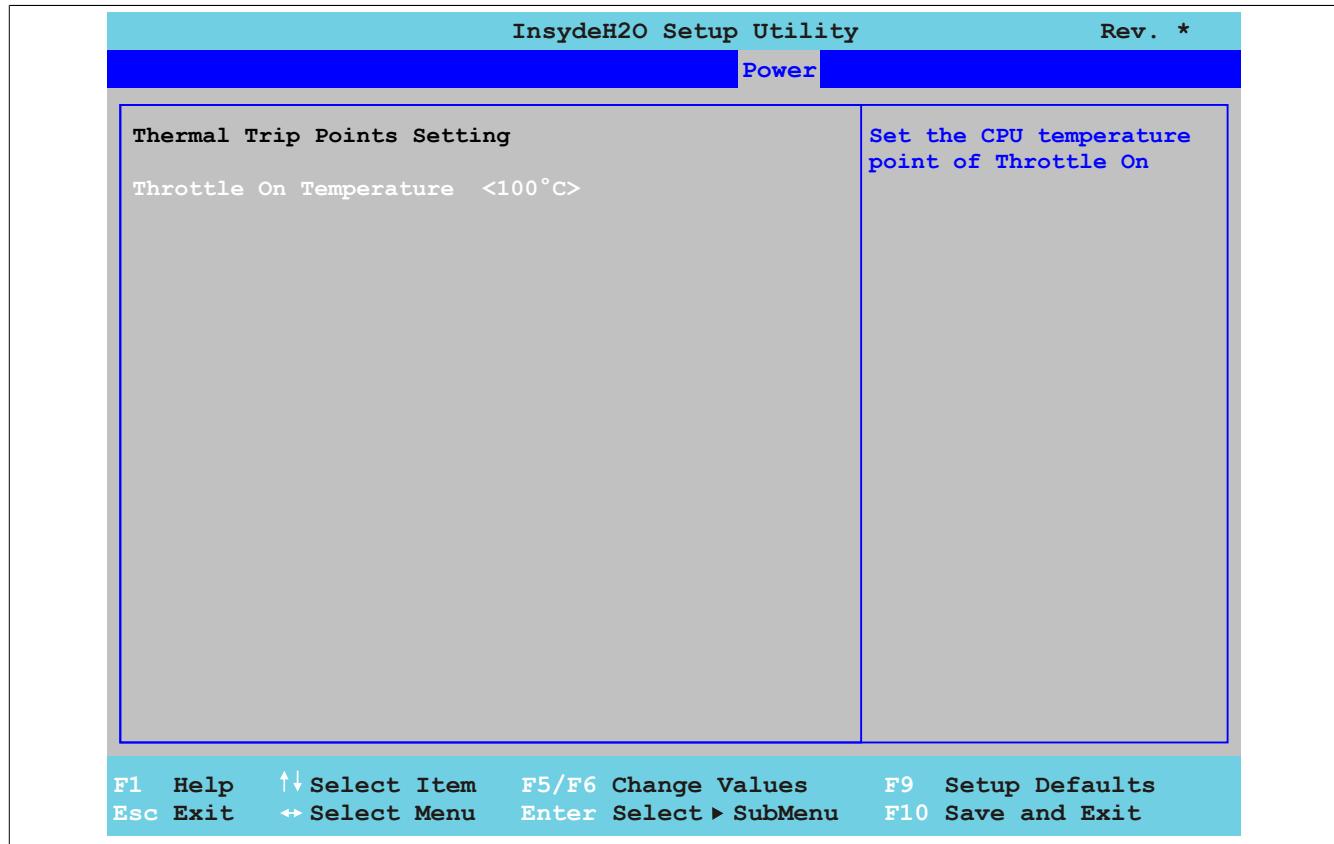

Image 63: US15W Power - Advanced - CPU Control - Thermal Trip Points Settings

BIOS setting	Meaning	Setting options	Effect
Throttle On Temperature	With this function, a temperature can be set at which the operating system throttles the system.	40°C, 45°C, 50°C, 55°C, 60°C, 65°C, 70°C, 75°C, 80°C, 85°C, 90°C, 95°C, 100°C	Temperature setting for the thermal trip point. Can be set in 5 degree increments.

Table 110: US15W Power - Advanced CPU Control - Thermal Trip Points Settings options

1.7.2 Platform Power Management

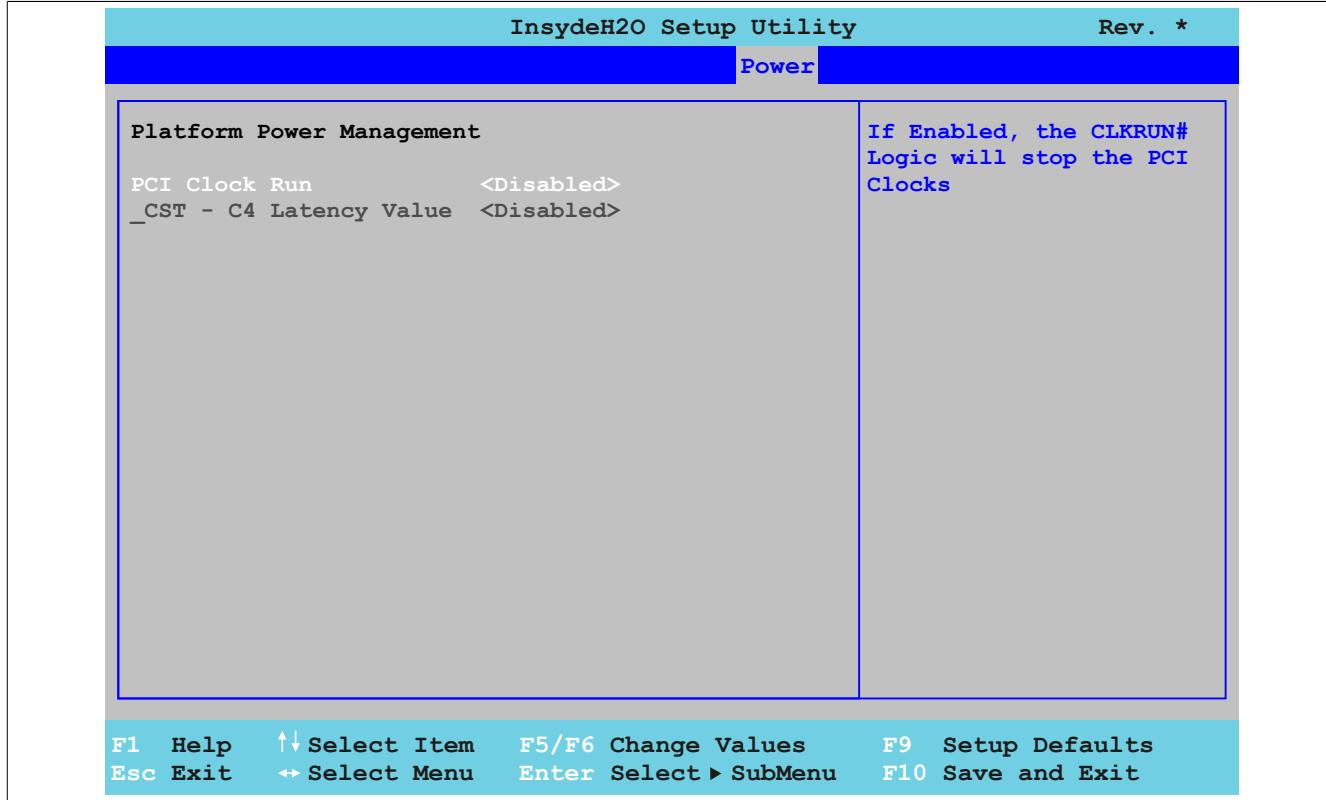

Image 64: US15W Power - Platform Power Management

BIOS setting	Meaning	Setting options	Effect
PCI Clock Run	Option for enabling / disabling the PCI Clocks to save energy.	Enabled	Enables this function.
		Disabled	Disables this function.
_CST - C4 Latency Value ¹⁾	Option for enabling / disabling the latency period for C4 C-States in the ACPI _CST object. Information: For more detailed information about this setting, see the ACPI specification (www.acpi.info).	Enabled	Enables this function.
		Disabled	Disables this function.
C4 on C3 - Deeper Sleep ²⁾	Fine-tunes the power saving function on an ACPI operating system.	Enabled	Processor is needed in C4 if the operating system is initiated in a C3 state.
		Disabled	Disables this function.

Table 111: US15W Power - Platform Power Management setting options

1) These settings are only possible if C-States is set to *Enabled* in the menu item *Advanced CPU Control*.

2) These settings are only possible if *_CST - C4 Latency Value* is set to *Enabled*.

1.8 Boot

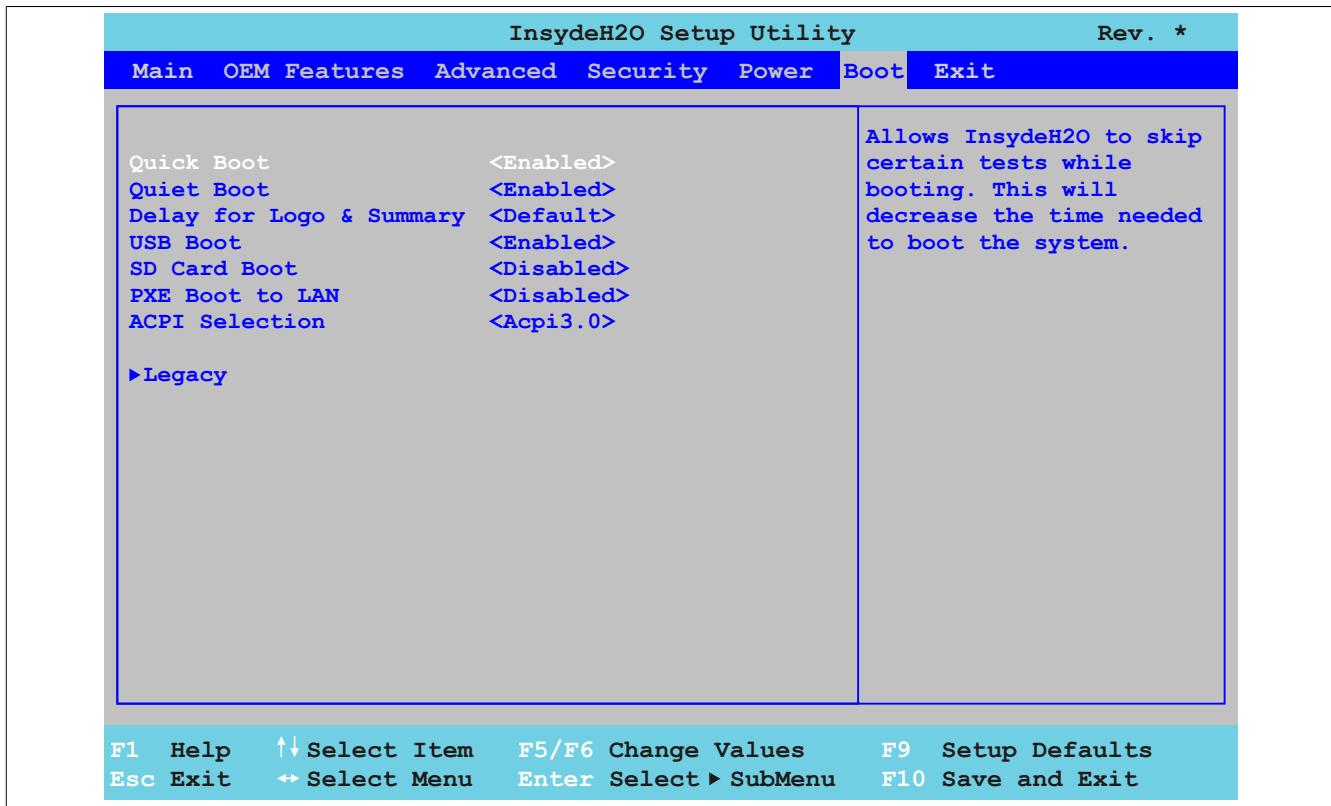

Image 65: US15W Boot - Menu

BIOS setting	Meaning	Setting options	Effect	
Quick Boot	This function reduces the boot time by skipping some POST tests.	Enabled	Enables this function.	
		Disabled	Disables this function.	
Quiet Boot	Determines if POST message or OEM logo (default = black background) is displayed.	Enabled	OEM logo display instead of POST message.	
		Disabled	POST message display.	
Delay for Logo & Summary	Option for setting the display duration of the logo and summary screen.	Default	The display duration is minimized for a quick boot procedure.	
		1 Sec., 1.5 Sec., 2 Sec., 2.5 Sec., 3 Sec., 4 Sec., 5 Sec., 10 Sec., 20 Sec.	A display duration of x seconds can be defined.	
USB Boot	This function can be used to enable / disable the option of booting from USB devices.	Enabled	Enables this function.	
		Disabled	Disables this function.	
SD Card Boot	This function can be used to enable / disable the option of booting from SD cards.	Enabled	Enables this function.	
		Disabled	Disables this function.	
Warning!				
SD memory cards are only permitted for use as mass memory. It is not possible to boot from an SD card.				
PXE Boot to LAN	This function can be used to enable / disable the option of booting from LAN (ETH).	Enabled	Enables this function.	
		Disabled	Disables this function.	
ACPI Selection	Option for setting the power option specifications to be supported. The ACPI functions must be supported by the drivers and operating systems being used.	AcpI 1.0B	ACPI functions in accordance with v1.0B	
		AcpI 3.0	ACPI functions in accordance with v3.0	
		AcpI 4.0	ACPI functions in accordance with v4.0	
Legacy	Configuration and display of the Boot sequence.	Enter	Opens the submenu See "Legacy" on page 114	

Table 112: US15W Boot - Menu setting options

1.8.1 Legacy

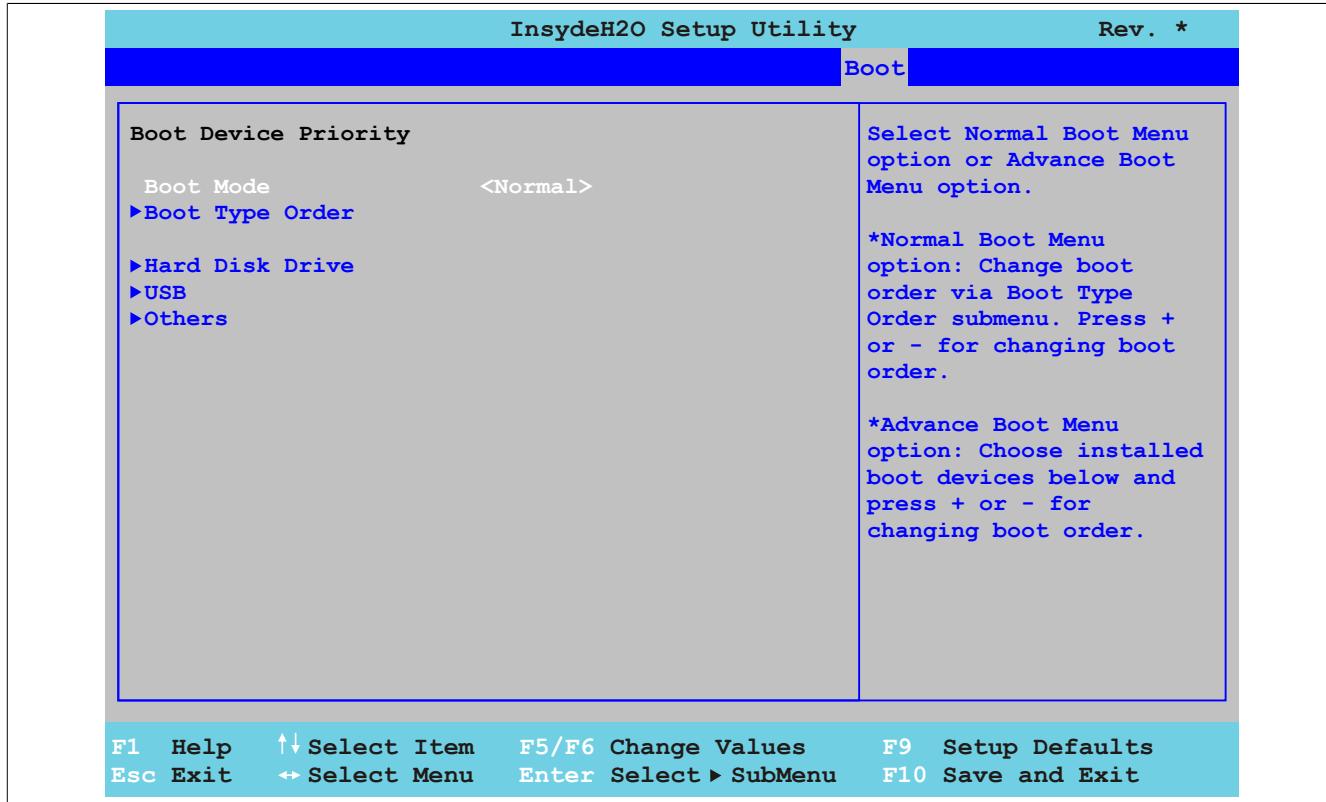

Image 66: US15W Boot - Legacy

BIOS setting	Meaning	Setting options	Effect
Boot mode	Boot mode configuration.	Normal	Displays the submenus for changing the boot sequence settings.
		Advanced	Displays only the product names of the bootable connected devices. The boot sequence can be defined right here.
Boot Type Order¹⁾	Configuration of Boot Type Order settings.	Enter	Opens the submenu See " Boot Type Order" on page 115
Hard Disk Drive¹⁾²⁾	Displays the inserted CompactFlash cards.	Enter	Opens the submenu See " Hard Disk Drive" on page 116
USB¹⁾³⁾	Displays connected USB flash drives.	Enter	Opens the submenu See " USB" on page 116
Others¹⁾⁴⁾	Displays the CPU Boards / Baseboards for PXE Boot with the onboard Ethernet interfaces.	Enter	Opens the submenu See " Others" on page 117

Table 113: US15W Boot - Legacy setting options

- 1) These submenus are only shown if *Normal Boot Mode* is set to *Normal*.
- 2) Only shown if a CompactFlash card is connected.
- 3) Only shown if a USB flash drive is connected.
- 4) Only shown if *PXE Boot to LAN* is set to *Enabled* in the boot menu.

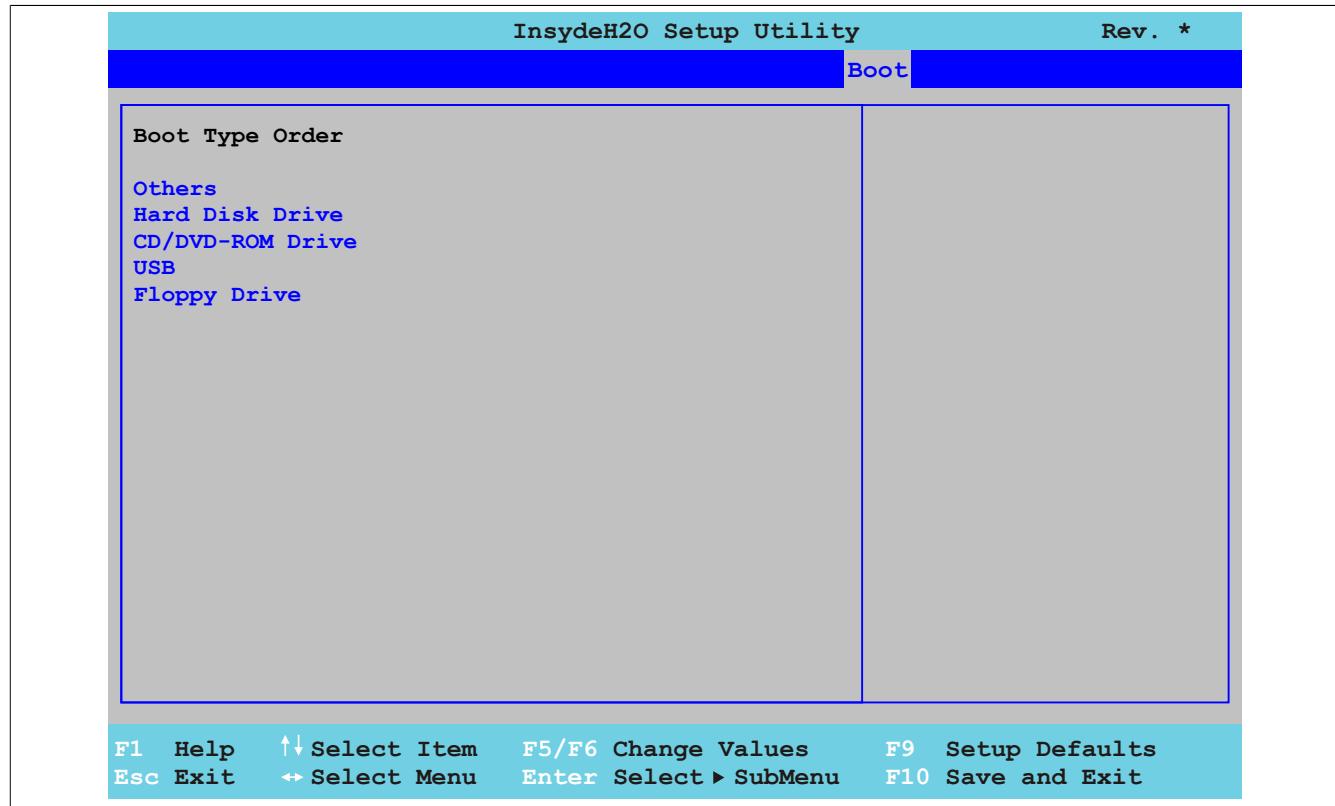

Boot Type Order

Image 67: US15W Boot - Legacy - Boot Type Order

BIOS setting	Meaning	Setting options	Effect
Others	The boot drives can be set using this option.	Others	Select the desired sequence.
Hard Disk Drive		Hard Disk Drive	
CD/DVD ROM drive		CD/DVD ROM drive	
USB		USB	
Floppy Drive		Floppy Drive	

Table 114: US15W Boot - Legacy - Boot Type Order setting options

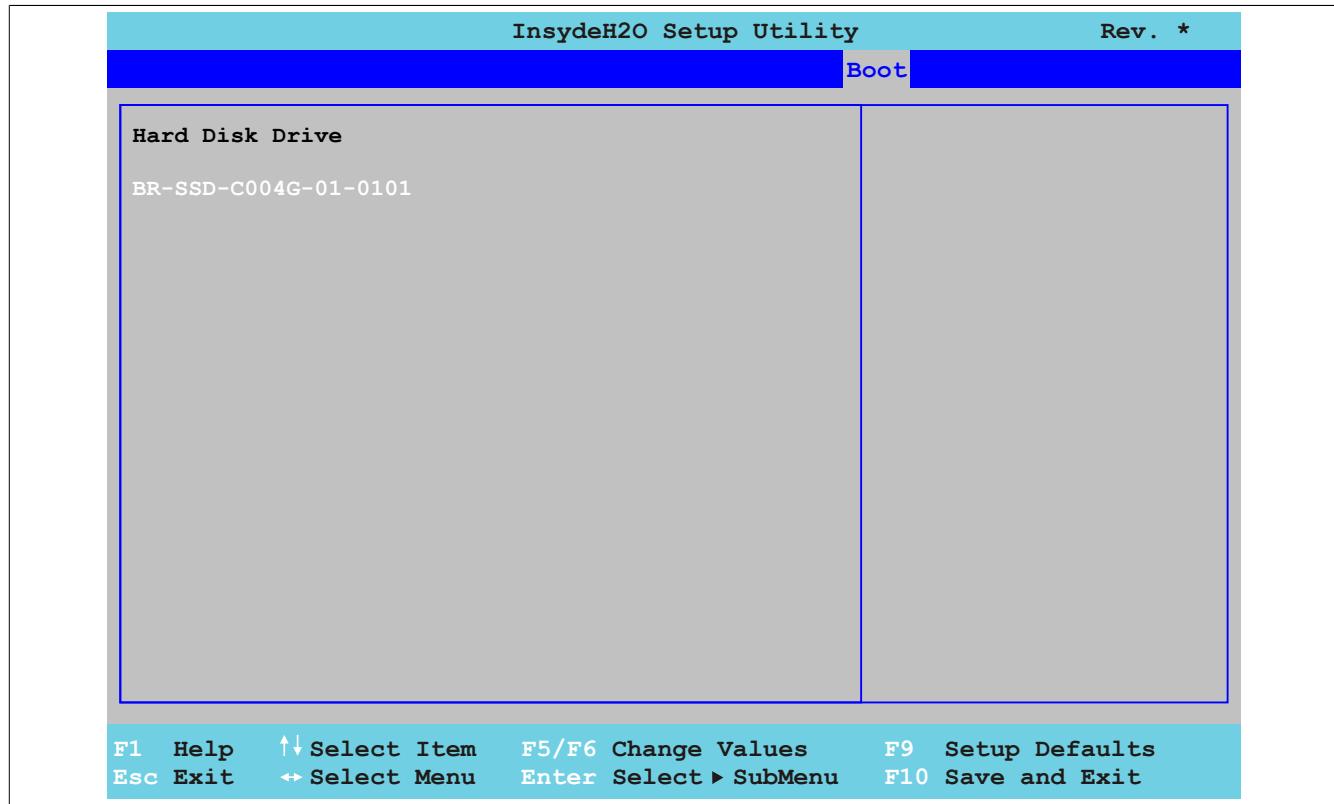

Hard Disk Drive

Image 68: US15W Boot - Legacy - Hard Disk Drive

BIOS setting	Meaning	Setting options	Effect
	Displays the inserted CompactFlash cards.	None	-

Table 115: US15W Boot - Legacy - Hard Disk Drive setting options

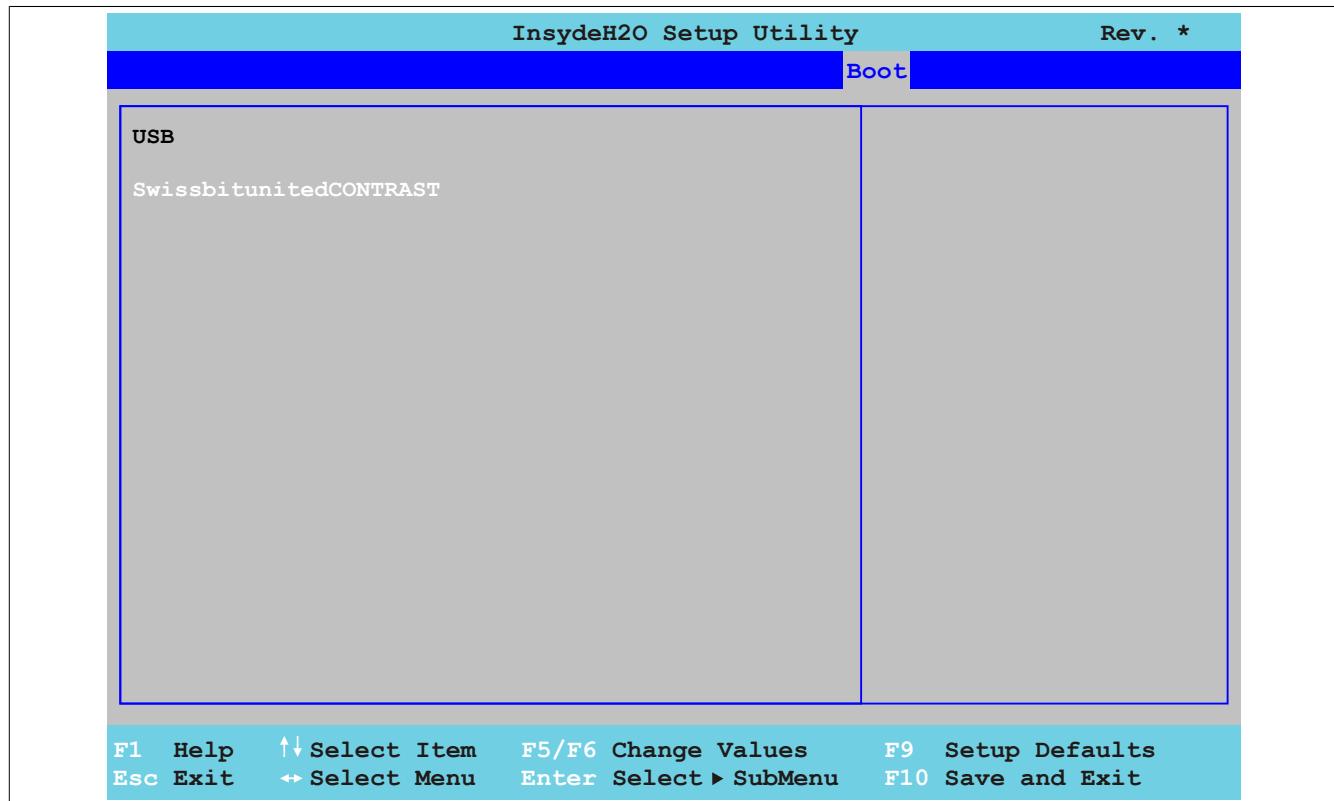

USB

Image 69: US15W Boot - Legacy - USB

BIOS setting	Meaning	Setting options	Effect
-	Displays connected USB flash drives.	None	-

Table 116: US15W Boot - Legacy - USB setting options

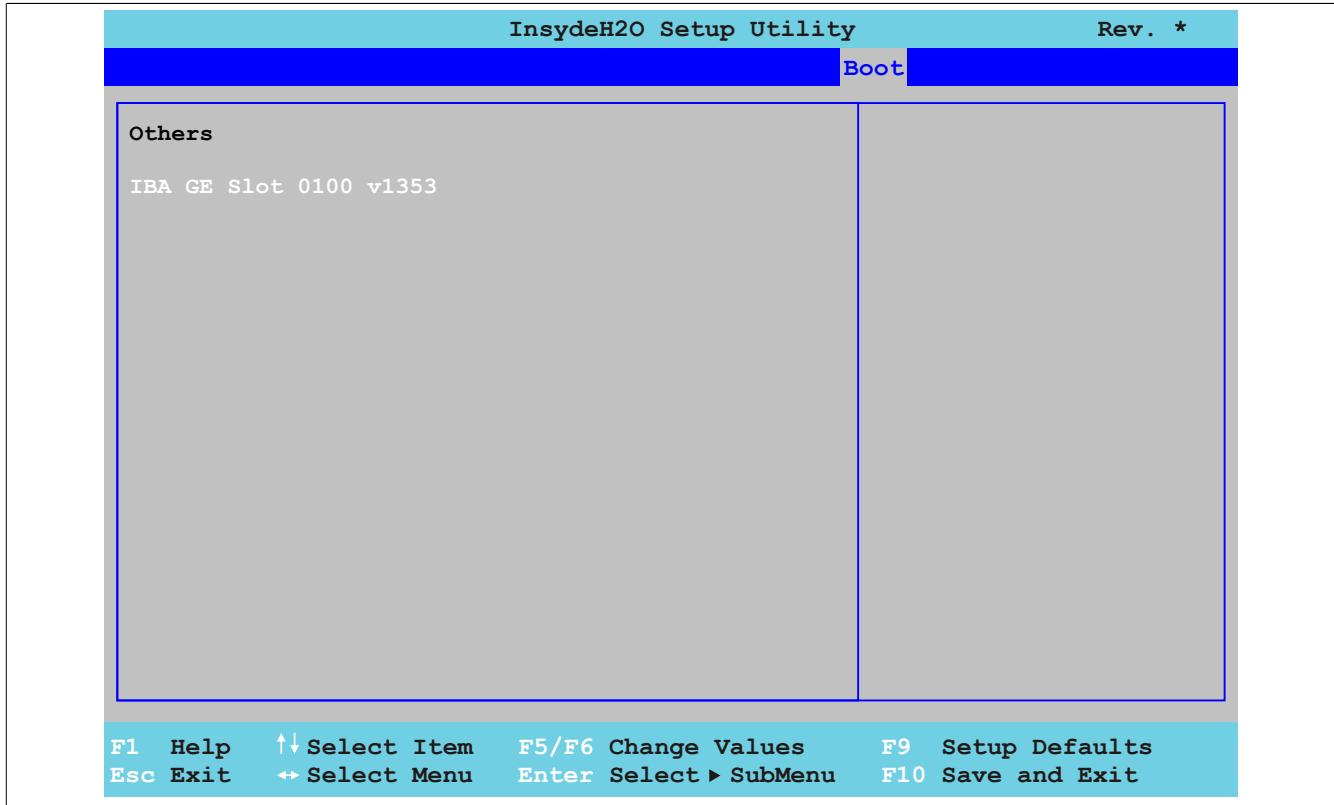

Others

Image 70: US15W Boot - Legacy - Others

BIOS setting	Meaning	Setting options	Effect
-	Displays the CPU Boards / Baseboards for PXE Boot with the onboard Ethernet interfaces.	None	-

Table 117: US15W Boot - Legacy - Others setting options

1.9 Exit

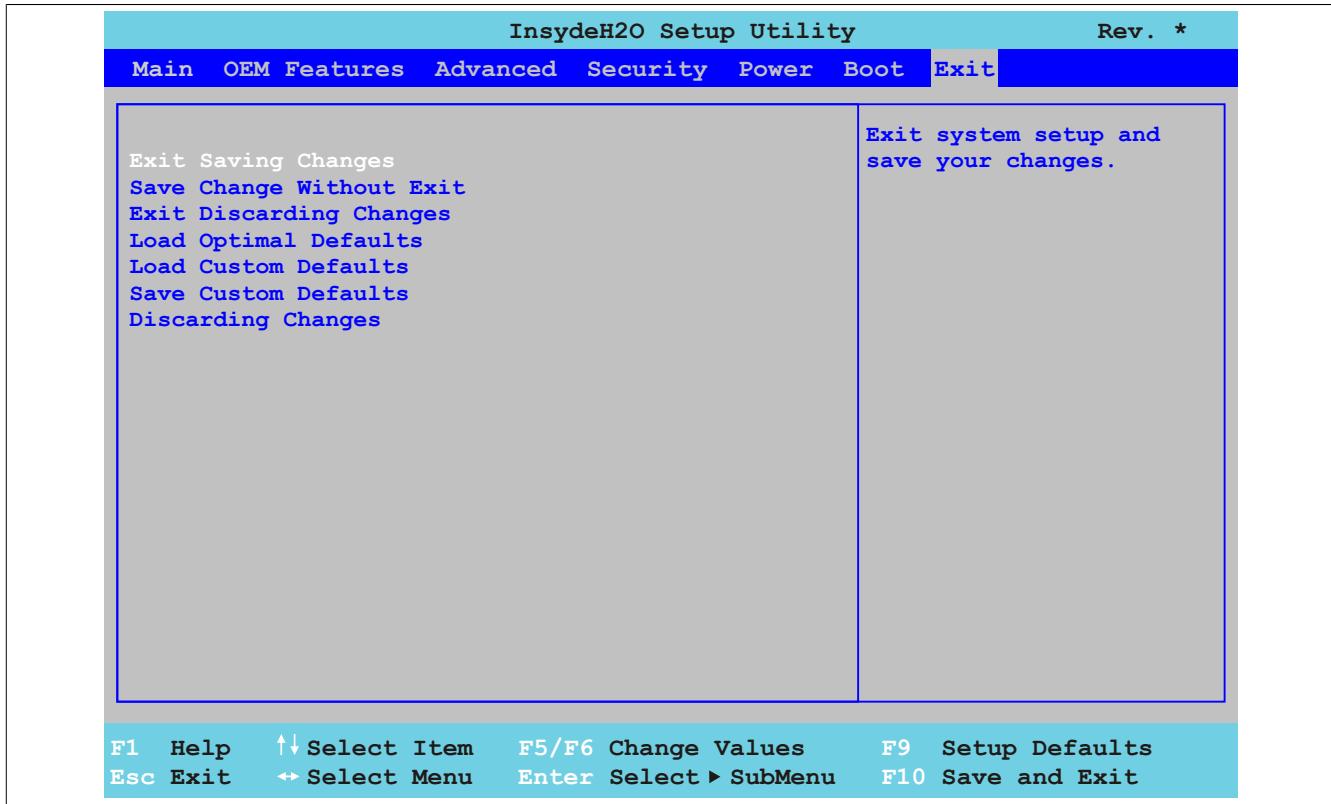

Image 71: US15W Exit - Menu

BIOS setting	Meaning	Setting options	Effect
Exit saving changes	BIOS setup is closed with this item. Changes made are saved in CMOS after confirmation, and the system is rebooted.	OK / Cancel	
Save Change Without Exit	After this is confirmed, any changes that have been made will be saved to the CMOS.	OK / Cancel	
Exit discarding changes	With this item you can close BIOS setup without saving the changes made. The system is then rebooted.	OK / Cancel	
Load Optimal Defaults	This item loads the CMOS default values, which are defined by the Mode / Node switch settings. These settings are loaded for all BIOS configurations.	OK / Cancel	
Load Custom Defaults	This item loads the CMOS values, which are defined by the Mode / Node switch settings. These settings are loaded for all BIOS configurations.	OK / Cancel	
Save Custom Defaults	This saves defined CMOS values. These settings are saved for all BIOS configurations.	OK / Cancel	
Discarding Changes	In the event that settings were made which the user can no longer remember, changes can be reset as long as they haven't been saved.	OK / Cancel	

Table 118: US15W Exit - Menu setting options

1.10 BIOS default settings

If the function "load setup defaults" is chosen in the main BIOS setup menu, or if exit is selected (or <F9> is pressed) in the individual setup screens, the following BIOS settings are the optimized values that will be used.

1.10.1 Main

Setting / View	Profile 0	My setting
InsydeH2O Version	-	
Processor Type	-	
System Bus Speed	-	
System Memory Speed	-	
Cache RAM	-	
Total Memory	-	
SODIMM 0	-	
System Time	-

1.11 Distribution of resources

1.11.1 RAM address assignment

RAM address	Address in Hex	Resource
(TOM - FB ¹⁾) – TOM ²⁾	N.A.	ACPI reclaim, MPS and NVS area ³⁾
(TOM - FB - TSEG ⁴⁾) – (TOM - FB)	N.A.	VGA frame buffer ⁵⁾
1024 kB – (TOM - 8 MB - 192 kB)	100000h - N.A.	Extended memory
896kB – 1024 kB	0E0000h - OFFFFFh	Runtime BIOS
832kB – 896 kB	0D0000h - 0DFFFFh	Upper memory
640 kB – 832 kB	0A0000h - 0CFFFFh	Video memory and BIOS
639 kB – 640 kB	09FC00h - 09FFFFh	Extended BIOS data
0 – 639 kB	000000h - 09FC00h	Conventional memory

Table 141: RAM address assignment

- 1) FB - VGA frame buffer
- 2) TOM - Top of memory: max. installed DRAM
- 3) Only if ACPI Aware OS is set to "YES" in the setup.
- 4) TSEG - Intended internally for SMI handling in system BIOS.
- 5) The VGA frame buffer can be reduced to 1 MB in the setup.

1.11.2 I/O address assignment

I/O address	Resource
0000h - 00FFh	Motherboard resources
01F0h - 01F7h	Primary IDE channel
03B0h - 03DFh	Video system
03F6h - 03F6h	Primary IDE channel command port
03F7h - 03F7h	Primary IDE channel status port
03F8h - 03FFh	COM1
0480h - 04BFh	Motherboard resources
04D0h - 04D1h	Motherboard resources
0800h - 087Fh	Motherboard resources
0CF8h - 0CFBh	PCI config address register
0CFCh - 0CFFh	PCI config data register
0D00h - FFFFh	PCI / PCI Express bus ¹⁾
4100h - 417Fh	MTCX
FF00h - FF07h	IDE bus master register

Table 142: I/O address assignment

- 1) The BIOS assigns the PCI and PCI Express Bus I/O resources from FFF0h downward. Devices that are not compatible with PnP/PCI/PCI Express cannot use the I/O resources in this area.

2 Upgrade information

Warning!

The BIOS and firmware on B&R devices must be kept up to date. New versions can be downloaded from the B&R website (www.br-automation.com)

2.1 BIOS upgrade

An upgrade might be necessary for the following reason:

- To update implemented functions or to add newly implemented functions or components to the BIOS setup (information about changes can be found in the Readme files of the BIOS upgrade).

2.1.1 What information do I need?

Information:

Individually saved BIOS settings are deleted when upgrading the BIOS.

Before you begin the upgrade, it helps to determine the various software versions.

Which BIOS version and firmware are already installed on the device?

This information can be found on the following BIOS setup page:

- After switching on the device, you can get to the BIOS Setup by pressing "F2".
- The current BIOS and MTCX version can be viewed in the BIOS main menu under "OEM Features".

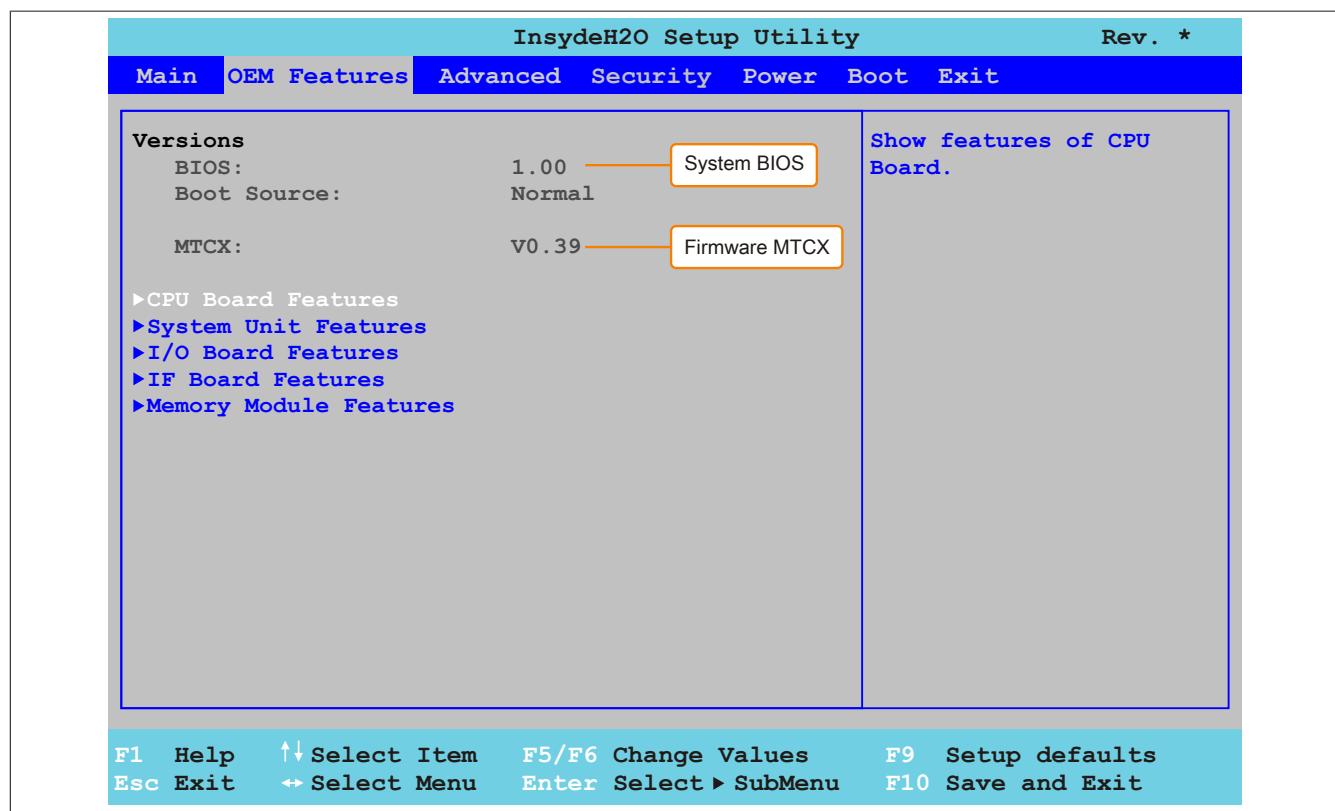

Image 73: BIOS and MTCX software versions

Information about the BIOS and Firmware versions can also be found in the Control Center (Start->Control Panel->Control Center->Versions).

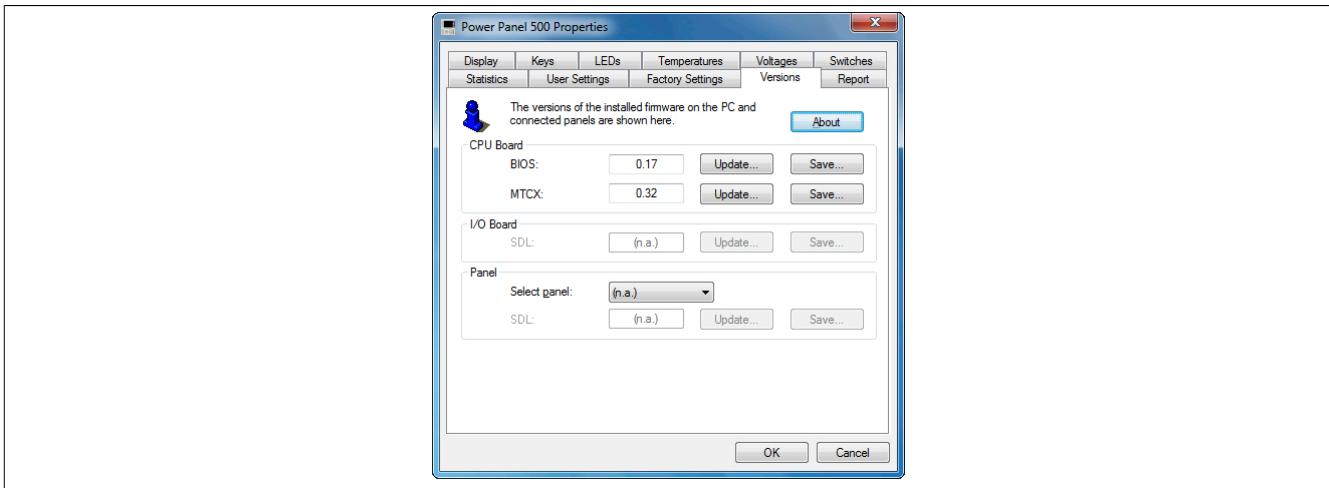

Image 74: BIOS and MTCX software versions - Control Center

2.1.2 Using the Control Center

1. Download the zip file from the B&R homepage (www.br-automation.com).
2. Go to Control Panel and **open the Control Center**.
3. Open the **Versions** tab.
4. Go to **CPU board**, BIOS and click on **update**. The dialog 'Open' is opened.
5. Go to **file name** and enter the name of the BIOS file or select a file.
6. Click **on open**. The dialog 'Open' is opened.

The transfer can be canceled by clicking on **Cancel** in the Download dialog box. Cancel is disabled when the flash memory is being written to.

Deleting the data in flash memory can take several seconds depending on the memory block being used. The progress indicator is not updated during this time.

Information:

The system must be restarted for the BIOS to take effect and for the updated version to be displayed. The user is prompted to restart the system when closing the Control Center.

Information:

For more information about saving and updating the BIOS, please refer to the help files for the Control Center.

2.2 Firmware upgrade

Current "PP500/APC510/APC511 Firmware Upgrade" software can be downloaded directly from the service portal on the B&R website (www.br-automation.com).

2.2.1 Procedure

1. Download the zip file from the B&R website (www.br-automation.com).
2. Open the **Control Center** in the Control Panel.
3. Then select the **Versions** tab.
4. Under **CPU Board** click on **Update for MTCX**. This brings up the "Open" dialog box.
5. Enter the **file name** of the firmware file or select a file.
6. Click on **Open**. This brings up the "Open" dialog box.

The transfer can be aborted by clicking on **Cancel** in the Download dialog box. **Cancel** is disabled when the flash memory is being written to.

Warning!

Do not press any panel keys while the firmware is being transferred! This can disrupt the procedure.

Deleting the data in flash memory can take several seconds depending on the memory block being used. The progress indicator is not updated during this time.

Information:

Power to the PC must be shut off and turned back on for the new firmware to become effective and for the updated version to be displayed. The user is prompted to do this when closing the Control Center.

Information:

For more information about saving and updating the firmware, please refer to the help files for the Control Center.

2.3 Upgrade problems

Potential upgrade problems are listed in the Liesmich.txt or Readme.txt files on the upgrade disks.

3 Windows XP Professional

3.3 Installation

Upon request, B&R can pre-install the required Windows XP Professional version on the desired mass memory (e.g. CompactFlash card, etc.). All of the drivers required for operation (graphics, network, etc.) are also installed when doing so.

3.4 Drivers

The latest drivers for all released operating systems can be found in the Download area of the B&R website (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R homepage, not from manufacturers' pages.

4 Windows 7

4.1 General information

Windows® 7 offers a wealth of innovative features and performance improvements. Faster switching to power saving mode, quicker restores, less memory usage and high-speed detection of USB devices are just a few of the advantages provided by Windows® 7. Both German and English are available in Windows® 7 Professional, while Windows® 7 Ultimate supports up to 35 different languages. Product activation is not necessary on B&R PCs, which is a huge advantage for simple logistical procedures relating to machine automation.

All of the Windows® operating systems offered by B&R are from the Microsoft Embedded division. This guarantees much longer availability, especially when compared to products offered on the consumer market.

4.2 Order data

Model number	Short description	Figure
	Windows 7	
5SWWI7.0100-ENG	Microsoft OEM Windows 7 Professional 32-bit, DVD, English. Only available with a new device.	
5SWWI7.0100-GER	Microsoft OEM Windows 7 Professional 32-bit, DVD, German. Only available with a new device.	
5SWWI7.0300-MUL	Microsoft OEM Windows 7 Ultimate 32-bit, DVD, multilanguage. Only available with a new device.	 Windows® 7

4.4 Installation

Upon request, B&R can pre-install the required Windows 7 version on the desired mass memory (e.g. Compact Flash card, etc.). All of the drivers required for operation (graphics, network, etc.) are also installed when doing so.

4.5 Drivers

The latest drivers for all released operating systems can be found in the Download area of the B&R website (www.br-automation.com).

Information:

Required drivers can only be downloaded from the B&R homepage, not from manufacturers' pages.

4.6 Special considerations, limitations

- Windows 7 does not contain a Beep.sys file, which means that audible signal is no longer played (i.e. when touching a key or button).
- Windows 7 system classification is not currently supported (does not apply to PP500, APC510 and APC511 devices).

5 Windows Embedded Standard 2009

5.1 General information

Windows® Embedded Standard 2009 is the modular version of Windows® XP Professional. It's used if XP applications require a smaller operating system size to run. Together with CompactFlash memory, Windows® Embedded Standard 2009 makes it possible to use the Microsoft desktop operating system in rough environmental conditions. In addition to the familiar features included in Windows® XP Professional, Windows® Embedded Standard 2009 has been improved with regard to dependability by adding a write filter for individual memory partitions. By protecting individual partitions such as the boot partition, the PC system can be started without any problems, even after an unexpected power failure. B&R offers complete images for industrial PCs, Power Panel and Mobile Panel devices to make the transition to Windows® Embedded Standard 2009 as easy as possible. In addition to Windows® Embedded Standard 2009, the standard Windows® XP Professional operating system is also available in English, German and multilingual.

Windows® Embedded Standard 2009 is based on the same binary files as Windows® XP Professional with Service Pack 3 and is optimally tailored to the hardware being used. In other words, only the functions and modules required by the respective device are included. Windows® Embedded Standard 2009 is also based on the same reliable code as Windows® XP Professional with SP3. It provides industry with leading reliability, improvements in security and performance, and the latest technology for Web browsing and extensive device support.

Function	Present
Media Player 6.4	✓
DirectX 9.0c	✓
Accessories	✓
Number of fonts	89

Table 148: Device functions in Windows Embedded Standard 2009

5.5 Installation

Upon request, Windows Embedded Standard 2009 can be preinstalled at B&R Austria on a suitable CompactFlash card (min. 1GB). The system is then automatically configured when it is switched on for the first time. This procedure takes approximately 10 minutes, and the device will be rebooted a number of times.

5.6 Drivers

All drivers required for operation are preinstalled on the operating system. If an older version of the driver is installed, the latest version can be downloaded from the B&R website (www.br-automation.com) and installed. Be sure to check whether the "Enhanced Write Filter (EWF)" is enabled.

5.6.1 Touch screen drivers

The touch screen driver is installed automatically during Windows Embedded Standard 2009 setup. If an Automation Panel 800/900 is connected later on, the additional touch screen interface needs to be selected in the touch screen settings in the Windows Control Panel. When doing so, be sure that the Enhanced Write Filter (EWF) or File Based Write Filter (FBWF) are not enabled.

Information:

Required drivers can only be downloaded from the B&R homepage, not from manufacturers' pages.

6 Windows Embedded Standard 7

6.1 General information

The successor to Windows® XP Embedded has been given the name Windows® Embedded Standard 7. As with previous versions, this embedded operating system offers full system support of Automation PC 810, Panel PC 800 and Power Panel 500 devices. In addition to brand new features that are also included in Windows® 7 Professional, Windows® Embedded Standard 7 includes components such as Enhanced Write Filter, File-Based Write Filter, Registry Filter and USB Boot. Windows® Embedded Standard 7 is available in two different versions. The main difference between them has to do with multilingual support. Windows® Embedded Standard 7 is only available in a single language, whereas Windows® Embedded Standard 7 Premium supports the installation of several languages simultaneously.

With Windows® Embedded Standard 7, Microsoft has also made substantial improvements in the area of security. The AppLocker program, available in the premium version, can prevent the execution of unknown or potentially unwanted applications that should be installed over a network or from drives that are directly connected. A tiered approach allows the differentiation between scripts (.ps1, .bat, .cmd, .vbs and .js), installer files (.msi, .msp) and libraries (.dll, .ocx). AppLocker can also be configured to record undesired activity and display it in the Event Viewer. Windows® Embedded Standard 7 is available in both 32-bit and 64-bit versions. This also provides support for challenging 64-bit applications.

Table 150: Device functions in Windows Embedded Standard 7

6.5 Installation

Upon request, Windows Embedded Standard 7 can be preinstalled at B&R Austria on a suitable CompactFlash card (min. 8 GB). The system is then automatically configured when it is switched on for the first time. This procedure takes approximately 30 minutes, and the device will be rebooted a number of times.

6.6 Drivers

All drivers required for operation are preinstalled on the operating system. If an older version of the driver is installed, the latest version can be downloaded from the B&R website (www.br-automation.com) and installed. Be sure to check whether the Enhanced Write Filter (EWF) is enabled.

6.6.1 Touch screen drivers

A touch screen driver will be automatically installed if a touch controller is detected during the Windows Embedded Standard 7 setup. If a touch controller is not detected during Windows Embedded Standard 7 setup, or if an Automation Panel 800/900 is connected later on, the touch screen driver needs to be installed or the additional touch screen interface needs to be selected in the touch screen settings in the Windows Control Panel. The driver is available in the Download area of the B&R website (www.br-automation.com). When doing so, be sure that the Enhanced Write Filter (EWF) or File Based Write Filter (FBWF) are not enabled.

Information:

Required drivers can only be downloaded from the B&R homepage, not from manufacturers' pages.

7 Windows CE

7.1 General information

B&R Windows CE is an operating system which is optimally tailored to B&R's devices. It includes only the functions and modules which are required by each device. This makes this operating system extremely robust and stable. A further advantage of B&R Windows CE compared to other operating systems are the low licensing costs.

7.2 Order data

Model number	Short description	Figure

7.3 Overview

Model number	Type	Target system	Chipset	Language	Preinstalled	Minimum size of CF/HDD	Minimum amount of RAM
5SWWCE.0838-ENG	WinCE6.0 Pro APC511 US15W	APC511	US15W	English	Yes	128 MB	128 MB

7.4 Windows CE 6.0 features

Detailed information about Windows CE for B&R devices is available in the Downloads area of the B&R website (www.br-automation.com).

Features	Windows CE 6.0
Supported screen resolutions	WVGA (TFT), VGA (TFT), SVGA (TFT), XGA (TFT)
Chipset	Intel US15W
Color depth	16-bit or 65,536 colors ¹⁾
Graphics card driver	Intel(R) embedded graphics driver
Main memory	Automatic detection and use of up to 512 MB RAM
Boot time / Startup time	Approx. 25 seconds
Screen rotation	not supported
Web browser	Internet Explorer
.NET	Compact Framework 3.5
Image size	Approx. 40 MB ²⁾ , uncompressed
Custom keys	Supported
PVI	Supported
Automation Device Interface	Supported
Remote Desktop Protocol for thin clients	Supported
B&R VNC Viewer	Supported
B&R Task Manager	Supported
B&R Picture Viewer	Supported
Compatible with zenOn	Yes
Compatible with Wonderware	No
Serial interfaces for any use	2
DirectX	No
Audio ports	"Line OUT" and "Line IN" are supported. "MIC" is not supported

Table 152: Windows CE 6.0 features

1) The color depth depends on the display used.

2) Use the function "Compress Windows CE Image" in the B&R Embedded OS Installer to reduce the image size.

7.5 Requirements

The device must fulfill the following criteria to be able run the Windows CE operating system.

- At least 128 MB main memory
- At least one 128 MB CompactFlash card (size should be specified when ordered)

7.6 Installation

Windows CE is usually preinstalled at the B&R plant.

7.7 B&R Embedded OS Installer

The B&R Embedded OS Installer allows you to install existing B&R Windows CE images. The 4 files (NK.BIN, BLDR, LOGOXRES.BMP, and LOGOQVGA.BMP) must be provided from an already functioning B&R Windows CE installation.

The B&R Embedded OS Installer is available in the Downloads section of the B&R website (www.br-automation.com). Further information is available in the online help for the B&R Embedded OS Installer.

8 Automation Runtime

8.1 General information

A integral component of Automation Studio is the real-time operating system. This real-time operating system makes up the software kernel which allows applications to run on a target system.

- Guaranteed highest possible performance for the hardware being used
- Runs on all B&R target systems
- Makes the application hardware-independent
- Applications can be easily ported between B&R target systems
- Cyclic runtime system guarantees deterministic behavior
- Multitasking according to deterministic runtime rules
- Configure priorities, time classes, and jitter tolerance
- Up to eight different time classes with any subprograms
- Guaranteed response to time violations and exceeding jitter tolerances
- Exception handling
- Configurable jitter tolerance in all task classes
- Supports all relevant programming language such as IEC 61131-3 and ANSI C
- Extensive function library conforming to IEC 61131-3 as well as the expanded Automation library
- Access to all networks and bus systems via function calls or the Automation Studio configuration

B&R Automation Runtime™ is fully embedded in the corresponding target system (this is the hardware where Automation Runtime™ is installed). It allows application programs to access I/O systems (e.g. via fieldbus) and other devices (interfaces, networks, etc.).

8.2 Order data

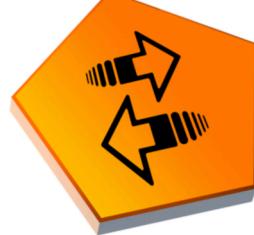

Model number	Short description	Figure
	Automation Runtime	
1A4600.10-5	B&R Automation Runtime ARwin, incl. License Label	
1A4601.06-5	B&R Automation Runtime ARemb, incl. License Label	
1A4601.06-T	B&R Automation Runtime ARemb Terminal, incl. License Label	

Table 153: 1A4600.10-5, 1A4601.06-5, 1A4601.06-T - Order data

8.3 Automation Runtime Windows (ARwin)

The system is supported by ARwin with an AS 3.0.90 / AR 4.00 upgrade.

8.4 Automation Runtime Embedded (ARemb)

The system is supported by ARemb with an AS 3.0.90 / AR 4.00 upgrade.

9 B&R Automation Device Interface (ADI) - Control Center

The ADI (Automation Device Interface) enables access to specific functions of B&R devices. Settings for this device can be read and edited using the B&R Control Center applet in the control panel.

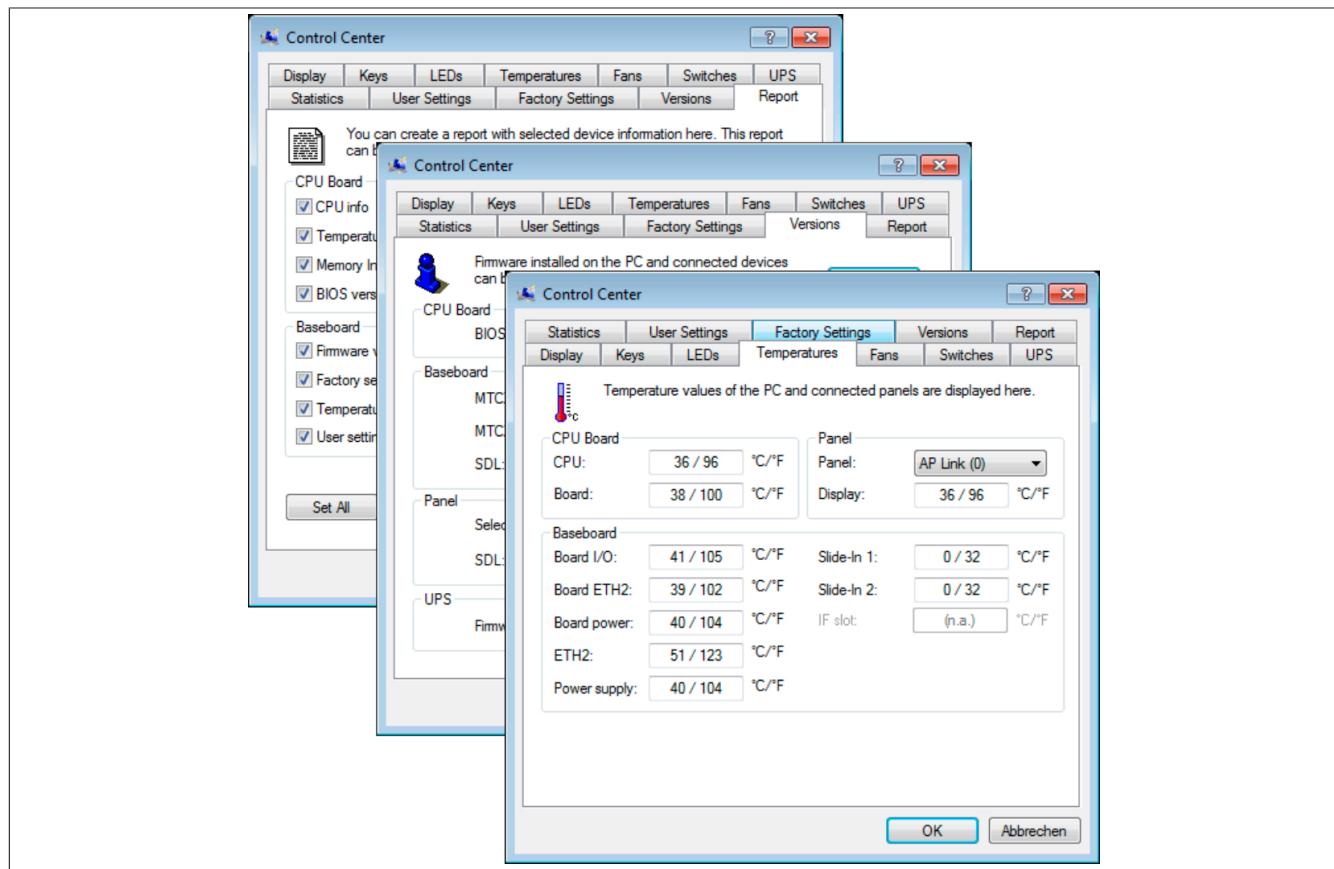

Image 75: ADI Control Center screenshots - Examples (symbol photo)

Information:

The displayed temperature and voltage values (e.g. CPU temperature, core voltage, battery voltage) on the corresponding ADI page represent uncalibrated information values. These cannot be used to draw any conclusions about any hardware alarms or error conditions. The hardware components used have automatic diagnostics functions that can be applied in the event of error.

9.1 Functions

Information:

The functions provided by the Automation Device Interface (ADI) - Control Center vary according to device series.

- Changing display-specific parameters
- Reading of device-specific keys
- Updating the key configuration
- Activation of device specific LEDs on a foil keypad
- Read or calibrate the entry devices (e.g. key switch, handwheel, joystick, potentiometer)
- Reading temperatures, fan speeds, statistical data, and switch settings
- Read the operating hours (power on hours)
- Reading user settings and factory settings
- Reading Software versions
- Updating and securing BIOS and firmware
- Creating reports about the current system (support assistance)
- Setting the SDL equalizer value for the SDL cable adjustment
- Changing the User serial ID

Supports following systems:

- Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Panel PC 700
- Panel PC 725
- Panel PC 800
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500
- Mobile Panel 40/50
- Mobile Panel 100/200
- Connected Automation Panel 800
- Connected Automation Panel 900

9.2 Installation

A detailed description of the Control Center can be found in the integrated online help. The B&R Automation Device Interface (ADI) driver (also contains Control Center) can be downloaded for free from the download area on the B&R homepage (www.br-automation.com).

1. Download and unzip the ZIP archive
2. Close all applications
3. Run the Setup.exe file (e.g. double-click on it in Explorer).

Information:

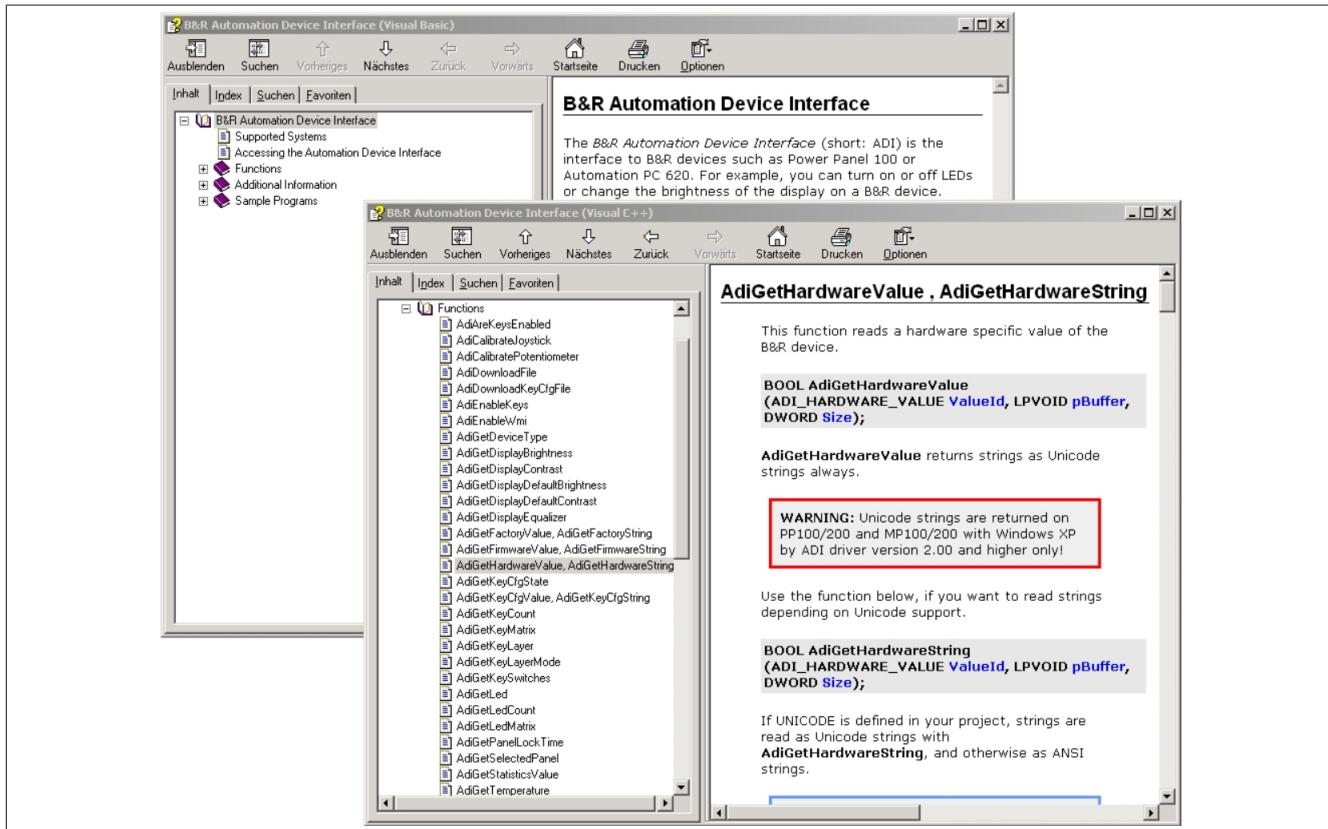

The ADI driver is already included in the B&R images of embedded operating systems.

If a more current ADI driver version exists (see the B&R homepage download area), it can be installed later. A potentially activated "Enhanced Write Filter (EWF)" must be taken into consideration when installing.

10 B&R Automation Device Interface (ADI) Development Kit

This software can be used to activate functions in the B&R Automation Device Interface (ADI) from Windows applications, which were created using a development environment such as one of the following.

- Microsoft Visual C++ 6.0
- Microsoft Visual Basic 6.0
- Microsoft eMbedded Visual C++ 4.0
- Microsoft Visual Studio 2005 (or newer)

Features:

- One Microsoft Visual Basic module with declarations for the ADI functions
- Header files and import libraries for Microsoft Visual C++
- Help files for Visual Basic and Visual C++
- Sample projects for Visual Basic and Visual C++
- ADI DLL (for testing the applications, if no ADI drive is installed)

Supports following systems (Version 3.10 and higher):

- Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Mobile Panel 40/50
- Mobile Panel 100/200
- Panel PC 300
- Panel PC 700
- Panel PC 800
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500

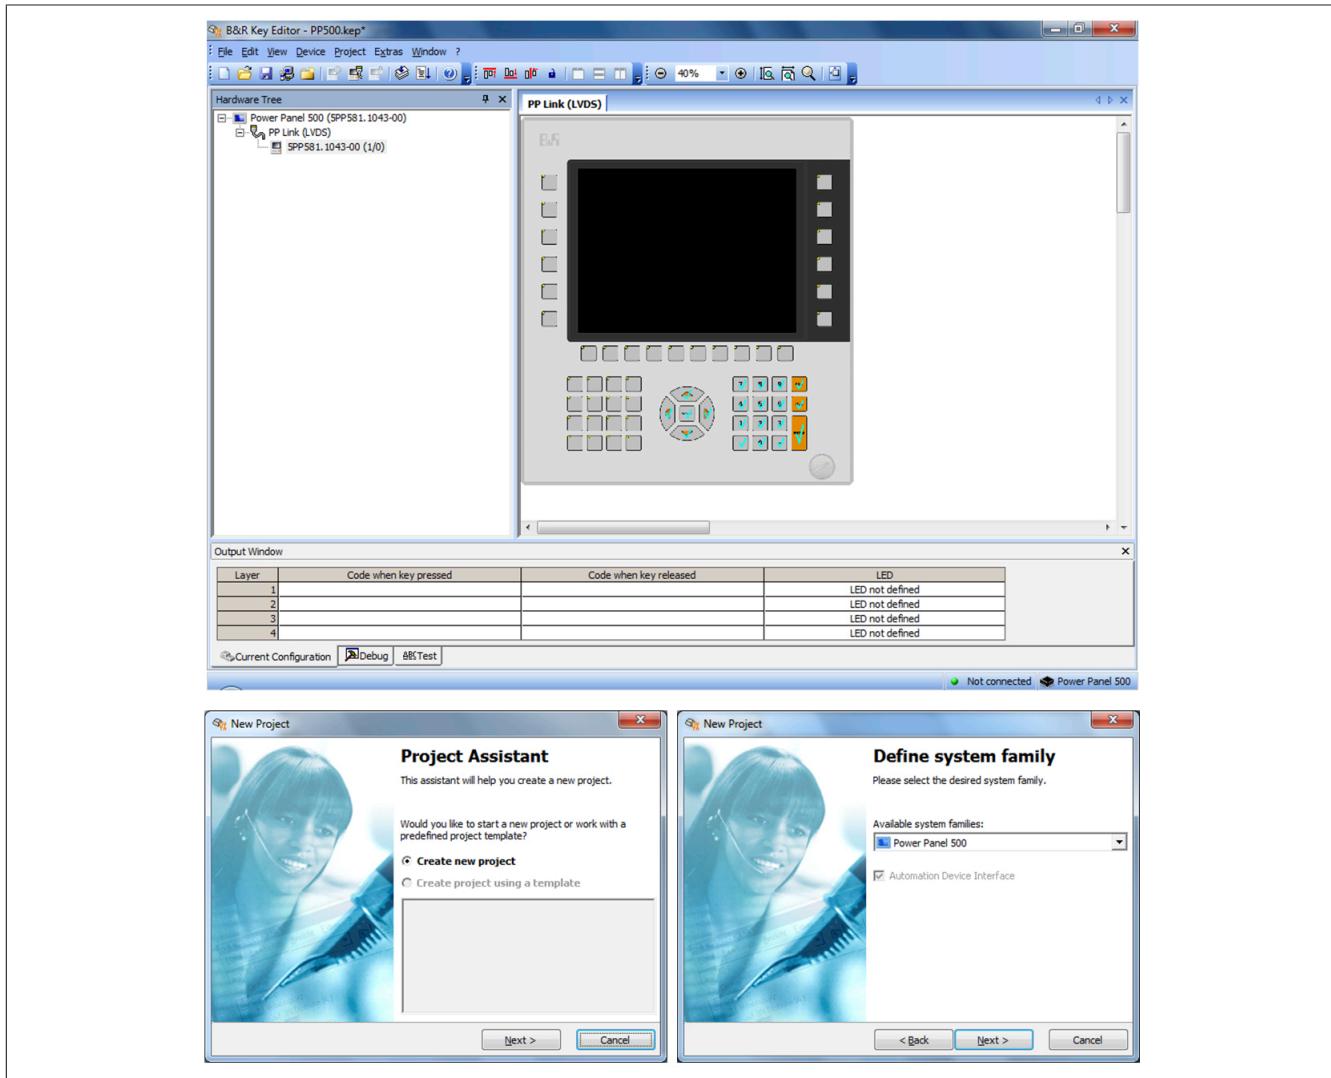

The ADI driver suitable for the device must be installed on the stated product series. The ADI driver is already included in the B&R images of embedded operating systems.

A detailed description of using the ADI functions can be found in the integrated online help.

The B&R Automation Device Interface (ADI) development kit can be downloaded for free from the download area on the B&R homepage (www.br-automation.com).

11 B&R Key Editor

On display units, it is often necessary to adjust the function keys and LEDs for the application software being used. The B&R Key Editor makes it quick and easy to adapt the application to a unique configuration.

Features:

- Configuration of normal keys like on a keyboard (A, B, C, etc.)
- Keyboard shortcuts (CTRL+C, SHIFT+DEL, etc.) on one key
- Special key functions (change brightness, etc.)
- Assign functions to LEDs (HDD access, power, etc.)
- 4 assignments per key possible (using layer function)
- Configuration of panel locking time when multiple Automation Panel 900 devices are connected to Automation PC and Panel PC devices

Supports following systems (Version 3.20):

- Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Automation Panel 800
- Automation Panel 900
- IPC2000, IPC2001, IPC2002
- IPC5000, IPC5600
- IPC5000C, IPC5600C

- Mobile Panel 40/50
- Mobile Panel 100/200
- Panel PC 300
- Panel PC 700
- Panel PC 800
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500

A detailed guide for configuring keys and LEDs can be found in the B&R Key Editor's online help. The B&R Key Editor can be downloaded for free from the download area on the B&R homepage (www.br-automation.com). Additionally, it can also be found on the B&R HMI Drivers & Utilities DVD (model number 5SWHMI.0000-00).

Chapter 5 • Accessories

The following accessories have passed B&R's functional testing and are approved for use with this device. However, it is important to observe any limitations that apply to the overall device when operated with different components. When operating the overall device, all of the specifications for the individual components must be adhered to.

All components listed in this manual have been subjected to extensive system and compatibility testing and are approved for use. B&R can make no guarantee regarding the functionality of non-approved accessories.

1 Replacement CMOS batteries

1.1 0AC201.91 / 4A0006.00-000

1.2 General information

The lithium battery is needed for buffering the BIOS CMOS data and real-time clock (RTC).

The battery is subject to wear and must be replaced when the battery power ("Bad" status) is insufficient.

1.3 Order data

Image not found for 0AC201.91-0AC201.9!	
Model number	Short description
0AC201.91	Batteries Lithium batteries 4 pcs., 3 V / 950 mAh button cell We hereby state that the lithium cells contained in this shipment qualify as "partly regulated". Handle with care. If the package is damaged, inspect cells, repack intact cells and protect cells against short circuits. For emergency information, call RENATA SA at + 41 61 319 28 27
4A0006.00-000	Lithium battery, 3 V / 950 mAh, button cell

Table 154: 0AC201.91, 4A0006.00-000 - Order data

1.4 Technical data

Warning!

Replace battery with Renata, type CR2477N only. Use of another battery may present a risk of fire or explosion.

Battery may explode if mistreated. Do not recharge, disassemble or dispose of in fire.

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate those specified for the entire device. For the entire device where this accessory is installed, refer to the data provided specifically for the entire device.

Product ID	0AC201.91	4A0006.00-000
General information		
Storage time	Max. 3 years at 30°C	
Electrical properties		
Capacity	950 mAh	
Self discharging	<1% per year (at 23°C)	
Voltage range	3V	
Environmental conditions		
Temperature Storage	-20 to 60°C	
Relative humidity Operation	0 to 95%	
Storage	0 to 95%	
Transport	0 to 95%

4 CompactFlash cards

4.1 General information

CompactFlash cards are easy-to-exchange storage media. Due to their robustness against environmental influences (e.g. temperature, shock, vibration, etc.), CompactFlash cards are ideal for use as storage media in industrial environments.

4.2 Basics

In order to be suited for use in industrial automation, CompactFlash cards must be highly reliable. To make this possible, the following is very important:

- Flash technology used
- Efficient algorithm for maximizing the lifespan
- Good mechanisms for detecting and fixing errors in the Flash memory

4.2.1 Flash technology

Currently, CompactFlash cards are available with MLC (Multi Level Cell) and SLC (Single Level Cell) flash blocks. SLC flash memory has a lifespan that is 10 times longer than MLC, which is why only CompactFlash cards with SLC flash blocks are suited for industrial applications.

4.2.2 Wear leveling

Wear leveling is an algorithm that can be used to maximize the lifespan of a CompactFlash card. There are three different algorithms:

- No Wear Leveling
- Dynamic Wear Leveling
- Static wear leveling

The basic idea behind wear leveling is to distribute data over a broad area of blocks or cells on the data carrier so that the same areas don't have to be cleared and reprogrammed over and over again.

No Wear Leveling

The earliest CompactFlash cards didn't have an algorithm for maximizing the lifespan. The lifespan of a CompactFlash card was determined only by the guaranteed lifespan of the flash blocks.

Dynamic Wear Leveling

Dynamic wear leveling makes it possible to utilize unused flash blocks when writing to a file.

If the data carrier is 80% full with files, then only 20% can be used for wear leveling.

The lifespan of the CompactFlash card is therefore dependent on the amount of unused flash blocks.

Static wear leveling

Static wear leveling also monitors which data is rarely changed. From time to time, the controller then moves this data to blocks that have already been frequently programmed in order to prevent further wear on those cells.

4.2.3 ECC error correction

Bit errors can be caused by inactivity or when a certain cell is operated. Error Correction Coding (ECC) implemented via hardware or software can detect and correct many errors of this type.

4.2.4 S.M.A.R.T. Support

Self-Monitoring, Analysis and Reporting Technology (S.M.A.R.T. for short) is an industry standard for mass memory that has been introduced to monitor important parameters and quickly detect imminent failures. Critical performance and calibration data is monitored and stored in order to help predict the probability of errors.

4.2.5 Maximum reliability

CompactFlash cards used by B&R use SLC flash blocks and static wear leveling together with a powerful ECC algorithm to provide maximum reliability.

4.3 5CFCRD.xxxx-06

4.3.1 General information

Information:

B&R CompactFlash cards 5CFCRD.xxxx-06 and CompactFlash cards from a different manufacturer cannot be used in the same system at the same time. Due to differences in technology (older vs. newer technologies), problems can occur during system startup that are caused by the different boot times.
see "Known problems / issues" on page 161

Information:

The 5CFCRD.xxxx-06 CompactFlash cards are supported on B&R devices with WinCE version ≥ 6.0 or higher.

4.3.2 Order data

Model number	Short description	Figure
5CFCRD.0512-06	CompactFlash 512 MByte B&R

4.3.3 Technical data

Caution!

A sudden loss of power can cause data to be lost! In very rare cases, the mass memory may also become damaged.

To prevent damage and loss of data, it is recommended to use a UPS device.

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate those specified for the entire device. For the entire device where this accessory is installed, refer to the data provided specifically for the entire device.

4.4.1 General information

Information:

B&R CompactFlash cards 5CFCRD.xxxx-04 and CompactFlash cards from a different manufacturer cannot be used in the same system at the same time. Due to differences in technology (older vs. newer technologies), problems can occur during system startup that are caused by the different boot times.
see "Known problems / issues" on page 161

Information:

The 5CFCRD.xxxx-04 CompactFlash cards are supported on B&R devices with WinCE version ≥ 6.0 or higher.

4.4.3 Technical data

Caution!

A sudden loss of power can cause data to be lost! In very rare cases, the mass memory may also become damaged.

To prevent damage and loss of data, it is recommended to use a UPS device.

Information:

The following characteristics, features and limit values only apply to this accessory and can deviate those specified for the entire device. For the entire device where this accessory is installed, refer to the data provided specifically for the entire device.

4.5.5 Dimensions

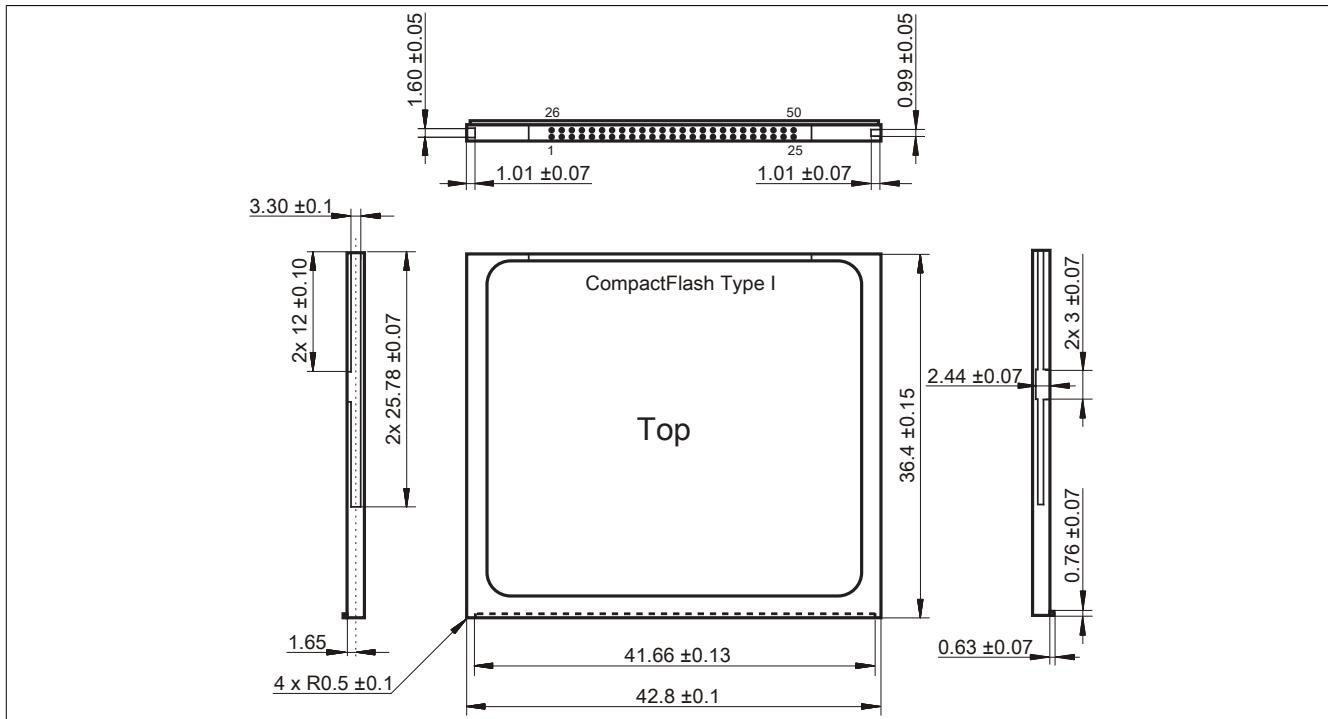

Image 85: Dimensions - CompactFlash card Type I

4.6 Known problems / issues

The following issue for devices with two CompactFlash slots is known:

- Using two different types of CompactFlash cards can cause problems in Automation PCs and Panel PCs. This can result in one of the two cards not being detected during system startup. This is caused by varying startup speeds. CompactFlash cards with older technology require significantly more time during system startup than CompactFlash cards with newer technology. This behavior occurs near the limits of the time frame provided for startup. The problem described above can occur because the startup time for the CompactFlash cards fluctuates due to the variance of the components being used. Depending on the CompactFlash cards being used, this error might never, sometimes or always occur.

5 USB flash drive

5.1 5MMUSB.2048-01

5.1.1 General information

USB flash drives are easy-to-exchange storage media. Because of the fast data transfer (USB 2.0), the USB flash drives are ideal for use as a portable memory medium. Without requiring additional drivers ("Hot Plug & Play" - except with Windows 98SE), the USB flash drive can immediately act as an additional drive where data can be read or written.

Information:

We reserve the right to supply alternative products due to the vast quantity of flash drives available on the market and their corresponding short product lifecycle. Therefore, the following measures might be necessary in order to boot from these flash drives:

- The flash drive must be reformatted or in some cases even re-partitioned (set active partition).
 - The flash drive must be at the top of the BIOS boot order, or alternatively the IDE controllers can also be deactivated in the BIOS. This can be avoided in most cases if a "fdisk /mbr" command is also executed on the USB flash drive.
- USB 1.1, USB 2.0
 - High transfer rate
 - High data storage
 - Ambient temperature during operation: 0 to 70°C

6.3.1 5CASDL.0xxx-01

General information

The 5CASDL.xxxx-01 SDL cables with 45° plug are designed for fixed layout.

Caution!

Cable can only be plugged in and unplugged when the device is turned off.

6.4 SDL flex cable

6.4.1 5CASDL.0xxx-03

General information

The 5CASDL.0xxx-03 SDL flex cables are designed for use in both fixed and flexible installations (e.g. in swing arm systems).

Caution!

Cable can only be plugged in and unplugged when the device is turned off.

Cable specifications

Warning!

If you want to build a suitable cable yourself, it should be wired according to these specifications.

If a self-built cable is used, B&R cannot guarantee that it will function properly. B&R guarantees the performance of all cables that they provide.

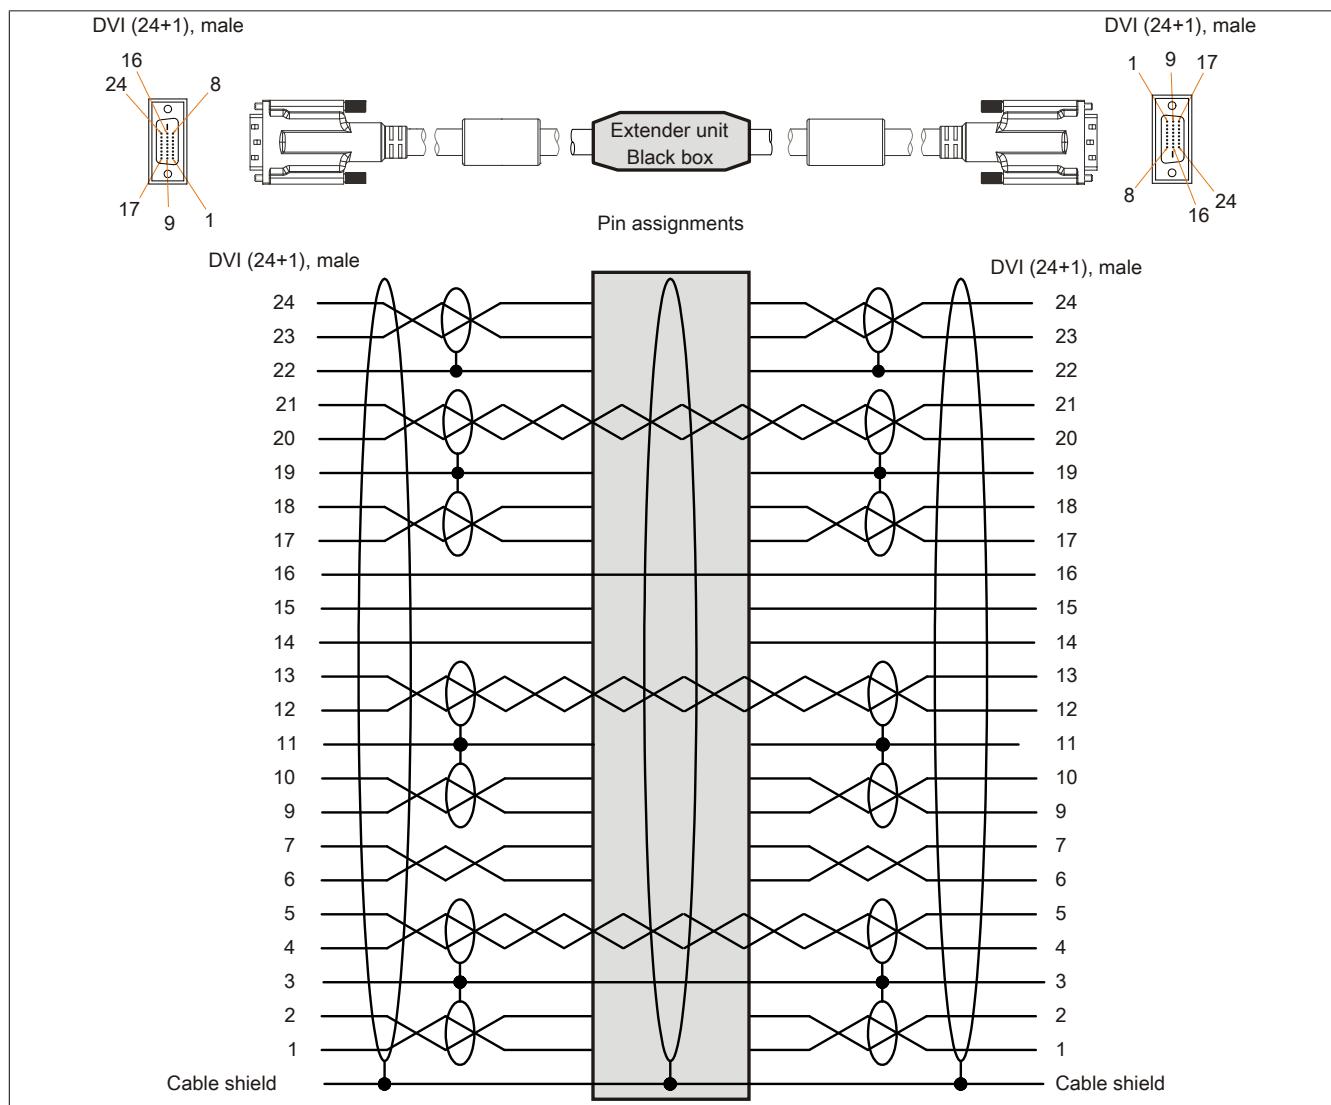

Image 101: 5CASDL.0xx0-13 - Pin assignments

Cable connection

The SDL flex cable with extender must be connected between the Industrial PC and Automation Panel 900 display unit in the correct direction. The signal direction is indicated on the extender unit for this purpose:

- Connect the end labeled "SDL IN" with the video output of e.g. the APC820 (monitor/panel output) or Panel OUT of an AP900 AP Link card.
- The "SDL OUT" end should be connected to the display unit (e.g. Automation Panel 900) via the Automation Panel Link insert card (Panel IN).

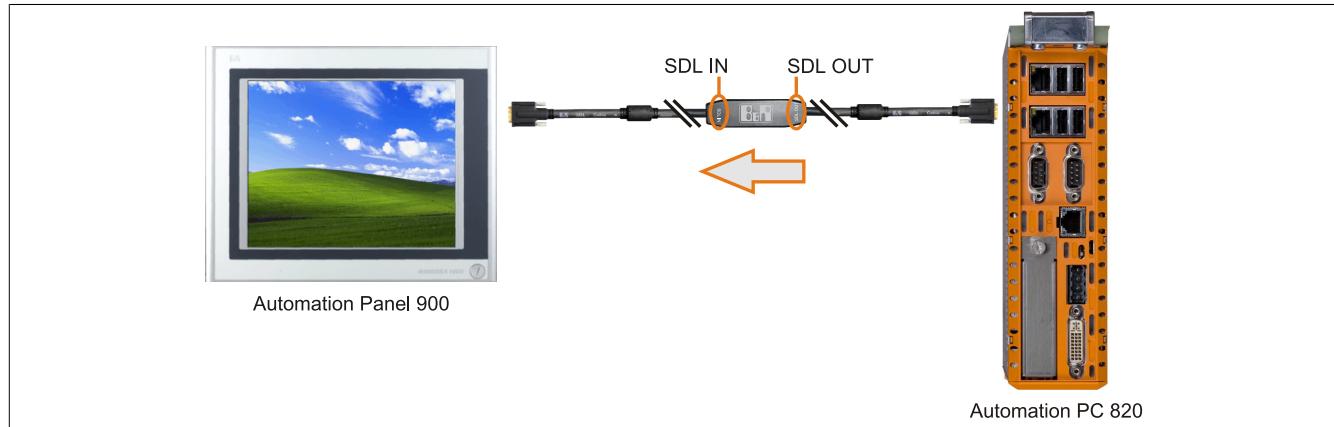

Image 102: Example of signal direction for the SDL flex cable with extender - APC820

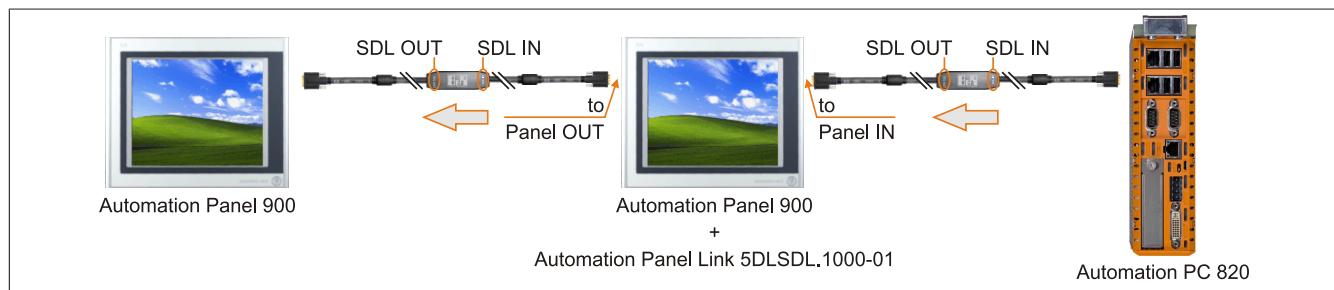

Image 103: Example of signal direction display - SDL flex cable with extender

6.6 USB cable

6.6.1 5CAUSB.00xx-00

General information

USB cables are designed for USB 2.0 transfer speed.

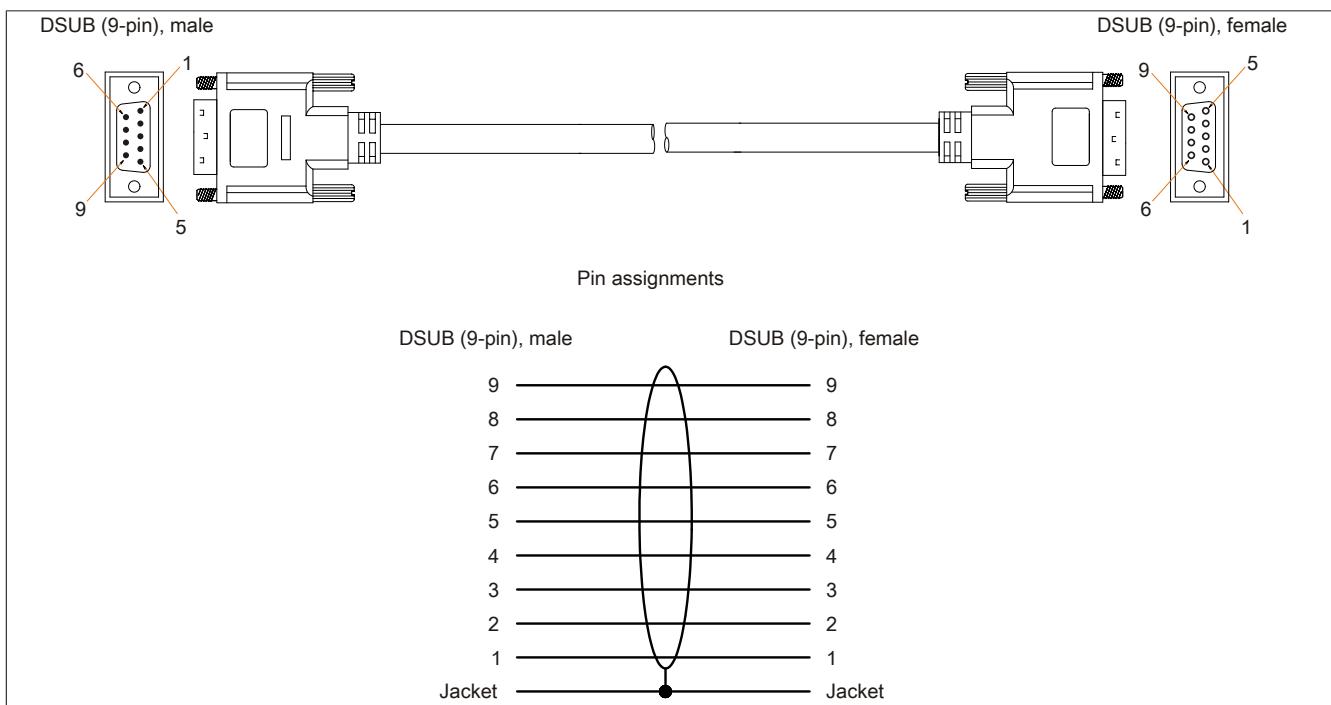

Image 105: 9A0014.xx - RS232 cable pin assignments

Chapter 6 • Maintenance / Servicing

The following chapter describes service/maintenance work which can be carried out by a trained, qualified user.

1 Changing the battery

The lithium battery buffers the internal real-time clock (RTC) and the CMOS data.

Information:

- The product design allows the battery to be changed with the B&R device switched either on or off. In some countries, safety regulations do not allow batteries to be changed while the module is switched on.
- Any BIOS settings that have been made will remain when the battery is changed with the power turned off (stored in non-volatile EEPROM). The date and time must be reset later because this data is lost when the battery is changed.
- The battery should only be changed by qualified personnel.

Warning!

Replace battery with Renata, type CR2477N only. Use of another battery may present a risk of fire or explosion.

Battery may explode if mistreated. Do not recharge, disassemble or dispose of in fire.

The following replacement lithium batteries are available: 4A0006.00-000 (1 pc.) and 0AC201.91 (4 pcs.).

1.1 Battery status evaluation

The battery status is evaluated immediately following start-up of the device and is subsequently checked by the system every 24 hours. The battery is subjected to a brief load (1 second) during the measurement and then evaluated. The evaluated battery status is displayed in the BIOS Setup pages (under Advanced - Baseboard monitor) and in the B&R Control Center (ADI driver), but can also be read in a customer application via the ADI Library.

Battery status	Meaning
N/A	Hardware, i.e. firmware used is too old and does not support read.
GOOD	Data buffering is guaranteed.
BAD	Data buffering is guaranteed for approx. another 500 hours from the point in time that the battery capacity is determined to be BAD (insufficient).

Table 183: Meaning of battery status

From the point when battery capacity is recognized as insufficient, data buffering is guaranteed for approximately another 500 hours. When changing the battery, data is buffered for approximately another 10 minutes by a gold leaf capacitor.

1.2 Procedure

- Disconnect the B&R industrial PC.
- Touch the housing or ground connection (not the power supply!) in order to discharge any electrostatic charge from your body.
- Remove the cover from the battery compartment and carefully pull out the battery using the removal strips.

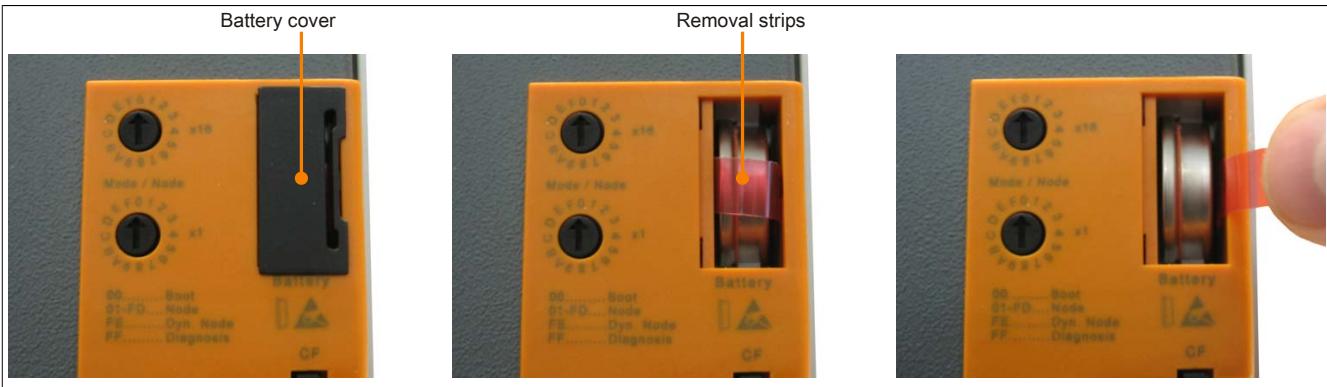

Image 106: Remove battery

- The battery should not be held by its edges. Insulated tweezers may also be used for inserting the battery.

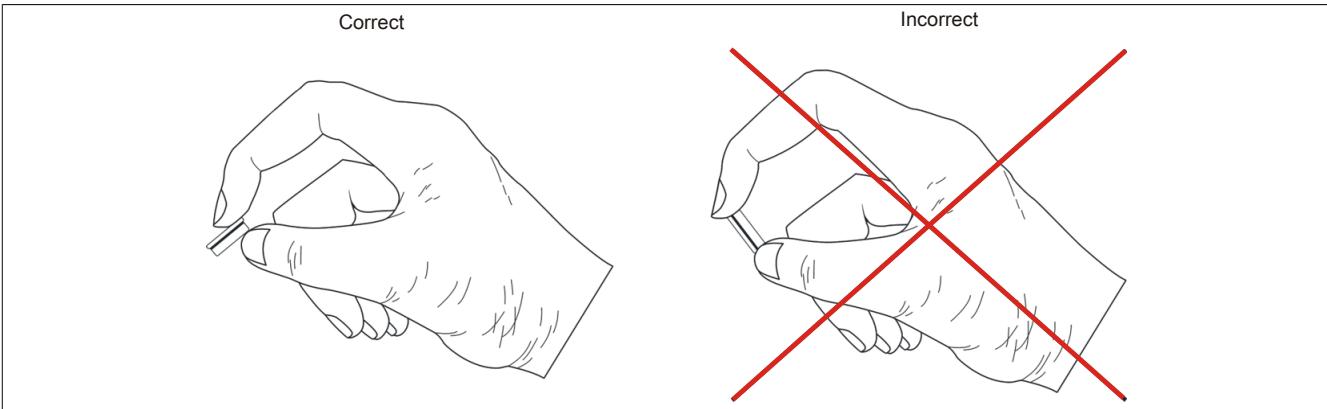

Image 107: Battery handling

- Insert the new battery with correct polarity.

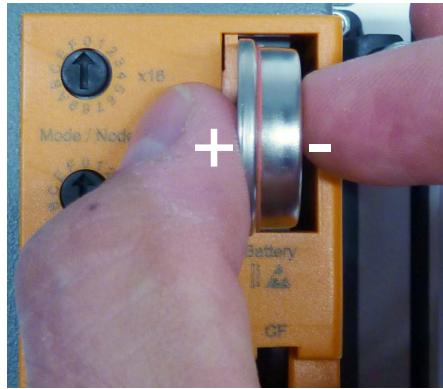

Image 108: Insert battery

- To make the next battery change easier, be sure the removal strip is in place when inserting battery.
- Reconnect power supply to the B&R industrial PC (plug in power cable and press power button).
- Date and time might need to be reset in BIOS.

Warning!

Lithium batteries are considered hazardous waste. Used batteries should be disposed of according to local requirements.

2 Exchanging the CompactFlash card

The CompactFlash card can be exchanged quickly and easily by sliding the ejector leftward (see image).

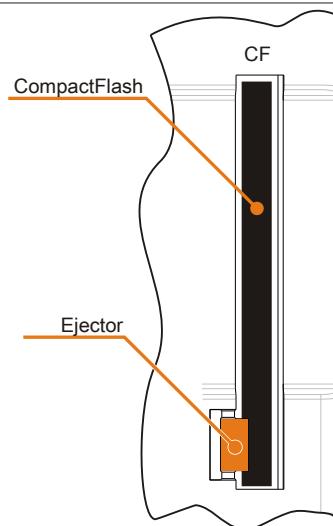

Image 109: CompactFlash + ejector (sample photo)

Caution!

Turn off the power before exchanging the CompactFlash card!

Appendix A

1 Maintenance Controller Extended (MTCX)

The MTCX controller (FPGA processor) is located on the CPU board in the PP500.

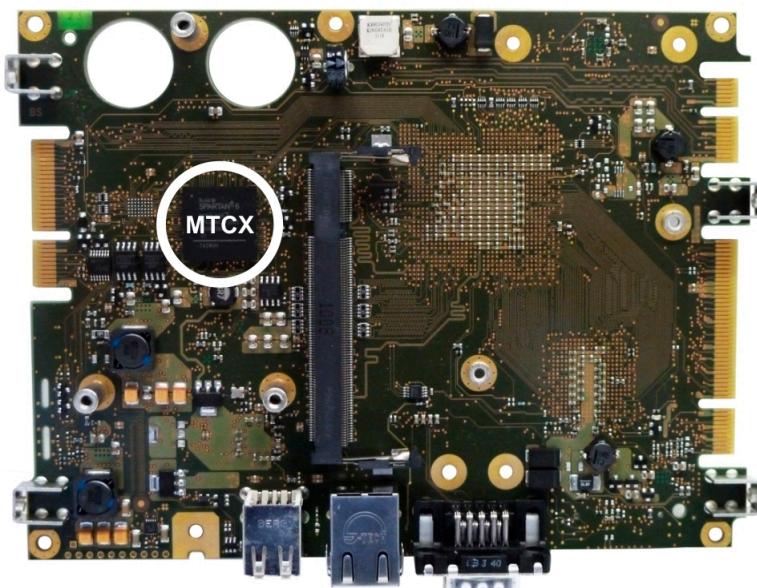

Image 110: MTCX controller location

The MTCX is responsible for the following monitoring and control functions:

- Power failure logic
- Watchdog handling (NMI and reset handling)
- Temperature monitoring (I/O area, power supply)
- Key and LED handling/coordination
- Advanced desktop operation (keys, USB forwarding)
- Backlight control for display
- Statistical data recording (power cycles - each power on, and power on are recorded - every full hour is counted e.g. 50 minutes no increase)
- Status LEDs (Power, CF, Link, Run)

The MTCX functions can be added with a firmware upgrade¹⁾⁾. The version can be read in BIOS (menu item "OEM Features" on page 70) or in an approved Microsoft Windows operating system, using B&R Control Center.

1)) Available for download from the B&R Website (www.br-automation.com).

2 Abbreviations

Abbreviation	Stands for	Description
NC	Normally closed	A normally closed (N.C.) relay contact.
	Not connected	Used in the description of pin assignments if a terminal or pin is not connected to a module.
ND	Not defined	In data tables, this stands for a value that has not been defined. Because a cable manufacturer does not provide certain technical data, for example.
NO	Normally open	A normally open (N.O.) relay contact.
TBD	To be defined	Used in technical data tables when certain information is not yet available. The value will be provided later.
