8BVI0880HWSS.004-1

1 General information

- · Clearly structured, straightforward implementation via network-based safety technology
- · Modular expandability through virtual wiring
- · Immediate triggering of safety function thanks to short cycle times
- · Easy implementation with transparent control and status information in the standard application as well
- · Compact design

2 Order data

Model number	Short description	Figure
	Wall mounting	
8BVI0880HWSS.004-1	ACOPOSmulti inverter module, 88 A, HV, wall mounting, SafeMC EnDat 2.2	
	Required accessories	10,10,
	Terminal block sets	
8BZVI1650SS.000-1A	Screw clamp set for ACOPOSmulti 8BVI0660HxSS, 8BVI0880HxSS, 8BVI1650HxSS, 8BVI0660HxSA, 8BVI0880HxSA and 8BVI1650HxSA modules: 1x 8TB2104.203L-00, 1x 8TB2108.2010-00 1x 1x 1x	
	Optional accessories	
	Fan modules	The same of the sa
8BXF001.0000-00	ACOPOSmulti fan module, replacement fan for ACOPOSmulti modules (8BVP / 8B0C / 8BVI / 8BVE / 8B0K)	
	Plug-in modules	
8BAC0120.000-1	ACOPOSmulti plug-in module, EnDat 2.1 interface	
8BAC0120.001-2	ACOPOSmulti plug-in module, EnDat 2.2 interface	
8BAC0121.000-1	ACOPOSmulti plug-in module, HIPERFACE interface	
8BAC0122.000-1	ACOPOSmulti plug-in module, resolver interface 10 kHz	
8BAC0123.000-1	ACOPOSmulti plug-in module, incremental encoder and SSI absolute encoder interface for RS422 signals	
8BAC0123.001-1	ACOPOSmulti plug-in module, incremental encoder interface for 5 V single-ended and 5 V differential signals	
8BAC0123.002-1	ACOPOSmulti plug-in module, incremental encoder interface for 24 V single-ended and 24 V differential signals	
8BAC0124.000-1	ACOPOSmulti plug-in module, SinCos interface	
8BAC0125.000-1	ACOPOSmulti plug-in module, SinCos EnDat 2.1/SSI interface	
8BAC0130.000-1	ACOPOSmulti plug-in module, 2 digital outputs, 50 mA, max. 62,5 kHz, 4 digital outputs, 500 mA, max. 1,25 kHz, 2 digital inputs 24 VDC	
8BAC0130.001-1	ACOPOSmulti plug-in module, 2 digital outputs, 50 mA, max. 62.5 kHz, 4 digital outputs, 500 mA, max. 1.25 kHz	
8BAC0132.000-1	ACOPOSmulti input module, 4 analog inputs ±10 V	
8BAC0133.000-1	ACOPOSmulti plug-in module, 3 RS422 outputs for ABR encoder emulation, 1 Mhz	
	POWERLINK cables	
X20CA0E61.00020	POWERLINK connection cable, RJ45 to RJ45, 0.2 m	
X20CA0E61.00025	POWERLINK connection cable, RJ45 to RJ45, 0.25 m	
X20CA0E61.00030	POWERLINK connection cable, RJ45 to RJ45, 0.3 m	
X20CA0E61.00035	POWERLINK connection cable, RJ45 to RJ45, 0.35 m	
X20CA0E61.00050	POWERLINK connection cable, RJ45 to RJ45, 0.5 m	
X20CA0E61.00100	POWERLINK connection cable, RJ45 to RJ45, 1 m	
	Shield component sets	
8SCS001.0000-00	ACOPOSmulti shield component set: 1x shield plate 4x type 1; 1x hose clamp, B 9 mm, D 12-22 mm	
8SCS002.0000-00	ACOPOSmulti shield component set: 1x clamping plate; 2x clamps D 4-13.5 mm; 4x screws	
8SCS003.0000-00	ACOPOSmulti shield component set: 1x shield mounting plate 4x 45°; 8x screws	
8SCS004.0000-00	ACOPOSmulti shield component set: 1x shield plate 4x type 0; 2x hose clamps, B 9 mm, D 32-50 mm	
8SCS010.0000-00	ACOPOSmulti shield component set: 1x ACOPOSmulti holding plate SK14-20; 1x shield terminal SK20	
	Terminal blocks

8BVI0880HWSS.004-1

Product ID	8BVI0880HWSS.004-1	
Installation at elevations above sea level		
Nominal	0 to 500 m	
Maximum ²⁰⁾	4000 m	
Degree of pollution in accordance with EN 60664-1	2 (non-conductive pollution)	
Overvoltage category in accordance with IEC 60364-4-443:1999	III	
EN 60529 protection	IP20 ²¹⁾	
Environmental conditions		
Temperature		
Operation		
Nominal	5 to 40°C	
Maximum ²²⁾	55°C	
Storage	-25 to 55°C	
Transport	-25 to 70°C	
Relative humidity		
Operation	5 to 85%	
Storage	5 to 95%	
Transport	Max. 95% at 40°C	
Mechanical characteristics		
Dimensions ²³⁾		
Width	2135 mm	
Height	317 mm	
Depth		
Wall mounting	263 mm	
Weight	Approx. 10.2 kg	
Module width	4	

Table 2: 8BVI0880HWSS.004-1 - Technical data

- 1) SLOT 2 is not occupied. SLOT 1 of the ACOPOSmulti module is occupied by the SafeMC module.
- 2) Valid in the following conditions: 750 VDC DC bus voltage, 5 kHz switching frequency, 40°C ambient temperature, installation altitude <500 m above sea level, no derating due to cooling type.
- 3) I_M ... Current on the motor connection [A].
- 4) P_{SMC1} ... Max. power consumption P_{SMC} [W] of the SafeMC module in SLOT1 (see the "Encoder interfaces" section).
 - P_{SLOT2} ... Max. power consumption P_{BBAC} [W] of the plug-in module in SLOT2 (see the technical data for the respective plug-in module).
 - $P_{24\,V\,Out}$... Power [W] that is output to the connections X2/+24 V Out 1 and X2/+24 V Out 2 on the module (max. 10 W)
 - P_{Fan8BOM...} ... Portion of the power [W] that is used by the fan modules in the mounting plate or the 8B0M0040HFF0.000-1 fan module (see the technical data for the respective 8B0M... mounting plate / 8B0M0040HFF0.000-1 fan module).
- 5) Only 8BCM motor cables from B&R may be used to connect the motor interfaces.
- 6) Valid in the following conditions: 750 VDC DC bus voltage. The temperature specifications refer to the ambient temperature.
- 7) Value for the nominal switching frequency.
- 8) The module cannot supply the full continuous current at this switching frequency. This unusual value for the ambient temperature, at which a derating of the continuous current must be accounted for, ensures that the derating of the continuous current can be determined in the same manner as at other switching frequencies.
- 9) B&R recommends operating the module at its nominal switching frequency. Operating the module at a higher switching frequency for application-specific reasons reduces the continuous current and increases the CPU load.
- 10) If necessary, the stress of the motor isolation system be reduced by an additional externally-wired dU/dt choke. For example, the RWK 305 three-phase du/dt choke from Schaffner (www.schaffner.com) can be used. IMPORTANT: Even when using a dU/dt choke, it is necessary to ensure that an EMC-compatible, low inductance shield connection is used!
- 11) The module's electrical output frequency (SCTRL_SPEED_ACT * MOTOR_POLEPAIRS) is monitored to protect against dual use in accordance with EC 428/2009 | 3A225. If the electrical output frequency of the module exceeds the limit value of 600 Hz uninterrupted for more than 0.5 s, then the current movement is aborted and error 6060 is output (Power element: Limit speed exceeded).
- 12) The connection is made with cable lugs using an M8 threaded bolt.
- 13) The maximum diameter that can be clamped depends on the shield component set.
- 14) During project development, it is necessary to check if the minimum voltage can be maintained on the holding brake with the specified wiring. The operating voltage range of the holding brake can be found in the user's manual for the respective motor.
- 15) The specified values is only valid under the following conditions:
 - The 24 VDC supply for the module is provided by an 8B0C auxiliary supply module installed on the same mounting plate.
 - Connection between S1 and S2 (activation of the external holding brake) using a jumper with a max. length of 10 cm.
 - If the 24 VDC supply for the module is applied to the mounting plate using an 8BVE expansion module, then the output voltage is reduced because of voltage drops on the expansion cable. In this case, undervoltage monitoring must be disabled.
 - If jumpers longer than 10 cm are used to connect S1 and S2, then the output voltage is reduced because of voltage drops on the jumpers.
- 16) Only 8BCF EnDat 2.2 cables from B&R may be used to connect the encoder interfaces.
- 17) An EnDat 2.2 functional safety encoder is required when using ACOPOSmulti with SafeMC! With standard EnDat 2.2 encoders, only the STO, SBC and SS1 functions are monitored with respect to timing!
- 18) The maximum encoder cable length I_{max} can be calculated as follows (the maximum permissible encoder cable length of 100 m must not be exceeded):

 $I_{max} = 7.9/I_{G} * A * 1/(2*\rho)$

- I_G ... Max. current consumption of the encoder [A]
- A ... Cross section of the supply wire [mm²]
- ρ ... Specific resistance [$\Omega mm^2/m$] (e.g. for copper: ρ = 0.0178)
- 19) I_{Encoder} ... Max. power consumption of the connected encoder [A].
- 20) Continuous operation at altitudes ranging from 500 m to 4000 m above sea level is possible (taking the specified continuous current reductions into consideration).
- 21) This value only applies in its delivered state (SLOT2 of the module is sealed by a slot cover / shield plate). If SLOT2 on the module is not sealed, then the protection level is reduced to IP10. It is important to note that a 8SCS005.0000-00 shield set (slot cover / shield plate) or plug-in module must always be inserted!

- 22) Continuous operation at ambient temperatures ranging from 40°C to max. 55°C is possible (taking the specified continuous current reductions into consideration), but this will result in a shorter service life.
- 23) These dimensions refer to the actual device dimensions including the respective mounting plate. Make sure to leave additional space above and below the devices for mounting, connections and air circulation.

4 Dimension diagram and installation dimensions

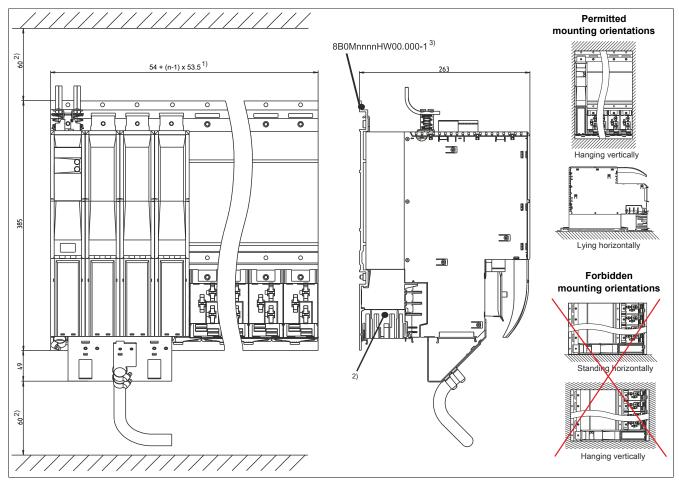

Figure 1: Dimension diagram and installation dimensions

- 1) n ... Necessary width (slots) of the mounting plate.
- 2) For proper air circulation, at least 60 mm clearance must be available above and below the module.
 - To ensure that the fan modules in the mounting plate can be replaced easily, at least 250 mm clearance must be available below the module.
- 3) nnnn indicates the number of slots (e.g. 0160 refers to 16 slots).

5 Wiring: Safe 4x width inverter modules (single-axis modules)

5.1 Pinout overview

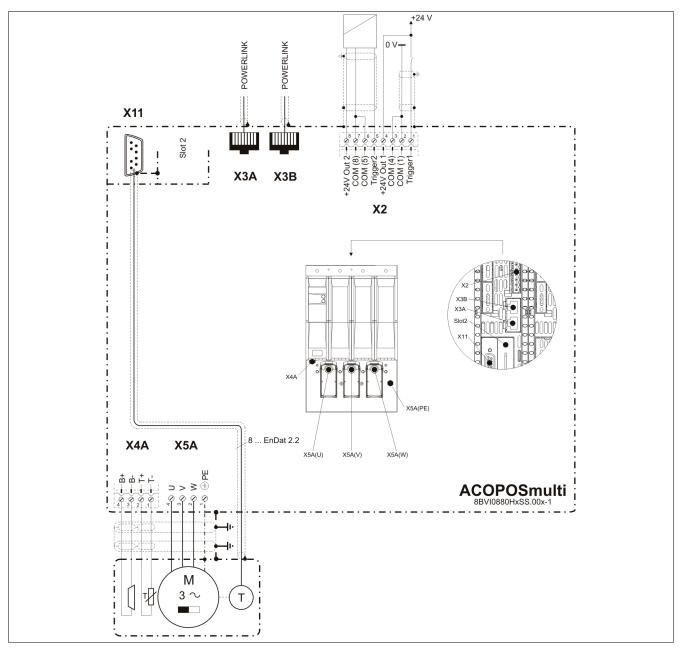

Figure 2: Pinout overview

5.2 X2 connector - Pinout

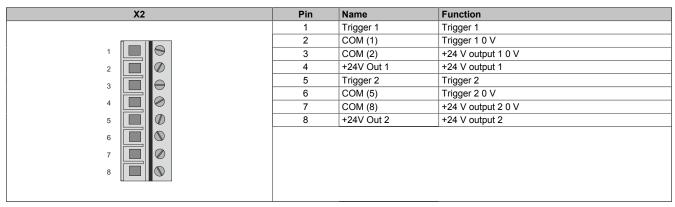

Table 3: X2 connector - Pinout

5.3 X3A, X3B connectors - Pinout

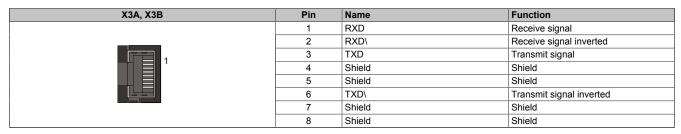

Table 4: X3A, X3B connectors - Pinout

5.4 X4A connector - Pinout

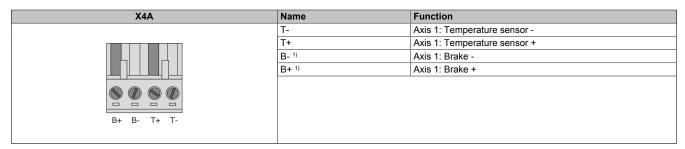

Table 5: X4A connector - Pinout

1) Wiring is not permitted to exceed a total length of 3 m.

Danger!

The functional fail safe state is enabled if the SBC output B+ is shorted to 24V (i.e. safe pulse disabling is activated). However, the brake always remains on/released because of the short circuit to 24 V! This can lead to dangerous situations because the motor holding brake (and in the case of hanging loads, the unrestrained reduction) cannot be halted/prevented!

Appropriate wiring measures must be implemented to ensure that the SBC output B+ is not shorted to 24V!

Danger!

The SBC output

- · may not be wired to multiple modules!
- · may not be wired as open emitter!
- may not be wired as open collector!

Danger!

Only one output voltage of ≤ 5 V can be ensured for the safe motor holding brake output when shut off. When selecting a motor holding brake, the user has to make sure that the required braking torque is reached at a current voltage of 5 V.

Information:

The transistors of the SBC output stage are tested cyclically. When the output channels are active, this test emits low pulses on the output with a maximum length of 600 μ s.

This must be taken into consideration when choosing the motor holding brake!

Danger!

The connections for the motor temperature sensors and the motor holding brake are safely isolated circuits. These connections are therefore only permitted to be connected to devices or components that have sufficient isolation in accordance with IEC 60364-4-41 or EN 61800-5-1.

Caution!

If B+ and B- are swapped when connecting the permanent magnet holding brakes, then the brakes cannot be opened! ACOPOSmulti inverter modules cannot determine if a holding brake is connected with reverse polarity!

Warning!

Temperature sensors are only permitted to be connected to the X4A/T+ and X4A/T- connectors on an ACOPOSmulti module under the following conditions:

• There is no ACOPOSmulti plug-in module in SLOT1 on the ACOPOSmulti module with a temperature sensor connected to T+ and T-.

Otherwise, the temperature monitoring functions on the ACOPOSmulti module may become ineffective, which in extreme cases can cause the hardware (e.g. motors) connected to the ACOPOSmulti module to be destroyed!

5.5 X5A - Pinout

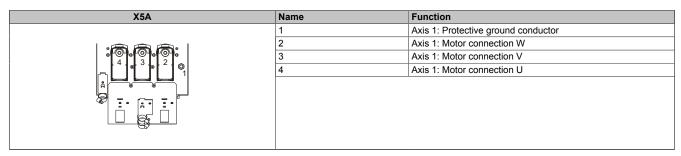

Table 6: X5A - Pinout

Information:

Only 8BCM motor cables from B&R may be used to connect the motor interfaces.

Motor connections U, V, W - Cable installation

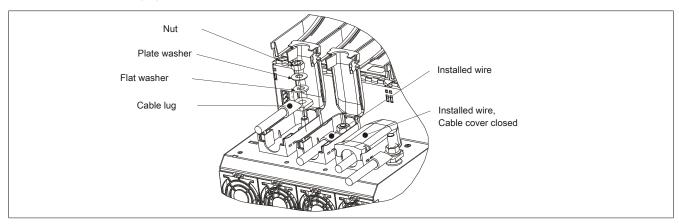

Figure 3: X5A - Cable installation

PE connection (1-wire) - Cable installation

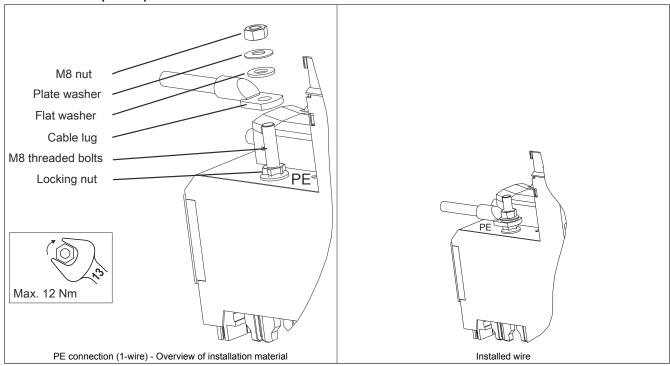

Table 7: PE connection (1-wire) - Cable installation

PE connection (3-wire) - Cable installation

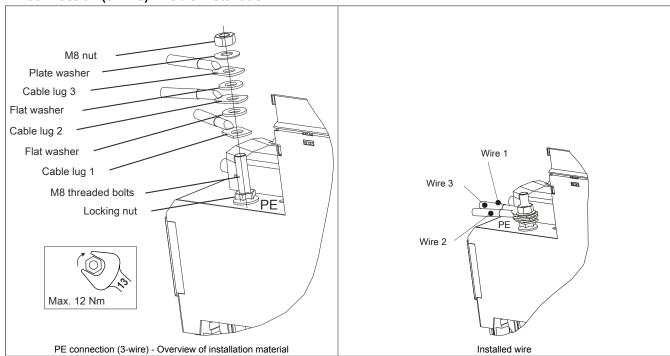

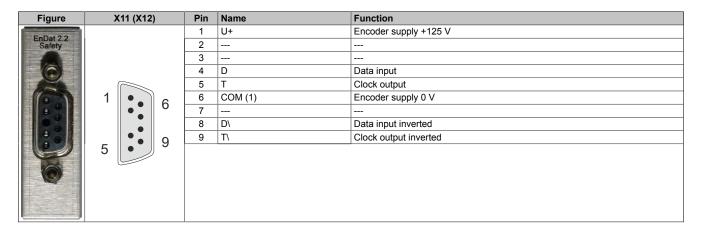

Table 8: PE connection (3-wire) - Cable installation

5.6 Pinout - SafeMC module

Information:

Only 8BCF EnDat 2.2 cables from B&R may be used to connect the encoder interfaces.

Information:

The SafeMC modules cannot be replaced! SafeMC modules and the corresponding inverter module form a single unit. In the event of an error, the entire inverter module must be replaced.
