| Chapter 1 General information  | 12 |
|--|----|
| 1 Manual history   | 12 |
| 2 Safety guidelines  | 13 |
| 2.1 Intended use   | 13 |
| 2.2 Protection against electrostatic discharge                         | 13 |
| 2.2.1 Packaging  | 13 |
| 2.2.2 Guidelines for proper ESD- Proper handling                       | 13 |
| 2.3 Policies and procedures  | 13 |
| 2.4 Transport and storage  | 14 |
| 2.5 Installation   | 14 |
| 2.6 Operation  | 14 |
| 2.6.1 Protection against touching electrical parts                     | 14 |
| 2.6.2 Environmental conditions - Dust, humidity, aggressive gases      | 14 |
| 2.6.3 Viruses and dangerous programs                                   | 14 |
| 2.7 Environmentally friendly disposal                                  | 15 |
| 2.7.1 Separation of materials  | 15 |
| 3 Organization of safety notices                                       | 15 |
| 4 Guidelines   | 15 |
| 5 Overview   | 16 |
|  |    |
| Chapter 2 Technical data   |    |
| 1 Introduction   |    |
| 1.1 Features   |    |
| 1.2 System components / configuration                                  |    |
| 1.2.1 Configuration - Base system                                      |    |
| 1.2.2 Accessory and software configuration                             |    |
| 2 Complete system  |    |
| 2.1 Temperature specifications.  |    |
| 2.1.1 Maximum ambient temperatures  2.1.2 Minimum ambient temperatures |    |
| 2.1.3 Temperature monitoring   |    |
| 2.1.4 Temperature sensor positions                                     |    |
| 2.1.4 Temperature sensor positions                                     |    |
| 2.3 Power management   |    |
| 2.3.1 Supply voltage block diagram                                     |    |
| 2.3.2 Power calculation with 5PC820.1505-00.                           |    |
| 2.3.3 Power calculation with 5PC820.1906-00.                           |    |
| 2.4 Block diagrams   |    |
| 2.4.1 Bus unit 5AC803.BX01-00  |    |
| 2.4.2 Bus unit 5AC803.BX01-01  |    |
| 2.4.3 Bus unit 5AC803.BX02-00  |    |
| 2.4.4 Bus unit 5AC803.BX02-01  |    |
| 2.5 Serial number sticker  |    |
| 2.6 Device interfaces and slots  |    |
| 2.6.1 +24 VDC power supply   |    |
| 2.6.2 Monitor/Panel interface - RGB                                    |    |
| 2.6.3 COM1 serial interface  |    |
| 2.6.4 Ethernet 1 (ETH1)  |    |
| 2.6.5  |    |
| 2.6.6  |    |
| 2.6.7 CompactFlash slot 1  |    |
| 2.6.8 CompactFlash slot 2  |    |
| 2.6.9 MIC, Line IN, Line OUT   |    |
| 2.6.10 Add-on UPS slot   |    |
| 2.6.11 Power button  |    |
| 2.6.12 Reset button  |    |
| 2.6.13 LED status indicators   |    |
|  |    |

| 3.10.1 5AC803.FA01-00   | 129 |
| 3.10.2 5AC803.FA02-00   | 130 |
| 3.10.3 5AC803.FA03-00   | 132 |
|   |     |
| Chapter 3 Installation  | 134 |
| 1 Installation  | 134 |
| 1.1 Important installation information                              | 134 |
| 1.2 Installation with clamping blocks                               |     |
| 1.3 Mounting orientation  |     |
| 1.3.1 Mounting orientation 0° and +/- 45°                           |     |
| 1.3.2 Mounting orientation with 5AC801.DVRS-00                      |     |
| 1.3.3 Mounting orientation with 5AC801.DVDS-00                      |     |
| 1.4 Spacing for air circulation                                     |     |
| 2 Cable connections   |     |
| 3 Grounding concept   |     |
| 4 General instructions for performing temperature testing           |     |
| 4.1 Procedure   |     |
| 4.2 Evaluating temperatures in Windows operating systems            |     |
| 4.2.1 Evaluating with the B&R Control Center                        |     |
| 4.2.2 Evaluating with the BurnInTest tool from Passmark             |     |
| 4.3 Evaluating temperatures in operating systems other than Windows |     |
| 4.4 Evaluating the measurement results                              |     |
| 5 Connection examples   |     |
| 5.1 One office TFT via RGB onboard                                  |     |
| 6 Touch screen calibration  |     |
| 6.1 Windows XP Professional   |     |
| 6.2 Windows XP Embedded   |     |
| 6.3 Windows Embedded Standard 2009                                  |     |
| 6.5 Windows Embedded Standard 7 Embedded / Premium                  |     |
| 6.6 Windows CE  |     |
| 6.7 Automation Runtime / Visual Components                          |     |
| 7 Connecting USB peripheral devices                                 |     |
| 7.1 Locally on the PPC800   |     |
| 8 Configuring a SATA RAID set                                       |     |
| 8.1 Create RAID set   |     |
| 8.2 Create RAID set - Striped                                       |     |
| 8.3 Create RAID set - Mirrored                                      |     |
| 8.4 Delete RAID set   |     |
| 8.5 Rebuild mirrored set  |     |
| 8.6 Resolve conflicts   |     |
| 8.7 Low level format  |     |
| 9 User tips for increasing the Display lifespan                     |     |
| 9.1 Backlight   |     |
| 9.1.1 How can the service life of the backlight be extended?        |     |
| 9.2 Image sticking  |     |
| 9.2.1 What causes screen burn-in?                                   |     |
| 9.2.2 How can screen burn-in be avoided?                            |     |
| 10 Pixel errors   |     |
| 11 Known problems/issues  |     |
|   |     |
| Chapter 4 Software  | 156 |
| 1 BIOS options  | 156 |

# Table of contents

| 1.1 General information   | 156 |
|---|-----|
| 1.2 BIOS setup and boot procedure                                     | 156 |
| 1.2.1 BIOS Setup keys   | 157 |
| 1.3 Main  | 158 |
| 1.4 Advanced  | 159 |
| 1.4.1 Graphics configuration  | 160 |
| 1.4.2 Baseboard/Panel features  |     |
| 1.4.3 Hardware monitoring   | 165 |
| 1.4.4 PCI configuration   |     |
| 1.4.5 PCI Express configuration                                       |     |
| 1.4.6 RTC wake settings   |     |
| 1.4.7 ACPI settings   |     |
| 1.4.8 CPU configuration   |     |
| 1.4.9 Memory configuration  |     |
| 1.4.10 Chipset configuration  |     |
| 1.4.11 IDE configuration  |     |
| 1.4.12 USB configuration  |     |
| 1.4.13 Serial port console redirection                                |     |
| 1.5 Boot.   |     |
|   |     |
| 1.5.1 Boot device priority  |     |
| 1.5.2 Boot configuration  |     |
| 1.6 Security  |     |
| 1.7 Save & Exit   |     |
| 1.8 BIOS default settings   |     |
| 1.8.1 Main  |     |
| 1.8.2 Advanced  |     |
| 1.8.3 Boot  |     |
| 1.8.4 Security  |     |
| 1.9 Allocation of resources.  |     |
| 1.9.1 RAM address assignment  | 195 |
| 1.9.2 I/O address assignment  | 195 |
| 1.9.3 Interrupt assignments in PIC mode                               | 195 |
| 1.9.4 Interrupt assignment in APIC mode                               | 195 |
| 2 Upgrade information   | 197 |
| 2.1 BIOS upgrade  | 197 |
| 2.1.1 Important information   | 197 |
| 2.1.2 Procedure with MS-DOS   |     |
| 2.2 Firmware upgrade  | 199 |
| 2.2.1 Procedure   |     |
| 2.2.2 Possible upgrade problems and software dependencies (for V1.02) |     |
| 2.3 Creating an MS-DOS boot diskette in Windows XP                    |     |
| 2.4 Creating a bootable USB flash drive for B&R upgrade files         |     |
| 2.4.1 Requirements.   |     |
| 2.4.2 Procedure   |     |
| 2.4.3 How to access MS-DOS.   |     |
| 2.5 Creating a bootable CompactFlash card for B&R upgrade files       |     |
| 2.5.1 Requirements  |     |
| 2.5.2 Procedure   |     |
|   |     |
| 2.5.3 How to access MS-DOS  |     |
| 3 Microsoft DOS   |     |
| 3.1 Order data  |     |
| 3.2 Known problems  |     |
| 3.3 Resolutions and color depths                                      |     |
| Windows XP Professional   |     |
| 4.1 General information   |     |
| 4.2 Order data  |     |
| 4.3 Overview  | 206 |

| 4.4 Installation  | 206            |
|---|----------------|
| 4.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03, 5ACPCI.RAIC-06 |                |
| 4.5 Drivers   |                |
| 5 Windows 7   |                |
| 5.1 General information   | 208            |
| 5.2 Order data  | 208            |
| 5.3 Overview  | 208            |
| 5.4 Installation  | 208            |
| 5.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03,                | 5ACPCI.RAIC-05 |
| 5ACPCI.RAIC-06  | 209            |
| 5.5 Drivers   | 209            |
| 5.6 Special considerations, limitations   | 209            |
| 6 Windows Embedded Standard 2009  | 210            |
| 6.1 General information   | 210            |
| 6.2 PPC800 (NM10) - Order data  |                |
| 6.3 Overview  | 210            |
| 6.4 Features with WES2009 (Windows Embedded Standard 2009)                        |                |
| 6.5 Installation  |                |
| 6.6 Drivers   |                |
| 6.6.1 Touch screen driver   |                |

Table 1: Manual history

# 2 Safety guidelines

#### 2.1 Intended use

Programmable logic controllers (PLCs), operating/monitoring devices (industrial PCs, Power Panels, Mobile Panels, etc.) and B&R uninterruptible power supplies have been designed, developed and manufactured for conventional use in industrial environments. They were not designed, developed and manufactured for any use involving serious risks or hazards that could lead to death, injury, serious physical damage or loss of any kind without the implementation of exceptionally stringent safety precautions. In particular, such risks and hazards include the use of these devices to monitor nuclear reactions in nuclear power plants, their use in flight control or flight safety systems as well as in the control of mass transportation systems, medical life support systems or weapons systems.

# 2.2 Protection against electrostatic discharge

Electrical components that can be damaged by electrostatic discharge (ESD) must be handled accordingly.

# 2.2.1 Packaging

- · Electrical components with a housing
  - ...Do not require special ESD packaging but must be handled properly (see "Electrical components with a housing").
- Electrical components without a housing
  - ...Are protected by ESD-suitable packaging.

#### 2.2.2 Guidelines for proper ESD- Proper handling

#### Electrical components with a housing

- Do not touch the connector contacts on connected cables.
- · Do not touch the contact tips on circuit boards.

#### Electrical components without a housing

The following applies in addition to the points listed under "Electrical components with a housing":

- Any persons handling electrical components or devices with installed electrical components must be grounded.
- Components may only be touched on their narrow sides or front plate.
- Components should always be stored in a suitable medium (ESD packaging, conductive foam, etc.). Metallic surfaces are not suitable storage surfaces!
- Components should not be subjected to electrostatic discharge (e.g. through the use of charged plastics).
- Ensure a minimum distance of 10 cm from monitors and TV sets.
- Measurement devices and equipment must be grounded.
- Measurement probes on potential-free measurement devices must be discharged on sufficiently grounded surfaces before taking measurements.

#### Individual components

- ESD protective measures for individual components are thoroughly integrated at B&R (conductive floors, footwear, arm bands, etc.).
- These increased ESD protective measures for individual components are not necessary for customers handling B&R products.

#### 2.3 Policies and procedures

Electronic devices are never completely failsafe. If the programmable control system, operating/monitoring device or uninterruptible power supply fails, the user is responsible for ensuring that other connected devices, e.g. motors, are brought to a secure state.

#### General information • Safety guidelines

When using programmable logic controllers or operating/monitoring devices as control systems together with a soft PLC (e.g. B&R Automation Runtime or comparable product) or slot PLC (e.g. B&R LS251 or comparable product), safety precautions relevant to industrial control systems (e.g. the provision of safety devices such as emergency stop circuits, etc.) must be observed in accordance with applicable national and international regulations. The same applies for all other devices connected to the system, such as drives.

All tasks such as the installation, commissioning and servicing of devices are only permitted to be carried out by qualified personnel. Qualified personnel are those familiar with the transport, mounting, installation, commissioning and operation of devices who also have the appropriate qualifications (e.g. IEC 60364). National accident prevention regulations must be observed.

The safety notices, connection descriptions (type plate and documentation) and limit values listed in the technical data are to be read carefully before installation and commissioning and must be observed.

#### 2.4 Transport and storage

During transport and storage, devices must be protected against undue stress (mechanical loads, temperature, humidity, aggressive atmospheres, etc.).

#### 2.5 Installation

- Die Geräte sind nicht gebrauchsfertig und müssen zur Einhaltung der EMV-Grenzwerte entsprechend den Anforderungen dieser Dokumentation montiert und verdrahtet werden.
- Installation must be performed according to this documentation using suitable equipment and tools.
- Devices are only permitted to be installed by qualified personnel without voltage applied. Before installation, voltage to the control cabinet must be switched off and prevented from being switched on again.
- · General safety guidelines and national accident prevention regulations must be observed.
- Electrical installation must be carried out in accordance with applicable guidelines (e.g. line cross sections, fuses, protective ground connections).

#### 2.6 Operation

## 2.6.1 Protection against touching electrical parts

To operate programmable logic controllers, operating/monitoring devices or uninterruptible power supplies, it is necessary for certain parts to carry dangerous voltage levels over 42 VDC. Touching one of these parts can result in a life-threatening electric shock. This could lead to death, severe injury or damage to equipment.

Before turning on the programmable logic controller, operating/monitoring devices or the uninterruptible power supply, the housing must be properly grounded (PE rail). Ground connections must be established even when testing or operating operating/monitoring devices or the uninterruptible power supply for a short time!

Before turning the device on, all parts that carry voltage must be securely covered. During operation, all covers must remain closed.

#### 2.6.2 Environmental conditions - Dust, humidity, aggressive gases

The use of operating/monitoring devices (e.g. industrial PCs, Power Panels, Mobile Panels, etc.) and uninterruptible power supplies in very dusty environments should be avoided. Dust collection on the devices can affect functionality and may prevent sufficient cooling, especially in systems with active cooling systems (fans).

The presence of aggressive gases can also lead to malfunctions. When combined with high temperature and humidity, aggressive gases – e.g. with sulfur, nitrogen and chlorine components – can induce chemical reactions that can damage electronic components very quickly. Signs of the presence of aggressive gases are blackened copper surfaces and cable ends on existing equipment.

For operation in dusty or humid conditions, correctly installed (e.g. cutout installations) operating/monitoring devices like the Automation Panel or Power Panel are protected on the front. The back of all devices must be protected from dust and humidity and cleaned at suitable intervals.

#### 2.6.3 Viruses and dangerous programs

This system is subject to potential risk each time data is exchanged or software is installed from a data medium (e.g. diskette, CD-ROM, USB flash drive, etc.), a network connection or the Internet. The user is responsible for assessing these dangers, implementing preventive measures such as virus protection programs, firewalls, etc. and making sure that software is only obtained from trusted sources.

# 2.7 Environmentally friendly disposal

All B&R programmable controllers, operating/monitoring devices and uninterruptible power supplies are designed to inflict as little harm as possible on the environment.

# 2.7.1 Separation of materials

It is necessary to separate different materials so the device can undergo an environmentally friendly recycling process.

| Component                            | Disposal                    |
|--------------------------------------|-----------------------------|
| Programmable logic controllers       | Electronics recycling       |
| Operating/monitoring devices         |                             |
| Uninterruptible power supply         |                             |
| Batteries and rechargeable batteries |                             |
| Cables                               |                             |
| Cardboard box / paper packaging      | Paper / cardboard recycling |
| Plastic packaging                    | Plastic recycling           |

Table 2: Environmentally friendly separation of materials

Disposal must comply with applicable legal regulations.

# 3 Organization of safety notices

Safety notices in this manual are organized as follows:

| Safety notice  | Description  |  |
|--|--|--|
| Danger! Disregarding these safety guidelines and notices can be life-threatening.                                      |  |  |
| Warning! Disregarding these safety guidelines and notices can result in severe injury or substantial damage to equipme |  |  |
| Caution! Disregarding these safety guidelines and notices can result in injury or damage to equipment.                 |  |  |
| Information:   | This information is important for preventing errors. |  |

Table 3: Description of the safety notices used in this documentation

# 4 Guidelines

European dimension standards apply to all dimension diagrams in this document.

All dimensions are specified in mm.

| Range of nominal sizes | General tolerance according to DIN ISO 2768 (medium) |
|------------------------|--|
| Up to 6 mm             | ±0.1 mm  |
| For 6 to 30 mm         | ±0.2 mm  |
| For 30 to 120 mm       | ±0.3 mm  |
| For 120 to 400 mm      | ±0.5 mm  |
| For 400 to 1000 mm     | ±0.8 mm  |

Table 4: Range of nominal sizes

# **5 Overview**

| Product ID  | Short description  | on page   |

| Product ID         | Short description  | on page |
|--------------------|--|---------|
| 5MMHDD.0250-00     | 250 GB SATA hard disk; replacement for 5AC801.HDDI-03 and 5ACPCI.RAIC-05; note: please see the manual  | 125     |
|                    | for information about using this hard disk   |         |
| 5MMHDD.0500-00     | 500 GB SATA hard disk; replacement for 5AC801.HDDI-04, 5AC901.CHDD-01 and 5ACPCI.RAIC-06; note:  | 127     |
|                    | please see the manual for information about using this hard disk   |         |
| 5MMSSD.0060-00     | 60 GB SATA SSD (MLC); replacement for 5AC801.SSDI-01 and 5AC901.CSSD-01; SSD for   | 99      |
| ENNACCD 0000 04    | 5PP5IO.GMAC-00; note: please see the manual for information about using this SSD   | 404     |
| 5MMSSD.0060-01     | 60 GB SATA SSD (MLC); replacement for 5AC801.SSDI-03 and 5AC901.CSSD-03; SSD for 5PP5IO.GMAC-00; note: please see the manual for information about using this SSD                                      | 101     |
| 5MMSSD.0128-01     | 128 GB SATA SSD (MLC); replacement for 5AC801.SSDI-04 and 5AC901.CSSD-04; SSD for  | 104     |
| 31V11V135D.U126-U1 | 5PP5IO.GMAC-00; note: please see the manual for information about using this SSD   | 104     |
| 5MMSSD.0180-00     | 180 GB SATA SSD (MLC); replacement part for 5AC801.SSDI-02 and 5AC901.CSSD-02; SSD for   | 107     |
| ONINGOD.0100 00    | 5PPSIO.GMAC-00; note: please see the manual for information about using this SSD   | 101     |
| 5MMSSD.0256-00     | 256 GB SSD MLC - Slide-in compact - Toshiba - SATA   | 109     |
|                    | Expansions   |         |
| 5AC803.SX01-00     | PPC800 expansion; 1 PCI/PCI Express and 1 slide-in slot (bus 5AC803.BX01-00 or 5AC803.BX01-01 required)  | 62      |
| 5AC803.SX02-00     | PPC800 expansion; 2 PCI/PCI Express and 1 slide-in slot (bus 5AC803.BX02-00 or 5AC803.BX02-01 required)  | 62      |
| <u> </u>           | Fan kits   |         |
| 5AC803.FA01-00     | PPC800 fan kit for system units without an expansion   | 129     |
| 5AC803.FA02-00     | PPC800 fan kit for system units without an expansion 5AC803.SX01-00  | 130     |
| 5AC803.FA03-00     | PPC800 fan kit for system units with expansion 5AC803.SX02-00  | 132     |
| 5AC603.FA03-00     | Heat sinks   | 132     |
| 5AC803.HS00-04     |  | 60      |
| 5AC803.HS00-04     | PPC800 heat sink for CPU board with Atom dual-core processor N2800   | 60      |
| EACDOO ETUO CO     | Interface cards  DClas Ethoract cord 4x 40/400/4000 For ADC220 and DDC200  | 74      |
| 5ACPCC.ETH0-00     | PCIec Ethernet card 1x 10/100/1000 For APC820 and PPC800.  | 71      |
| 5ACPCC.MPL0-00     | PCIec POWERLINK card, 2 POWERLINK interfaces, 512 kB SRAM; for APC820 and PPC800.  | 73      |
| 000000 0 : 2 : 2   | MS-DOS   |         |
| 9S0000.01-010      | OEM Microsoft MS-DOS 6.22, German floppy disks, only supplied together with a new PC   | 205     |
| 9S0000.01-020      | OEM Microsoft MS-DOS 6.22, English floppy disks, only supplied together with a new PC  | 205     |
|                    | Main memory for GM45 CPU boards  |         |
| 5MMDDR.2048-02     | SO-DIMM DDR3 RAM 2048 MB PC3-8500  | 61      |
| 5MMDDR.4096-02     | SO-DIMM DDR3 RAM 4096 MB PC3-8500  | 61      |
|                    | Miscellaneous  |         |
| 5AC900.1000-00     | DVI (male connector) to CRT (female connector) adapter. For connecting a standard monitor to a DVI-I interface.  | 236     |
|                    | Other  |         |
| 5SWHMI.0000-00     | HMI Drivers & Utilities DVD  | 277     |
|                    | RS232 cables   |         |
| 9A0014.02          | RS232 extension cable for remote operation of a display unit with touch screen, 1.8 m  | 281     |
| 9A0014.05          | RS232 extension cable for remote operation of a display unit with touch screen, 5 m  | 281     |
| 9A0014.10          | RS232 extension cable for remote operation of a display unit with touch screen, 10 m   | 281     |
| 9A0014.10          |  | 201     |
| 040400 42          | Replacement batteries  UDS hatteries have A (replacement part) 2v 42 V 7 Ah, for hattery wit 0.00100 42  | 247     |
| 9A0100.13          | UPS batteries type A (replacement part), 2x 12 V, 7 Ah, for battery unit 9A0100.12   | 247     |
| 9A0100.15          | UPS batteries type B (replacement part), 2x 12 V, 2.2 Ah, for battery unit 9A0100.14   | 247     |
| 9A0100.17          | UPS batteries type C (replacement part), 2x 12 V, 4.5 Ah, for battery unit 9A0100.16   | 247     |
|                    | Systemeinheiten  |         |
| 5PC820.1505-00     | Panel PC 820 15" XGA TFT display with touch screen (resistive); connections for 1x RS232, 5x USB 2.0, Smart  | 46      |
|                    | Display Link/DVI/Monitor, 2x Ethernet 10/100/1000, HDA sound, add-on UPS slot, expandable with 1 or 2 PCI /  |         |
|                    | PCI Express slots, optional CompactPCI Express and slide-in compact slot; IP65 protection (front); order 24 VDC connector for supply voltage separately (screw clamp: 0TB103.9; cage clamp: 0TB103.91) |         |
| 5PC820.1906-00     | Panel PC 820 19" SXGA color TFT display with touch screen (resistive); connections for 1x RS232, 5x USB  | 52      |
| 3F C020.1900-00    | 2.0, Smart Display Link/DVI/Monitor, 2x Ethernet 10/100/1000, HDA sound, add-on UPS slot, expandable with  | 32      |
|                    | 1 or 2 PCI / PCI Express slots, optional CompactPCI Express and slide-in compact slot; IP65 protection (front);  |         |
|                    | order 24 VDC connector for supply voltage separately (screw clamp: 0TB103.9; cage clamp: 0TB103.91)  |         |
|                    | Terminal blocks  |         |
| 0TB103.9           | Connector, 24 VDC, 3-pin female, 3.31 mm² screw clamps, protected against vibration by the screw flange  | 235     |
| 0TB103.91          | Connector, 24 VDC, 3-pin female, 3.31 mm² cage clamps, protected against vibration by the screw flange   | 235     |
|                    | USB accessories  |         |
| 5A5003.03          | Front cover, for remote CD-ROM drive 5A5003.02 and USB 2.0 drive combination 5MD900.USB2-00,   | 275     |
| J. 10000.00        | 5MD900.USB2-01 and 5MD900.USB2-02  | 210     |
| 5MD900.USB2-02     | USB 2.0 drive combination, consists of DVD-R/RW DVD+R/RW, CompactFlash slot (Type II), USB connection  | 271     |
| 5WB5000.5GB2 02    | (Type A on the front, Type B on the back); 24V DC (order screw clamp terminal 0TB103.9 or cage clamp terminal  | 2       |
|                    | OTB103.91 separately)  |         |
| 5MMUSB.2048-00     | USB 2.0 flash drive, 2048 MB   | 267     |
| 5MMUSB.2048-01     | USB 2.0 flash drive, 2048 MB, B&R  | 269     |
| 5MMUSB.4096-01     | USB 2.0 flash drive, 4096 MB, B&R  | 269     |
|                    | USB cables   |         |
| 5CAUSB.0018-00     | USB 2.0 connection cable type A - type B, 1.8 m  | 280     |
| 5CAUSB.0050-00     | USB 2.0 connection cable type A - type B, 1.8 m  | 280     |
| JUAU3D.0030-00     |  | 200     |
| EACCOO LIDOD OO    | Uninterruptible power supplies   | 0.40    |
| 5AC600.UPSB-00     | Battery unit 5 Ah; for APC620, APC810 or PPC800 UPS  | 242     |
| 5AC600.UPSF-00     | UPS fuse kit for battery unit 5AC600.UPSB-00 up to revision D0.  | 246     |
| 5AC600.UPSF-01     | UPS fuse, 5 pcs.   | 246     |
| 5AC600.UPSI-00     | UPS module for APC620, APC810, PPC800; for system units 5PC600.SX01-00 (beginning with rev. H0),   | 240     |
|                    | 5PC600.SX02-00 (beginning with rev. G0), 5PC600.SX02-01 (beginning with rev. H0), 5PC600.SX05-00 (be-  |         |
|                    | ginning with rev. F0), 5PC600.SX05-01 (beginning with rev. F0), 5PC600.SF03-00 (beginning with rev. A0),   |         |
|                    |  |         |

| 5SWWXP.0600-MUL | Microsoft OEM Windows XP Professional Service Pack 3, CD, multilingual. Only available with a new device.   | 206     |

# Chapter 2 • Technical data

# 1 Introduction

The Panel PC 800 covers an extremely wide performance range – relying on efficient Intel Atom N2800 processors and Core2 Duo processors for applications with exceptionally high performance requirements. Brilliant 15" XGA and 19" SXGA touch screen displays provide a simple and intuitive user interface. Flexibility was raised to a completely new level when designing the PPC800. This makes it possible to add several different options to the cost-effective base device. This includes up to two PCI and PCI Express slots, modular drives, additional interfaces and an integrated UPS. The chipset, processor and other components are connected directly to the heat sink using heat conductive materials. This makes it possible to operate not only Atom processors, but also certain dual-core processors without a fan at all.

#### 1.1 Features

- 15" and 19" diagonals
- Latest processor technology Atom N2800 (dual core)
- Up to 4 GB main memory
- 2 CompactFlash slots (type I)
- Upgrade expansions with 1 or 2 slots for PCI / PCI Express (PCIe) cards and a slide-in drive slot
- 1 optional PClec (PCI Express compact) card slot (can be upgraded with an adapter)
- 1 optional slide-in compact slot (can be upgraded with an adapter)
- 5x USB 2.0
- 2x Ethernet 10/100/1000 Mbit interfaces
- 1x RS232 interface, modem-compatible
- 24 VDC supply voltage
- BIOS (AMI UEFI)
- Real-time clock (RTC, battery-backed)
- Easy slide-in drive replacement (SATA hot plugging)
- HDA sound
- · Add-on UPS slot

# 1.2 System components / configuration

The PPC800 system can be assembled to meet individual requirements and operating conditions.

The following components are absolutely essential for operation:

- · System unit
- · CPU board
- Heat sink (depends on the CPU board)
- · Main memory
- Drive (mass storage device such as CompactFlash card or hard disk) for the operating system
- · Software

# 1.2.1 Configuration - Base system

be operated in a single device.

# 2 Complete system

#### 2.1 Temperature specifications

CPU boards can be combined with various other components such as drives, main memory, additional plug-in cards, etc. depending on the system unit and fan kit. The many different configurations possible result in varying maximum ambient temperatures, which can be seen in the following tables in this section.

# Information:

The maximum specified ambient temperatures for operation with and without a fan kit have been determined under worst-case conditions. Experience has shown that higher ambient temperatures can be reached in typical applications, e.g. those in Microsoft Windows. Testing and evaluation must be performed on-site by the user (temperatures can be read in BIOS or with the B&R Control Center).

#### Information regarding worst-case conditions

- Thermal Analysis Tool (TAT V3.8) from Intel for simulating a 100% processor load
- BurnInTest tool (BurnInTest V4.0 Pro from Passmark Software) for simulating a 100% load on the interface via loop back adapters (serial interfaces, slide-in drives, USB ports, audio outputs)
- · Maximum system expansion and power consumption

#### What must be considered when determining the maximum ambient temperature?

· Operating the complete system with or without fan kit

#### 2.1.1 Maximum ambient temperatures

#### Information:

Only specified mounting orientations are permitted. See chapter "Installation", section "Mounting orientation" on page 136.

<sup>1)</sup> Only possible with a CompactFlash card from B&R that is compatible with the device.

Table 5: Ambient temperatures

#### 2.1.1.1 How is the maximum ambient temperature determined?

- 1. The CPU board is selected (i.e. operation with or without a fan kit).
- 2. The "Maximum ambient temperature" row shows the maximum ambient temperature for the complete system, including the respective CPU board.

# Information:

Maximum temperature data is for operation at 500 meters. The maximum ambient temperature is typically derated by 1°C per 1000 meters (starting at 500 meters above sea level).

3. Incorporating additional drives (slide-in), main memory, additional plug-in cards, etc. can change the temperature limits of a PPC800 system.

If there is a "\( \sigma\)" next to the component, it can be used at the maximum ambient temperature of the complete system without problems.

If there is a specific temperature, for example "50", next to the component, then the ambient temperature of the complete PPC800 system cannot exceed this temperature.

#### 2.1.2 Minimum ambient temperatures

For systems containing one of the following components, the minimum ambient temperature is +5°C: 5AC801.DVDS-00, 5AC801.DVRS-00. If none of these components are used, then the minimum ambient temperature is 0°C.

#### 2.1.3 Temperature monitoring

Sensors monitor temperature values at various places in the PPC800 (board I/O, board ETH2, board power, power supply, slide-in drive 1, IF slot). The location of these temperature sensors is illustrated in "Temperature sensor locations" on page 25. The value listed in the table represents the defined maximum temperature for this measurement point. An alarm is not triggered if this temperature is exceeded. The temperatures¹) can be read in BIOS (Advanced - Baseboard/Panel features - Baseboard monitor) or in approved Microsoft Windows operating systems using the B&R Control Center.

In addition, the hard disks for PPC800 systems available from B&R are equipped with S.M.A.R.T, or Self-Monitoring, Analysis, and Reporting Technology. This makes it possible to read various parameters, e.g. temperature, using software (such as HDD Thermometer, a freeware program) on approved Microsoft operating systems (except Windows CE).

#### 2.1.4 Temperature sensor positions

Sensors monitor temperature values at many different locations in the PPC800. These temperatures can be read in BIOS (Advanced - Baseboard/Panel features - Baseboard monitor) or in approved Microsoft operating systems using the B&R Control Center<sup>2</sup>).

For applications that don't use Windows, the temperatures can be evaluated using the B&R implementation guide. In addition to the implementation guide, there are also programs available in MS-DOS.

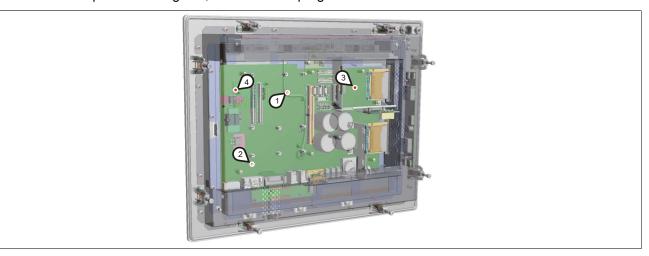

Figure 3: Temperature sensor locations

| Position | Measurement point for | Measurement   | Max. specified                               |
|----------|-----------------------|---|--|
| 1        | Board I/O             | Board temperature in the I/O area (sensor on the mainboard)                 | 80°C   |
| 2        | Board ETH2            | Baseboard temperature near the ETH2 controller (sensor on the mainboard)    | 80°C   |
| 3        | Board power           | Board power supply temperature (sensor on the mainboard)                    | 80°C   |
| 4        | Power supply          | Power supply temperature  | 80°C   |
| -        | Slide-in drive 1      | Slide-in drive temperature (sensor integrated in the slide-in slot).        | Depends on the slide-<br>in drive being used |
| -        | IF slot               | PClec slot temperature; the sensor is located directly on the plug-in card. | Depends on the plug-<br>in card being used   |

Table 6: Temperature sensor locations

<sup>1)</sup> The temperature measured approximates the immediate ambient temperature but may also be influenced by neighboring components.

<sup>2)</sup> The ADI driver containing the B&R Control Center is available in the Downloads section of the B&R website (www.br-automation.com).

# 2.2 Humidity specifications

The following table lists the minimum and maximum relative humidity values for the individual components that are relevant for the humidity limitations of a complete system. The lowest and highest common values are always used when establishing these limits.

| Component                  |   | Operation | Storage / Transport |
|----------------------------|---|-----------|---------------------|
| NM10 COM Express CPU board | ds  | 10 to 90% | 5 to 95%            |
| Main memory for CPU boards |   | 10 to 90% | 5 to 95%            |
|                            | 5AC801.HDDI-00  | 5 to 90%  | 5 to 95%            |
|                            | 5AC801.HDDI-03  | 5 to 95%  | 5 to 95%            |
|                            | 5AC801.HDDI-04  | 5 to 95%  | 5 to 95%            |
|                            | 5AC801.SSDI-00  | 5 to 95%  | 5 to 95%            |
|                            | 5AC801.SSDI-01  | 5 to 95%  | 5 to 95%            |
| Slide-in compact drives    | 5AC801.SSDI-02  | 5 to 95%  | 5 to 95%            |
|                            | 5AC801.SSDI-03 ≤ Rev. C0  | 8 bis 90% | 8 to 95%            |

Table 7: Overview of humidity specifications for individual components

The specifications listed correspond to the relative humidity at an ambient temperature of 30°C. More detailed information about specific temperature-dependent humidity values can be found in the technical data for the individual components.

# 2.3 Power management

# 2.3.1 Supply voltage block diagram

The following block diagram illustrates the simplified structure of the PPC800 supply voltage.

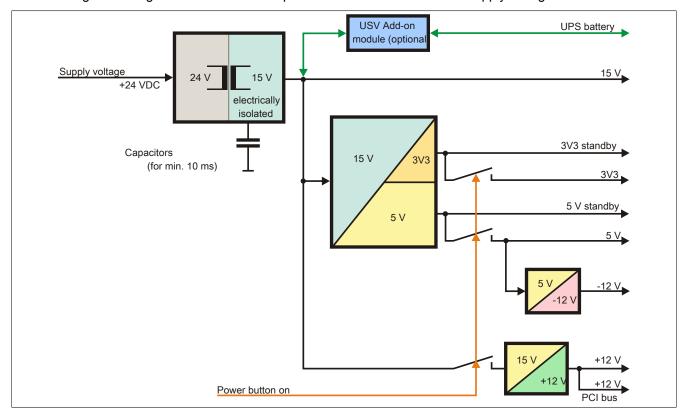

Figure 4: Supply voltage block diagram

# **Description**

15 V is generated from the supply voltage using a DC-to-DC converter. This electrically isolated 15 V supplies additional DC-to-DC converters that generate the remaining voltage.

After the system is turned on (e.g. using the power button), the 3V3 and 5 V voltages are applied to the bus. At the 5 V output, another DC-to-DC converter generates -12 V and applies this to the bus. An additional DC-to-DC converter generates +12 V.

The optional add-on UPS (with battery unit) is supplied with 15 V and provides an uninterrupted power supply of the 15 V bus during a power failure.

<sup>1)</sup> The total performance of one PCI/PCIe card per PCI slot (= sum of the power consumption for each voltage range) may not exceed the limits stated for operation with or without a fan kit.

Table 9: Power calculation for 19" PPC800

# Information:

The PClec card must not consume more than a total of 4 W (12 V / 5 V / 3V3)!

<sup>2)</sup> The total performance of one PClec card per PClec slot (= sum of the power consumption for each voltage area) may not exceed the limits stated for operation with or without a fan kit.

# 2.4 Block diagrams

The following block diagrams show the simplified structure of system units (5PC820.1505-00 / 5PC820.1906-00) with a NM10 CPU board that depend on different bus units.

# 2.4.1 Bus unit 5AC803.BX01-00

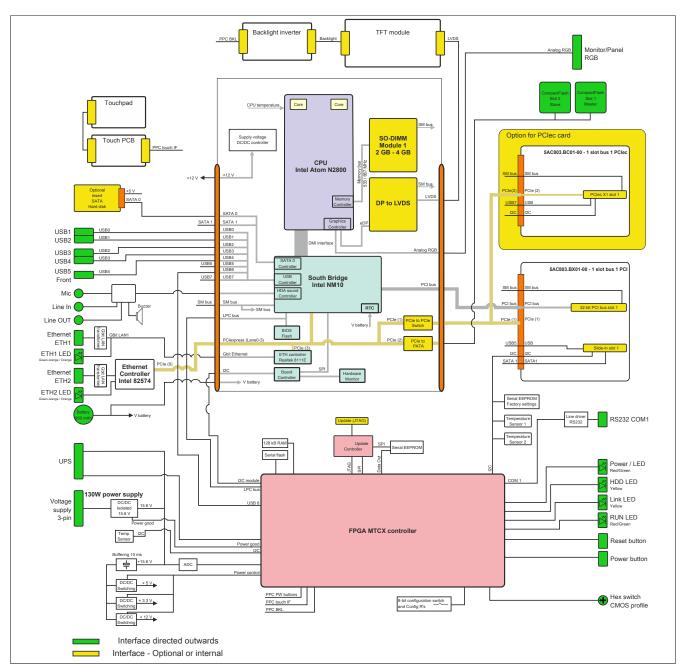

Figure 5: Block diagram with bus unit 5AC803.BX01-00

#### 2.4.2 Bus unit 5AC803.BX01-01

#### 2.4.3 Bus unit 5AC803.BX02-00

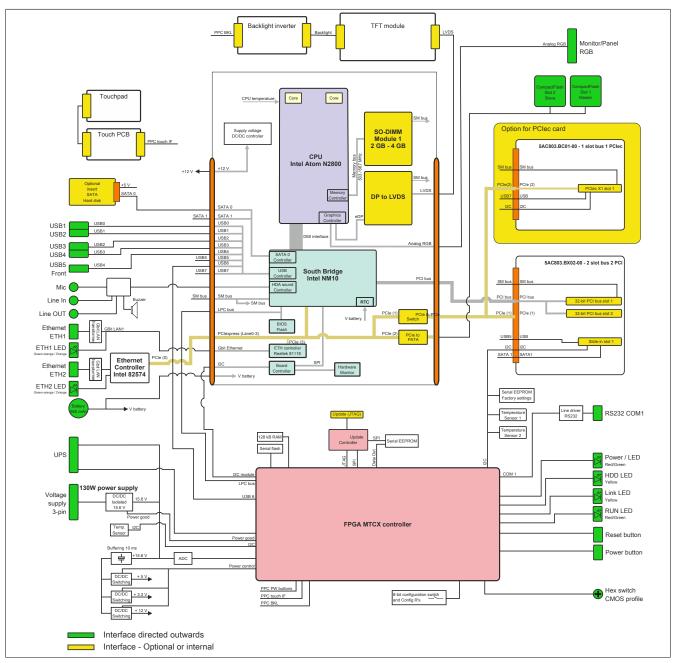

Figure 7: Block diagram with bus unit 5AC803.BX02-00

#### 2.4.4 Bus unit 5AC803.BX02-01

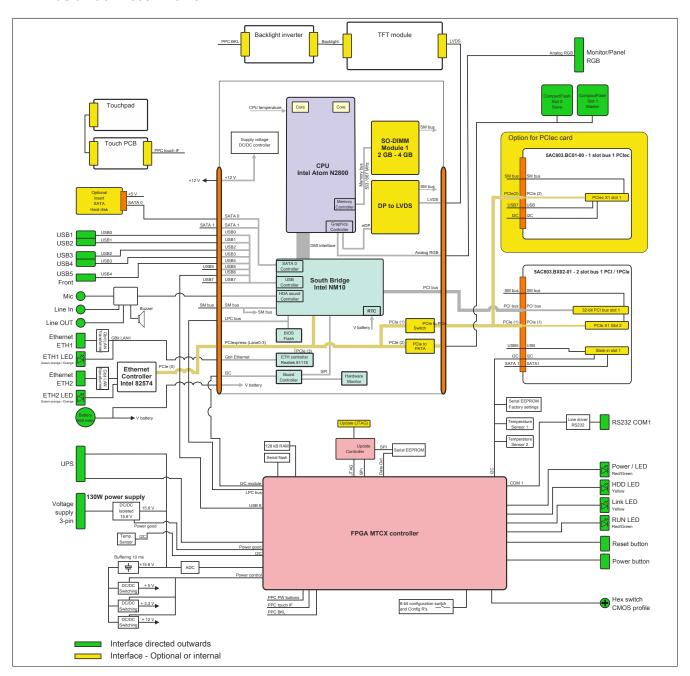

Figure 8: Block diagram with bus unit 5AC803.BX02-01

#### 2.5 Serial number sticker

A unique serial number sticker with a barcode (Code 128) is affixed to each B&R device for identification purposes. This serial number represents all of the individual components built into the system (model number, name, revision, serial number, delivery date and duration of warranty).

Figure 9: Serial number sticker (back)

This information can also be found on the B&R website by entering the serial number of the complete system in the search field tab (after selecting the "Serial number" option) at the top of the website <a href="www.br-automation.com">www.br-automation.com</a>. The search provides a detailed list of installed components.

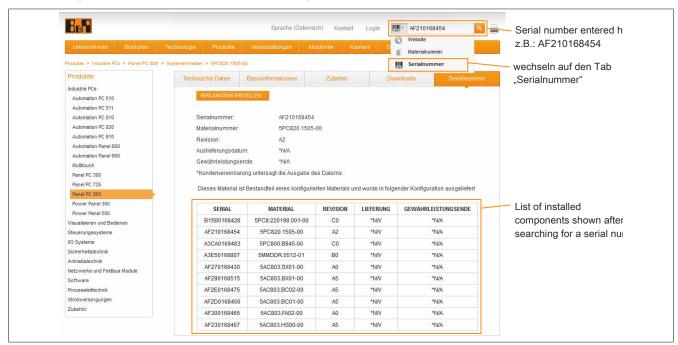

Figure 10: Example of serial number search

#### 2.6 Device interfaces and slots

# 2.6.1 +24 VDC power supply

The 3-pin male connector required for the power supply interface is not included in delivery. It can be ordered from B&R using model number 0TB103.9 (screw clamp) or 0TB103.91 (cage clamp).

The pinout is listed in the following table and printed on the PPC800 housing. The supply voltage is protected internally by a soldered fuse (15 A, fast-acting) to prevent damage to the device in the event of an overload (fuse replacement necessary) or if the voltage supply is connected incorrectly (reverse polarity protection - fuse replacement not necessary). The device must be returned to B&R for repairs if the fuse is blown in the event of an error.

|              | Power supply                                |                       |  |  |  |
|--------------|---|-----------------------|--|--|--|

Table 10: 24 VDC power supply interface

#### 2.6.1.1 Grounding

# Caution!

The functional ground (pin 2) must be connected to ground (e.g. control cabinet) using the shortest possible path. Using the largest possible conductor cross section on the supply connector is recommended.

The ground connection is located at the top right on the back of the PPC800 system.

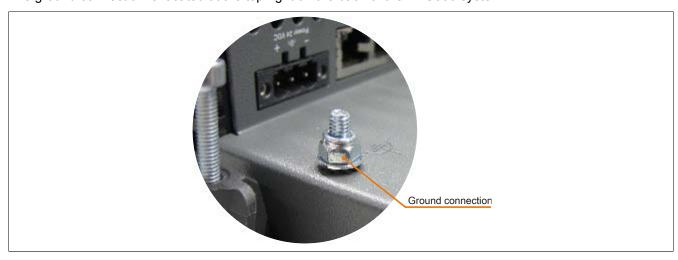

Figure 11: Ground connection

The M4 self-locking nut can be used, for example, to fasten a copper strip to a central grounding point in the control cabinet or system where the PPC800 is installed. The largest possible conductor cross section should be used (at least 2.5 mm²).

#### 2.6.2 Monitor/Panel interface - RGB

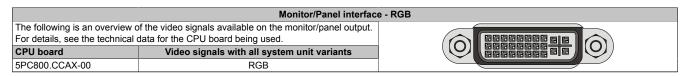

Table 11: Monitor/Panel interface - RGB

# Information:

Bei der RGB-Schnittstelle handelt es sich um ein analoges Signal, die mögliche Leitungslänge ist von der Auflösung sowie den herrschenden Umwelteinflüssen abhängig. This interface is therefore only recommended for service purposes.

Table 13: COM1 - Pinout

The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.

#### 2.6.4 Ethernet 1 (ETH1)

This Ethernet controller is integrated in the CPU board and connected to external devices via the system unit.

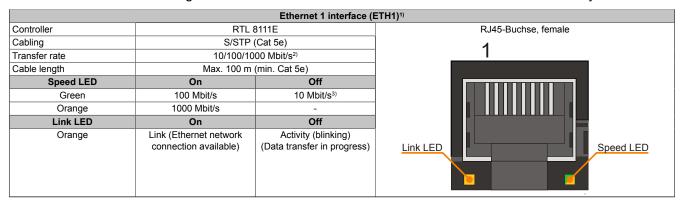

Table 14: Ethernet interface (ETH1)

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Switching takes place automatically
- 3) The 10 Mbit/s transfer speed / connection only exists if the Link LED is also lit at the same time.

#### **Driver support**

A special driver is required in order to operate the Realtek 8111E Ethernet controller. Drivers for approved operating systems are available in the Downloads section of the B&R website (www.br-automation.com).

## Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

Dieser Ethernet-Controller ist im Basisboard integriert und wird über die Systemeinheit nach außen geführt.

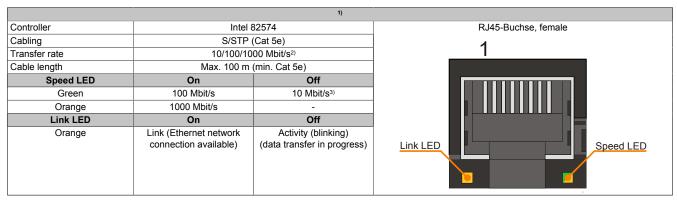

Table 15: Ethernet-Schnittstelle (ETH2)

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Switching takes place automatically
- 3) The 10 Mbit/s transfer speed / connection only exists if the Link LED is also lit at the same time.

#### **Driver support**

A special driver is required in order to operate the Intel 82574 Ethernet controller. Drivers for approved operating systems are available in the Downloads section of the B&R website (www.br-automation.com).

### Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

The PPC800 features a USB 2.0 (Universal Serial Bus) host controller with multiple USB ports, 5 of which are accessible externally for the user.

# Warning!

Peripheral USB devices can be connected to the USB interfaces on this device. Due to the vast number of USB devices available on the market, B&R cannot guarantee their performance. All USB devices provided by B&R are guaranteed to function properly.

## Caution!

Because this interface is designed according to general PC specifications, extreme care should be exercised with regard to EMC, cable routing, etc.

Table 17: USB5-Schnittstelle

- The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Each USB port is protected by a maintenance-free "USB current-limiting circuit breaker" (max. 1 A).

#### 2.6.7 CompactFlash slot 1

This CompactFlash slot is a standard component on an PPC800 system and internally connected with the chipset via PCIe to PATA bridge. Type I CompactFlash cards are supported.

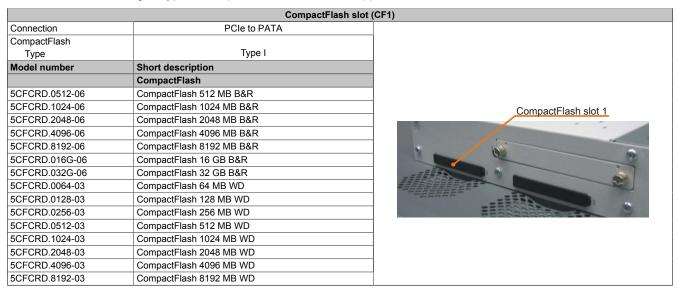

Table 18: CompactFlash slot (CF1)

## Warning!

Power must be turned off before inserting or removing CompactFlash cards.

#### 2.6.8 CompactFlash slot 2

This CompactFlash slot is a standard component on an PPC800 system and internally connected with the chipset via PCIe to PATA bridge. Type I CompactFlash cards are supported.

Table 19: CompactFlash slot (CF2)

# Warning!

An- und Abstecken der CompactFlash-Karte darf nur in spannungslosem Zustand erfolgen!

### 2.6.9 MIC, Line IN, Line OUT

All PPC800 systems include an HDA-compatible sound chip with access to the MIC, Line IN and Line OUT channels from the outside.

| MIC, Line IN, Line OUT |   |                      |
|------------------------|---|----------------------|
| Controller             | Realtek ALC 662   | 3.5 mm jack, female  |
| MIC                    | Connection of a mono microphone with a 3.5 mm jack                        |                      |
| Line IN                | Stereo Line IN signal supplied via a 3.5 mm jack                          |                      |
| Line OUT               | Connection of a stereo playback device (e.g. amplifier) via a 3.5 mm jack | Line OUT Line IN MIC |

Table 20: MIC, Line IN, Line OUT

### **Driver support**

A special driver is required in order to operate the audio controller. Drivers for approved operating systems are available in the Downloads section of the B&R website (<a href="https://www.br-automation.com">www.br-automation.com</a>).

## Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

### 2.6.10 Add-on UPS slot

An optional Automation PC add-on UPS module can be installed in this slot.

|                         | Add-on UPS s                              | ot                                 |
|-------------------------|---|------------------------------------|

Table 21: Add-on UPS slot

For additional information about the UPS module, see "Accessories" on page 233.

#### 2.6.11 Power button

Auf Grund der vollen ATX-Netzteilunterstützung besitzt der Power Taster verschiedenste Funktionalitäten.

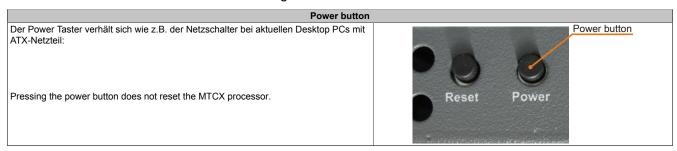

Table 22: Power button

### 2.6.12 Reset button

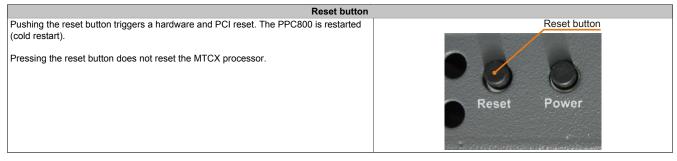

Table 23: Reset button

# Warning!

A system reset can result in lost data!

#### 2.6.13 LED status indicators

LED status indicators are located on the back of the system unit.

| LED status i | indicators           |          |  |      |
|--------------|----------------------|----------|--|------|
| LED          | Color                | Status   | Description  |      |
| Power        | Green                | On       | Supply voltage OK  | i di |
|              | Red                  | On       | System in standby mode (S5: Soft-off mode, S4: Hibernation mode suspend-to-disk or S3: Suspend-to-RAM)   |      |
|              | Orange <sup>1)</sup> | On       | Supply voltage not OK, system operating on battery power   |      |
|              | Red/Green            | Blinking | Service function for MTCX upgrade: A red/green blinking power LED indicates a faulty or incomplete MTCX upgrade. The MTCX runs using the firmware version installed when delivered. This could be caused by a power failure during an MTCX upgrade. An MTCX upgrade must be performed again. |      |
| HDD          | Yellow               | On       | Indicates IDE drive access (CF, HDD, CD, etc.)   |      |
| Link         | Yellow               | On       | Indicates an active SDL connection on the monitor/panel interface  |      |
|              |                      | Blinking | Indicates that an active SDL connection has been interrupted by a loss of power to the display unit  |      |
| Run          | Green                | On       | Application running  |      |
|              |                      | Off      | Application not running  | 1    |

Table 24: LED status indicators

1) Only lit when an add-on UPS module is installed.

### 2.6.14 CMOS profile switch

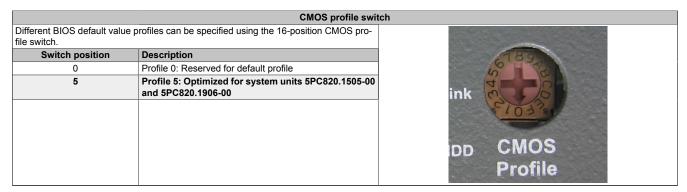

Table 25: CMOS profile switch

## Information:

The factory default switch position represents the optimal BIOS default values for this system and should therefore not be changed.

The position of the CMOS profile switch is displayed in BIOS Setup and in the B&R ADI Control Center (among other places).

### **2.6.15 Battery**

The lithium battery (3 V, 950 mAh) buffers the internal real-time clock (RTC) and individually stored BIOS settings. It is located behind the black cover on the front of the device. The battery's buffer lifespan is at least  $2\frac{1}{2}$  years (at 50°C, 8.5  $\mu$ A for the components being supplied and a self-discharge of 40%). The battery has a limited service life and should be replaced regularly (after the specified service life at the latest).

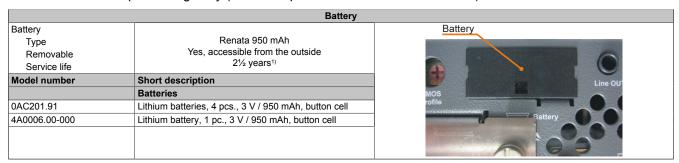

Table 26: Battery

At 50°C, 8.5 μA of the supplied components and a self-discharge of 40%.

### **Evaluating the battery status**

The status of the battery is determined immediately after the device is started and subsequently checked by the system every 24 hours. During this measurement, the battery is subjected to a brief load (approximately 1 second) and then evaluated. Once determined, the battery status is displayed in BIOS (Advanced - OEM features - System board features - Voltage values) and in the B&R Control Center (ADI driver); it can also be read in a customer application using the ADI library.

| Battery status | Function   |
|----------------|--|
| N/A            | The hardware or firmware being used is too old and does not support reading the battery status.                                  |
| GOOD           | Data buffering is intact.  |
| BAD            | From the point when battery capacity is recognized as insufficient (BAD), data buffering is intact for approximately another 500 |
|                | hours.   |

Table 27: Battery status

From the point when battery capacity is recognized as insufficient, data buffering is intact for approximately another 500 hours. When replacing the battery, data is buffered for approximately 10 minutes by a gold leaf capacitor.

### 2.6.16 Slide-in compact slot

The internal connection between the slide-in compact slot and the chipset is made via SATA II.

|                | Slide-in compact slot   |                  |  |  |
|----------------|---|------------------|--|--|
| Connection     | SATA II   |                  |  |  |
| Model number   | Short description   | Slide-in compact |  |  |
|                | Adapters  | drive            |  |  |
| 5AC803.BC02-00 | PPC800 1 slide-in compact adapter   |                  |  |  |

| 5AC801.HDDI-00 | 40 GB SATA hard disk, slide-in compact, 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk. |                  |  |  |
| 5AC801.HDDI-03 | 250 GB SATA hard disk, slide-in compact, 24/7 operation Note: Please see the manual for information about using this hard disk.                                 |                  |  |  |
| 5AC801.HDDI-04 | 500 GB SATA hard disk, slide-in compact, 24/7 operation. Note: Please see the manual for information about using this hard disk.                                |                  |  |  |
| 5AC801.SSDI-00 | 32 GB SATA SSD (SLC), slide-in compact  |                  |  |  |
| 5AC801.SSDI-01 | 60 GB SATA SSD (SLC), slide-in compact  |                  |  |  |
| 5AC801.SSDI-02 | 180 GB SATA SSD (SLC), slide-in compact   |                  |  |  |
| 5AC801.SSDI-03 | 60 GB SATA SSD (SLC), slide-in compact  |                  |  |  |
| 5AC801.SSDI-04 | 128 GB SATA SSD (SLC), slide-in compact   |                  |  |  |
| 5AC801.SSDI-05 | 256 GB SATA SSD (SLC), slide-in compact   |                  |  |  |

Table 28: Slide-in compact slot

## Information:

The adapter 5AC803.BC02-00 is required for the use of slide-in compact drives.

### Information:

The SATA II interface allows disks to be replaced during operation (hot plugging). In order to take advantage of this capability, this feature must be supported by the operating system.

### 2.6.17 PClec slot (Card slot)

|                | PClec slot  |                   |  |  |
|----------------|---|-------------------|--|--|
| Model number   | Short description   | PClec card slot   |  |  |

| 5AC803.BC01-00 | PPC800 1 PCI Express compact adapter                      |                   |  |  |
|                | Plug-in cards   |                   |  |  |
| 5ACPCC.ETH0-00 | Compact PCIe Ethernet card 1x 10/100/1000                 |                   |  |  |
| 5ACPCC.MPL0-00 | PCIec POWERLINK card, 2 POWERLINK interfaces, 512 kB SRAM | Annual Sons on we |  |  |

Table 29: PClec slot

### Information:

The adapter 5AC803.BC01-00 is required to use PClec plug-in cards.

### Information:

Only B&R PClec cards that have been specially designed for the Automation PC 820 and Panel PC 800 can be used.

For more information, see "PClec plug-in cards" on page 70.

# 3 Individual components

## 3.1 System units

### 3.1.1 5PC820.1505-00

### 3.1.1.1 General information

- 15" TFT XGA color display
- · Analog resistive touch screen
- · Robust design
- · Compact installation depth
- · Fanless operation
- 1 optional PCI Express compact slot
- 1 optional slide-in compact slot
- Optional PCI and PCIe slots and optional slide-in drives, optional expansions available

#### 3.1.1.2 Order data

| Model number   | Short description  |
|----------------|--|
|                | System units   |
| 5PC820.1505-00 | Panel PC 820 15" XGA TFT display with touch screen (resistive); connections for 1x RS232, 5x USB 2.0, Smart Display Link/DVI/Monitor, 2x Ethernet 10/100/1000, HDA sound, add-on UPS slot, expandable with 1 or 2 PCI / PCI Express slots, optional CompactPCI Express and slide-in compact slot; IP65 protection (front); order 24 VDC connector for supply voltage separately (screw clamp: 0TB103.9; cage clamp: 0TB103.91) |
|                | Required accessories   |
|                | CPU boards   |
| 5PC800.CCAX-00 | Intel Atom N2800 CPU board, 1.86 GHz, dual core, 533 MHz FSB, 1 MB L2 cache; NM10 chipset; 1 slot for SO-DIMM DDR3 module  |
|                | Terminal blocks  |
| 0TB103.9       | Connector, 24 VDC, 3-pin female, 3.31 mm² screw clamp, protected against vibration by the screw flange   |
| 0TB103.91      | Connector, 24 VDC, 3-pin female, 3.31 mm² cage clamp, protected against vibration by the screw flange  |
|                | Main memory  |
| 5MMDDR.2048-02 | SO-DIMM DDR3 RAM 2048 MB PC3-8500  |
| 5MMDDR.4096-02 | SO-DIMM DDR3 RAM 4096 MB PC3-8500  |
|                | Heat sink  |
| 5AC803.HS00-04 | PPC800 heat sink for CPU board with Atom dual-core processor N2800.  |
|                | Optional accessories   |
|                | Adapters   |
| 5AC803.BC01-00 | 1 compact PCI Express PPC800 adapter   |
| 5AC803.BC02-00 | 1 compact slide-in PPC800 adapter  |
|                | Bus units  |
| 5AC803.BX01-00 | PPC800 bus; 1 PCI, 1 slide-in slot   |
| 5AC803.BX01-01 | PPC800 bus; 1 PCI Express, 1 slide-in slot   |
| 5AC803.BX02-00 | PPC800 bus; 2 PCI, 1 slide-in slot   |
| 5AC803.BX02-01 | PPC800 bus: 1 PCI, 1 PCI Express, 1 slide-in slot  |
|                | Plug-in cards  |
| 5ACPCC.ETH0-00 | PClec Ethernet card 1x 10/100/1000 For APC820 and PPC800.  |
| 5ACPCC.MPL0-00 | PCIec POWERLINK card, 2 POWERLINK interfaces, 512 kB SRAM; for APC820 and PPC800.  |
|                | Expansions   |
| 5AC803.SX01-00 | PPC800 expansion; 1 PCI/PCI Express and 1 slide-in slot (bus 5AC803.BX01-00 or 5AC803.BX01-01 required)  |
| 5AC803.SX02-00 | PPC800 expansion; 2 PCI/PCI Express and 1 slide-in slot (bus 5AC803.BX02-00 or 5AC803.BX02-01 required)  |
|                | Drives   |
| 5AC801.ADAS-00 | SATA hard disk adapter for operating a slide-in compact hard disk in a slide-in slot   |
| 5AC801.DVDS-00 | DVD-ROM SATA slide-in drive  |
| 5AC801.DVRS-00 | DVD-R/RW DVD+R/RW SATA drive, slide-in   |
| 5AC801.HDDI-00 | 40 GB slide-in compact SATA hard disk, 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.   |

Table 30: 5PC820.1505-00 - Order data

Table 30: 5PC820.1505-00 - Order data

#### 3.1.1.3 Interfaces

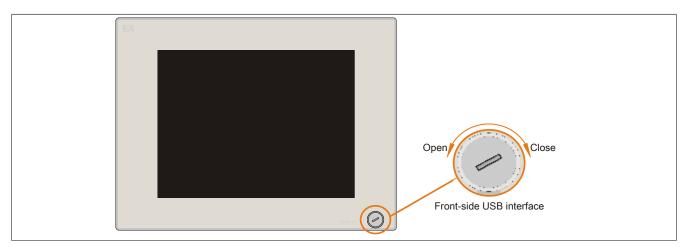

Figure 12: 5PC820.1505-00 - Front view

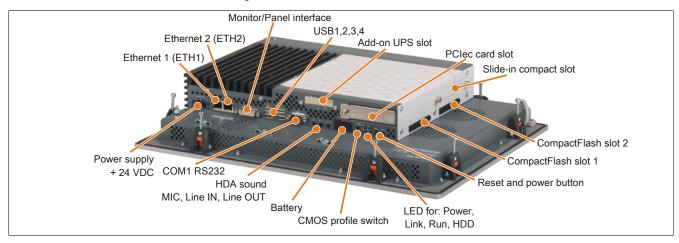

Figure 13: 5PC820.1505-00 - Rear view

# Warning!

Do not remove the fastening screws from the heat sink since this component is connected to the processor and chipset via a thermal coupling. If this connection is interrupted, the B&R Industrial PC must be sent back to the factory for repair. Removing the fastening screws (protected by a seal) voids all warranty.

During operation, surface temperatures of the heat sink may reach 70°C ("hot surface" warning).

| Gasket                     | Flat gasket around display front                                    |  |
| Dimensions                 |   |  |
| Width                      | 435 mm  |  |
| Height                     | 330 mm  |  |
| Depth                      | Depends on the component  |  |
| Weight                     | 5500 g (depends on the component)                                   |  |

Table 31: 5PC820.1505-00, 5PC820.1505-00 - Technical data

- Maintenance Controller Extended.
- 2) At an ambient temperature of 25°C. Reducing the brightness by 50% can result in an approximately 50% increase in the half-brightness time. Touch screen drivers for approved operating systems are available in the Downloads section of the B&R website.
- The PCI slots available depend on the expansion and bus unit being used.
- The PCIe slots available depend on the expansion and bus unit being used.
- Optional with PClec adapter 5AC803.BC01-00.
- Optional with slide-in compact adapter 5AC803.BC02-00.

#### 3.1.1.5 Dimensions

## 3.1.1.6 Cutout

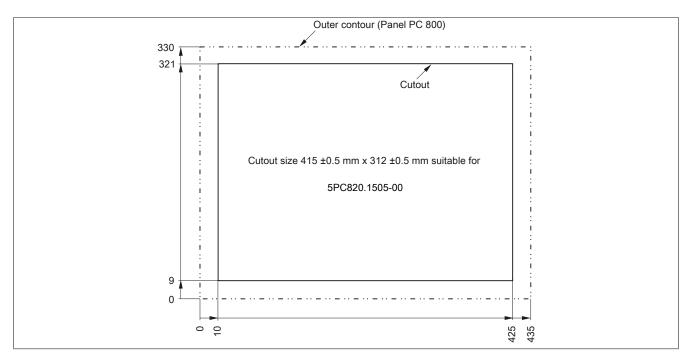

Figure 15: 5PC820.1505-00 - Cutout installation

### 3.1.2 5PC820.1906-00

### 3.1.2.1 General information

- 19" TFT SXGA color display
- Analog resistive touch screen
- · Robust design
- · Compact installation depth
- · Fanless operation
- 1 optional PCI Express compact slot
- 1 optional slide-in compact slot
- · Optional PCI and PCIe slots and optional slide-in drives, optional expansions available

### 3.1.2.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | System units  |        |
| 5PC820.1906-00 | Panel PC 820 19" SXGA color TFT display with touch screen (resistive); connections for 1x RS232, 5x USB 2.0, Smart Display Link/DVI/Monitor, 2x Ethernet 10/100/1000, HDA sound, add-on UPS slot, expandable with 1 or 2 PCI / PCI Express slots, optional CompactPCI Express and slide-in compact slot; IP65 protection (front); order 24 VDC connector for supply voltage separately (screw clamp: 0TB103.9; cage clamp: 0TB103.91) |        |
|                | Required accessories  |        |
|                | CPU boards  |        |
| 5PC800.CCAX-00 | Intel Atom N2800 CPU board, 1.86 GHz, dual core, 533 MHz FSB, 1 MB L2 cache; NM10 chipset; 1 slot for SO-DIMM DDR3 module   |        |
|                | Terminal blocks   |        |
| 0TB103.9       | Connector, 24 VDC, 3-pin female, 3.31 mm² screw clamp, protected against vibration by the screw flange  |        |
| 0TB103.91      | Connector, 24 VDC, 3-pin female, 3.31 mm² cage clamp, protected against vibration by the screw flange   |        |
|                | Main memory   |        |
| 5MMDDR.2048-02 | SO-DIMM DDR3 RAM 2048 MB PC3-8500   |        |
| 5MMDDR.4096-02 | SO-DIMM DDR3 RAM 4096 MB PC3-8500   |        |
|                | Heat sink   |        |
| 5AC803.HS00-04 | PPC800 heat sink for CPU board with Atom dual-core processor N2800.   |        |
|                | Optional accessories  |        |
|                | Adapters  |        |
| 5AC803.BC01-00 | 1 compact PCI Express PPC800 adapter  |        |
| 5AC803.BC02-00 | 1 compact slide-in PPC800 adapter   |        |
|                | Bus units   |        |
| 5AC803.BX01-00 | PPC800 bus; 1 PCI, 1 slide-in slot  |        |
| 5AC803.BX01-01 | PPC800 bus; 1 PCI Express, 1 slide-in slot  |        |
| 5AC803.BX02-00 | PPC800 bus; 2 PCI, 1 slide-in slot  |        |
| 5AC803.BX02-01 | PPC800 bus: 1 PCI, 1 PCI Express, 1 slide-in slot   |        |
|                | Plug-in cards   |        |
| 5ACPCC.ETH0-00 | PClec Ethernet card 1x 10/100/1000 For APC820 and PPC800.   |        |
| 5ACPCC.MPL0-00 | PCIec POWERLINK card, 2 POWERLINK interfaces, 512 kB SRAM; for APC820 and PPC800.   |        |
|                | Expansions  |        |
| 5AC803.SX01-00 | PPC800 expansion; 1 PCI/PCI Express and 1 slide-in slot (bus 5AC803.BX01-00 or 5AC803.BX01-01 required)   |        |
| 5AC803.SX02-00 | PPC800 expansion; 2 PCI/PCI Express and 1 slide-in slot (bus 5AC803.BX02-00 or 5AC803.BX02-01 required)   |        |
|                | Drives  |        |
| 5AC801.ADAS-00 | SATA hard disk adapter for operating a slide-in compact hard disk in a slide-in slot  |        |
| 5AC801.DVDS-00 | DVD-ROM SATA slide-in drive   |        |
| 5AC801.DVRS-00 | DVD-R/RW DVD+R/RW SATA drive, slide-in  |        |
| 5AC801.HDDI-00 | 40 GB slide-in compact SATA hard disk, 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.  |        |
| 5AC801.HDDI-04 | 500 GB slide-in compact SATA hard disk; 24/7 operation. Note: Please see the manual for information about using this hard disk.   |        |
| 5AC801.HDDS-00 | 40 GB slide-in SATA hard disk; 24/7 operation with extended temperature range. Note: Please see the manual for information about using this hard disk.  |        |
| 5AC801.SSDI-04 | 128 GB SATA SSD (MLC), slide-in compact   |        |

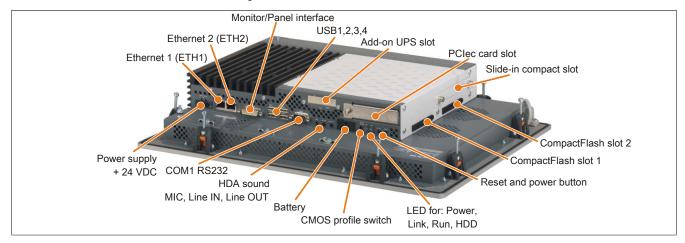

Figure 17: 5PC820.1906-00 - Rear view

# Warning!

Do not remove the fastening screws from the heat sink since this component is connected to the processor and chipset via a thermal coupling. If this connection is interrupted, the B&R Industrial PC must be sent back to the factory for repair. Removing the fastening screws (protected by a seal) voids all warranty.

During operation, surface temperatures of the heat sink may reach 70°C ("hot surface" warning).

## 3.1.2.6 Cutout

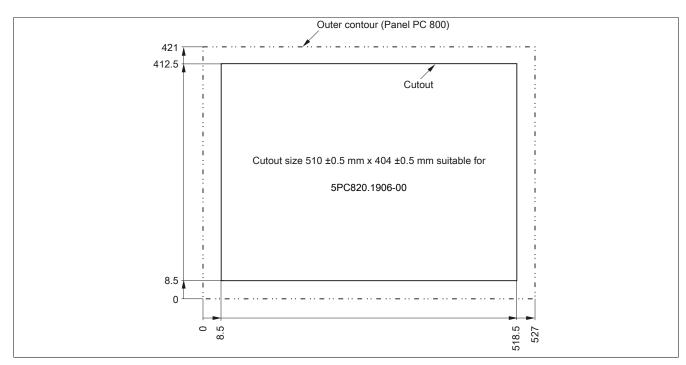

Figure 19: 5PC820.1906-00 - Cutout installation

#### 3.2 NM10 CPU boards

#### 3.2.1 General information

NM10 CPU boards are equipped with one DDR3 memory slot for a maximum of 4 GB. Additionally, the Intel® GMA 3600 is integrated with 384 MB memory and a maximum resolution of 1920 x 1200 pixels (WUXGA).

- Intel® dual-core Atom N2800 1.86 GHz
- Intel® NM10 chipset
- 1x DDR3 memory slot
- Intel® GMA 3600
- · AMI BIOS (UEFI)

Table 39: 5MMDDR.2048-02, 5MMDDR.4096-02 - Technical data

1) Yes, although applies only if all components installed within the complete system have this certification

## Information:

A main memory module can only be replaced at B&R.

## 3.5 Expansions

#### 3.5.1 General information

This is an optional expansion for the PPC800 and has inserts for up to 2 PCI/PCIe slots (only in connection with a bus unit) and a slide-in drive.

#### 3.5.2 Order data

| 5AC801.DVDS-00 | APC810 and PPC800 slide-in DVD-ROM         |  |   |

Table 42: Slide-in slot 1

# Information:

The SATA II interface allows disks to be replaced during operation (hot plugging). In order to take advantage of this capability, this feature must be supported by the operating system.

### 3.6 Bus units

#### 3.6.1 General information

Bus units are compatible with expansions with 1 or 2 card slots and provide support for PCI and/or PCI Express.

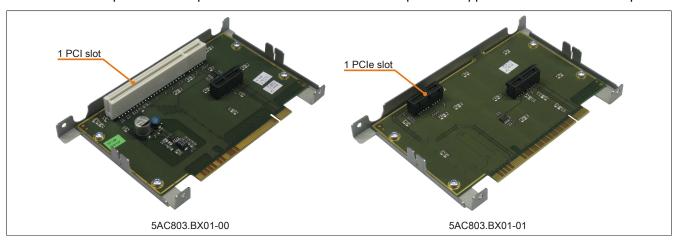

Figure 25: 1-slot bus units

## 3.7 Adapters

### 3.7.1 5AC803.BC01-00

#### 3.7.1.1 General information

This adapter can be used to operate a PCI Express compact plug-in card in PPC800 system units.

### **3.7.1.2 Order data**

| Model number   | Short description   | Figure  |
|----------------|---|---------|
|                | Adapter   | * 14.00 |
| 5AC803.BC01-00 | 1 compact PCI Express PPC800 adapter  |         |
|                | Required accessories  |         |
|                | Interface cards   |         |
| 5ACPCC.ETH0-00 | PCIec Ethernet card 1x 10/100/1000 For APC820 and PPC800.                         |         |
| 5ACPCC.MPL0-00 | PCIec POWERLINK card, 2 POWERLINK interfaces, 512 kB SRAM; for APC820 and PPC800. |         |

Table 45: 5AC803.BC01-00 - Order data

### 3.7.2 5AC803.BC02-00

#### 3.7.2.1 General information

This adapter can be used to operate a slide-in compact drive in PPC800 system units.

### 3.7.2.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | Adapter   |        |
| 5AC803.BC02-00 | 1 compact slide-in PPC800 adapter   |        |
|                | Required accessories  |        |
|                | Drives  |        |
| 5AC801.HDDI-00 | 40 GB SATA slide-in compact hard disk; 24/7 operation with extended temperature range. Note: please see the manual for information about using this hard disk |        |
| 5AC801.HDDI-04 | 500 GB SATA hard disk, slide-in compact, 24/7 operation Note: please see the manual for information about using this hard disk                                |        |
| 5AC801.SSDI-00 | 32 GB SATA SSD (SLC), slide-in compact  |        |
| 5AC801.SSDI-03 | 60 GB SATA slide-in compact SSD (MLC)   |        |
| 5AC801.SSDI-04 | 128 GB SATA SSD (MLC), slide-in compact   |        |

Table 46: 5AC803.BC02-00 - Order data

## 3.8 PClec plug-in cards

#### 3.8.1 General information

PClec plug-in cards are equipped with a sensor that monitors the card's temperature. This is read out in BIOS and in the ADI.

#### 3.8.2 Dimensions

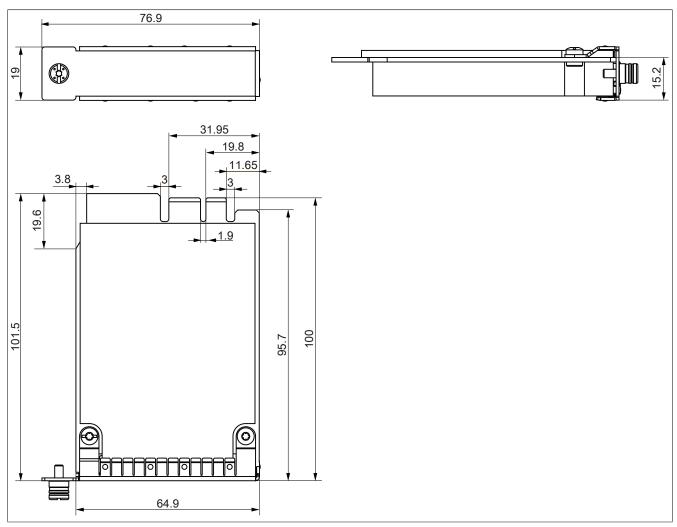

Figure 27: PCI Express compact plug-in cards - Dimensions

## Information:

Only B&R PClec cards that have been specially designed for the Automation PC 820 and Panel PC 800 can be used.

#### 3.8.3 5ACPCC.ETH0-00

#### 3.8.3.1 General information

This PCI Express compact Ethernet card has a 10/100/1000 Mbit/s network connection and can be used as an additional network interface in a PCI Express compact slot.

- · PClec Ethernet card
- 1 network connection (10/100/1000 Mbit/s)

### When used in a PPC800

### Information:

The adapter 5AC803.BC01-00 is required to use PClec plug-in cards.

#### 3.8.3.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | Interface cards   |        |
| 5ACPCC.ETH0-00 | PCIec Ethernet card 1x 10/100/1000 For APC820 and PPC800. |        |

Table 47: 5ACPCC.ETH0-00 - Order data

#### 3.8.3.3 Technical data

| Product ID                 | 5ACPCC.ETH0-00                                   |
|----------------------------|--|
| General information        |  |
| B&R ID code                | 0xAB25   |
| Diagnostics                |  |

| Controller                 | Intel 82574                                      |
| Design                     | Shielded RJ45 port                               |
| Transfer rate              | 10/100/1000 Mbit/s                               |
| Cable length               | Max. 100 m between two stations (segment length) |
| Mechanical characteristics |  |
| Slot                       | PCIec module                                     |

Table 48: 5ACPCC.ETH0-00 - Technical data

### 3.8.3.3.1 Ethernet interface

## Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

## Technical data • Individual components

| Ethernet interface (ETH¹¹) |  |  |                       |  |
|----------------------------|--|--|-----------------------|--|
| Controller                 | Intel 82574                                  |  | Female RJ45 connector |  |
| Cabling                    | S/STP (Cat 5e)                               |  | 4                     |  |
| Transfer rate              | 10/100/1000 Mbit/s <sup>2)</sup>             |  | <u> </u>              |  |
| Cable length               | Max. 100 m (min. Cat 5e)                     |  |                       |  |
| Speed LED                  | On   | Off  |                       |  |
| Green                      | 100 Mbit/s                                   | 10 Mbit/s <sup>3)</sup>                              |                       |  |
| Orange                     | 1000 Mbit/s                                  | -  |                       |  |
| Link LED                   | On   | Off  |                       |  |
| Orange                     | Link (Ethernet network connection available) | Activity (blinking - da-<br>ta transfer in progress) | Link LED Speed LED    |  |

Table 49: 5ACPCC.ETH0-00 - Ethernet interface

- 1) The interfaces, etc. available on the device or module have been numbered as such for easy identification. This numbering may differ from that used by the particular operating system.
- 2) Switching takes place automatically.
- 3) The 10 Mbit/s transfer speed / connection is only present if the IF slot Link LED is also lit at the same time.

#### **Driver support**

A special driver is required in order to operate the Intel 82574 Ethernet controller. Drivers for approved operating systems are available in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>).

## Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

### 3.8.4 5ACPCC.MPL0-00

### 3.8.4.1 General information

This PCI Express compact POWERLINK card is equipped with two POWERLINK interfaces, two station number switches and a card number switch for differentiating between modules. This PCI Express compact POWERLINK card can be used as an additional POWERLINK interface in a PCI Express compact slot.

- PClec POWERLINK card
- · 2 POWERLINK interfaces
- · 2 station number switches
- · Card number switch

### When used in a PPC800

## Information:

The adapter 5AC803.BC01-00 is required to use PClec plug-in cards.

### 3.8.4.2 Order data

| Model number   | Short description   | Figure |  |  |  |  |  |
|----------------|---|--------|--|--|--|--|--|
|                | Interface cards   |        |  |  |  |  |  |
| 5ACPCC.MPL0-00 | PCIec POWERLINK card, 2 POWERLINK interfaces, 512 kB SRAM; for APC820 and PPC800. | 3 4    |  |  |  |  |  |

Table 50: 5ACPCC.MPL0-00 - Order data

| Slot                                     | PCIec module  |  |

Table 51: 5ACPCC.MPL0-00 - Technical data

### 3.8.4.3.1 POWERLINK interface

## Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

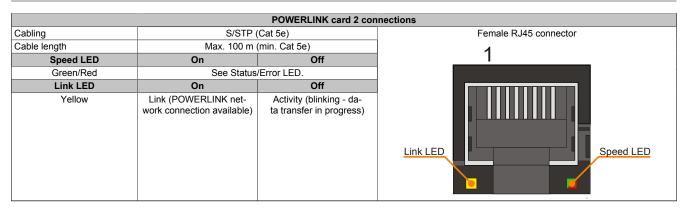

Table 52: 5ACPCC.MPL0-00 - POWERLINK interface

### 3.8.4.3.2 LED status indicators

The Status/Error LED is a green and red dual LED. The LED status can have different meanings depending on the operating mode.

### **Ethernet TCP/IP mode**

The interface can be operated purely as an Ethernet TCP/IP interface.

| Green - Status | Description  |
|----------------|--|
| On             | POWERLINK interface operating purely as an Ethernet TCP/IP interface |

Table 53: Status/Error LED - Ethernet TCP/IP operating mode

### **POWERLINK V1**

| LED status indicators                                   |             |   |  |  |
|---|-------------|---|--|--|
| Green Red   |             | Status of the POWERLINK station   |  |  |
| On Off The POWERLINK station is running with no errors. |             | The POWERLINK station is running with no errors.  |  |  |
| Off   | On          | A fatal system error has occurred. The error type can be read using the PLC logbook. An irreparable problem has occurred. The system cannot properly carry out its tasks. This state can only be changed by resetting the module. |  |  |
| Blinking a  | alternately | The POWERLINK managing node has failed. This error code can only occur when operated as a controlled node.  |  |  |
| Off   | Blinking    | System failure. The red blinking LED signals a certain type of error using a blink code (see section "System failure error codes" on page 75).  |  |  |

Table 54: Status/Error LED - POWERLINK V1 operating mode

### **POWERLINK V2**

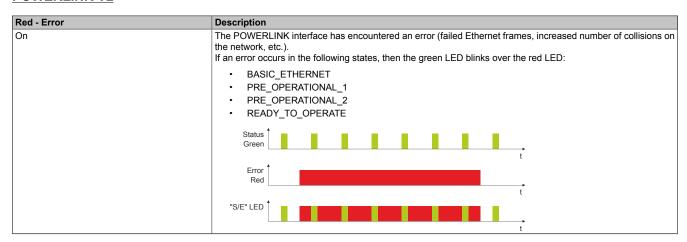

Table 55: Status/Error LED as Error LED - POWERLINK V2 operating mode

| Green - Status                                  | Description   |
|---|---|
| Off<br>NOT_ACTIVE                               | Managing node (MN) The bus is monitored for POWERLINK frames. If a frame is not received within the configured time window (timeout), the interface goes directly into the PRE_OPERATIONAL_1 state (single flash). If POWERLINK communication is detected before this time passes, however, the interface goes directly into the BASIC_ETHERNET state (flickering).     |
|   | Controlled node (CN)  The bus is monitored for POWERLINK frames. If a frame is not received within the configured time window (timeout), the interface goes directly into the BASIC_ETHERNET state (flickering).  If POWERLINK communication is detected before this time passes, however, the interface goes directly into the PRE_OPERATIONAL_1 state (single flash). |
| Green flickering (approx. 10 Hz) BASIC_ETHERNET | The interface is in the BASIC_ETHERNET state and being operated purely as an Ethernet TCP/IP interface.   |
|   | Managing node (MN) This state can only be changed by resetting the interface.   |
|   | Controlled node (CN) If POWERLINK communication is detected while in this state, the interface goes into the PRE_OPERATIONAL_1 state (single flash).  |
| Single flash (approx. 1 Hz) PRE_OPERATIONAL_1   | The interface status is in the PRE_OPERATIONAL_1 state.   |
|   | Managing node (MN)  The MN starts "reduced cycle" operation. Collisions are allowed on the bus. Cyclic communication is not yet taking place.   |
|   | Controlled node (CN) The CN waits until it receives an SoC frame and then goes into the PRE_OPERATIONAL_2 state (double flash).   |
| Double flash (approx. 1 Hz) PRE_OPERATIONAL_2   | The interface status is in the PRE_OPERATIONAL_2 state.   |
|   | Managing node (MN)  The MN begins cyclic communication (cyclic input data is not yet evaluated). The CNs are configured in this state.  |
|   | Controlled node (CN) In this state, the interface is normally being configured by the manager. Once complete, a command changes the state to PRE_OPERATIONAL_3 (triple flash).  |
| Triple flash (approx. 1 Hz) READY_TO_OPERATE    | The interface status is in the READY_TO_OPERATE state.  |
|   | Managing node (MN) Normal cyclic and asynchronous communication. Received PDO data is ignored.  |
|   | Controlled node (CN)  The configuration of the interface is complete. Normal cyclic and asynchronous communication.  The PDO data sent corresponds to the PDO mapping. Cyclic data is not yet evaluated, however.   |
| On<br>OPERATIONAL                               | The interface status is in the OPERATIONAL state.   |
| Blinking (approx. 2.5 Hz)<br>STOPPED            | The interface status is in the STOPPED state.   |
|   | Managing node (MN) This status is not possible for the MN.  |
|   | Controlled node (CN)  No output data is produced, and no input data is received. It is only possible to enter or leave this state after the manager has given the appropriate command.  |

Table 56: Status/Error LED as Status LED - POWERLINK operating mode

## System failure error codes

Incorrect configuration or defective hardware can cause a system failure error.

The error code is indicated by the red error LED using four switch-on phases. The switch-on phases have a duration of either 150 ms or 600 ms. Error code output is repeated cyclically after 2 seconds.

Key: • ... 150 ms - ... 600 ms

Delay ... 2 sec. delay

| Error description | Error code indicated by red status LED |   |   |   |       |   |   |   |   |       |
|-------------------|--|---|---|---|-------|---|---|---|---|-------|
| RAM error         | •                                      | • | • | - | Pause | • | • | • | - | Pause |
| Hardware error    | -                                      | • | • | - | Pause | - | • | • | - | Pause |

Table 57: Status/Error LED as Error LED - System failure error codes

### 3.8.4.3.3 POWERLINK station number

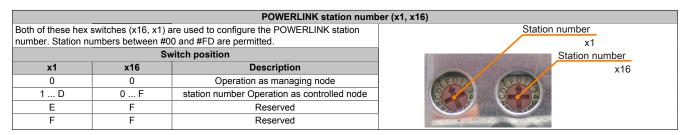

Table 58: POWERLINK station number (x1, x16)

#### 3.8.4.3.4 Card number switch

The one-digit card number (\$1 - \$F) is configured using the card number switch. This number is used to identify the module.

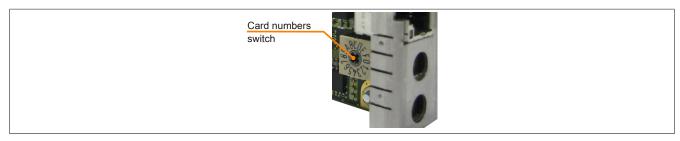

Figure 28: POWERLINK card - 2-port node number switch

If the card is operated with Automation Runtime, then the card number switch must match the slot number in Automation Studio.

Figure 29: Integrating the POWERLINK plug-in card in Automation Studio

### 3.8.4.3.5 SRAM

The 2-port 5ACPCC.MPL0-00 POWERLINK card has 512 kB SRAM.

#### 3.9 Drives

#### 3.9.1 5AC801.HDDI-00

#### 3.9.1.1 General information

This 40 GB slide-in compact hard disk is specified for 24-hour operation, features an extended temperature range and can be used in APC810 and PPC800 system units.

### When used in a PPC800

## Information:

The adapter 5AC803.BC02-00 is required for the use of slide-in compact drives.

When inserted in the slide-in compact slot, the slide-in compact drive is accessed internally via SATA.

#### 3.9.1.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | Drives  |        |
| 5AC801.HDDI-00 | 40 GB SATA slide-in compact hard disk; 24/7 operation with extended temperature range. Note: please see the manual for information about using this hard disk |        |

Table 59: 5AC801.HDDI-00 - Order data

## 3.9.1.3 Technical data

# Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

Table 60: 5AC801.HDDI-00 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) With 8760 POH (power-on hours) per year and  $70^{\circ}\text{C}$  surface temperature.
- 3) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- 4) Standard operation refers to 333 POH (power-on hours) per month.
- 5) 24-hour operation refers to 732 POH (power-on hours) per month.
- 6) Humidity gradient: Maximum 15% per hour.
- 7) Slide-in compact installation.

### 3.9.1.4 Temperature humidity diagram

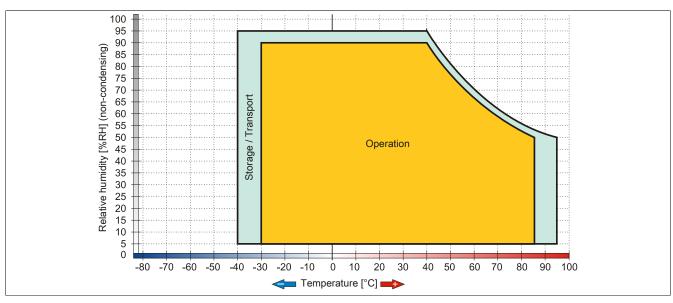

Figure 30: 5AC801.HDDI-00 - Temperature humidity diagram

### 3.9.2 5AC801.HDDI-03

### 3.9.2.1 General information

This 250 GB slide-in compact hard disk is specified for 24-hour operation and can be used in APC810 and PPC800 system units.

### When used in a PPC800

## Information:

The adapter 5AC803.BC02-00 is required for the use of slide-in compact drives.

When inserted in the slide-in compact slot, the slide-in compact drive is accessed internally via SATA.

#### 3.9.2.2 Order data

Table 64: 5AC801.HDDI-04 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) With 8760 POH (power-on hours) per year and 25°C surface temperature.
- 3) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- 4) Standard operation refers to 333 POH (power-on hours) per month.
- 5) 24-hour operation refers to 732 POH (power-on hours) per month.
- 6) Humidity gradient: Maximum 20% per hour.
- 7) Slide-in compact installation.

### 3.9.3.4 Temperature humidity diagram

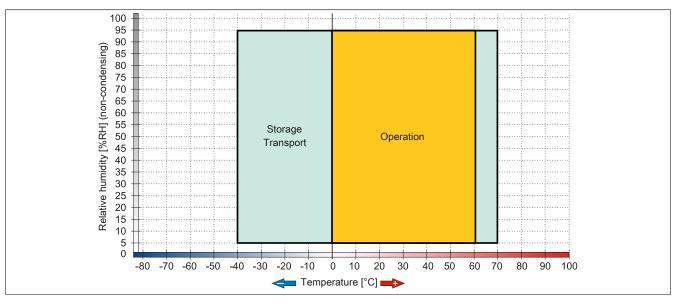

Figure 32: 5AC801.HDDI-04 - Temperature humidity diagram

### 3.9.4 5AC801.SSDI-00

### 3.9.4.1 General information

This 32 GB slide-in compact SSD (solid-state drive) is based on single-level cell (SLC) technology and can be used in APC810 and PPC800 system units.

### When used in a PPC800

### Information:

The adapter 5AC803.BC02-00 is required for the use of slide-in compact drives.

When inserted in the slide-in compact slot, the slide-in compact drive is accessed internally via SATA.

#### 3.9.4.2 Order data

### 3.9.4.3 Technical data

# Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

# Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

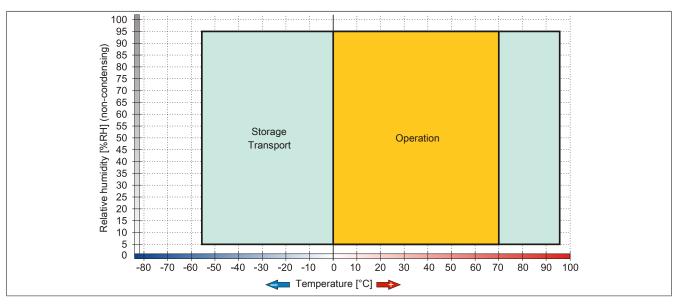

Figure 37: 5AC801.SSDI-02 - Temperature humidity diagram

### 3.9.7 5AC801.SSDI-03

### 3.9.7.1 General information

This 60 GB slide-in compact SSD (solid-state drive) is based on multi-level cell (MLC) technology and can be used in APC810 and PPC800 system units.

### When used in a PPC800

## Information:

The adapter 5AC803.BC02-00 is required for the use of slide-in compact drives.

When inserted in the slide-in compact slot, the slide-in compact drive is accessed internally via SATA.

### 3.9.9 5AC801.SSDI-05

### 3.9.9.1 General information

This 256 GB slide-in compact SSD (solid-state drive) is based on multi-level cell (MLC) technology and can be used in APC810 and PPC800 system units.

### When used in a PPC800

## Information:

The adapter 5AC803.BC02-00 is required for the use of slide-in compact drives.

When inserted in the slide-in compact slot, the slide-in compact drive is accessed internally via SATA.

### 3.9.9.3 Technical data

# Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

## 3.9.9.4 Temperature humidity diagram

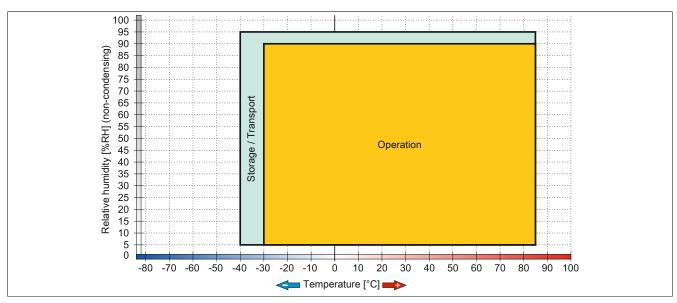

Figure 42: 5AC801.SSDI-05 - Temperature humidity diagram

### 3.9.10 5MMSSD.0060-00

### 3.9.10.1 General information

This 60 GB slide-in compact SSD (solid-state drive) is based on multi-level cell (MLC) technology and can be used as a replacement or accessory part.

- Replacement for 5AC801.SSDI-01 or 5AC901.CSSD-01 SSD drives
- Accessory for the APC510 (optional SSD for I/O board)

### 3.9.10.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | Drives  |        |
| 5MMSSD.0060-00 | 60 GB SATA SSD (MLC); replacement for 5AC801.SSDI-01 and 5AC901.CSSD-01; SSD for 5PP5IO.GMAC-00; note: please see the manual for information about using this SSD |        |

Table 78: 5MMSSD.0060-00 - Technical data

- Yes, although applies only if all components installed within the complete system have this certification IOPS: Random read and write input/output operations per second. 1) 2)

## 3.9.10.4 Temperature humidity diagram

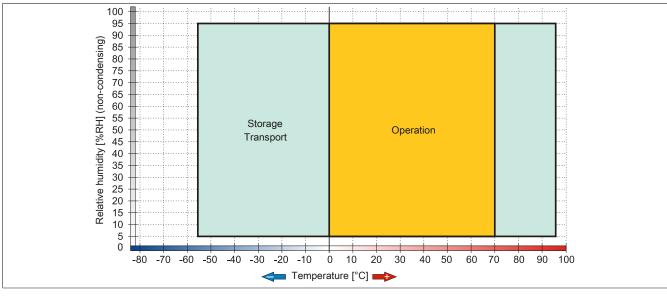

Figure 43: 5MMSSD.0060-00 - Temperature humidity diagram

### 3.9.11 5MMSSD.0060-01

### 3.9.11.1 General information

This 60 GB slide-in compact SSD (solid-state drive) is based on multi-level cell (MLC) technology and can be used as a replacement or accessory part.

- Replacement for 5AC801.SSDI-03 or 5AC901.CSSD-03 SSD drives
- Accessory for the APC510 (optional SSD for I/O board)

### 3.9.11.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | Drives  |        |
| 5MMSSD.0060-01 | 60 GB SATA SSD (MLC); replacement for 5AC801.SSDI-03 and 5AC901.CSSD-03; SSD for 5PP5IO.GMAC-00; note: please see the manual for information about using this SSD |        |

Table 79: 5MMSSD.0060-01 - Order data

### 3.9.11.3 Technical data

# Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

### 3.9.13 5MMSSD.0180-00

### 3.9.13.1 General information

This 180 GB slide-in compact SSD (solid-state drive) is based on multi-level cell (MLC) technology and can be used as a replacement or accessory part.

- Replacement for 5AC801.SSDI-02 or 5AC901.CSSD-02 SSD drives
- Accessory for the APC510 (optional SSD for I/O board)

### 3.9.13.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | Drives  |        |
| 5MMSSD.0180-00 | 180 GB SATA SSD (MLC); replacement part for 5AC801.SSDI-02 and 5AC901.CSSD-02; SSD for 5PP5IO.GMAC-00; note: please see the manual for information about using this SSD |        |

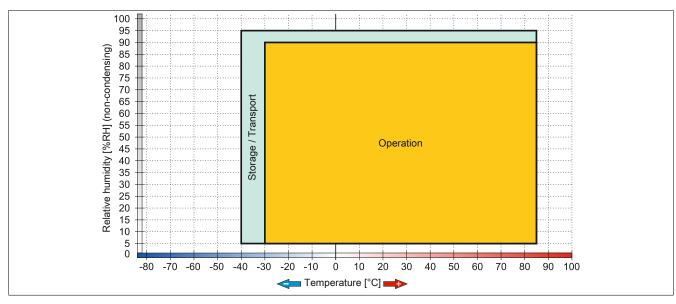

Figure 49: 5MMSSD.0256-00 - Temperature humidity diagram

#### 3.9.15 5AC801.ADAS-00

#### 3.9.15.1 General information

The hard disk adapter is a slide-in adapter that allows slide-in compact drives to be installed and operated on a B&R Industrial PC. This adapter can be used in APC810 and PPC800 system units with a slide-in drive slot.

### When used in a PPC800

## Information:

The expansion 5AC803.SX01-00 or 5AC803.SX02-00 is required in order to use slide-in drives.

#### 3.9.15.2 Order data

| Height                     | 172.5 mm       |
| Depth                      | 150 mm         |
| Weight                     | 328 g          |

Table 88: 5AC801.ADAS-00 - Technical data

<sup>1)</sup> Yes, although applies only if all components installed within the complete system have this certification

#### 3.9.16 5AC801.HDDS-00

#### 3.9.16.1 General information

This 40 GB hard disk is specified for 24-hour operation, features an extended temperature range and can be used in APC810 and PPC800 system units with a slide-in drive slot.

## Information:

A slide-in drive can be inserted or removed at any time.

#### When used in a PPC800

## Information:

The expansion 5AC803.SX01-00 or 5AC803.SX02-00 is required in order to use slide-in drives.

When inserted in the slide-in slot, the slide-in drive is accessed internally via SATA and USB.

#### 3.9.16.2 Order data

Table 90: 5AC801.HDDS-00 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) With 8760 POH (power-on hours) per year and  $70^{\circ}\text{C}$  surface temperature.
- 3) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- 4) Standard operation refers to 333 POH (power-on hours) per month.
- 5) 24-hour operation refers to 732 POH (power-on hours) per month.
- 6) Humidity gradient: Maximum 15% per hour.
- 7) Slide-in compact installation.

## 3.9.16.4 Temperature humidity diagram

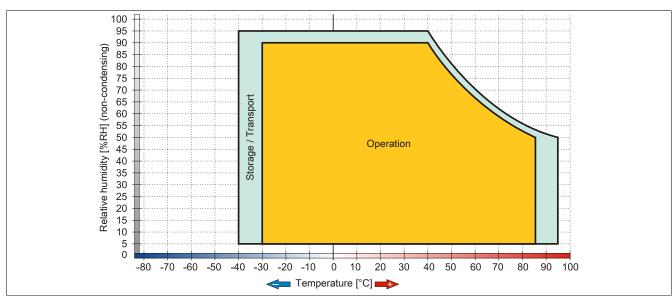

Figure 50: 5AC801.HDDS-00 - Temperature humidity diagram

#### 3.9.17 5AC801.DVDS-00

#### 3.9.17.1 General information

The DVD-ROM slide-in drive can be used in APC810 and PPC800 system units with a slide-in drive slot.

### Information:

A slide-in drive can be inserted or removed at any time.

#### When used in a PPC800

## Information:

The expansion 5AC803.SX01-00 or 5AC803.SX02-00 is required in order to use slide-in drives.

When inserted in the slide-in slot, the slide-in drive is accessed internally via SATA and USB.

### Table 94: 5AC801.DVRS-00 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) RAM drivers are not provided by the manufacturer. Support of RAM function by "Nero" burning software (model number 5SWUTI.0000-00) or other burning software packages or drivers from third-party providers.
- 3) Temperature specifications refer to operation at 500 meters. The maximum ambient temperature is typically derated by 1°C per 1000 meters (starting at 500 meters above sea level).
- 4) Drive surface temperature.

## 3.9.18.4 Temperature humidity diagram

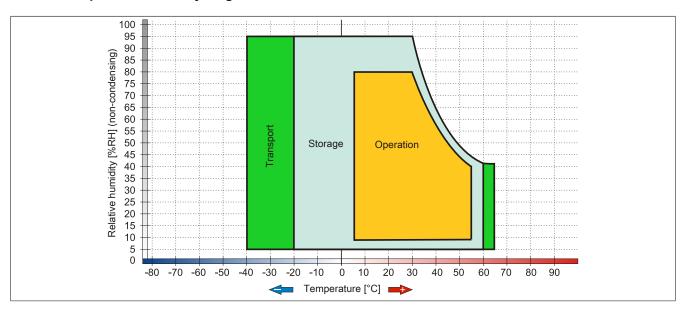

Figure 52: 5AC801.DVRS-00 - Temperature humidity diagram

#### 3.9.19 5ACPCI.RAIC-05

#### 3.9.19.1 General information

This SATA RAID controller supports RAID level 0 and 1 and can be inserted in a PCI slot. The 250 GB hard disks that are used are specified for 24-hour operation (24x7).

- SATA RAID controller
- RAID level 0 (striped) and 1 (mirrored)
- 2 SATA hard disk drives (suitable for 24-hour operation)
- · Only requires 1 PCI slot
- · Transfer rates up to 150 MB/s

Figure 53: PCI SATA RAID controller

## Information:

The PCI SATA RAID controller cannot be used in place of a universal power supply (UPS). If the operating system is not shut down properly, then this will be detected as an error state (with RAID 1 sets) at the next system startup and a complete rebuild is performed. If 250 GB of memory are used, this generally takes approximately 250 minutes (configurable) to complete.

### 3.9.19.2 Order data

Table 96: 5ACPCI.RAIC-05 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- Standard operation refers to 333 POH (power-on hours) per month.
- 4) 24-hour operation refers to 732 POH (power-on hours) per month.

- 5) Humidity gradient: Maximum 30% per hour.
- 6) Operation in areas prone to vibration and shock can affect performance negatively (reduction of transfer rate).
- 7) Installed in PCI slot.

#### 3.9.19.4 Temperature humidity diagram

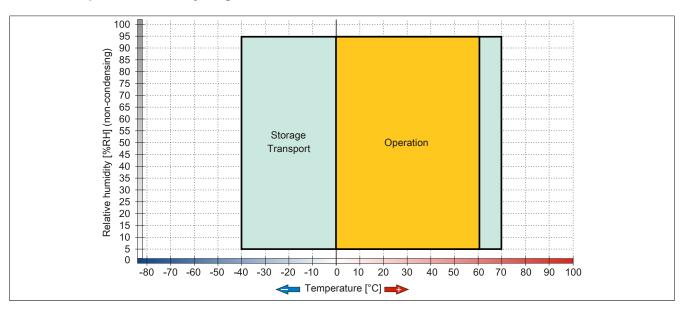

Figure 54: 5ACPCI.RAIC-05 - Temperature humidity diagram

#### 3.9.19.5 Driver support

Special drivers are necessary for operating the PCI SATA RAID controller. Drivers for supported and approved operating systems are available in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>).

.NET-based SATA Raid™ serial ATA RAID management software can also be found on the B&R website.

### Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

## 3.9.19.6 Configuration

For information about configuring a SATA RAID set, see 3 "Installation", section 8 "Configuring a SATA RAID set" on page 149.

### 3.9.19.7 Replacing a HDD

A hard drive can be easily replaced in the event of an error when using the RAID1 (mirroring) configuration without having to reinstall the system. The 250 GB 5MMHDD.0250-00 SATA HDD is available as a replacement hard disk.

For information about performing a replacement, see "Replacing a PCI SATA RAID hard disk in a RAID 1 set" on page 303.

#### 3.9.20 5ACPCI.RAIC-06

#### 3.9.20.1 General information

This SATA RAID controller supports RAID level 0 and 1 and can be inserted in a PCI slot. The 500 GB hard disks that are used are specified for 24-hour operation (24x7).

- SATA RAID controller
- RAID level 0 (striped) and 1 (mirrored)
- 2x 500 GB SATA hard disks (suitable for 24-hour operation)
- Only requires 1 PCI slot
- · Transfer rates up to 150 MB/s

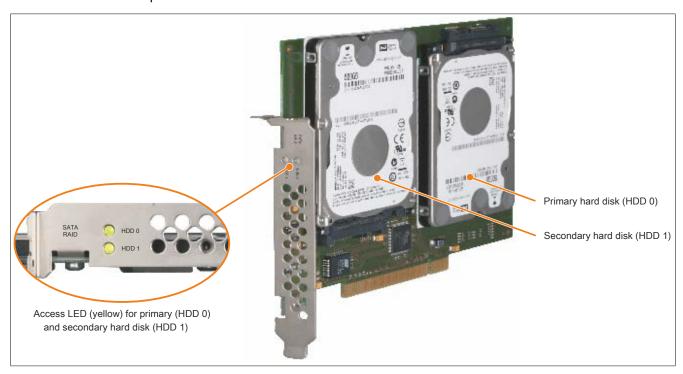

Figure 55: PCI SATA RAID controller

## Information:

The PCI SATA RAID controller cannot be used in place of a universal power supply (UPS). If the operating system is not shut down properly, then this will be detected as an error state (with RAID 1 sets) at the next system startup and a complete rebuild is performed. If 500 GB of memory are used, this generally takes approximately 500 minutes (configurable) to complete.

Table 98: 5ACPCI.RAIC-06 - Technical data

- Yes, although applies only if all components installed within the complete system have this certification
- 2) Technical data for a hard disk.
- 3) With 8760 POH (power-on hours) per year and 25°C surface temperature.
- 4) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- 5) Standard operation refers to 333 POH (power-on hours) per month.
- 6) 24-hour operation refers to 732 POH (power-on hours) per month.
- Humidity gradient: Maximum 20% per hour.
- 8) Operation in areas prone to vibration and shock can affect performance negatively (reduction of transfer rate).
- 9) Installed in PCI slot.

#### 3.9.20.4 Temperature humidity diagram

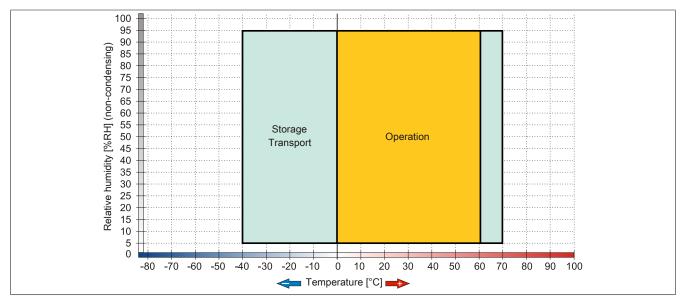

Figure 56: 5ACPCI.RAIC-06 - Temperature humidity diagram

#### 3.9.20.5 Driver support

Special drivers are necessary for operating the PCI SATA RAID controller. Drivers for supported and approved operating systems are available in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>).

.NET-based SATA Raid™ serial ATA RAID management software can also be found on the B&R website.

### Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

## 3.9.20.6 Configuration

For information about configuring a SATA RAID set, see 3 "Installation", section 8 "Configuring a SATA RAID set" on page 149.

### 3.9.20.7 Replacing a HDD

A hard drive can be easily replaced in the event of an error when using the RAID1 (mirroring) configuration without having to reinstall the system. The 500 GB 5MMHDD.0500-00 SATA HDD is available as a replacement hard disk.

For information about performing a replacement, see "Replacing a PCI SATA RAID hard disk in a RAID 1 set" on page 303.

#### 3.9.21 5MMHDD.0250-00

#### 3.9.21.1 General information

This 250 GB hard disk can be used as a replacement part or accessory.

- · 250 GB hard disk
- Replacement hard disk for a 5AC801.HDDI-03 hard disk or a 5ACPCI.RAIC-05 RAID controller
- APC510 accessory (optional hard disk for the I/O board)
- Specified for 24-hour operation
- · S.M.A.R.T. support

#### 3.9.21.2 Order data

| Model number   | Short description  | Figure |
|----------------|--|--------|

| 5MMHDD.0250-00 | 250 GB SATA hard disk; replacement for 5AC801.HDDI-03 and 5ACPCI.RAIC-05; note: please see the manual for information about using this hard disk |        |

Table 99: 5MMHDD.0250-00 - Order data

#### 3.9.21.3 Technical data

## Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

## Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

| Product ID                      | 5MMHDD.0250-00                                      |

Table 100: 5MMHDD.0250-00 - Technical data

- Yes, although applies only if all components installed within the complete system have this certification
- 1) 2) With 8760 POH (power-on hours) per year and 25°C surface temperature.
- 3) Temperature values at an elevation of 305 meters. The temperature specification must be reduced linearly by 1°C every 305 meters. The temperature increase and decrease can be a maximum of 20°C per hour.
- Standard operation refers to 333 POH (power-on hours) per month. 4)
- 24-hour operation refers to 732 POH (power-on hours) per month. 5)
- Humidity gradient: Maximum 30% per hour.

## 3.9.21.4 Temperature humidity diagram

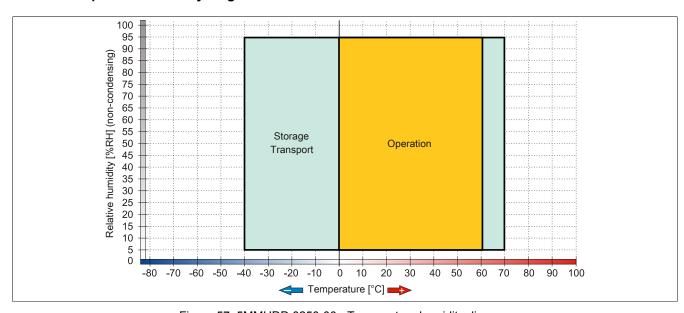

Figure 57: 5MMHDD.0250-00 - Temperature humidity diagram

#### 3.9.22 5MMHDD.0500-00

#### 3.9.22.1 General information

This 500 GB hard disk can be used as a replacement part or accessory.

- 500 GB hard disk
- Replacement hard disk for a 5AC801.HDDI-04 / 5AC901.CHDD-01 hard disk or a 5ACPCI.RAIC-05 RAID controller
- APC510 accessory (optional hard disk for the I/O board)
- · Specified for 24-hour operation
- S.M.A.R.T. support

#### 3.9.22.3 Technical data

## Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

### Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

| Product ID                      | 5MMHDD.0500-00                         |

### 3.9.22.4 Temperature humidity diagram

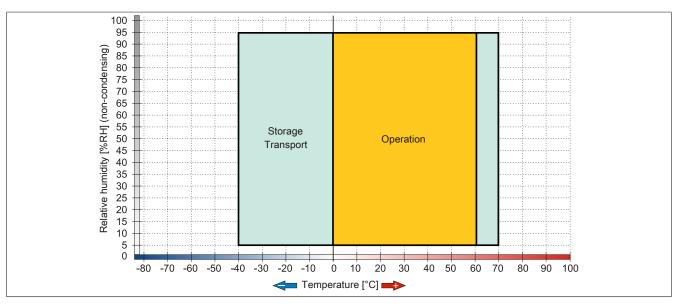

Figure 58: 5MMHDD.0500-00 - Temperature humidity diagram

#### 3.10 Fan kit

## Information:

Fans are necessary when using components that must work within certain temperature limits, e.g. DVD combos and PCI cards.

Fan and dust filters are subject to wear and must be checked with appropriate frequency and cleaned or replaced when not functioning properly (e.g. due to dirt and grime).

#### 3.10.1 5AC803.FA01-00

#### 3.10.1.1 General information

This fan kit is an optional addition for PPC800 system units without an expansion.

Table 108: 5AC803.FA03-00 - Technical data

# **Chapter 3 • Installation**

### 1 Installation

## Danger!

- All supply voltage must be disconnected before removing device covers or components or removing/installing accessories, hardware or cables.
- The power cable must be disconnected from the device and from the voltage supply.
- Before the device can be connected to the power supply and turned on, all covers, components, accessories, hardware and cables must be installed or attached.

B&R Industrial PCs are best mounted in a wall cutout using the retaining clips or clamping blocks found on the housing (designs may vary).

## 1.1 Important installation information

- · Environmental conditions must be taken into consideration.
- When installed in an enclosed housing, enough space must be available for air to circulate sufficiently.
- This device must be mounted to a flat, clean and burr-free surface.
- This device is only certified for operation in closed rooms.
- This device must not be subjected to direct sunlight.
- · Ventilation holes must not be covered.
- This device must be mounted in one of the approved orientations.
- The wall or control cabinet must be able to withstand four times the total weight of the device.
- The flex radius of connected cables (DVI, SDL, USB, etc.) must not be exceeded.
- This device must be mounted in a position that minimizes glare on the screen.
- This device must be mounted in a position and orientation that make viewing as easy as possible for the operator.

## 1.2 Installation with clamping blocks

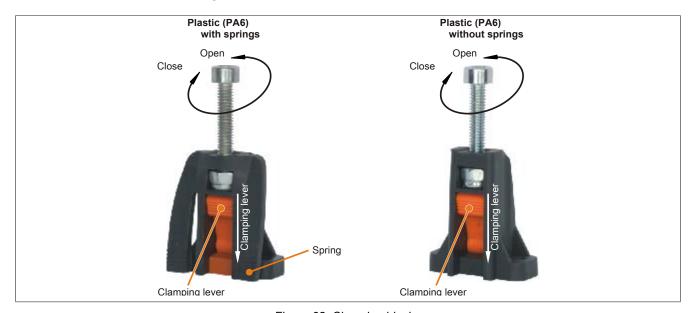

Figure 62: Clamping blocks

Clamping blocks are designed to clamp a maximum thickness of 10 mm and minimum thickness of 2 mm.

A hex key (3 mm) is needed to tighten and loosen the screws. The maximum torque when tightening the clamp is 0.5 Nm.

Devices must be installed on flat, clean and burr-free surface; uneven areas can cause damage to the display when the screws are tightened or intrusion of dust and water.

## 1.3 Mounting orientation

The PPC800 must be mounted as described in the following sections.

## 1.3.1 Mounting orientation 0° and +/- 45°

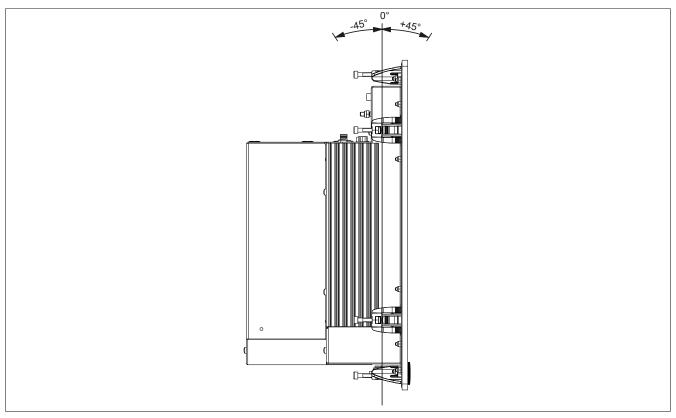

Figure 63: Mounting orientation 0° and +/- 45°

In order to facilitate natural air circulation, devices must be mounted according to the spacing indicated in the section "Spacing for air circulation" on page 139.

## 1.3.2 Mounting orientation with 5AC801.DVRS-00

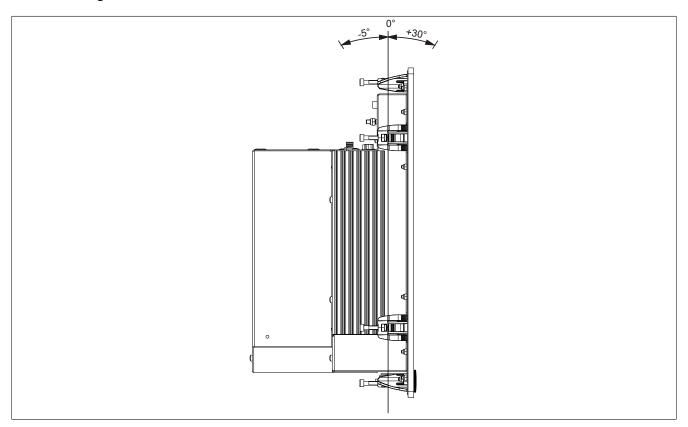

Figure 64: Mounting orientation with 5AC801.DVRS-00

In order to facilitate natural air circulation, devices must be mounted according to the spacing indicated in the section "Spacing for air circulation" on page 139.

## 1.3.3 Mounting orientation with 5AC801.DVDS-00

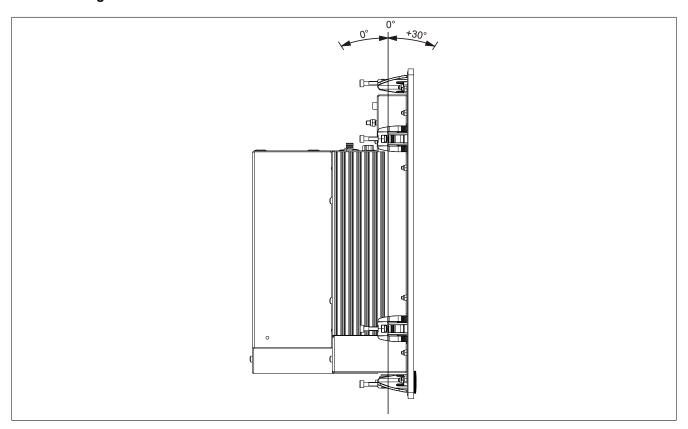

Figure 65: Mounting orientation with 5AC801.DVDS-00

In order to facilitate natural air circulation, devices must be mounted according to the spacing indicated in the section "Spacing for air circulation" on page 139.

## 1.4 Spacing for air circulation

In order to guarantee sufficient air circulation, allow the specified amount of space above, below, to the side and behind the Panel PC 800 devices. The minimum specified spacing is indicated in the following diagram. This applies to all Panel PC 800 variants.

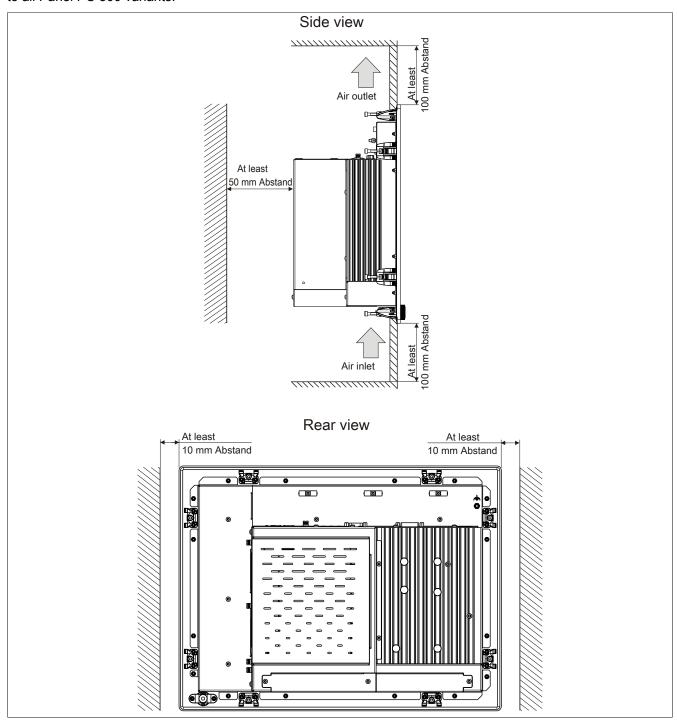

Figure 66: Spacing for air circulation

## Information:

The spacing specifications for air circulation are based on the worst-case scenario for operation at the maximum specified ambient temperature (see "Temperature specifications" in the chapter "Technical data").

If the spacing specifications for air circulation cannot be adhered to, then the maximum specified temperatures for the temperature sensors (see "Temperature sensor positions" in the chapter "Technical data") must be monitored by the user and appropriate measures taken if they are exceeded.

## 2 Cable connections

Flex radius specifications must be taken into account when installing or connecting cables.

## Information:

The maximum torque for the locating screws is 0.5 Nm.

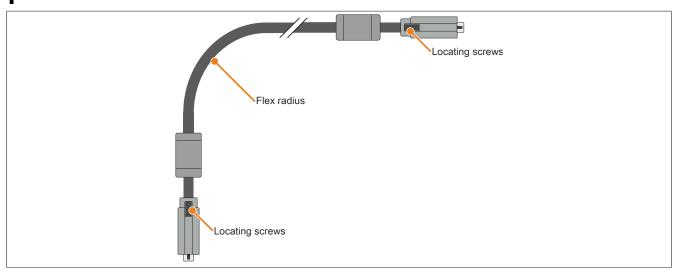

Figure 67: Flex radius - Cable connection (sample image)

## Information:

The specified flex radius is listed in the technical data for the respective cable.

## 3 Grounding concept

Functional ground is a current path of low impedance between electrical circuits and ground. It is used, for example, to improve immunity to disturbances and not necessarily as a protective measure. It therefore serves only to deflect disturbances, not to provide any kind of protection against electric shock.

The functional ground on the device has 2 connections:

- · Power supply
- · Ground connection

To guarantee safe conductance of electric disturbances, the following points should be observed:

- The device should be connected to the central grounding point in the control cabinet using the shortest route possible.
- A cable with a minimum cross section of 2.5 mm<sup>2</sup> per connection should be used. If a cable with wire end sleeves is connected to the 0TB103.9 or 0TB103.91 terminal block, then a cable with maximum 1.5 mm<sup>2</sup> per connection is possible.
- Note the line shielding concept; all connected data cables are used as shielded lines.

Functional ground is indicated on the B&R device with the following symbol:

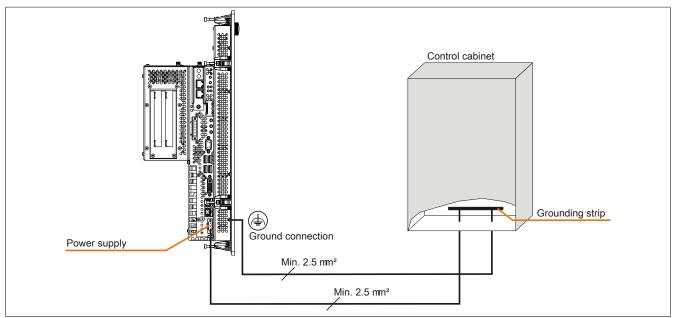

Figure 68: Grounding concept

## 4 General instructions for performing temperature testing

The purpose of these instructions is to explain general procedures for performing application-specific temperature testing on B&R Industrial PCs and Power Panels. Nevertheless, these instructions are meant to serve only as a guideline.

#### 4.1 Procedure

In order to obtain accurate results, the testing conditions should match the conditions in the field. This means that for the duration of the temperature tests, the target application should be running, the PC should be installed in the control cabinet that will be used, etc.

In addition, a temperature sensor should be installed for the device being tested to provide live monitoring of the ambient temperature. In order to obtain accurate measurements, this sensor should be installed at a distance of 5 to 10 cm from the B&R Industrial PC near the air intake (not near the exhaust).

All B&R Industrial PCs and Power Panels are equipped with internal temperature sensors. These are installed in different locations for each series. The number of sensors and the temperature limits also vary from series to series.

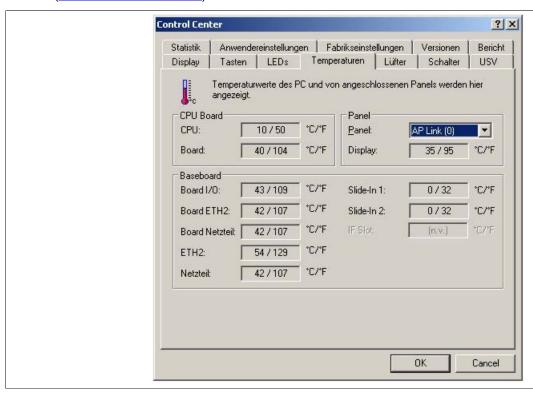

For information about the locations of temperature sensors and the maximum specified values, please see section "Temperature sensor positions" in chapter 2 "Technical data".

To ensure that the thermal situation is evaluated reliably, a minimum of 8 hours is recommended for testing.

### 4.2 Evaluating temperatures in Windows operating systems

#### 4.2.1 Evaluating with the B&R Control Center

The B&R Control Center can be used to evaluate the temperatures. Temperatures can be viewed on the "Temperatures" property page. The B&R Control Center is available at no cost in the Downloads section of the B&R website (<a href="https://www.br-automation.com">www.br-automation.com</a>). The B&R Control Center uses the B&R Automation Device Interface (ADI).

A separate application can be developed if it is necessary to collect historical data.

## Information:

Software development kits such as the ADI .NET SDK are available on the B&R website (<u>www.br-automation.com</u>).

#### 4.2.2 Evaluating with the BurnInTest tool from Passmark

If a separate application is not created or used to evaluate the temperature, then B&R recommends using the BurnInTest software tool from Passmark.

Standard and Professional versions of BurnInTest are available. In addition to the software package, there are also various loopback plugs (serial, parallel, USB, etc.) and test CDs/DVDs available. The exact software and loopback plugs used will determine the corresponding load that can be generated on the system and peripheral devices.

## Information:

Loopback plugs are also available from Passmark. More information is available at <a href="https://www.passmark.com">www.passmark.com</a>.

The following screenshots are based on Passmark BurnInTest Pro V4 and a 2-slot APC810 with DVD.

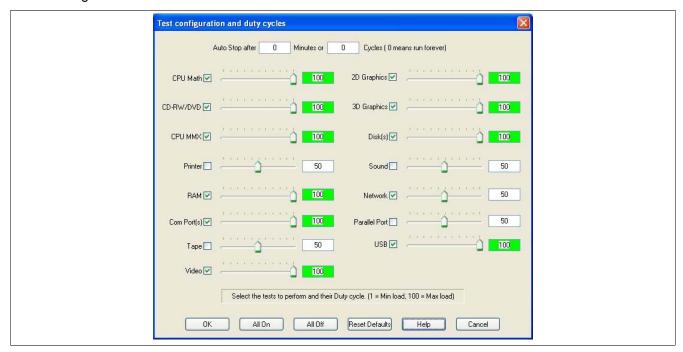

Figure 69: Settings for Passmark BurnInTest Pro V4 and a 2-slot APC810 with DVD

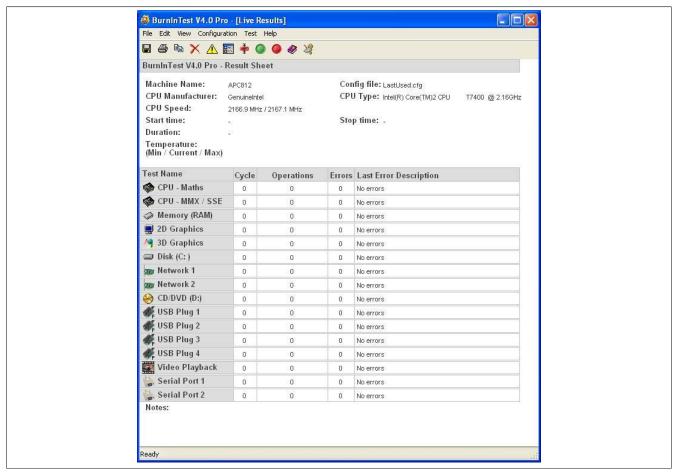

Figure 70: Test overview of a 2-slot APC810 with DVD

The respective test properties may need to be fine-tuned depending on the availability of a loopback plug and DVDs.

## Information:

USB flash drives can also be used if a USB loopback plug is not available. The USB flash drives must be detected as formatted drives in Windows. The test USB must then be deselected, and the USB flash drives must be configured as the testing device in the disk properties.

## Information:

Serial loopback plugs are relatively easy to create. Simply connect several pins on the serial interface with wires.

## 4.3 Evaluating temperatures in operating systems other than Windows

For applications that don't use Windows, temperatures can be evaluated with the help of the B&R implementation guide. In addition to the implementation guide, there are also programs available in MS-DOS.

The implementation guide only describes device-specific functions and not the main functions of the example programs.

If code from the example programs is used, it is important to observe the notes in the implementation guide regarding TODO statements, I/O access functions, etc.

## Information:

Example programs and implementation guides for all B&R Industrial PCs and Power Panels are available at no cost from the B&R website (www.br-automation.com).

### 4.4 Evaluating the measurement results

The maximum temperature value recorded by each sensor must not exceed the temperature limits specified in the user's manuals.

If the temperature tests cannot be performed in a climate-controlled chamber, they can still be performed in an office environment. In this case, however, it is necessary to measure the ambient temperature. Experience at B&R has shown that values measured on passive systems (systems without a fan kit) can be projected linearly based on the ambient temperature. In order to be able to project the temperature values for systems with a fan kit, the fans must be running. It is also important to take values such as speed into consideration.

If the temperature tests are performed in a climate-controlled chamber with fans, the fans will cool the devices and skew the results. Measurement results for passive devices would therefore be unusable in this case. In order to obtain accurate results in climate-controlled chambers with fans, the fans must be turned off and the device must be allowed to run for a sufficient amount of time (several hours) before beginning the test.

#### Example using a 2-slot APC810

The following example is only valid if the instructions for installation and mounting orientation provided in the user's manual are observed.

| Temperature sensor  | Measured temperature | Projected temperatu | re   |
|---------------------|----------------------|---------------------|------|
| Ambient temperature | 20°C                 | 35°C                | 45°C |
| CPU                 | 48°C                 | 63°C                | 73°C |
| CPU board           | 51°C                 | 66°C                | 76°C |
| Board I/O           | 51°C                 | 66°C                | 76°C |
| Board ETH2          | 52°C                 | 67°C                | 77°C |
| Board power supply  | 51°C                 | 66°C                | 76°C |
| ETH2                | 65°C                 | 80°C                | 90°C |
| Power supply        | 51°C                 | 66°C                | 76°C |

Table 109: Evaluation example using a 2-slot APC810

## **5 Connection examples**

The following example provides an overview of the configuration options for connecting external panels with the PPC800. The following question will be answered:

· Which panels can be operated using the monitor/panel interface?

### 5.1 One office TFT via RGB onboard

An office TFT (analog RGB) with a maximum resolution of 1920 x 1200 (WUXGA) is connected to the integrated RGB interface (onboard).

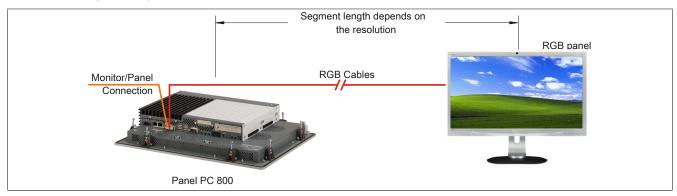

Figure 71: One office TFT via RGB

### 6 Touch screen calibration

B&R touch screen devices are equipped with a touch controller that supports hardware calibration. As a result, devices are pre-calibrated when delivered. This is an advantageous feature when replacing devices of the same model or type since it avoids having to recalibrate the new device. Nevertheless, calibrating the device is still recommended in order to achieve the best results and to better adapt the touch screen to the user's preferences.

Regardless of this, the touch screen will have to be calibrated once during or following the installation of the touch screen driver.

#### 6.1 Windows XP Professional

After installing Windows XP Professional on the device, the touch screen driver must be installed in order to operate the touch screen. The necessary driver is available in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>).

#### 6.2 Windows XP Embedded

After starting Windows XP Embedded on the device for the first time (first boot agent), the touch screen driver must be installed in order to operate the touch screen. The necessary driver is available in the Downloads section of the B&R website www.br-automation.com.

#### 6.3 Windows Embedded Standard 2009

After starting Windows Embedded Standard 2009 on the Panel PC or Power Panel for the first time (first boot agent), the corresponding touch screen driver is installed automatically.

On all other devices, the touch screen driver must be installed in order to operate the touch screen. The necessary driver is available in the Downloads section of the B&R website (www.br-automation.com).

#### 6.4 Windows 7 Professional / Ultimate

After installing Windows 7 on the device, the touch screen driver must be installed in order to operate the touch screen. The necessary driver is available in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>).

### 6.5 Windows Embedded Standard 7 Embedded / Premium

A touch screen driver will be installed automatically if a touch controller is detected during the Windows Embedded Standard 7 installation.

The touch screen driver must be installed manually if a touch controller was not detected during the Windows Embedded Standard 7 setup or if an Automation Panel 800/900/9x3/9xD has been connected after setup. The necessary driver is available in the Downloads section of the B&R website (www.br-automation.com).

#### 6.6 Windows CE

Windows CE starts the touch screen calibration sequence during its first boot in its default configuration (i.e. delivered state).

#### 6.7 Automation Runtime / Visual Components

The touch screen must be calibrated once for the customer application when commissioning the device and project.

## 7 Connecting USB peripheral devices

## 7.1 Locally on the PPC800

Many different peripheral USB devices can be connected to the 5 USB interfaces on the Panel PC 800. These can each handle a load of up to 1 A. The maximum transfer rate is USB 2.0.

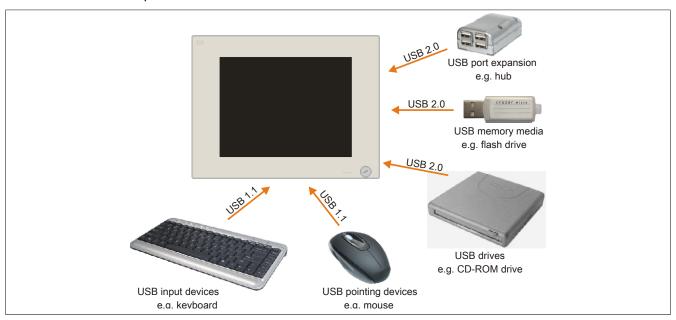

Figure 72: Local connection of USB peripheral devices on the PPC800

## 8 Configuring a SATA RAID set

## Information:

The following software description is valid for PCI SATA controllers 5ACPCI.RAIC-01, 5ACPCI.RAIC-03, 5ACPCI.RAIC-05 and 5ACPCI.RAIC-06.

The "RAID Configuration Utility" in BIOS must be started in order to make the necessary settings. After POST, pressing <Ctrl+S> or <F4> opens the RAID BIOS.

```
SiI 3512A SATA Raid BIOS Version 4.3.79
Copyright (C) 1997-2006 Silicon Image, Inc.

Press <Ctrl+S> or F4 to enter RAID utility
0 ST96023AS 55 GB
1 ST96023AS 55 GB
```

Figure 73: Open the RAID Configuration Utility

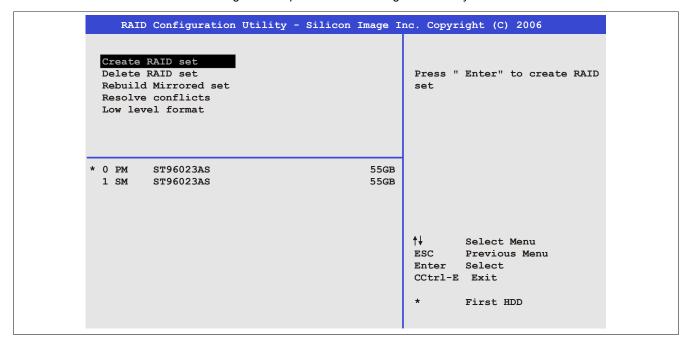

Figure 74: RAID Configuration Utility - Menu

The following keys can be used once inside BIOS Setup:

| Key      | Function                                   |
|----------|--|
| Cursor ↑ | Moves to the previous item                 |
| Cursor ↓ | Moves to the next item                     |
| Enter    | Selects an item or opens a submenu         |
| ESC      | Returns to the previous menu               |
| Ctrl+E   | Saves any changed settings and exits setup |

Table 110: BIOS-relevant keys in the RAID Configuration Utility

#### 8.1 Create RAID set

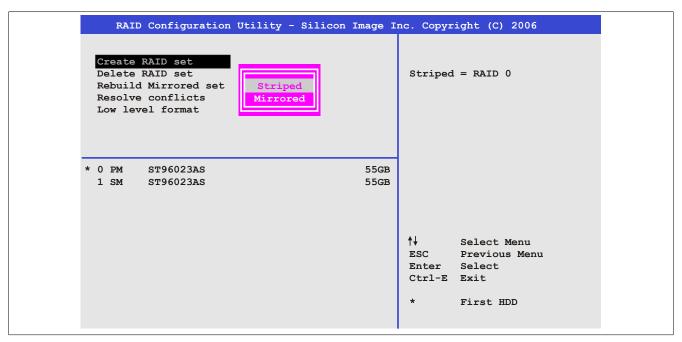

Figure 75: RAID Configuration Utility - Menu

The RAID system can be set up as "Striped" = RAID0 or "Mirrored" = RAID1 using the "Create RAID set" menu option.

## 8.2 Create RAID set - Striped

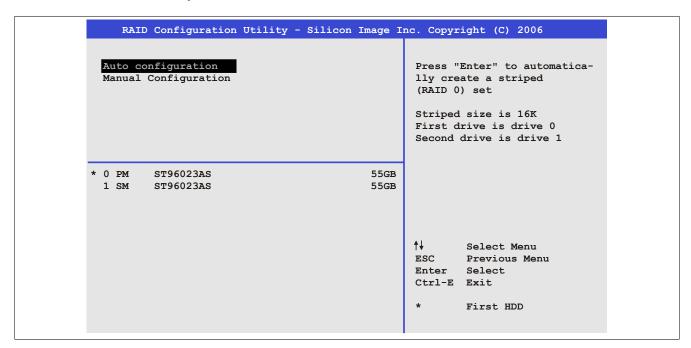

Figure 76: RAID Configuration Utility - Create RAID set - Striped

#### "Auto configuration"

Auto configuration optimizes all settings.

#### "Manual configuration"

Allows the first and second HDD to be specified as well as the "Chunk size" (= block size, application-dependent).

#### 8.3 Create RAID set - Mirrored

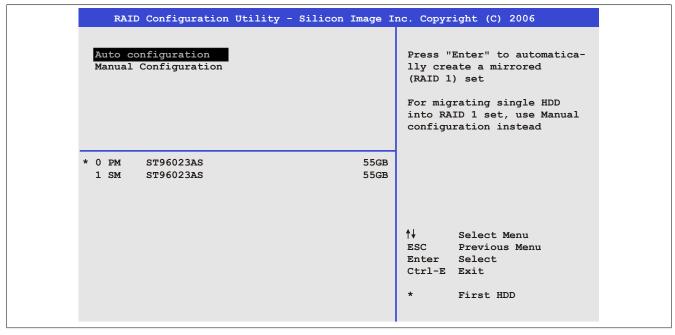

Figure 77: RAID Configuration Utility - Create RAID set - Mirrored

#### "Auto configuration"

Auto configuration optimizes all settings.

## "Manual configuration"

Allows the "Source" and "Target" HDD to be specified as well as whether a rebuild (mirror) should be performed immediately (takes approx. 50 minutes).

#### 8.4 Delete RAID set

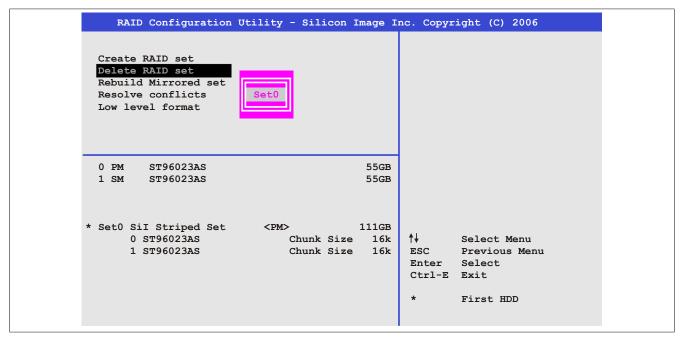

Figure 78: RAID Configuration Utility - Delete RAID set

An existing RAID set can be deleted using the "Delete RAID set" menu option.

#### 8.5 Rebuild mirrored set

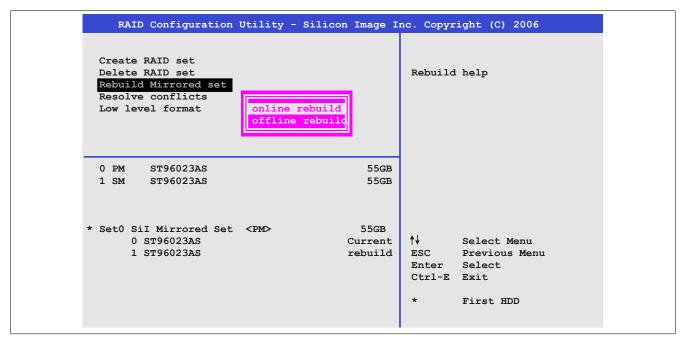

Figure 79: RAID Configuration Utility - Rebuild mirrored set

The "Rebuild mirrored set" menu option can be used to restart a rebuild procedure in a RAID 1 set if an error occurs, if a rebuild procedure was interrupted or if a hard disk was replaced.

If "Online rebuild" is selected, then the rebuild is executed during operation after the system is booted. The installed SATA RAID configuration program may display an event pop-up message: SATA Raid detected a new event before restarting the rebuild. The entire rebuild takes approximately 50 minutes.

If "Offline rebuild" is selected, then a rebuild is performed immediately before the operating system is started (duration depends on the respective memory size).

### 8.6 Resolve conflicts

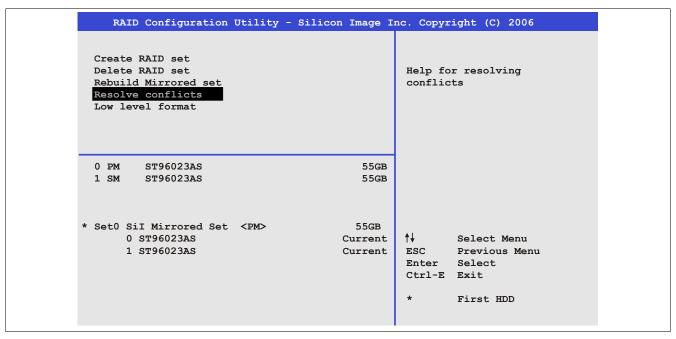

Figure 80: RAID Configuration Utility - Resolve conflicts

Conflicts in a RAID set can be resolved using the "Resolve conflicts" menu option. This function is only available if the status of the hard disk is "Conflict".

#### 8.7 Low level format

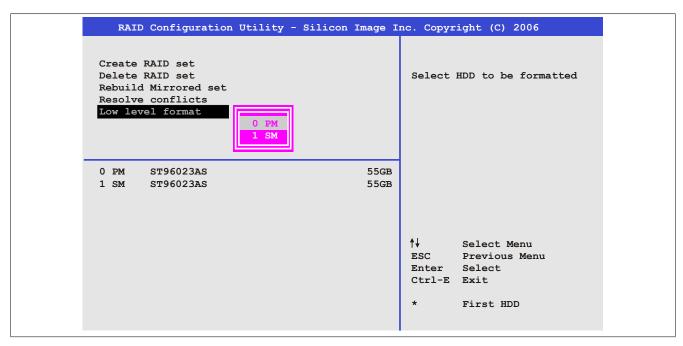

Figure 81: RAID Configuration Utility - Low level format

Individual hard disks can be configured using the "Low level format" menu option. This can only be done if a RAID set is not configured. A low level format of a hard disk takes approx. 40 minutes.

## 9 User tips for increasing the Display lifespan

## 9.1 Backlight

The service life of the backlight is specified by its "half-brightness time". For example, a specified operating time of 50,000 hours means that the display would still retain 50% of its brightness after this time.

#### 9.1.1 How can the service life of the backlight be extended?

- By setting the display brightness to the lowest value that is still comfortable for the eyes
- · By using dark images
- By reducing the brightness by 50%, which can result in an approximately 50% increase in the half-brightness time

## 9.2 Image sticking

Screen burn-in refers to the "burning in" of a static image on a display after being displayed for a prolonged period of time. Nevertheless, static images are not the only cause of screen burn-in. Screen burn-in is also referred to as burn-in effect, image retention, memory effect, memory sticking or ghost image.

There are basically two types:

- Area type: This type of screen burn-in is indicated by a dark gray image. The effect will disappear if the display is switched off for a long period of time.
- Line type: This type of screen burn-in can cause lasting damage.

#### 9.2.1 What causes screen burn-in?

- · Static images
- · No screensaver
- Sharp transitions in contrast (e.g. black/white)
- · High ambient temperatures
- Operation outside of specifications

#### 9.2.2 How can screen burn-in be avoided?

- · By constantly changing between static and dynamic images
- · By avoiding excessive brightness differences between foreground and background elements
- · By using colors with similar brightness
- · By using complementary colors in follow-up images
- By using a screensaver

## 10 Pixel errors

## Information:

Displays may contain defective pixels (dead/stuck pixels) that result from the manufacturing process. These flaws are not grounds for reclamation or initiating a warranty claim.

## 11 Known problems/issues

- Using two different types of CompactFlash cards can cause problems with Automation PCs and Panel PCs. For example, it is possible that one of the two cards is not detected during system startup. This is caused by different startup speeds. CompactFlash cards with older technology require significantly more time during system startup than CompactFlash cards with newer technology. This behavior occurs near the end of the time frame provided for startup. The problem described can occur because the startup time for the CompactFlash cards fluctuates due to the different components being used. Depending on the CompactFlash cards being used, this error may occur never, sometimes or always.
- Only RGB is available on the monitor/panel interface.
- If the PClec slot is operated with an exclusive IRQ, then PCI Express root port 2 must be disabled in BIOS.
  Disabling PCI Express root port 2 turns off the PCle to PATA bridge that is using the same PIRQ line as
  the PClec slot. As a result, the PClec slot can again be used exclusively, but the CF1 and CF2 slots are
  disabled. Only one SATA device can be used as a mass storage device in the slide-in or compact slide-in
  slot. In addition, ARwin must be configured for shared IRQ operation (see ARwin help documentation).
- The Intel NM10 chipset no longer supports AC'97 sound.

# Chapter 4 • Software

## 1 BIOS options

### Information:

The following diagrams and BIOS menu items including descriptions refer to BIOS version 1.11. It is therefore possible that these diagrams and BIOS descriptions will not correspond with the BIOS version actually installed.

#### 1.1 General information

BIOS is an acronym for "Basic Input/Output System". It is the most basic standardized interface between the user and the system (hardware). The BIOS system used in this B&R Industrial PC was developed by American Megatrends Inc.

The BIOS Setup utility can be used to modify basic system configuration settings. These settings are stored in CMOS and EEPROM memory (as a backup).

CMOS data is buffered by a battery (if present) and continues to remain stored on the B&R Industrial PC even when the power is turned off (no 24 VDC supply).

### 1.2 BIOS setup and boot procedure

BIOS is immediately activated when switching on the power supply or pressing the power button on the B&R Industrial PC. The system checks if the setup data from EEPROM memory is "OK". If the data is "OK", then it is transferred to CMOS. If the data is "Not OK", then the CMOS data is checked to see whether it is valid. An error message is output if the CMOS data contains errors, and the boot procedure can be continued by pressing <F1>. To prevent an error message from appearing at each restart, the BIOS Setup utility can be opened by pressing <Del>. The settings can then be re-saved.

BIOS reads the system configuration information, checks and configures the system with the Power-On Self-Test (POST).

When these "preliminaries" are finished, BIOS looks for an operating system on the available data storage devices (hard drive, floppy drive, etc.). BIOS then launches the operating system and hands over to it the control of system operations.

To enter BIOS Setup, the <Del> key must be pressed after the USB controller has been initialized as soon as the following message appears on the screen (during POST): "Press DEL or ESC to enter Setup"

Figure 82: Boot screen

## 1.2.1 BIOS Setup keys

The following keys are enabled during POST:

## Information:

Key signals from USB keyboards will only be registered after the USB controller has been initialized.

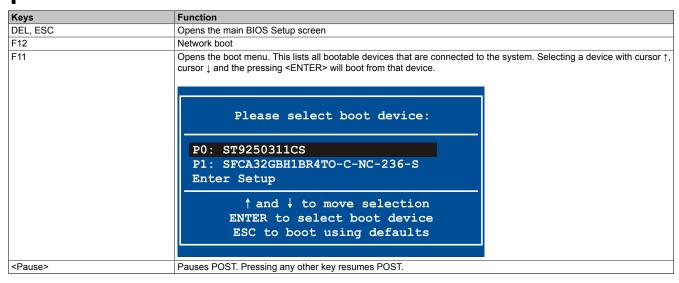

Table 111: BIOS-relevant keys for POST

The following keys can be used once inside BIOS Setup:

| Key           | Function   |
|---------------|--|
| F1            | Opens general help information                                 |
| Cursor ↑      | Moves to the previous item                                     |
| Cursor ↓      | Moves to the next item   |
| Cursor ←      | Moves to the previous item                                     |
| Cursor →      | Moves to the next item   |
| +-            | Changes the setting for the selected function                  |
| Enter         | Changes to the selected menu / Confirms selection              |
| Home 1 / PgUp | Jumps to the first BIOS menu item or object                    |
| End / PgDn    | Jumps to the last BIOS menu item or object                     |
| F2            | Resets any changes   |
| F9            | Loads and configures CMOS default values for all BIOS settings |
| F10           | Saves and exits  |
| ESC           | Exits a submenu  |

Table 112: BIOS-relevant keys

#### 1.3 Main

The main BIOS Setup screen appears immediately after the <Del> button is pressed during startup.

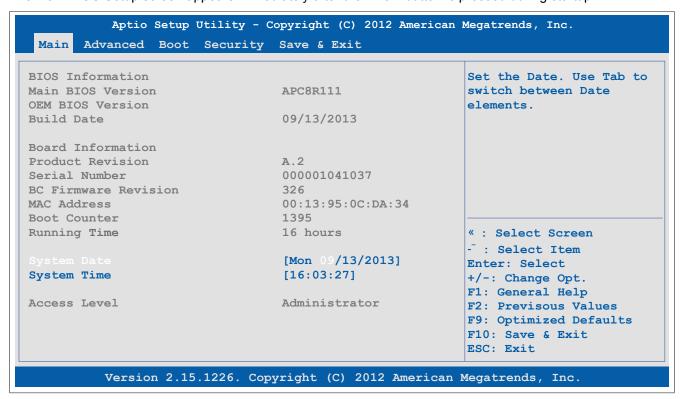

Figure 83: NM10 Main - Übersicht

| BIOS setting      | Function  | Configuration options   | Effect   |
|-------------------|---|-------------------------|--|
| BIOS information  |   |                         |  |
| Main BIOS version | Displays the BIOS version   | None                    | -  |
| OEM BIOS version  | Displays the OEM BIOS version   | None                    | -  |
| Build date        | Displays the date the BIOS was created  | None                    | -  |
| Board information |   |                         |  |
| Product revision  | Displays the hardware revision of the CPU   | None                    | -  |
|                   | board   |                         |  |
| Serial number     | Displays the serial number of the CPU board   | None                    | -  |
| BC firmware rev.  | Displays the firmware revision of the CPU board controller  | None                    | -  |
| ETH1 MAC address  | Displays the assigned MAC address for the ETH1 interface  | None                    | -  |
| Boot counter      | Displays the boot counter; each restart increases the counter by one (max. 16777215)                                | None                    | -  |
| Running time      | Displays the runtime in hours (max. 65535)  | None                    | -  |
| System date       | The currently configured system date. This is buffered by the CMOS battery when the system is switched off.         | Changes the system date | Sets the system date in the format Month:Day:Year (mm:dd:yyyy)   |
| System time       | The currently configured system time setting. This is buffered by the CMOS battery when the system is switched off. | Changes the system time | Sets the system time in the format Hour:Minute:Second (hh:mm:ss) |
| Access Level      | Indicates the current access level  | None                    | -  |

Table 113: NM10 Main - Configuration options

#### 1.4 Advanced

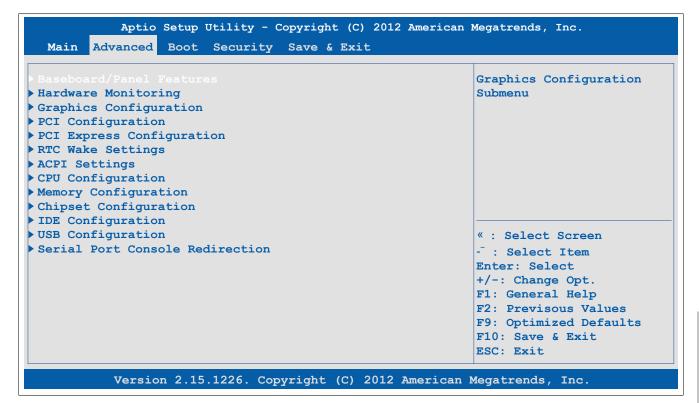

Figure 84: NM10 Advanced - Übersicht

| BIOS setting                    | Function  | Configuration options | Effect  |
|---------------------------------|---|-----------------------|---|
| Baseboard/Panel fea-<br>tures   | Configures mainboard and panel features   | Enter                 | Opens the submenu See "Baseboard/Panel features" on page 161              |
| Hardware monitoring             | Displays the current voltage levels as well as the CPU and baseboard temperatures | Enter                 | Opens the submenu See "Hardware monitoring" on page 165                   |
| Graphics configuration          | Configures graphics settings  | Enter                 | Opens the submenu See "Graphics configuration" on page 160                |
| PCI configuration               | Configures PCI devices  | Enter                 | Opens the submenu See "PCI configuration" on page 166                     |
| PCI Express configura-<br>tion  | Configures PCI Express devices  | Enter                 | Opens the submenu See "PCI Express configuration" on page 168             |
| RTC wake settings               | Configures the start time when switched off                                       | Enter                 | Opens the submenu See "RTC wake settings" on page 174                     |
| ACPI settings                   | Configures ACPI settings  | Enter                 | Opens the submenu<br>See "ACPI settings" on page 175                      |
| CPU configuration               | Configures CPU settings   | Enter                 | Opens the submenu See "CPU configuration" on page 176                     |
| Memory configuration            | Configures main memory settings   | Enter                 | Opens the submenu See "Memory configuration" on page 178                  |
| Chipset configuration           | Configures chipset settings   | Enter                 | Opens the submenu See "Chipset configuration" on page 179                 |
| IDE configuration               | Configures IDE settings   | Enter                 | Opens the submenu See "IDE configuration" on page 180                     |
| USB configuration               | Configures USB settings   | Enter                 | Opens the submenu See "USB configuration" on page 181                     |
| Serial port console redirection | Configures the remote console   | Enter                 | Opens the submenu<br>See "Serial port console redirection" on page<br>182 |

Table 114: NM10 Advanced - Overview

#### 1.4.1 Graphics configuration

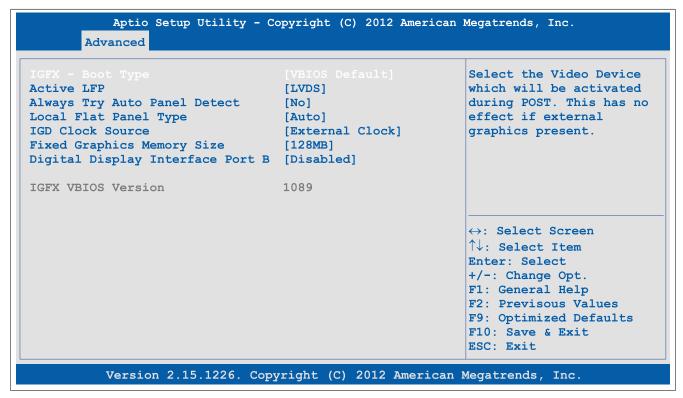

Figure 85: NM10 Advanced - Graphics Configuration

| BIOS setting              | Function  | Configuration options                     | Effect   |
|---------------------------|---|---|--|
| IGFX - Boot type          | Option for selecting which display device han-    | VBIOS default                             | Uses VBIOS default settings                                |
|                           | dles graphics output during booting               | CRT                                       | Uses the CRT (cathode ray tube) channel                    |
|                           |   | LFP                                       | Uses the LFP (local flat panel) channel                    |
|                           |   | EFP                                       | Uses the EFP (external flat panel) channel                 |
|                           |   | CRT + LFP                                 | Uses the CRT and LFP channels                              |
|                           |   | CRT + EFP                                 | Uses the CRT and EFP channels                              |
|                           |   | LFP + EFP                                 | Uses the LFP and EFP channels                              |
| Active LFP                | Option for selecting the active LFP (local flat   | No LVDS                                   | Does not use the LVDS channel                              |
|                           | panel) channel                                    | LVDS                                      | Uses an LVDS channel                                       |
| Always try auto panel de- | Option for configuring automatic panel detection  | No  | LFP not configured automatically                           |
| tect 1)                   |   | Yes                                       | LFP configured automatically                               |
| Local flat panel type 1)  | Option for manually setting the LFP type          | Auto                                      | Automatically defines the LFP type based on EDID data      |
|                           |   | VGA (640 x 480) to<br>WUXGA (1920 x 1200) | Manual setting of resolution from 640 x 480 to 1920 x 1200 |
|                           |   | Customized EDID 1 - 3                     | User-specific settings for the LFP type                    |
| IGD clock source          | Option for selecting the IGD (integrated graphics | External clock                            | External clock   |
|                           | display) clock source                             | Internal clock                            | Internal clock   |
| Fixed graphics memory     | Option for setting a fixed amount of memory that  | 128 MB                                    | Allocates 128 MB of main memory                            |
| size                      | can be used for the internal graphics controller  | 256 MB                                    | Allocates 256 MB of main memory                            |
| Digital display interface | Option for selecting the display device that is   | Disabled                                  | No display device connected                                |
| port B                    | connected to display port B or defining the port  | Display port                              | Configures the port as a display port                      |
|                           | as an HDMI/DVI or display port                    | HDMI/DVI                                  | Configures the port as an HDMI/DVI port                    |
| IGFX VBIOS version        | Displays the IGFX BIOS version                    | None                                      | -  |

Table 115: NM10 Advanced - Graphics configuration - Configuration options

1) These settings are only possible if Active LFP is set to LVDS.

#### 1.4.2 Baseboard/Panel features

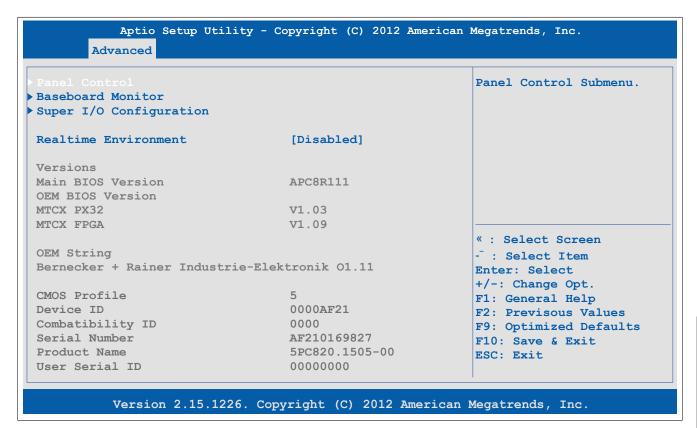

Figure 86: NM10 Advanced - Baseboard/Panel Features

| BIOS setting            | Function   | Configuration options  | Effect   |
|-------------------------|--|--|--|
| Panel control           | Displays device-specific information for the connected panel   | Enter  | Opens the submenu<br>See "Panel control features" on page 162  |
| Baseboard monitor       | Displays device-specific information for the CPU board   | Enter  | Opens the submenu<br>See"Baseboard monitor" on page 163        |
| Super I/O configuration | Configures special interface settings  | Enter  | Opens the submenu<br>See "Super I/O configuration" on page 164 |
| Real-time environment   | Configures settings for real-time operating sys-   | Disabled   | Disables this function   |
|                         | tems such as ARwin   | Enabled Disables hyperthreading, EIST and CPU thermal monitoring | Enables this function  |
| Versions                |  |  |  |
| Main BIOS version       | Displays the installed B&R BIOS version  | None   | -  |
| OEM BIOS version        | Displays the OEM BIOS version  | None   | -  |
| MTCX PX32               | Displays the installed MTCX PX32 version   | None   | -  |
| MTCX FPGA               | Displays the installed MTCX FPGA version   | None   | -  |
| CMOS Profile            | Displays the CMOS profile being used   | None   | -  |
| Device ID               | Displays the device ID of the system board   | None   | -  |
| Compatibility ID        | Displays the version of the device within the same B&R device ID. This ID is needed for Automation Runtime.  | None   | -  |
| Serial number           | Displays the B&R serial number   | None   | -  |
| Product name            | Displays the B&R model number  | None   | -  |
| User serial ID          | Displays the user serial ID. This 8-digit hexadecimal value can be freely specified by the user (e.g. to give the device a unique ID) and can only be changed using the "B&R Control Center" included with the ADI driver. | None   | -  |

Table 116: NM10 Advanced - Baseboard/Panel features - Configuration options

#### 1.4.2.1 Panel control features

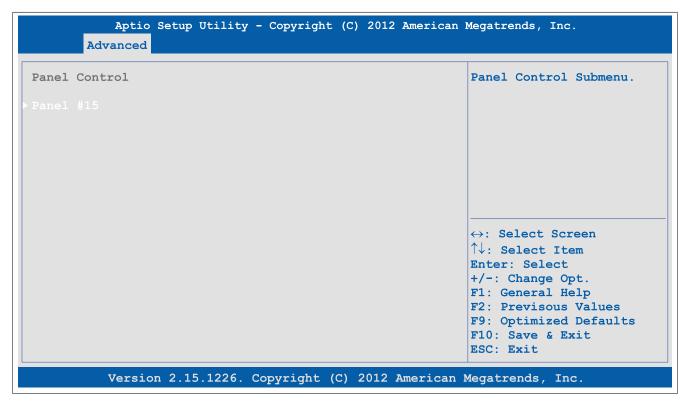

Figure 87: NM10 Advanced - Baseboard/Panel Features - Panel Control

| BIOS setting | Function                                       | Configuration options | Effect                     |
|--------------|--|-----------------------|----------------------------|
| Panel #X     | Displays the panel properties of the connected | Enter                 | Opens the submenu          |
|              | panel  |                       | See "Panel #X" on page 162 |

Table 117: NM10 Advanced - Baseboard/Panel features - Panel control - Configuration options

#### 1.4.2.1.1 Panel #X

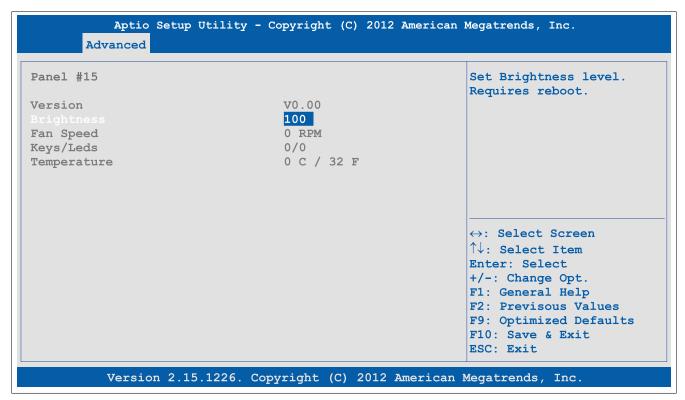

Figure 88: NM10 Advanced - Baseboard/Panel Features - Panel Control - Panel #x

| BIOS setting | Function   | Configuration options | Effect   |
|--------------|--|-----------------------|--|
| Version      | Displays the firmware version of the SDLR controller | None                  | -  |
| Brightness   | Setting for the brightness of the panel              | 0 to 100              | Sets the brightness (in %) of the selected panel. Settings only take effect after the system has been restarted. |
| Fan speed    | Displays the fan speed of the panel                  | None                  | -  |
| Keys/LEDs    | Displays the available keys and LEDs for the panel   | None                  | -  |
| Temperature  | Displays the temperature of the panel in °C and °F   | None                  | -  |

Table 118: NM10 Advanced - Baseboard/Panel features - Panel control - Panel #x - Configuration options

#### 1.4.2.2 Baseboard monitor

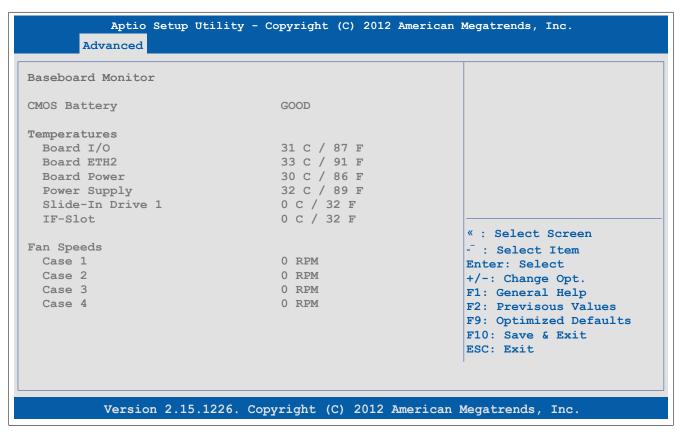

Figure 89: NM10 Advanced - Baseboard/Panel Features - Baseboard Monitor

| BIOS setting     | Function   | Configuration options | Effect |
|------------------|--|-----------------------|--------|
| CMOS battery     | Displays the status of the CMOS battery n.a Not available Good - Battery OK Bad - Battery not OK | None                  | -      |
| Temperatures     |  |                       |        |
| Board I/O        | Displays the current temperature in the I/O area in °C and °F                                    | None                  | -      |
| Board ETH2       | Displays the current temperature in the Ethernet controller chip area in °C and °F               | None                  | -      |
| Board power      | Displays the current board power temperature in °C and °F  | None                  | -      |
| Power supply     | Displays the current power supply temperature in °C and °F                                       | None                  | -      |
| Slide-in drive 1 | Displays the current temperature of slide-in drive 1 in °C and °F                                | None                  | -      |
| IF slot          | Displays the temperature near the IF slot in °C and °F   | None                  | -      |
| Fan speeds       |  |                       |        |
| Case 1           | Displays the current fan speed of case 1 in rpm (revolutions per minute)                         | None                  | -      |
| Case 2           | Displays the current fan speed of case 2 in rpm (revolutions per minute)                         | None                  | -      |

Table 119: NM10 Advanced - Baseboard/Panel features - Baseboard monitor

#### Software • BIOS options

| BIOS setting | Function   | Configuration options | Effect |
|--------------|--|-----------------------|--------|
| Case 3       | Displays the current fan speed of case 3 in rpm (revolutions per minute) | None                  | -      |
| Case 4       | Displays the current fan speed of case 4 in rpm (revolutions per minute) | None                  | -      |

Table 119: NM10 Advanced - Baseboard/Panel features - Baseboard monitor

## 1.4.2.3 Super I/O configuration

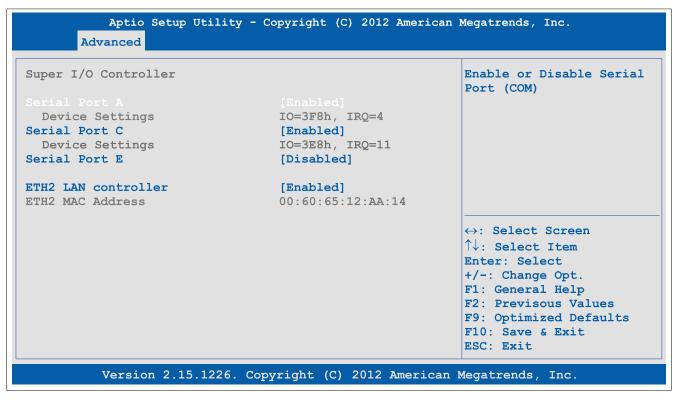

Figure 90: NM10 Advanced - Baseboard/Panel Features - Super I/O Configuration

| BIOS setting                  | Function  | Configuration options | Effect                       |
|-------------------------------|---|-----------------------|------------------------------|
| Serial port A                 | Settings for the COM1 serial interface                                    | Enabled               | Enables the interface        |
|                               |   | Disabled              | Disables the interface       |
| Device settings 1)            | Displays the I/O address and interrupt of the COM interface               | None                  | -                            |
| Serial port C                 | Sets the COM port for the touch screen con-                               | Enabled               | Enables the interface        |
|                               | nected to the monitor/panel interface                                     | Disabled              | Disables the interface       |
| Device settings 2)            | Displays the I/O address and interrupt of the COM interface               | None                  | -                            |
| Serial port E                 | Sets the COM port of the 5AC600.485I-00 B&R add-on interface              | Enabled               | Enables the interface        |
|                               |   | Disabled              | Disables the interface       |
| Device settings <sup>3)</sup> | Displays the I/O address and interrupt of the COM interface <sup>4)</sup> | None                  | -                            |
| ETH2 LAN Controller           | Enables/Disables the onboard Ethernet LAN2 controller                     | Disabled              | Disables the ETH2 controller |
|                               |   | Enabled               | Enables the ETH2 controller  |
| ETH2 MAC address              | Displays the MAC addresses for the Ethernet2 controller                   | None                  | -                            |

Table 120: NM10 Advanced - Baseboard/Panel features - Super I/O configuration - Configuration options

- 1) This setting is only available if Serial port A is set to Enabled.
- 2) This setting is only available if Serial port C is set to Enabled.
- 3) This setting is only available if Serial port E is set to Enabled.
- Only displayed after the system has been restarted.

Table 124: NM10 Advanced - PCI Express configuration - Overview

#### 1.4.5.1 PCI Express root port 0

## Warning!

Improper settings can cause instability or device problems. It is therefore strongly recommended that these settings only be changed by experienced users.

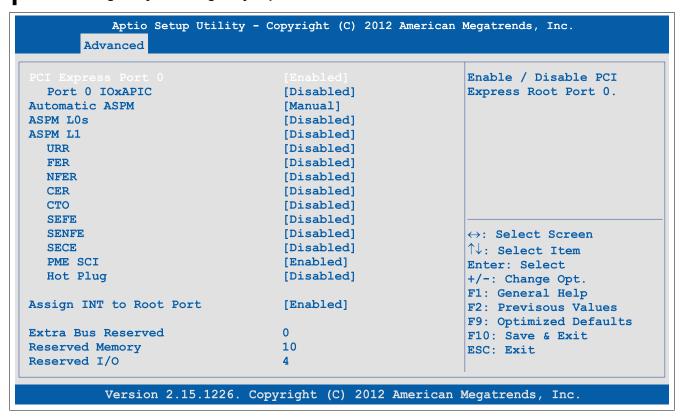

Figure 95: NM10 Advanced - PCI Express Configuration - PCI Express Root Port 0

| BIOS setting       | Function  | Configuration options        | Effect  |
|--------------------|---|------------------------------|---|
| PCI Express port 0 | Option for enabling/disabling PCI Express root  | Disabled                     | Disables PCI Express root port 0                      |
|                    | port 0  | Enabled                      | Enables PCI Express root port 0                       |
| Port 0 IOxAPIC     | Option for enabling/disabling PCI Express root  | Disabled                     | Disables PCI Express root port 0 I/O APIC             |
|                    | port 0 I/O APIC   | Enabled                      | Enables PCI Express root port 0 I/O APIC              |
| Automatic ASPM     | Active state power management Option for configuring an automatic or manual   | Manual                       | Manual setting of energy saving functions L0s and L1  |
|                    | power saving function (L0s/L1) for PCIe link cards if they do not require full power  | Auto                         | Automatic assignment by BIOS and the operating system |
| ASPM L0s 1)        | Enables/Disables the L0 energy saving function  | Disabled                     | Disables this function                                |
|                    |   | Root port only               | Function only available for the root port             |
|                    |   | Endpoint port only           | Function only available for the end device port       |
|                    |   | Both root and endpoint ports | Function available for the root and end device port   |
| ASPM L1 1)         | Enables/Disables the L1 energy saving function.   | Disabled                     | Disables the L1 energy saving function                |
|                    | Power consumption is lower than with L0, but the exit latency is higher.  | Enabled                      | Enables the L1 energy saving function                 |
| URR                | Unsupported Request (UR) reporting  | Disabled                     | Disables this function                                |
|                    | Option for reporting unsupported requests. Log-<br>ging of error messages received by the root port<br>is controlled exclusively by the root control regis-<br>ter.                   | Enabled                      | Enables this function                                 |
| FER                | Fatal error reporting   | Disabled                     | Disables this function                                |
|                    | Option for reporting fatal errors. All of the functions of a multifunction device will be monitored. The report for the root port takes place internally inside the root complex.     | Enabled                      | Enables this function                                 |
| NFER               | Non-fatal error reporting   | Disabled                     | Disables this function                                |
|                    | Option for reporting non-fatal errors. All of the functions of a multifunction device will be monitored. The report for the root port takes place internally inside the root complex. | Enabled                      | Enables this function                                 |
| CER                | Correctable error reporting   | Disabled                     | Disables this function                                |

Table 125: NM10 Advanced - PCI Express configuration - PCI Express root port 0 - Configuration options

## Software • BIOS options

| BIOS setting            | Function  | Configuration options | Effect   |
|-------------------------|---|-----------------------|--|
|                         | Option for reporting correctable errors. All of the functions of a multifunction device will be monitored. The report for the root port takes place internally inside the root complex. | Enabled               | Enables this function  |
| CT0                     | PCI Express completion timer T0   | Disabled              | Disables this function   |
|                         | Option for enabling/disabling the PCI Express completion timer  | Enabled               | Enables this function  |
|                         | Information:  This setting should be set to "Enabled" if the system detected an ROB (processor reorder buffer) timeout.   |                       |  |
| SEFE                    | System error on fatal error   | Disabled              | Disables this function   |
|                         | Option for generating a system error if a fatal error is registered by a device on the root port or by the root port itself   | Enabled               | Enables this function  |
| SENFE                   | System error on non-fatal error   | Disabled              | Disables this function   |
|                         | Option for generating a system error if a non-fatal error is registered by a device on the root port or by the root port itself   | Enabled               | Enables this function  |
| SECE                    | System error on correctable error   | Disabled              | Disables this function   |
|                         | Option for generating a system error if a correctable error is registered by a device on the root port or by the root port itself   | Enabled               | Enables this function  |
| PME SCI                 | Option for generating an SCI if power manage-   | Disabled              | Disables this function   |
|                         | ment is detected  | Enabled               | Enables this function Enables the root port to generate an SCI if power management is detected |
| Hot plug                | Option for enabling/disabling hot plugging in or-   | Disabled              | Disables this function   |
|                         | der to replace components during operation  | Enabled               | Enables this function  |
| Assign INT to root port | Option for enabling/disabling the IRQ for the root  | Disabled              | Disables this function   |
| - '                     | port  | Enabled               | Enables this function  |
| Extra bus reserved      | Option for reserving the extra bus to bridges behind this root bridge   | 0 to 7                | Sets the corresponding bus   |
| Reserved memory         | Option for configuring reserved memory for this root bridge   | 1 to 20               | Sets the size of reserved memory between 1 MB and 20 MB  |
| Reserved I/O            | Option for configuring a reserved I/O range (4K/8K/12K/16K/20K) for this root bridge  | 4 to 20               | Sets the size of the reserved I/O area between 4 K and 20 K                                    |

Table 125: NM10 Advanced - PCI Express configuration - PCI Express root port 0 - Configuration options

<sup>1)</sup> This setting is only available if Automatic ASPM is set to Manual.

#### 1.4.5.2 PCI Express root port x

## Warning!

Improper settings can cause instability or device problems. It is therefore strongly recommended that these settings only be changed by experienced users.

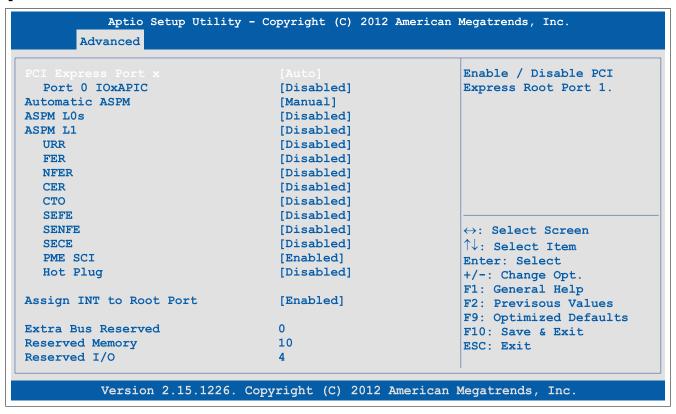

Figure 96: NM10 Advanced - PCI Express Configuration - PCI Express Root Port x

| BIOS setting            | Function  | Configuration options        | Effect   |
|-------------------------|---|------------------------------|--|
| PCI Express root port x | Option for enabling/disabling the PCI Express   | Disabled                     | Disables PCI Express root port x                       |
|                         | root port   | Enabled                      | Enables PCI Express root port x                        |
|                         |   | Auto                         | Automatically enables/disables PCI Express root port x |
| Port 0 IOxAPIC          | Option for enabling/disabling PCI Express root  | Disabled                     | Disables PCI Express root port 0 I/O APIC              |
|                         | port 0 I/O APIC   | Enabled                      | Enables PCI Express root port 0 I/O APIC               |
| Automatic ASPM          | Active state power management Option for configuring an automatic or manual   | Manual                       | Manual setting of energy saving functions L0s and L1   |
|                         | power saving function (L0s/L1) for PCIe link cards if they do not require full power  | Auto                         | Automatic assignment by BIOS and the operating system  |
| ASPM L0s                | Enables/Disables the L0 energy saving function  | Disabled                     | Disables this function                                 |
|                         |   | Root port only               | Function only available for the root port              |
|                         |   | Endpoint port only           | Function only available for the end device port        |
|                         |   | Both root and endpoint ports | Function available for the root and end device port    |
| ASPM L1                 | Enables/Disables the L1 energy saving function.   | Disabled                     | Disables the L1 energy saving function                 |
|                         | Power consumption is lower than with L0, but the exit latency is higher.  | Enabled                      | Enables the L1 energy saving function                  |
| URR                     | Unsupported Request (UR) reporting  | Disabled                     | Disables this function                                 |
|                         | Option for reporting unsupported requests. Log-<br>ging of error messages received by the root port<br>is controlled exclusively by the root control regis-<br>ter.                   | Enabled                      | Enables this function                                  |
| FER                     | Fatal error reporting   | Disabled                     | Disables this function                                 |
|                         | Option for reporting fatal errors. All of the functions of a multifunction device will be monitored. The report for the root port takes place internally inside the root complex.     | Enabled                      | Enables this function                                  |
| NFER                    | Non-fatal error reporting   | Disabled                     | Disables this function                                 |
|                         | Option for reporting non-fatal errors. All of the functions of a multifunction device will be monitored. The report for the root port takes place internally inside the root complex. | Enabled                      | Enables this function                                  |
| CER                     | Correctable error reporting   | Disabled                     | Disables this function                                 |

Table 126: NM10 Advanced - PCI Express configuration - PCI Express root port x - Configuration options

## Software • BIOS options

| BIOS setting            | Function  | Configuration options | Effect   |
|-------------------------|---|-----------------------|--|
|                         | Option for reporting correctable errors. All of the functions of a multifunction device will be monitored. The report for the root port takes place internally inside the root complex. | Enabled               | Enables this function  |
| CT0                     | PCI Express completion timer T0   | Disabled              | Disables this function   |
|                         | Option for enabling/disabling the PCI Express completion timer  | Enabled               | Enables this function  |
|                         | Information:  This setting should be set to "Enabled" if the system detected an ROB (processor reorder buffer) timeout.   |                       |  |
| SEFE                    | System error on fatal error   | Disabled              | Disables this function   |
|                         | Option for generating a system error if a fatal error is registered by a device on the root port or by the root port itself   | Enabled               | Enables this function  |
| SENFE                   | System error on non-fatal error   | Disabled              | Disables this function   |
|                         | Option for generating a system error if a non-fatal error is registered by a device on the root port or by the root port itself   | Enabled               | Enables this function  |
| SECE                    | System error on correctable error   | Disabled              | Disables this function   |
|                         | Option for generating a system error if a correctable error is registered by a device on the root port or by the root port itself   | Enabled               | Enables this function  |
| PME SCI                 | Option for generating an SCI if power manage-   | Disabled              | Disables this function   |
|                         | ment is detected  | Enabled               | Enables this function Enables the root port to generate an SCI if power management is detected |
| Hot plug                | Option for enabling/disabling hot plugging in or-   | Disabled              | Disables this function   |
|                         | der to replace components during operation  | Enabled               | Enables this function  |
| Assign INT to root port | Option for enabling/disabling the IRQ for the root  | Disabled              | Disables this function   |
| - '                     | port  | Enabled               | Enables this function  |
| Extra bus reserved      | Option for reserving the extra bus to bridges behind this root bridge   | 0 to 7                | Sets the corresponding bus   |
| Reserved memory         | Option for configuring reserved memory for this root bridge   | 1 to 20               | Sets the size of reserved memory between 1 MB and 20 MB  |
| Reserved I/O            | Option for configuring a reserved I/O range (4K/8K/12K/16K/20K) for this root bridge  | 4 to 20               | Sets the size of the reserved I/O area between 4 K and 20 K                                    |

Table 126: NM10 Advanced - PCI Express configuration - PCI Express root port x - Configuration options

<sup>1)</sup> This setting is only available if Automatic ASPM is set to Manual.

#### 1.4.5.3 PCI Express settings

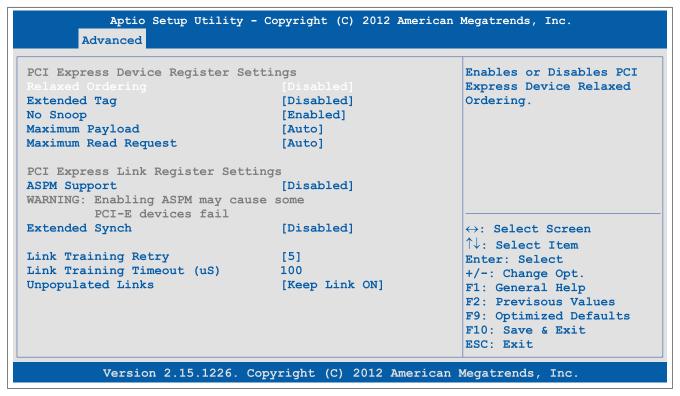

Figure 97: NM10 Advanced - PCI Express Configuration - PCI Express Settings

| BIOS setting               | Function   | Configuration options   | Effect   |
|----------------------------|--|-------------------------|--|
| Relaxed ordering           | Option for enabling/disabling relaxed ordering   | Disabled                | Disables this function   |
|                            |  | Enabled                 | Enables this function  |
| Extended tag               | Option for enabling/disabling the extended tag   | Disabled                | Disables this function Only 5 bits can be used.  |
|                            |  | Enabled                 | Enables this function Devices with 8 bits in the requester transaction ID field can be used. |
| No snoop                   | Option for enabling/disabling the "No snoop" op-   | Disabled                | Disables this function   |
|                            | tion   | Enabled                 | Enables this function  |
| Maximum payload            | Option for setting the maximum surface packet  | Auto                    | Automatically assigns the packet size  |
|                            | size for data transfers  | 128 bytes to 4096 bytes | Manual maps the packet size  |
| Maximum read request       | Option for setting the maximum read request  | Auto                    | Automatic assignment   |
|                            |  | 128 bytes to 4096 bytes | Manual assignment  |
| ASPM support <sup>1)</sup> | Option for configuring a power saving function (L0s/L1) for PCle slots if they do not require full power                         | Disabled                | Disables the energy saving function  |
|                            |  | Auto                    | Maximum energy savings. The energy saving function is set to L0 or L1.                       |
|                            |  | Force L0s               | Enables L0 mode  |
| Extended synch             | Option for setting an extended synchronization   | Disabled                | Disables this function   |
|                            | pattern to improve system performance  | Enabled                 | Enables this function  |
| Link training retry        | Option for defining the number of times the soft-  | Disabled                | Disables this function   |
|                            | ware should attempt to reroute a link if the previous training attempt was unsuccessful  | 2                       | 2 link training attempts   |
|                            |  | 3                       | 3 link training attempts   |
|                            |  | 5                       | 5 link training attempts   |
| Link training timeout (μS) | Option for defining how many microseconds the software waits before the link training bit in the link status register is queried | 10 to 1000              | Time setting in μs   |
| Unpopulated links          | Option for enabling/disabling PCIe slots where no devices are connected  | Keep link on            | Keeps PCIe slots where no devices are connected enabled                                      |
|                            |  | Disable link            | Disables PCIe slots where no devices are connected to save power                             |

Table 127: NM10 Advanced - PCI Express configuration - PCI Express settings - Configuration options

1) ASPM = Active state power management.

## 1.4.6 RTC wake settings

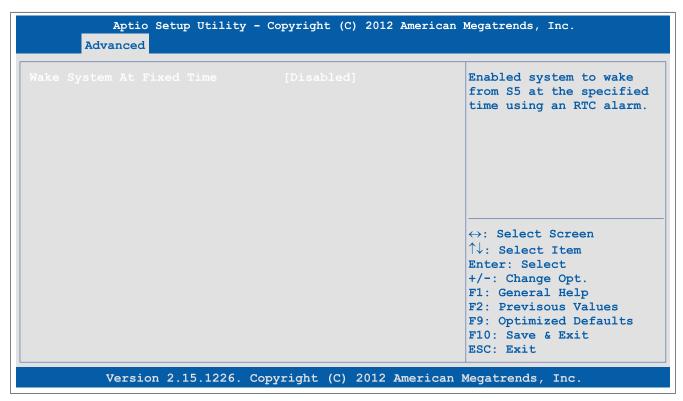

Figure 98: NM10 Advanced - RTC Wake Settings

| BIOS setting                 | Function   | Configuration options | Effect  |
|------------------------------|--|-----------------------|---|
| Wake system at fixed time    | Option for setting the time (to the second) when           | Disabled              | Disables this function  |
|                              | the system should boot from a switched-off state (ACPI S5) | Enabled               | Enables this function   |
| Wake up hour <sup>1)</sup>   | Option for setting the hour                                | 0 to 23               | Example: If set to 3, the system will start up at 3 AM. If set to 15, the system will start up at 3 PM. |
| Wake up minute <sup>1)</sup> | Option for setting the minute                              | 0 to 59               | Example: If set to 15, the system will start up at minute 15.   |
| Wake up second <sup>1)</sup> | Option for setting the second                              | 0 to 59               | Example: If set to 32, the system will start up at second 32.   |

Table 128: NM10 Advanced - RTC wake settings - Configuration options

<sup>1)</sup> This setting is only available if Wake system At fixed time is set to Enabled.

#### 1.4.7 ACPI settings

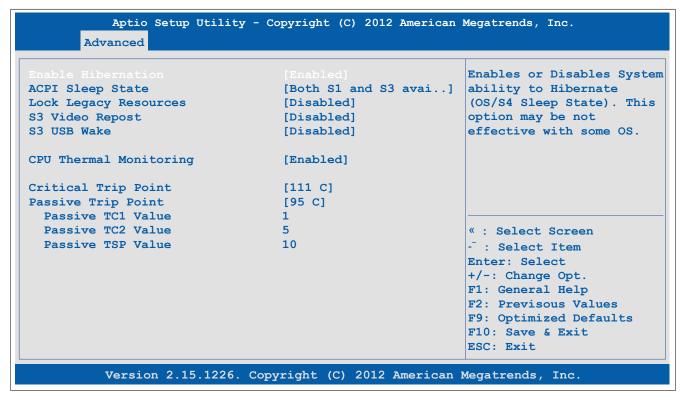

Figure 99: NM10 Advanced - ACPI Settings

| BIOS setting              | Function  | Configuration options                           | Effect   |
|---------------------------|---|---|--|
| Enable hibernation        | Option for enabling/disabling the hibernate func-   | Disabled  | Disables this function   |
|                           | tion. This can put the operating system into the S4 state. This option may not have any effect on some operating systems. | Enabled   | Enables this function  |
| ACPI sleep state          | Selects the ACPI status to be used when Sus-  | Suspend disabled                                | Disables this function   |
|                           | pend mode is enabled  | S1 only (CPU stop clock)                        | Sets S1 as Suspend mode. Only a few functions are disabled and are available again at the touch of a button.                             |
|                           |   | S3 only (Suspend to RAM)                        | Sets S3 as Suspend mode. The current state of the operating system is written to RAM, which is then the only component to receive power. |
|                           |   | Both S1 and S3 available                        | Enables S1 and S3. The states can then be se-  |
|                           |   | for OS to choose from                           | lected by the operating system.  |
| Lock legacy resources     | Option for configuring whether the operating  | Disabled  | Disables this function   |
|                           | system is permitted to configure legacy resources   | Enabled   | Enables this function  |
| S3 video repost           | Option for determining whether graphic POST should be executed again after starting from status S3                        | Disabled  | Disables this function   |
|                           |   | Enabled   | Enables this function  |
| S3 USB wake               | Option for configuring whether connected USB  | Disabled  | Disables this function   |
|                           | devices can generate ACPI events  | Enabled   | Enables this function  |
| CPU thermal monitoring 1) | Option for enabling/disabling CPU thermal mon-<br>itoring   | Enabled   | Enables CPU thermal monitoring, displays temperature values in SCPI and generates SMI  |
|                           |   | Disabled  | Disables CPU thermal monitoring<br>Disabled is recommended for real-time applica-<br>tions.  |
| Critical trip point       | Option for configuring a CPU temperature at   | POR   | Sets the critical trip point to 100°C  |
|                           | which the operating system automatically shuts down   | 79 C, 87 C, 95 C, 103<br>C, 111 C, 119 C, 127 C | Temperature setting for the critical trip point. Configurable in increments of 8°C.  |
| Passive trip point        | Option for configuring an ACPI passive trip point   | Disabled  | Disables this function   |
|                           | temperature at which the operating system throttles the CPU speed   | 71 C, 79 C, 87 C, 95 C                          | Temperature setting for the passive trip point in °C   |
| Passive TC1 value         | Option for setting the TC1 value for the ACPI passive cooling formula   | 1 to 16   | Sets the TC1 value   |
| Passive TC2 value         | Option for setting the TC2 value for the ACPI passive cooling formula   | 1 to 16   | Sets the TC2 value   |

Table 129: NM10 Advanced - ACPI settings - Configuration options

## Software • BIOS options

| BIOS setting | Function   | Configuration options | Effect             |
|--------------|--|-----------------------|--------------------|
|              | Option for setting the TSP value for the ACPI passive cooling formula The TSP value specifies how often the operating system reads the temperature in a tenth of a second. | 2 to 32               | Sets the TSP value |

Table 129: NM10 Advanced - ACPI settings - Configuration options

1) This setting is only available if Advanced - Baseboard/Panel features - Realtime environment is set to Disabled.

## 1.4.8 CPU configuration

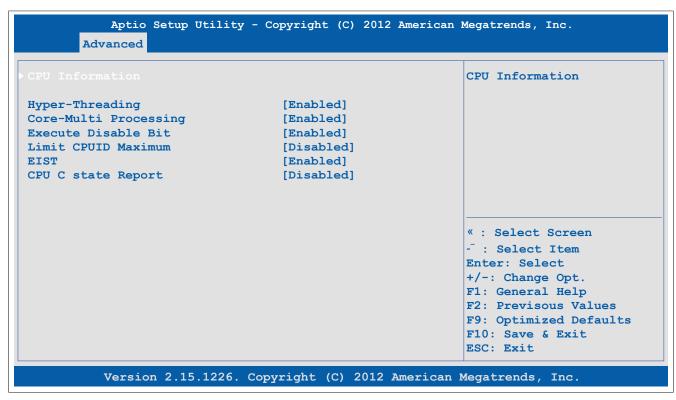

Figure 100: NM10 Advanced - CPU Configuration

| BIOS setting                   | Function  | Configuration options | Effect   |
|--------------------------------|---|-----------------------|--|
| CPU information                | Displays CPU properties   | Enter                 | Opens the submenu See "CPU information" on page 177  |
| Hyper-Threading                | Option for enabling/disabling Intel hyper-threading technology  | Disabled              | Disables this function   |
|                                |   | Enabled               | Enables this function Each processor core can execute multiple tasks (threads) at a time. Intel hyper-thread- ing technology increases processor throughput and improves the overall performance of mul- ti-thread software. |
| Core-multi processing          | Option for enabling/disabling core-multi process-   | Disabled              | Disables this function   |
| ooro maia processing           | ing   | Enabled               | Enables this function  |
| Execute disable bit            | Option for enabling/disabling hardware support  | Disabled              | Disables this function   |
|                                | for prevention of data execution  | Enabled               | Enables this function  |
| Limit CPUID maximum            | Option for limiting the CPUID value. This may be necessary for older operating systems.  Information:  This option must be set to Disabled when using Windows XP. | Disabled              | The processor returns the current maximum value when the CPUID value is requested.   |
|                                |   | Enabled               | The processor limits the maximum CPUID value to 03h if necessary if the processor supports a higher value.   |
| EIST                           | Option for enabling/disabling Intel® SpeedStep™ technology  | Disabled              | Disables Intel® SpeedStep™ technology  |
|                                |   | Enabled               | Enables Intel® SpeedStep™ technology   |
| CPU C state report             | Option for enabling/disabling the CPU C report to the operating system  | Disabled              | Disables this function. No report is sent to the operating system.   |
|                                |   | Enabled               | Enables this function  |
| Enhanced C state <sup>1)</sup> | Option to enable/disable enhanced C state   | Disabled              | Disables this function   |
|                                |   | Enabled               | Enables this function  |
| CPU hard C4E <sup>1)</sup>     | TBD   | Disabled              | Disables this function   |
|                                |   | Enabled               | Enables this function  |
| CPU C6 state <sup>1)</sup>     | TBD   | Disabled              | Disables this function   |

Table 130: NM10 Advanced - CPU configuration - Configuration options

| BIOS setting                 | Function                                     | Configuration options | Effect                 |
|------------------------------|--|-----------------------|------------------------|
|                              |  | Enabled               | Enables this function  |
| C4 exit timing <sup>1)</sup> | Option for enabling/disabling C4 exit timing | Default               | Uses the default       |
|                              |  | Fast                  | Fast timing            |
|                              |  | Slow                  | Slow timing            |
| C-state POPDOWN¹)            | TBD  | Disabled              | Disables this function |
|                              |  | Enabled               | Enables this function  |
| C-state POPUP1)              | TBD  | Disabled              | Disables this function |
|                              |  | Enabled               | Enables this function  |

Table 130: NM10 Advanced - CPU configuration - Configuration options

1) This setting is only available if CPU C state report is set to Enabled.

#### 1.4.8.1 CPU information

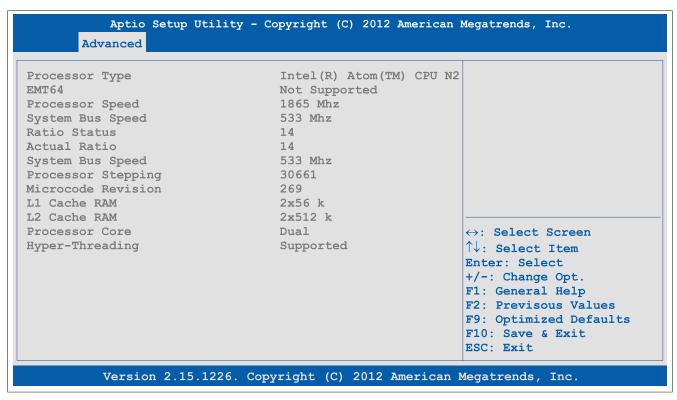

Figure 101: NM10 Advanced - CPU Configuration - CPU Information

| BIOS setting       | Function  | Configuration options | Effect |
|--------------------|---|-----------------------|--------|
| Processor type     | Displays the processor type                                 | None                  | -      |
| EMT64              | TBD   | None                  | -      |
| Processor speed    | Displays the processor clock frequency                      | None                  | -      |
| System bus speed   | Displays the system clock frequency                         | None                  | -      |
| Ratio status       | Displays the processor multiplier status                    | None                  | -      |
| Actual ratio       | Displays the current processor multiplier status            | None                  | -      |
| System bus speed   | Displays the system clock frequency                         | None                  | -      |
| Processor stepping | Displays the processor ID                                   | None                  | -      |
| Microcode revision | Displays the processor microcode                            | None                  | -      |
| L1 cache RAM       | Displays the L1 cache                                       | None                  | -      |
| L2 cache RAM       | Displays the L2 cache                                       | None                  | -      |
| Processor core     | Displays the number of processor cores                      | None                  | -      |
| Hyper-threading    | Displays information about Intel Hyper-Threading technology | None                  | -      |

Table 131: NM10 Advanced - CPU configuration - Configuration options

## 1.4.9 Memory configuration

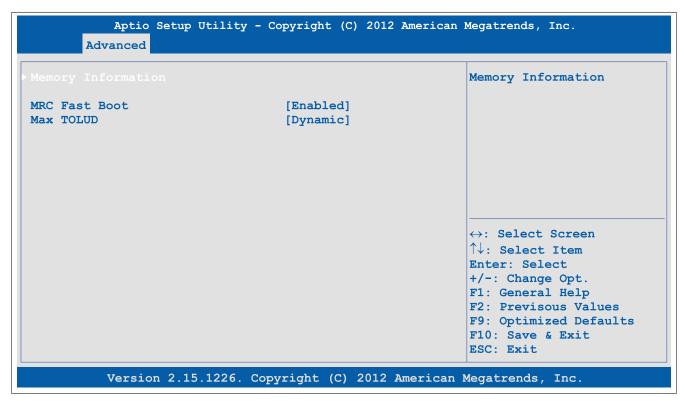

Figure 102: NM10 Advanced - Memory Configuration

| BIOS setting       | Function  | Configuration options   | Effect  |
|--------------------|---|---|---|
| Memory information | Displays main memory properties                             | Enter   | Opens the submenu<br>See "Memory information" on page 179                           |
| MRC fast boot      | Option for enabling/disabling MRC fast booting              | Enabled   | Enables this function   |
|                    |   | Disabled  | Disables this function  |
| Max TOLUD          | Option for configuring the maximum "Top of low usable DRAM" | Dynamic   | Automatically adjusts the TOLUD based on the MMIO length of the graphics controller |
|                    |   | 1 GB, 1.25 GB, 1.5 GB, 1.75<br>GB, 2 GB, 2.25 GB, 2.5 GB,<br>2.75 GB, 3 GB, 3.25 GB | Manual setting of the TOLUD   |

Table 132: NM10 Advanced - Memory configuration - Configuration options

#### 1.4.9.1 Memory information

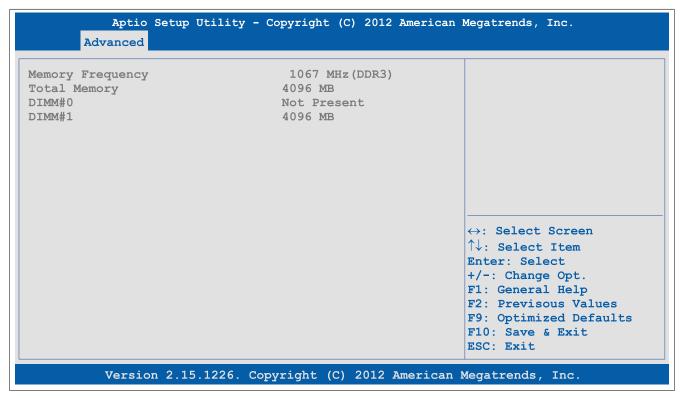

Figure 103: NM10 Advanced - Memory Configuration - Memory Information

| BIOS setting     | Function                                     | Configuration options | Effect |
|------------------|--|-----------------------|--------|
| Memory frequency | Displays the memory clock frequency          | None                  | -      |
| Total memory     | Displays the complete system memory size     | None                  | -      |
| DIMM#0           | Displays the amount of memory in slot Dimm#0 | None                  | -      |
| DIMM#1           | Displays the amount of memory in slot Dimm#1 | None                  | -      |

Table 133: NM10 Advanced - Memory configuration - Memory information

#### 1.4.10 Chipset configuration

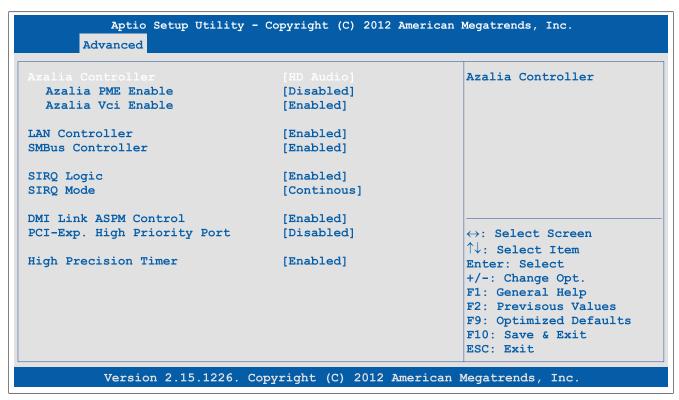

Figure 104: NM10 Advanced - Chipset Configuration

## Software • BIOS options

| BIOS setting  | Function  | Configuration options  | Effect                        |
|---|---|--|-------------------------------|
| Azalia controller   | Option for enabling/disabling the audio controller                                  | Disabled   | Disables the audio controller |
|   |   | HD audio   | Enables the audio controller  |
| Azalia PME enable <sup>1)</sup>   | Option for enabling/disabling power management for the audio controller             | Disabled   | Disables this function        |
|   |   | Enabled  | Enables this function         |
| Azalia Vci enable1)   | Option for enabling/disabling video management on the audio controller              | Disabled   | Disables this function        |
|   |   | Enabled  | Enables this function         |
| LAN controller  | Option for enabling/disabling the onboard LAN                                       | Disabled   | Disables the controller       |
|   | controller  | Enabled  | Enables the controller        |
| SMBus controller  | Option for enabling/disabling the SMBus (system management bus) controller          | Disabled   | Disables the controller       |
|   |   | Enabled  | Enables the controller        |
| SIRQ logic  | Option for enabling/disabling serial IRQ logic                                      | Disabled   | Disables this function        |
|   |   | Enabled  | Enables this function         |
| SIRQ mode <sup>2)</sup>   | Select the serial IRQ mode  | Quiet  | SIRQ in quiet mode            |
|   |   | Continuous   | SIRQ in continuous mode       |
| DMI link ASPM control   | Option for enabling/disabling active state power management (ASPM) for the DMI link | Disabled   | Disables the controller       |
|   |   | Enabled  | Enables the controller        |
| PCI-Exp. High priority port   | Selects the PCI Express priority port   | Disabled   | Disables this function        |
|   |   | Port 0 - 3   | Selects the port              |
| High-precision timer  | The HPET is a timer inside the PC. It is able to                                    | Disabled   | Disables this function        |
| trigger an interrupt with a high degree of accuracy, which allows other programs to better synchronize a variety of applications. | Enabled   | Enables this function. This function is recommended for multimedia applications. |                               |

Table 134: NM10 Advanced - Chipset configuration - Configuration options

- 1) This setting is only available if Azalia controller is set to HD audio.
- 2) This setting is only available if SIRQ logic is set to Enabled.

## 1.4.11 IDE configuration

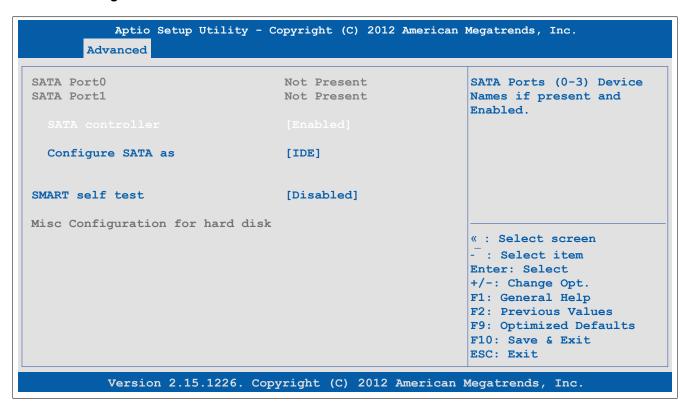

Figure 105: NM10 Advanced - IDE configuration

| BIOS setting              | Function   | Configuration options | Effect                           |
|---------------------------|--|-----------------------|----------------------------------|
| SATA Ports (0-3)          | Displays the name of the hardware connected to the respective port | None                  | -                                |
| SATA controller           | Option for enabling/disabling the SATA controllers                 | Disabled              | Disables the controllers         |
|                           |  | Enabled               | Enables the controllers          |
| Configure SATA as 1)      | Option for setting the SATA configuration                          | IDE                   | Configured as IDE                |
|                           |  | AHCI                  | Configured as AHCI               |
| Port (0-3) speed limit 2) | Sets the speed of the SATA ports                                   | No limit              | No speed limiting                |
|                           |  | GEN1 rate             | Maximum transfer rate = 2.5 GT/s |
|                           |  | GEN2 rate             | Maximum transfer rate = 5 GT/s   |
| SATA port 0 2)            | Option for enabling/disabling SATA port 0                          | Disabled              | Disables SATA port 0             |
|                           |  | Enabled               | Enables SATA port 0              |

Table 135: NM10 Advanced - IDE configuration - Configuration options

| BIOS setting                              | Function  | Configuration options | Effect  |
|---|---|-----------------------|---|
| SATA port 0 hot plug 2)                   | Option for configuring hot plugging for SATA    | Disabled              | Hot plugging not enabled for SATA port 0  |
|   | port 0  | Enabled               | Hot plugging enabled for SATA port 0. Devices can be connected/disconnected during operation. |
| SATA port 1 2)                            | Option for enabling/disabling SATA port 1       | Disabled              | Disables SATA port 1  |
|   |   | Enabled               | Enables SATA port 1   |
| SATA port 1 hot plug 2) Option for config | Option for configuring hot plugging for SATA    | Disabled              | Hot plugging not enabled for SATA port 1  |
|   | port 1  | Enabled               | Hot plugging enabled for SATA port 1. Devices can be connected/disconnected during operation. |
| SMART self test                           | Option for configuring the SMART self-test dur- | Disabled              | Disables this function  |
|   | ing POST  | Enabled               | Enables this function   |

Table 135: NM10 Advanced - IDE configuration - Configuration options

- 1) This setting is only available if SATA controller is set to Enabled.
- 2) This setting is only available if SATA controller is set to Enabled and Configure SATA as is set to AHCI.

#### 1.4.12 USB configuration

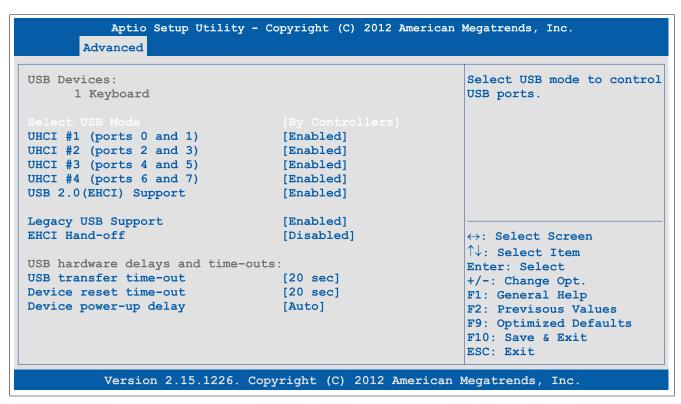

Figure 106: NM10 Advanced - USB Configuration

| BIOS setting               | Function  | Configuration options        | Effect  |
|----------------------------|---|------------------------------|---|
| Select USB mode            | Selects the USB mode  | By ports                     | Selection by port   |
|                            |   | By controllers               | Selection by controller   |
| UHCI #11)                  | Configures USB UHCl controller 1 for USB port   | Disabled                     | Disables the controller   |
|                            |   | Enabled                      | Enables the controller  |
| UHCI #2 - #4 <sup>2)</sup> | Configures USB UHCI controllers 2 - 4 for USB   | Disabled                     | Disables the controller   |
|                            | port  | Enabled                      | Enables the controller  |
| USB function3)             | Switches available USB ports on/off   | Disabled                     | Disables this function  |
|                            |   | 1-8 USB ports                | Enables this function   |
| USB 2.0(EHCI) support4)    | Enables/Disables USB 2.0 support  | Disabled                     | Disables the controller   |
|                            |   | Enabled                      | Enables the controller  |
| Legacy USB support         | Legacy USB support  Option for configuring legacy USB support. USB ports do not function during startup. USB support is available again after the operating system has started. A USB keyboard is still recognized during POST. | Enabled                      | Enables this function   |
|                            |   | Disabled                     | Disables this function  |
|                            |   | Auto                         | Automatic enabling  |
| EHCI hand-off              | Option for configuring support for operating systems without a fully automated EHCI function  | Disabled                     | Disables this function With operating systems that do not have a fully automated EHCI function, USB devices are only operated with USB 1.1. |
|                            |   | Enabled                      | Enables USB 2.0 support   |
| USB transfer time-out      | Option for configuring the timeout value for control, bulk and interrupt transfers  | 1 sec, 5 sec, 10 sec, 20 sec | Value in seconds  |

Table 136: NM10 Advanced - USB configuration - Configuration options

### Software • BIOS options

| BIOS setting                                   | Function  | Configuration options          | Effect   |
|--|---|--------------------------------|--|
| Device reset time-out                          | Option for configuring the time that POST waits for USB memory storage devices after the device start command is issued | 10 sec, 20 sec, 30 sec, 40 sec | Value in seconds   |
| Device power-up delay                          | Option to set the maximum time to wait for a USB device to report to the host controller                                | Auto                           | Sets the maximum time automatically. For a root port, 100 ms is set; for a hub port, the data from the hub descriptor is used. |
|  |   | Manual                         | Allows the maximum time to be entered man-<br>ually using the "Device power-up delay in sec-<br>onds" option                   |
| Device power-up delay in seconds <sup>5)</sup> | Option to manually set the maximum time to wait for a USB device to report to the host controller                       | 1 to 40                        | The maximum time can be entered in seconds.  |

Table 136: NM10 Advanced - USB configuration - Configuration options

- 1) This setting is only available if Select USB mode is set to By controllers.
- 2) This setting is only available if Select USB mode is set to By controllers and UHCI #1 is set to Enabled.
- 3) This setting is only available if Select USB mode is set to By ports.
- 4) This setting is only available if UHCI #1 is set to Enabled.
- 5) This setting is only possible if *Device power-up delay* is set to *Manual*.

#### 1.4.13 Serial port console redirection

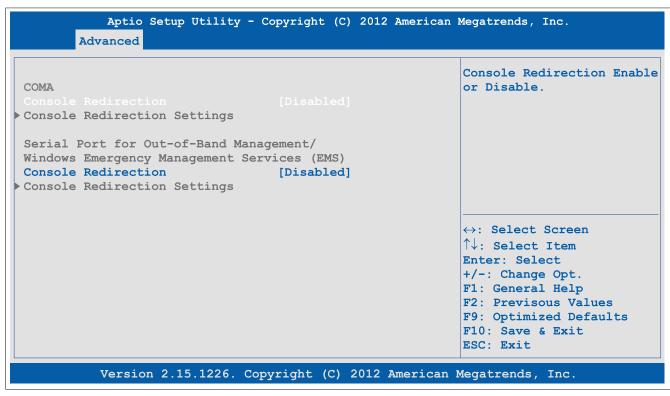

Figure 107: NM10 Advanced - Serial Port Console Redirection

| BIOS setting                                    | Function  | Configuration options | Effect  |
|---|---|-----------------------|---|
| COMA  |   |                       |   |
| Console redirection                             | Option for enabling/disabling console redirection | Disabled              | Disables this function  |
|   |   | Enabled               | Enables this function   |
| Console redirection set-<br>tings <sup>1)</sup> | Configures the remote console                     | Enter                 | Opens the submenu<br>See "Console redirection settings (COMA)" on<br>page 183 |
| Serial port for out-of-band n                   | nanagement / Windows Emergency Management So      | ervices (EMS)         |   |
| Console redirection                             | Option for enabling/disabling console redirection | Disabled              | Disables this function  |
|   |   | Enabled               | Enables this function   |
| Console redirection settings <sup>2)</sup>      | Configures the remote console                     | Enter                 | Opens the submenu<br>See "Console redirection settings (EMS)" on<br>page 184  |

Table 137: NM10 Advanced - Serial port console redirection - Configuration options

- 1) This setting is only available if Console redirection (COMA) is set to Enabled.
- 2) This setting is only available if Console redirection (EMS) is set to Enabled.

#### 1.4.13.1 Console redirection settings (COMA)

Figure 108: NM10 Console Redirection Settings (COMA)

| BIOS setting                     | Function   | Configuration options                | Effect   |
|----------------------------------|--|--------------------------------------|--|
| Terminal type                    | Selects the type of connection   | VT100, VT100+,<br>VT-UTF8, ANSI      | Configures the connection type manually  |
| Bits per second                  | Selects the transfer rate in bits per second                                     | 9600, 19200, 38400,<br>57600, 115200 | Transfer rate  |
| Data bits                        | Option for setting the data bits   | 7, 8                                 | Sets the number of data bits   |
| Parity                           | Option for setting a parity bit  | None                                 | Parity bit not used  |
|                                  |  | Even                                 | Uses an even number of parity bits   |
|                                  |  | Odd                                  | Uses an odd number of parity bits  |
|                                  |  | Mark                                 | Parity bit always 1  |
|                                  |  | Space                                | Parity bit always 0  |
| Stop bits                        | Sets the number of stop bits   | 1, 2                                 | Uses 1 or 2 bits as the stop bit   |
| Flow control                     | Determines how the transfer is controlled via the                                | None                                 | Operates the interface without transfer control  |
|                                  | interface  | Hardware RTS/CTS                     | Uses hardware for interface transfer control.  |
| VT-UTF8 combo key sup-           | Option for enabling/disabling VT-UTF8 combo                                      | Disabled                             | Disables this function   |
| port                             | key support for ANSI and VT100 connections                                       | Enabled                              | Enables this function  |
| Recorder mode                    | Option for enabling/disabling recorder mode                                      | Disabled                             | Disables this function   |
|                                  |  | Enabled                              | Enables this function When this setting is used, all control escape sequences are suppressed from the serial redirection output. This may lead to incorrectly formatted screen output but makes automatic storage of the serial console output easier. |
| Resolution 100x31                | Option for enabling/disabling extended terminal                                  | Disabled                             | Disables this function   |
|                                  | resolution   | Enabled                              | Enables this function  |
| Legacy OS redirection resolution | Option for configuring the number of lines and columns for legacy OS redirection | 80x24, 80x25                         | 80 x 24 or 80 x 25 resolution  |
| Putty keypad                     | TBD  | VT100                                | TBD  |
|                                  |  | LINUX                                | TBD  |
|                                  |  | XTERMR6                              | TBD  |
|                                  |  | SCO                                  | TBD  |
|                                  |  | ESCN                                 | TBD  |
|                                  |  | VT400                                | TBD  |
| Redirection After BIOS           | Option for configuring redirection after startup                                 | Always enable                        | Keeps redirection enabled permanently  |
| POST                             |  | BootLoader                           | Enables redirection during system startup and when charging  |

Table 138: NM10 Advanced - Serial port console redirection - Console redirection settings (COMA) - Configuration options

### 1.4.13.2 Console redirection settings (EMS)

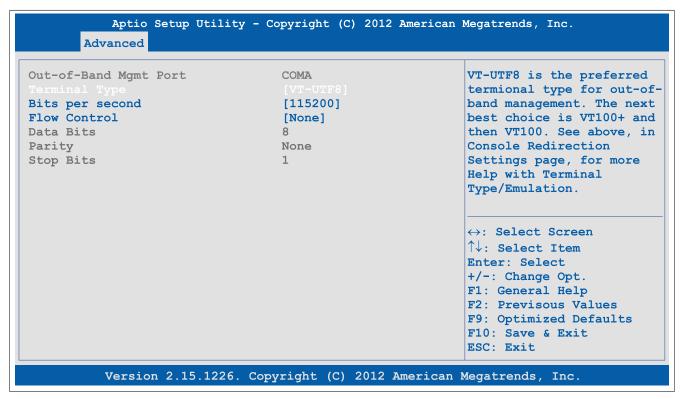

Figure 109: NM10 Console Redirection Settings (EMS)

| BIOS setting          | Function  | Configuration options           | Effect  |
|-----------------------|---|---------------------------------|---|
| Out-of-band mgmt port | Indicator   | None                            | -   |
| Terminal type         | Selects the type of connection                    | VT100, VT100+,<br>VT-UTF8, ANSI | Configures the connection type manually         |
| Bits per second       | Selects the transfer rate in bits per second      | 9600, 19200, 57600, 115200      | Transfer rate                                   |
| Flow control          | Determines how the transfer is controlled via the | None                            | Operates the interface without transfer control |
|                       | interface   | Hardware RTS/CTS                | Uses hardware for interface transfer control.   |
|                       |   | Software Xon/Xoff               | Uses software for interface transfer control    |
| Data bits             | Displays the number of data bits                  | None                            | -   |
| Parity                | Displays the parity bit                           | None                            | -   |
| Stop bits             | Displays the number of stop bits                  | None                            | -   |

### 1.5.2 Boot configuration

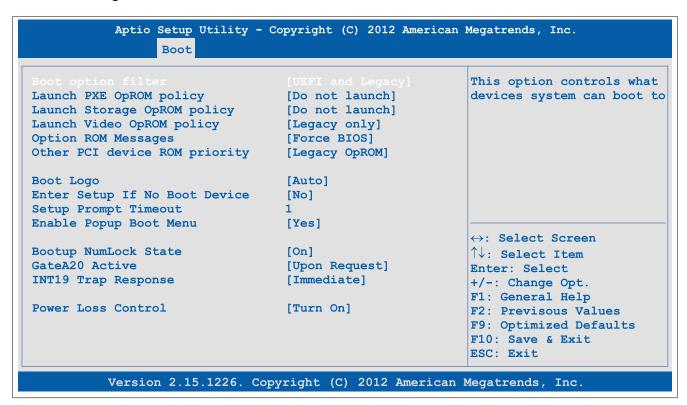

Figure 112: NM10 Boot - Boot Configuration

| BIOS setting           | Function                                   | Configuration options | Effect                                      |
|------------------------|--|-----------------------|---|
| Boot option filter     | Option for setting the boot option filter  | UEFI and legacy       | Allows booting with UEFI and legacy devices |
|                        |  | Legacy only           | Allows booting with legacy devices only     |
|                        |  | UEFI only             | Allows booting with UEFI devices only       |
| Launch PXE OpROM poli- | Option for booting from PXE Option ROM     | Do not launch         | Does not boot from PXE Option ROM           |
| су                     |  | UEFI only             | Boots from UEFI ROM                         |
|                        |  | Legacy only           | Boots from legacy ROM                       |
| Launch storage OpROM   | Option for booting from Storage Option ROM | Do not launch         | Does not boot from Storage Option ROM       |
| policy                 |  | UEFI only             | Boots from UEFI ROM                         |
|                        |  | Legacy only           | Boots from legacy ROM                       |

Table 142: Boot - Boot configuration - Configuration options

| BIOS setting               | Function  | Configuration options | Effect   |
|----------------------------|---|-----------------------|--|
| Launch video OpROM pol-    | Option for booting from Video Option ROM  | Do not launch         | Does not boot from Video Option ROM  |
| icy                        |   | UEFI only             | Boots from UEFI ROM  |
|                            |   | Legacy only           | Boots from legacy ROM  |
| Option ROM messages        | Option to display Option ROM messages during  | Force BIOS            | Displays Option ROM messages during POST   |
|                            | POST  | Keep current          | Does not display Option ROM messages during POST   |
| Other PCI device ROM pri-  | Option for selecting other PCI boot devices   | UEFI OpROM            | Uses UEFI PCI devices  |
| ority                      |   | Legacy OpROM          | Uses Legacy PCI devices  |
| Boot logo                  | Option for configuring the boot logo  | Disabled              | Does not display the boot logo   |
|                            |   | Enabled               | Displays the boot logo   |
|                            |   | Auto                  | Displays the boot logo? TBD  |
| Enter setup if no boot de- | Option for configuring whether the setup screen   | No                    | Does not display the setup screen  |
| vice                       | is displayed when no bootable drive is connected  | Yes                   | Displays the setup screen  |
| Setup prompt timeout       | Option for configuring how long the setup activation key (key for entering BIOS) is displayed | 1 to 65534            | Displays the setup activation key for x seconds  |
|                            |   | 65535                 | Displays the setup activation key for an unlimited amount of time  |
| Enable popup boot menu     | Option for enabling/disabling the popup boot menu   | Yes                   | Enables this function. Pressing "F11" during POST allows a boot device to be selected.                                       |
|                            |   | No                    | Disables this function. It is not possible to select a boot device during POST. Devices will boot in their configured order. |
| Bootup NumLock state       | Option for configuring the numeric keypad when booting the system                             | On                    | Enables the numeric keypad   |
|                            |   | Off                   | Only enables the cursor (movement) functions of the numeric keypad   |
| GateA20 active             | Option for defining how memory above 1 MB is  | Upon request          | GA20 can be disabled.  |
|                            | accessed  | Always                | GA20 is not disabled.  |
| INT19 trap response        | TBD   | Immediate             | TBD  |
|                            |   | Postponed             | TBD  |
| Power loss control         | Specifies whether the system should be on/off   | Remain off            | Keeps the PPC800 turned off  |
|                            | following power loss  | Turn on               | Turns on the PPC800  |
|                            |   | Last state            | Enables the previous state   |

#### 1.7 Save & Exit

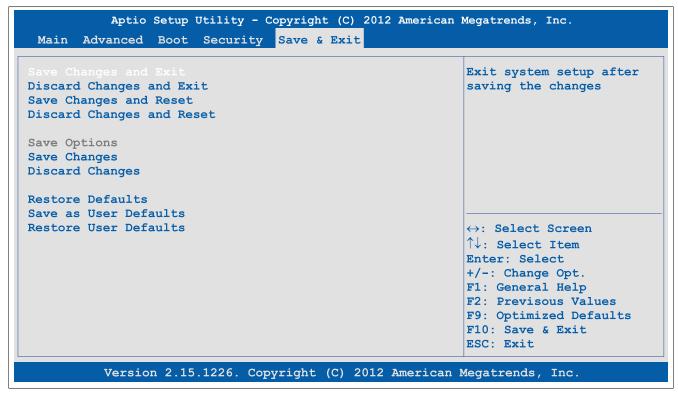

Figure 114: NM10 Save & Exit - Übersicht

| BIOS setting              | Function   | Configuration options | Effect |
|---------------------------|--|-----------------------|--------|
| Save changes and exit     | Selecting this option closes BIOS Setup. Any changes made are saved to CMOS after confirmation.  | Yes / No              |        |
| Discard changes and exit  | Selecting this option closes BIOS Setup without saving any changes made.   | Yes / No              |        |
| Save changes and reset    | Selecting this option closes BIOS Setup. Any changes made are saved to CMOS after confirmation, and the system is rebooted.                            | Yes / No              |        |
| Discard changes and reset | Selecting this option closes BIOS Setup without saving any changes made. The system is then rebooted.  | Yes / No              |        |
| Save changes              | Any changes made are saved to CMOS after confirmation.   | Yes / No              |        |
| Discard changes           | This option can be used to reset any settings that may have been made but have been forgotten in the meantime (provided they have not yet been saved). | Yes / No              |        |
| Restore defaults          | This option restores BIOS default values.  | Yes / No              |        |
| Save as user defaults     | This option saves the defined values as user defaults.   | Yes / No              |        |
| Restore user defaults     | This option restores the user default values.  | Yes / No              |        |

Table 144: NM10 Save & Exit menu - Configuration options

## 1.8 BIOS default settings

The various positions of the CMOS profile hex switch can be used to load predefined BIOS profile settings.

## Information:

The factory default switch position represents the optimal BIOS default values for this system and should therefore not be changed.

If the function "Restore defaults" is selected in the main BIOS setup menu, or if "Save & Exit" is selected (or F9 is pressed) in the individual setup screens, the following BIOS settings are the optimized values that will be used.

| Profile number | Optimized for                               | Switch position | Note  |
|----------------|---|-----------------|---|
| Profile 0      | Reserved                                    | 0               |   |
| Profile 5      | System unit 5PC820.1505-00 / 5PC820.1906-00 |                 | The default settings for this profile can be found in the PPC800 user's manual. This can be downloaded at no cost from the B&R website. |

Table 145: Profile overview

The following pages provide an overview of the BIOS default settings for the different CMOS profile switch positions. Settings highlighted in yellow are variations from the BIOS default profile (=profile 0).

## 1.8.1 Main

| Setting/Option    | Profile 0 | Profile 5 | My settings |
|-------------------|-----------|-----------|-------------|
| Main BIOS version | -         | -         |             |
| OEM BIOS version  | -         | -         |             |
| Build date        | -         | -         |             |
| Product revision  | -         | -         |             |
| Serial number     | -         | -         |             |
| BC firmware rev.  | -         | -         |             |
| ETH 1 MAC Address | -         | -         |             |
| Boot counter      | -         | -         |             |
| Running time      | -         | -         |             |
| System date       | -         | -         |             |
| System time       | -         | -         |             |
| Access Level      | -         | -         |             |

Table 146: NM10 Main - Profile settings

#### 1.8.2 Advanced

## 1.8.2.1 Graphics configuration

| Setting/Option                   | Profile 0      | Profile 5      | My setting |
|----------------------------------|----------------|----------------|------------|
| IGFX - Boot type                 | VBIOS default  | VBIOS default  |            |
| Active LFP                       | LVDS           | LVDS           |            |
| Always try auto panel detect     | No             | No             |            |
| Local flat panel type            | Auto           | Auto           |            |
| IGD clock source                 | External clock | External clock |            |
| Fixed graphics memory size       | 128 MB         | 128 MB         |            |
| Digital display interface port B | Disabled       | Disabled       |            |
| IGFX VBIOS version               | -              | -              |            |

#### 1.9 Allocation of resources

## 1.9.1 RAM address assignment

| RAM address                        | Address in hexadecimal | Resource   |
|------------------------------------|------------------------|--|
| (TOM - 384 kB) – TOM <sup>1)</sup> | N.A.                   | ACPI reclaim, PCI memory range, Video, <sup>2)</sup> |
| 1024 kB – (TOM - xxxx)             | 100000h - N.A.         | Extended memory                                      |
| 869 kB – 1024 kB                   | 0E0000h - 0FFFFh       | Runtime BIOS   |
| 768 kB – 869 kB                    | 0C0000h - 0DFFFFh      | Expansion area                                       |
| 640 kB – 768 kB                    | 0A0000h - 0BFFFFh      | Video memory and BIOS                                |
| 639 kB – 640 kB                    | 09FC00h - 09FFFFh      | Extended BIOS data                                   |
| 0 – 639 kB                         | 000000h - 09FC00h      | Conventional memory                                  |

Table 162: RAM address assignment

TOM = Top of memory: max. installed DRAM.

### 1.9.2 I/O address assignment

| I/O address   | Resource                           |
|---------------|------------------------------------|
| 0000h - 00FFh | Motherboard resources              |
| 0170h - 0177h | Secondary IDE channel              |
| 01F0h - 01F7h | Primary IDE channel                |
| 02E8h - 02EFh | COM4                               |
| 0376h - 0376h | Secondary IDE channel command port |
| 0377h - 0377h | Secondary IDE channel status port  |
| 03B0h - 03DFh | Video system                       |
| 03E8h - 03EFh | COM3                               |
| 03F6h - 03F6h | Primary IDE channel command port   |
| 03F7h - 03F7h | Primary IDE channel status port    |
| 03F8h - 03FFh | COM1                               |
| 04D0h - 04D1h | Motherboard resources              |
| 0500h - 053Fh | Motherboard resources              |
| 0800h - 087Fh | Motherboard resources              |
| 0A00h - 0A7Fh | Motherboard resources              |
| 0CF8h - 0CFBh | PCI config address register        |
| 0CFCh - 0CFFh | PCI config data register           |
| 0D00h - FFFFh | PCI / PCI Express bus¹)            |
| 4100h - 417Fh | MTCX                               |
| FF00h - FF07h | IDE bus master register            |

Table 164: IRQ interrupt assignments in PIC mode

- 1) Advanced Configuration and Power Interface.
- 2) If the SATA configuration in BIOS is set to Enhanced mode for all SATA ports, IRQs 14 and 15 are enabled for the system and the SATA ports use other IRQs.
- ... Default setting
- o ... Optional setting

## 1.9.4 Interrupt assignment in APIC mode

A total of 23 IRQs are available in APIC (**A**dvanced **P**rogrammable **I**nterrupt **C**ontroller) mode. Enabling this option is only effective if done before the Windows operating system is installed.

<sup>1)</sup> The BIOS assigns the PCI and PCI Express bus I/O resources from FFF0h downward. Devices that are not compatible with PnP/PCI/PCI Express cannot use the I/O resources in this range.

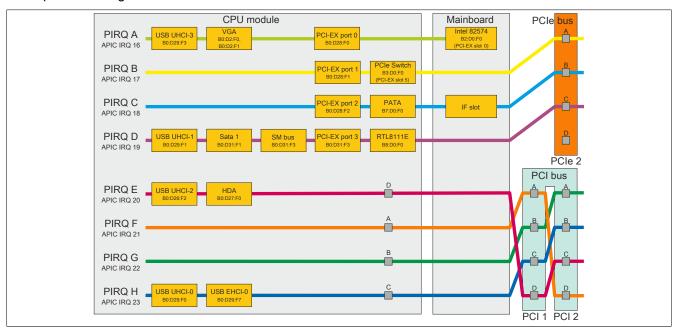

Figure 115: PCI and PCIe routing with enabled APIC for NM10 CPU boards

# 2 Upgrade information

# Warning!

The BIOS and firmware on B&R devices must be kept current. New versions can be downloaded from the B&R website (www.br-automation.com).

## 2.1 BIOS upgrade

An upgrade may be necessary in order to accomplish the following:

• Updating implemented functions or adding newly implemented functions or components to BIOS Setup (information about changes can be found in the Readme file for the BIOS upgrade).

#### 2.1.1 Important information

## Information:

Customized BIOS settings are deleted when upgrading BIOS.

Before starting an upgrade, it helps to determine the various software versions.

#### 2.1.1.1 Which BIOS version and firmware are already installed on the PPC800?

This information can be found on the following BIOS Setup screen:

- After switching on the PPC800, BIOS Setup can be accessed by pressing <Del>.
- From the BIOS main menu "Advanced", select "Baseboard/Panel features".

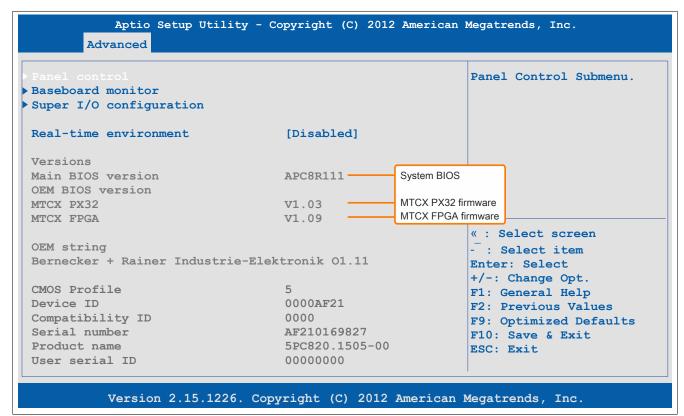

Figure 116: Software version

### 2.1.2 Procedure with MS-DOS

- 1. Download the .zip file from the B&R website (www.br-automation.com).
- 2. Create bootable media.

## Information:

In MS-DOS, Win95 and Win98, a blank HD disk can be made bootable by typing "sys a:" or "format a: / s" on the command line.

Information about creating a bootable diskette in Windows XP can be found on page 201.

Information on creating a USB flash drive for a B&R upgrade can be found on page 203.

Information on creating a CompactFlash card for a B&R upgrade can be found on page 204.

- 3. Copy the contents of the .zip file to the bootable media. If the B&R upgrade was already added when creating the bootable media with the B&R Embedded OS Installer, then this step is not necessary.
- 4. Connect the bootable media to the B&R device and reboot.
- 5. The following boot menu will be shown after startup:

```
1. Upgrade AMI (UEFI) BIOS for N2800 (5PC800.CCAX-00)
2. Exit
```

#### Item 1:

BIOS is automatically upgraded (default after 5 seconds).

#### Item 2:

Returns to the shell (MS-DOS)

## Information:

If a button is not pressed within 5 seconds, then item 1 "Upgrade AMI BIOS for NM10" is automatically carried out and the industrial PC is updated automatically.

- 6. The system must be rebooted after a successful upgrade.
- 7. Reboot and press <Del> to enter BIOS Setup and load the setup defaults, then select "Save changes and exit".

### 2.2 Firmware upgrade

The "Firmware upgrade (MTCX, SDLR, UPS)" software makes it possible to update the firmware for multiple controllers (MTCX, SDLR, UPS) depending on the PPC800 system variant.

The latest firmware upgrade is available in the Downloads section of the B&R website (www.br-automation.com).

#### 2.2.1 Procedure

Proceed as follows to carry out a firmware upgrade:

- 1. Download the .zip file from the B&R website (www.br-automation.com).
- 2. Create bootable media.

## Information:

In MS-DOS, Win95 and Win98, a blank HD disk can be made bootable by typing "sys a:" or "format a: / s" on the command line.

Information about creating a bootable diskette in Windows XP can be found on page 201.

Information on creating a USB flash drive for a B&R upgrade can be found on page 203.

Information on creating a CompactFlash card for a B&R upgrade can be found on page 204.

- 3. Copy the contents of the .zip file to the bootable media. If the B&R upgrade was already added when creating the bootable media with the B&R Embedded OS Installer, then this step is not necessary.
- 4. Connect the bootable media to the B&R device and reboot.
- 5. The following boot menu will be shown after startup:

## Information:

The following boot menu options including descriptions are based on Version 1.02 of the PPC800 upgrade (MTCX, SDLR, SDLT, UPSI) disk. In some cases, these descriptions might not match the version you are currently using.

```
1. Upgrade MTCX (PPC800) PX32 and FPGA
2. Upgrade SDLR (AP800/AP900) on Monitor/Panel
2.1. Upgrade SDLR on AP 0 (AP800/AP900)
2.2. Upgrade SDLR on AP 1 (AP800/AP900)
2.3. Upgrade SDLR on AP 2 (AP800/AP900)
2.4. Upgrade SDLR on AP 3 (AP800/AP900)
2.5. Upgrade all SDLR (AP800/AP900)
2.6. Return to Main Menu
3. Upgrade Add-on UPS (Firmware and Battery Settings)
3.1. Upgrade Add-on UPS Firmware (5AC600.UPSI-00)
3.2. Upgrade Battery Settings (5AC600.UPSB-00)
3.3. Return to Main Menu
4. Exit
```

## Item 1:

Automatically upgrades the PX32 and FPGA of the MTCX (default after 5 seconds)

#### Item 2:

Opens Submenu 1 for upgrading the SDLR controller on the monitor/panel interface

### 2.1 Upgrade SDLR on AP 0 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 0 interface

#### 2.2 Upgrade SDLR on AP 1 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 1 interface

### 2.3 Upgrade SDLR on AP 2 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 2 interface

#### 2.4 Upgrade SDLR on AP 3 (AP800/AP900)

Automatically updates the SDLR controller on the Automation Panel 3 interface

## 2.5 Upgrade all SDLR (AP800/AP900)

Automatically updates all SDLR controllers on all Automation Panels on the monitor/panel interface (default selection after 5 sec)

### Software • Upgrade information

#### 2.6 Return to main menu

Returns to the main menu

Item 3:

Opens Submenu 3 for upgrading the add-on UPS firmware and battery settings

3.1 Upgrade add-on UPS firmware (5AC600.UPSI-00)

Updates the firmware for the add-on UPS

3.2 Upgrade battery settings (5AC600.UPSB-00)

Automatically updates the battery settings for 5AC600.UPSB-00

3.3 Return to main menu

Returns to the main menu

Item 4:

Returns to the shell (MS-DOS)

The system must be rebooted after a successful upgrade.

### 2.2.2 Possible upgrade problems and software dependencies (for V1.02)

- The SDLR firmware can only be updated if an Automation Panel with Automation Panel Link transceiver (5DLSDL.1000-01) and Automation Panel Link receiver (5DLSDL.1000-00) is connected.
- Automation Panel Link transceivers (5DLSDL.1000-01) or Automation Panel Link receivers (5DLSDL.1000-00) with a firmware version less than or equal to V00.10 can no longer be combined with Automation Panel Link transceivers (5DLSDL.1000-01) or Automation Panel Link receivers (5DLSDL.1000-00) with a firmware version greater than or equal to V01.04. Daisy chain mode is not possible with this type of a combination.
- If a UPS (e.g. 5AC600.UPSI-00) + battery unit (e.g. 5AC600.UPSB-00) is connected to the system and ready to be operated, then either the battery must be disconnected or the Power button pushed after upgrading the MTCX or SDLT (to put the system in standby mode) before powering the system off and back on. If this is not done, the firmware upgrade will not work since the UPS is buffering the system.

## 2.3 Creating an MS-DOS boot diskette in Windows XP

- 1. Insert a blank 1.44 MB HD diskette into the disk drive.
- 2. Open Windows Explorer.
- 3. Right-click on the 3½ floppy diskette icon and select "Format".

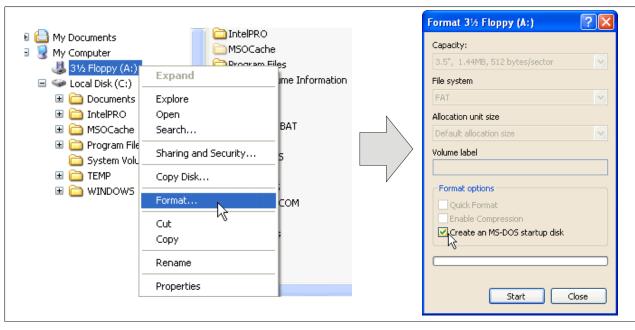

Figure 117: Creating a bootable diskette in Windows XP - Step 1

4. Select the "Create an MS-DOS startup disk" option, click on "Start" and acknowledge the warning message with "OK".

Figure 118: Creating a bootable diskette in Windows XP - Step 2

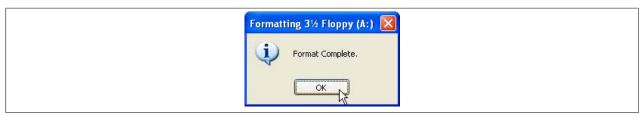

Figure 119: Creating a bootable diskette in Windows XP - Step 3

After creating the startup disk, some of the files must be deleted because of the size of the update.

To do this, all files (hidden system files, etc.) must be visible on the diskette.

In Windows Explorer, go to the "Tools" menu, select "Folder options" and open the "View" tab. Then deselect the option "Hide protected operating system files (Recommended)" (enabled by default) and enable the option "Show hidden files and folders".

### Software • Upgrade information

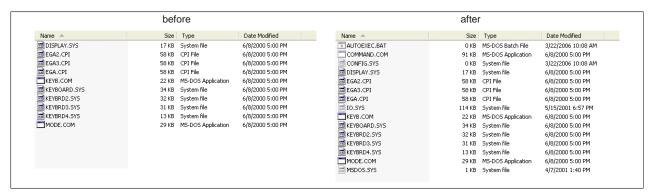

Figure 120: Creating a bootable diskette in Windows XP - Step 4

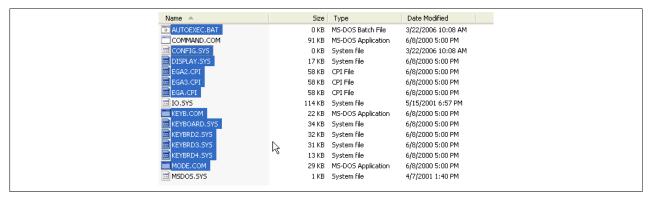

Figure 121: Creating a bootable diskette in Windows XP - Step 5

Now all files (selected) except Command.com, IO.sys and MSDOS.sys can be deleted.

## 2.4 Creating a bootable USB flash drive for B&R upgrade files

When used in connection with a B&R Industrial PC, it is possible to upgrade (e.g. upgrade BIOS) from one of the USB flash drives available from B&R. To do this, the USB flash drive must be prepared accordingly. This is done with the B&R Embedded OS Installer, which can be downloaded at no cost from the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>).

### 2.4.1 Requirements

The following is required to create a bootable USB flash drive:

- · B&R USB flash drive
- B&R Industrial PC
- · USB media drive
- B&R Embedded OS Installer (V3.00 or higher)

#### 2.4.2 Procedure

- 1. Connect the USB flash drive to the PC.
- 2. If the drive list is not refreshed automatically, the list can be updated using the command **Drives > Refresh**.
- 3. Select the desired USB flash drive in the drive list.
- 4. Change to the **Action** tab and select **Install a B&R update to a USB flash drive** as the type of action.
- 5. Enter the path to the MS-DOS operating system files. If the files are part of a .zip archive, then click on the button **From .zip file**. If the files are stored in a directory on the hard drive, then click on the button **From folder**.
- 6. In the **B&R upgrade** text box, it is also possible to enter the path to the .zip file for the B&R upgrade disk and select the file.
- 7. Click on the Start action button in the toolbar.

Figure 122: Creating a USB flash drive for B&R upgrade files

## 2.4.3 How to access MS-DOS

Information on creating an MS-DOS boot diskette can be found in section see "Creating an MS-DOS boot diskette in Windows XP" on page 201. The files from the diskette are then copied to the hard drive.

### 2.5 Creating a bootable CompactFlash card for B&R upgrade files

When used in connection with a B&R industrial PC, it is possible to upgrade (e.g. upgrade BIOS) from one of the CompactFlash cards available from B&R. To do this, the CompactFlash card must be prepared accordingly. This is done with the B&R Embedded OS Installer, which can be downloaded at no cost from the B&R website (www.br-automation.com).

### 2.5.1 Requirements

The following peripherals are required for creating a bootable CompactFlash card:

- · CompactFlash card
- · B&R Industrial PC
- · USB media drive
- B&R Embedded OS Installer (at least V3.10)

#### 2.5.2 Procedure

- 1. Insert the CompactFlash card in the CF slot on the industrial PC.
- 2. If the drive list is not refreshed automatically, the list can be updated using the command **Drives > Refresh**.
- 3. Select the desired CompactFlash card from the drive list.
- 4. Change to the **Action** tab and select **Install a B&R Update to a CompactFlash card** as the type of action.
- 5. Enter the path to the MS-DOS operating system files. If the files are part of a .zip archive, then click on the button **From .zip file**. If the files are stored in a directory on the hard drive, then click on the button **From folder**.
- In the B&R upgrade text box, it is also possible to enter the path to the .zip file for the B&R upgrade disk and select the file.
- 7. Click on the Start action button in the toolbar.

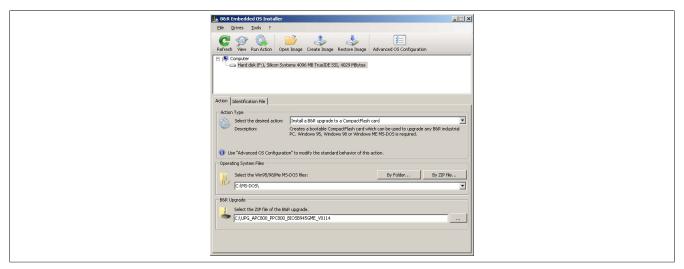

Figure 123: Creating a CompactFlash card for B&R upgrade files

## 2.5.3 How to access MS-DOS

Information on creating an MS-DOS boot diskette can be found in section see "Creating an MS-DOS boot diskette in Windows XP" on page 201. The files from the diskette are then copied to the hard drive.

## 3 Microsoft DOS

### 3.1 Order data

Table 166: 9S0000.01-010, 9S0000.01-020 - Order data

## 3.2 Known problems

Either no drivers are available for the following hardware components or only with limitations:

- · HDA sound is not supported.
- USB 2.0: only USB 1.1 rates can be achieved.
- "Graphics engine 2" (for e.g. extended desktop mode) cannot be used.
- · Some "ACPI control" functions in BIOS cannot be used.

## 3.3 Resolutions and color depths

The following table shows the tested resolutions and color depths on the monitor/panel interface with NM10 CPU boards.

|                     | Color depth |        |        |  |  |
|---------------------|-------------|--------|--------|--|--|
| Resolutions for RGB | 8-bit       | 16-bit | 24-bit |  |  |
| 640 x 480           | ✓           | ✓      | ✓      |  |  |
| 800 x 600           | ✓           | ✓      | ✓      |  |  |
| 1024 x 768          | ✓           | ✓      | ✓      |  |  |
| 1280 x 1024         | ✓           | ✓      | ✓      |  |  |
| 1600 x 1200         | ✓           | ✓      | ✓      |  |  |
| 1920 x 1200         | ✓           | ✓      | ✓      |  |  |

Table 167: Tested resolutions and color depths for RGB signals

## 4 Windows XP Professional

### 4.1 General information

## Information:

Discontinuation of support for Windows XP by Microsoft:

After *April 8th, 2014* Microsoft will no longer be providing any security updates, hotfixes, support (free or paid) or technical resources for Windows XP.

#### 4.2 Order data

| Model number    | Short description   | Figure                     |
|-----------------|---|----------------------------|
|                 | Windows XP Professional   |                            |

#### 4.4 Installation

Windows XP Professional wird schon im Hause B&R auf dem gewünschten Datenträger (z.B. CompactFlash-Karte, etc.) vorinstalliert. All of the drivers required for operation (graphics, network, etc.) are also installed in this process.

### 4.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03, 5ACPCI.RAIC-05, 5ACPCI.RAIC-06

The following steps are necessary to install Windows XP Professional on a PCI SATA RAID controller:

1. Download the RAID driver from the B&R website <a href="www.br-automation.com">www.br-automation.com</a> and copy the files to a diskette.

- 2. Connect the media drive (5MD900.USB2-02) to the USB port.
- 3. Insert the diskette and Windows XP Professional CD in the media drive and boot from the CD.
- 4. Press the F6 key during installation to install a third-party SCSI or driver.
- 5. Press the "s" key when asked about installing an additional drive. Insert the diskette into the floppy drive. Press "Enter" and select the driver.
- 6. Follow the installation instructions.
- 7. The installer will copy the files to the Windows XP Professional folder and restart the B&R Industrial PC.

### Information:

- Not all USB FDD drives are supported by the Windows XP installer (see Microsoft KB 916196).
- Depending on the system, the boot order may have to be changed in BIOS.

## 4.5 Drivers

Current drivers for all approved operating systems are available in the Downloads section of the B&R website www.br-automation.com.

## Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

## 5 Windows 7

### 5.1 General information

Windows® 7 offers a wealth of innovative features and performance improvements. Faster switching to power saving mode, quicker restores, less memory usage and high-speed detection of USB devices are just a few of the advantages provided by Windows® 7. Both English and German are available in Windows® 7 Professional, while Windows® 7 Ultimate supports up to 35 different languages (up to 36 languages in Service Pack 1). Product activation is not necessary on B&R PCs, which is a huge advantage for simple logistical procedures relating to machine automation.

All of the Windows® operating systems offered by B&R are from the Microsoft Embedded division. This guarantees much longer availability, especially compared to products offered on the consumer market.

#### 5.2 Order data

| Model number    | Short description   | Figure    |
|-----------------|---|-----------|
|                 | Windows 7 Professional/Ultimate   |           |

<sup>1)</sup> The memory used by additional language packs is not taken into account in the minimum size of the disk.

### 5.4 Installation

All of the drivers required for operation (graphics, network, etc.) are also installed in this process.

#### 5.4.1 Installation on a PCI SATA RAID controller - 5ACPCI.RAIC-03, 5ACPCI.RAIC-05, 5ACPCI.RAIC-06

The following steps are necessary to install Windows 7 on a PCI SATA RAID controller:

- 1. Download the RAID driver for Windows 7 from the B&R website at <a href="www.br-automation.com">www.br-automation.com</a> and copy the data to a folder on a USB flash drive.
- 2. Boot using the Windows 7 DVD.
- 3. Follow the installation steps until a page appears asking "Where do you want to install Windows?".
- 4. Plug the USB flash drive with the RAID drivers into an available USB port.
- 5. Click on "Load driver" and navigate to the directory containing the RAID drivers. Then click Next to continue.
- 6. Remove the USB flash drive.
- 7. The Windows 7 installation can now be performed as usual.

# Information:

Depending on the system, the boot order may have to be changed in BIOS.

#### 5.5 Drivers

Current drivers for all approved operating systems are available in the Downloads section of the B&R website www.br-automation.com.

## Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

### 5.6 Special considerations, limitations

- Windows 7 does not contain a Beep.sys file, which means that an audible signal is no longer sounded (e.g. when pressing a key).
- There is currently no support for the Windows 7 system rating (although this does not apply to PP500, APC2100, APC510, APC511, APC910, PPC2100 or PPC800 devices with an NM10 chipset).

### 6 Windows Embedded Standard 2009

#### 6.1 General information

Windows® Embedded Standard 2009 is the modular version of Windows® XP Professional. It is used if XP applications should be executed with a minimal operating system size. Together with CompactFlash memory, Windows® Embedded Standard 2009 makes it possible to use the Microsoft desktop operating system in harsh environmental conditions. In addition to the familiar features included in Windows® XP Professional, Windows® Embedded Standard 2009 has been improved with regard to dependability by adding a write filter for individual memory partitions. By protecting individual partitions such as the boot partition, the PC system can be started without problems even after an unexpected power failure. B&R offers complete images for industrial PCs, Power Panel and Mobile Panel devices to make the transition to Windows® Embedded Standard 2009 as easy as possible. In addition to Windows® Embedded Standard 2009, the standard Windows® XP Professional operating system is also available in English, German and a multilingual version.

Windows® Embedded Standard 2009 is based on the same binary files as Windows® XP Professional with Service Pack 3 and is optimally tailored to the hardware being used. In other words, only the functions and modules required by the respective device are included. Windows® Embedded Standard 2009 is also based on the same reliable code as Windows® XP Professional with SP3. It provides industry with leading reliability, security and performance improvements as well as the latest technology for web browsing and extensive device support.

### 6.4 Features with WES2009 (Windows Embedded Standard 2009)

The following list of features shows the most important device functions included in Windows Embedded Standard 2009.

| Function                           | Present      |
|------------------------------------|--------------|
| Enhanced Write Filter (EWF)        | ✓            |
| File-Based Write Filter (FBWF)     | <b>√</b>     |
| Page file                          | Configurable |
| Administrator accounts             | ✓            |
| User accounts                      | Configurable |
| Explorer shell                     | ✓            |
| Registry filter                    | ✓            |
| Internet Explorer 8.0              | ✓            |
| Internet information service (IIS) | -            |
| Terminal service                   | <b>√</b>     |
| Windows Firewall                   | ✓            |
| MSN Explorer                       | -            |
| Outlook Express                    | -            |
| Administrative Tools               | ✓            |
| Remote Desktop                     | <b>√</b>     |
| Remote Assistance                  | -            |
| .NET Framework                     | -            |
| ASP.NET                            | -            |
| OpenGL support                     | ✓            |
| Local network bridge               | <b>√</b>     |

Table 171: Device functions in Windows Embedded Standard 2009

| Function                             | Present |
|--------------------------------------|---------|
| Codepages / User locales / Keyboards | ✓       |
| Disk Management Service              | ✓       |
| Windows Installer Service            | ✓       |
| Class Installer                      | ✓       |
| CoDevice Installer                   | ✓       |
| Media Player 6.4                     | ✓       |
| DirectX 9.0c                         | ✓       |
| Accessories                          | ✓       |
| Number of fonts                      | 89      |

Table 171: Device functions in Windows Embedded Standard 2009

#### 6.5 Installation

Windows Embedded Standard 2009 wird schon im Hause B&R auf einer geeigneten CompactFlash-Karte (mind. 1 GByte) vorinstalliert. The system is then automatically configured when it is switched on for the first time. Dieser Vorgang nimmt ca. 10 Minuten in Anspruch und das Gerät wird dabei einige Male automatisch rebootet.

#### 6.6 Drivers

All drivers required for operation are preinstalled along with the operating system. If an older version of the driver is still being used, the latest version can be downloaded and installed from the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>). It is important that Enhanced Write Filter (EWF) is disabled for this.

#### 6.6.1 Touch screen driver

In order to operate Automation Panel 800 or Automation Panel 900 touch screen devices, the touch screen driver must be installed manually or the touch screen interface updated in the device manager. The driver is available in the Downloads section of the B&R website (<a href="https://www.br-automation.com">www.br-automation.com</a>). It is important that Enhanced Write Filter (EWF) is enabled for this.

## Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

### 7 Windows Embedded Standard 7

#### 7.1 General information

The successor to Windows® XP Embedded is Windows® Embedded Standard 7. As with previous versions, this embedded operating system offers full system support for B&R Industrial PCs. In addition to brand new features that are also included in Windows® 7 Professional, Windows® Embedded Standard 7 includes embedded components such as Enhanced Write Filter, File-Based Write Filter, Registry Filter and USB Boot. Windows® Embedded Standard 7 is available in two different versions. The main difference between them has to do with multilingual support. Windows® Embedded Standard 7 is only available in a single language, whereas Windows® Embedded Standard 7 Premium supports the installation of several languages simultaneously.

With Windows® Embedded Standard 7, Microsoft has made substantial improvements in the area of security. The AppLocker program, available in the premium version, can prevent the execution of unknown or potentially undesired applications that are being installed over a network or from drives that are directly connected. A tiered approach allows the differentiation between scripts (.ps1, .bat, .cmd, .vbs and .js), installation files (.msi, .msp) and libraries (.dll, .ocx). AppLocker can also be configured to record undesired activity and display it in the Event Viewer. Windows® Embedded Standard 7 is available in both a 32-bit and 64-bit version.<sup>3)</sup>, which ensures that even the most demanding applications have the level of support they need.

## 7.2 PPC800 (NM10) - Order data

| Model number    | Short description  | Figure |
|-----------------|--|--------|
|                 | Windows Embedded Standard 7  |        |
| 5SWWI7.1539-ENG | Microsoft OEM Windows Embedded Standard 7 32-bit, Service Pack 1, English; for PPC800 with NM10 chipset; order Compact-Flash separately (at least 16 GB).                    |        |

| Boot from USB flash drive                           | ✓                           | ✓                                   |
| Accessories   | ✓                           | ✓                                   |
| Page file   | Configurable                | Configurable                        |
| Number of fonts                                     | 134                         | 134                                 |

Table 173: Device functions in Windows Embedded Standard 7

#### 7.5 Installation

Windows Embedded Standard 7 wird schon im Hause B&R auf einer geeigneten CompactFlash-Karte (mind. 8 GByte bzw. 16 GByte) vorinstalliert. The system is then automatically configured when it is switched on for the first time. Dieser Vorgang nimmt ca. 30 Minuten in Anspruch und das Gerät wird dabei einige Male automatisch rebootet.

### Information:

Wenn der EWF (Enhanced Write Filter) verwendet werden soll, sind während des Setup oder SYSPREP alle Massenspeicher (außer dem Bootlaufwerk) aus dem System zu entfernen. It is also possible to disable additional mass storage devices in BIOS.

#### 7.6 Drivers

All drivers required for operation are preinstalled along with the operating system. If an older version of the driver is still being used, the latest version can be downloaded and installed from the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>). It is important that Enhanced Write Filter (EWF) is disabled for this.

#### 7.6.1 Touch screen driver

A touch screen driver will be installed automatically if a touch controller is detected during the Windows Embedded Standard 7 installation. If a touch controller is not detected during Windows Embedded Standard 7 installation or a B&R Automation Panel is connected at a later time, then the touch screen driver needs to be installed manually or the additional touch screen interface must be selected in the touch screen settings in the Windows Control Panel. The driver is available in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>). It is important that both the Enhanced Write Filter (EWF) and the File Based Write Filter (FBWF) are disabled for this.

## Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

### **8 Automation Runtime**

#### 8.1 General information

An integral component of Automation Studio is the real-time operating system, which makes up the software kernel that allows applications to run on a target system.

- Garantiert höchstmögliche Leistung für die eingesetzte Hardware
- · Runs on all B&R target systems
- Macht die Applikation hardwareunabhängig
- Applikationen k\u00f6nnen einfach zwischen B&R Zielsystemen portiert werden
- Garantierter Determinismus durch zyklisches System
- · Configurable jitter tolerance in all task classes
- Unterstützung aller relevanten Programmier-Sprachen, wie IEC-61131-3 und C
- Reiche Funktionsbibliothek nach IEC-61131-3 und zusätzlich die erweiterte B&R Automation Library
- Eingebunden in Automation NET. Zugriff auf alle Netzwerke und Bussysteme über Funktionsaufrufe oder durch Konfiguration im Automation Studio™

B&R Automation Runtime is fully embedded in the corresponding target system (the hardware where Automation Runtime is installed). It allows application programs to access I/O systems (e.g. via fieldbus) and other devices (interfaces, networks, etc.).

#### 8.2 Order data

| Model number | Short description  | Figure   |

## 8.3 Automation Runtime Windows (ARwin)

System support is provided by ARwin with an AS 3.0.90 / AR 4.02 upgrade. An Automation Runtime dongle is not required.

## Information:

In order to use Automation Runtime Windows (ARwin), the BIOS setting Advanced - Realtime environment must be set to Enabled.

### Information:

In ARwin 4.06 ist kein gleichzeitiger ADI-Zugriff aus Windows und ARwin mehr möglich, da die ADI-Schnittstelle von ARwin gesperrt wird.

Um von Windows und ARwin gleichzeitig auf die ADI-Schnittstelle zugreifen zu können sind folgende Komponenten erforderlich:

- ADI Treiber V1.8 (oder höher)
- ARwin I4.06 (oder höher)

# 9 B&R Automation Device Interface (ADI) - Control Center

The ADI (Automation Device Interface) enables access to specific functions on B&R devices. Settings for devices can be read and configured using the B&R Control Center applet in the Control Panel.

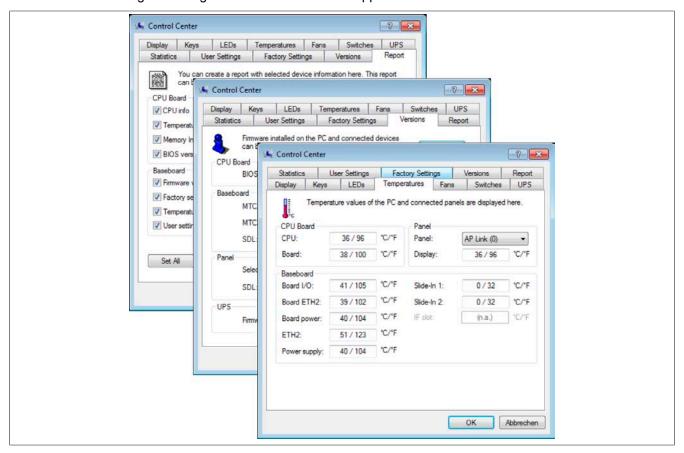

Figure 124: ADI Control Center screenshots - Examples

## Information:

The temperature and voltage values (e.g. CPU temperature, core voltage, battery voltage) shown in the corresponding ADI window represent uncalibrated values for informational purposes. They cannot be used to draw any conclusions about hardware alarms or error conditions. The hardware components used have automatic diagnostic functions that can be applied in the event of error.

### 9.1 Functions

## Information:

The functions provided by the Automation Device Interface (ADI) - Control Center vary according to the device series.

- · Changing display-specific parameters
- Reading device-specific keys
- Updating the key configuration
- Enabling device-specific LEDs on a membrane keypad or keys
- Reading and calibrating control devices (e.g. key switches, handwheels, joysticks, potentiometers)
- Reading temperatures, fan speeds, statistical data and switch settings
- Reading operating hours (power-on hours)
- · Reading user and factory settings
- · Reading software versions
- · Updating and backing up BIOS and firmware
- Creating reports about the current system (support assistance)
- Setting the SDL equalizer value when adjusting SDL cables
- Changing the user serial ID

Supports the following systems:

- Automation PC 510
- Automation PC 511
- Automation PC 620
- · Automation PC 810
- Automation PC 820
- Automation PC 910
- Automation PC 2100
- · Panel PC 300
- · Panel PC 700
- Panel PC 725
- Panel PC 800
- · Panel PC 900
- Panel PC 2100
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500
- Mobile Panel 40/50
- Mobile Panel 100/200
- Connected Automation Panel 800
- · Connected Automation Panel 900

#### 9.2 Installation

A detailed description of the Control Center can be found in the integrated help system. The B&R Automation Device Interface (ADI) driver (also contains Control Center) is available in the Downloads section of the B&R website (<a href="https://www.br-automation.com">www.br-automation.com</a>).

- 1. Download and unzip the .zip archive.
- 2. Close all applications.
- 3. Run the Setup.exe file (e.g. double-click on it in Explorer).

## Information:

The ADI driver is already included in B&R images of embedded operating systems.

If a more current ADI driver version exists (see the Downloads section of the B&R website), it can be installed later. It is important that Enhanced Write Filter (EWF) is disabled for this.

## 9.3 SDL Equalizer settings

- 1. Open the Control Center in the Control Panel.
- 2. Select the **Display** tab.
- 3. Click on **Settings**. This opens the following window:

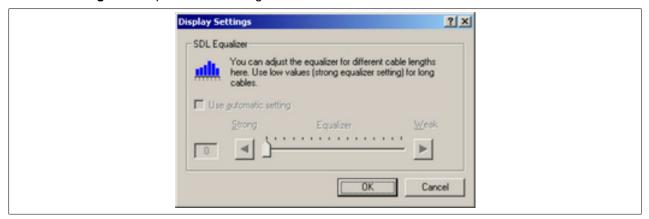

Figure 125: ADI Control Center - SDL Equalizer settings

The settings in this window can be used to configure the SDL Equalizer settings for the display. The equalizer is integrated into Automation Panel devices and adapts the DVI signal to different cable lengths. The equalizer value is automatically calculated based on the cable length. It is possible to set a different equalizer value in order to obtain the best possible display quality (e.g. in the event of low-quality cables or poor DVI signal quality).

The optimal value for the cable length is defined by selecting "Use automatic setting".

The equalizer value can only be changed if the function is supported by Automation Panel 900 (Panel firmware version 1.04 or higher).

## 9.4 UPS configuration

This window displays the status values for an optionally installed B&R add-on UPS and allows the battery settings for the UPS to be edited, updated and backed up. It is also possible to configure the system settings for the UPS.

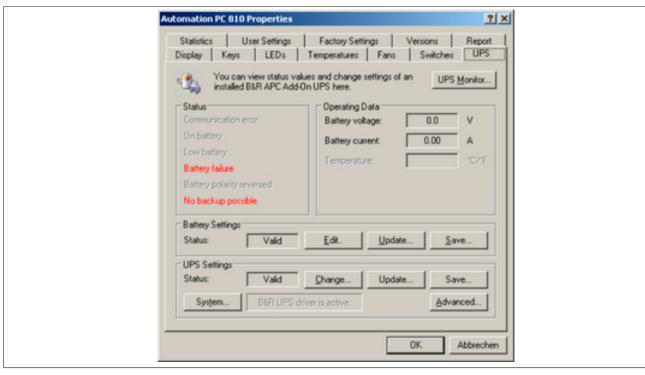

Figure 126: ADI Control Center - UPS settings

## Caution!

The installed UPS must be selected and configured in the Power Options section of the Control Panel in order for battery operation to be supported.

## Information:

The UPS service is supported in B&R Windows Embedded Version 2.10 and higher.

#### 9.4.1 Installing the UPS service for the B&R add-on UPS

- 1. Open the Control Center in the Control Panel.
- 2. Select the UPS tab.
- 3. Under **UPS settings**, click on **System**. This opens the **Power options** in the Control Panel (**Power options** can also be opened directly from the **Control Panel**).
- 4. Go to the **UPS** tab and click **Select**.
- Select "Bernecker + Rainer" as the manufacturer and "APC add-on UPS" as the model and then click Finish.
   The value for the COM connection is only required for a serially connected UPS and is ignored by the APC add-on UPS driver.
- 6. Click on **Apply** to start the UPS service. The UPS status and details will be displayed after a few seconds.
- 7. Click OK.

The text field next to **System** (on the **UPS** tab in the **Control Center**) also indicates whether the B&R UPS driver is active.

## Information:

Administrator rights are required in order to change the energy options or display the UPS status.

## 9.4.2 Displaying UPS default values

- 1. Open the Control Center in the Control Panel.
- 2. Select the UPS tab.

The displayed values are updated automatically.

## Information:

The status "Reversed battery polarity" is only displayed if using UPS firmware version 1.08 or higher. With UPS firmware versions 1.07 and older, switching between battery operation and normal operation can lead to a communication error.

3. Select "UPS monitor" to display UPS status changes since the last time the system or UPS driver was started.

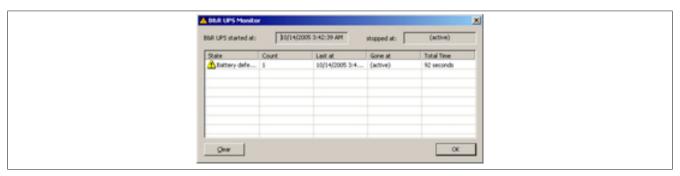

Figure 127: ADI Control Center - UPS monitor

The window is updated automatically when the status changes.

To remove a status from the list, click on Clear.

## Information:

The current status of the UPS is also displayed on the UPS page in the power options when the UPS service is started in the Windows Control Panel.

## Information:

In a German version of Windows XP Professional the battery status is shown as "Low" in the power options even if the battery is OK (Windows error). In an English version, three battery status levels are displayed: unknown, OK and replace. A low battery status is never displayed.

## 9.4.3 Changing UPS battery settings

- 1. Open the Control Center in the Control Panel.
- 2. Select the UPS tab.
- 3. Under Battery settings, click on Edit. This opens the "Open" dialog box.
- 4. Select and open the file containing the battery settings.

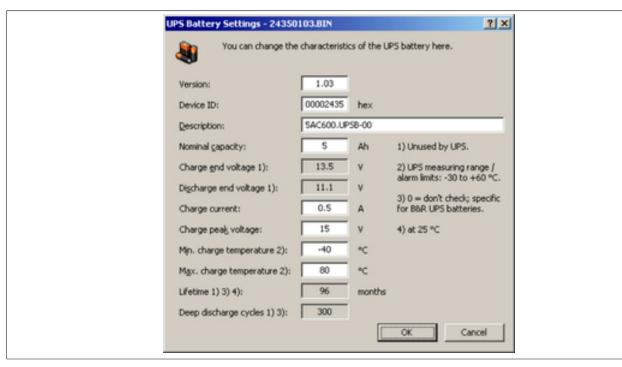

Figure 128: ADI Control Center - UPS battery settings

This window can be used to change the settings for the UPS battery.

Click **OK** to write the changed settings to the file. The battery settings for the UPS can then be updated with this file.

## Information:

To make settings for non-B&R batteries, it is best to make a copy of a file that contains battery settings from B&R under a new name and then adjust the settings in this new file for the battery being used.

Current files with settings for batteries from B&R can be updated using B&R's "Upgrade PPC800 MTCX" software.

## Information:

- The current UPS firmware version 1.10 does not use charge end voltage, deep discharge voltage, service life and deep discharge cycles.
- Service life is only included in version 2 (and higher) of the UPS battery settings and only valid for B&R UPS batteries at 25°C ambient temperature.
- Deep discharge cycles are only included in version 3 (and higher) of the UPS battery settings and only valid for UPS batteries from B&R.

## Information:

To change the current battery settings on the UPS, they must first be saved to a file.

## 9.4.4 Updating UPS battery settings

- 1. Open the Control Center in the Control Panel.
- 2. Select the UPS tab.
- 3. Under Battery settings, click on Update. Clicking on "Open" opens a dialog box.
- 4. Select and open the file containing the battery settings. The "Download" dialog box is opened.

The transfer can be canceled by clicking on Cancel. "Cancel" is disabled when writing to flash memory.

## Information:

- The UPS cannot be operated while the battery settings are being updated.
- If the transfer is aborted, then the procedure must be repeated until the battery settings have been updated successfully. Otherwise, battery operation will no longer be possible.

Deleting the data in flash memory can take several seconds depending on the memory block being used. The progress indicator is not updated during this time.

## Information:

The UPS is automatically restarted after a successful download. This can cause a brief failure in the UPS communication.

## 9.4.5 Saving UPS battery settings

- 1. Open the Control Center in the Control Panel.
- 2. Select the **UPS** tab.
- 3. Under "Battery settings", click on **Save**. This opens the "Save as" window.
- 4. Enter a filename or select an existing file and click on Save.

## Information:

UPS settings can only be saved with UPS firmware version 1.10 and higher.

The transfer can be aborted by clicking on **Cancel** in the Download dialog box.

## 9.4.6 Configuring UPS system settings

- 1. Open the Control Center in the Control Panel.
- 2. Select the UPS tab.
- 3. Under **UPS settings**, click on **Change**. This opens the following window:

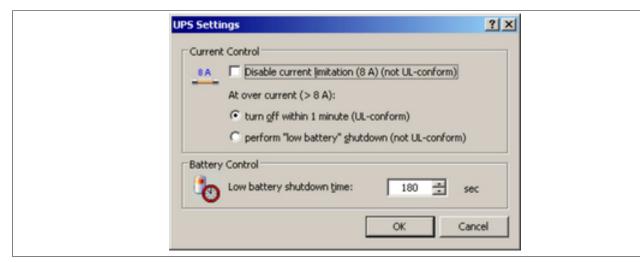

Figure 129: ADI Control Center - UPS settings

Additional information regarding UPS system settings can be found in the Windows help documentation.

## Information:

- UPS settings can only be changed with UPS firmware version 1.10 and higher. If there are no modified settings on the UPS, then the factory or default settings are used.
- The UPS is automatically restarted after the UPS settings have been changed. This can cause a brief disruption in communication with the UPS.
- Administrator rights are required in order to change the energy options or display the UPS status.

#### 9.4.6.1 Disabling 8 A current limitation

## Information:

It is not UL-compliant to switch off the 8 A current limitation on devices during battery operation!

"Low battery" shutdowns caused by overcurrent >8 A on devices running on the battery are not UL compliant!

Select the checkbox Disable current limitation (8 A).

If current limitation is enabled (checkbox not selected), then the UPS uses battery operation to check whether the UPS battery is discharged with 8 A for longer than 16 seconds. If so, then an overcurrent alarm is sent to the PC.

## Information:

Current limitation is only supported with UPS firmware version 1.10 and higher.

Enabling one of the two following options determines how the UPS should perform when an overcurrent alarm occurs:

If **Turn-off within 1 minute** is selected, then the UPS will be switched off within one minute when an overcurrent alarm occurs.

# Warning!

The operating system will not be properly shut down if an overcurrent alarm occurs!

If **Perform "low battery" shutdown** is selected, then the UPS will also signal a "Low battery alarm" in addition to the overcurrent alarm and will be switched off after the defined **Low battery shutdown time**. This will allow the operating system to shut down properly when the UPS service is enabled.

#### 9.4.6.2 Changing the shutdown time of the UPS when the battery is low

Enter the **Low battery shutdown time** in seconds. This is the amount of time that the UPS will wait before shutting off the power supply when the battery level is low.

This prevents the UPS battery from becoming too low if the Windows UPS service is not enabled to have the operating system turn off the UPS.

If the UPS service is enabled, then the UPS will be turned off by the operating system in accordance with the **Shutdown time** UPS service in Windows (see "Changing additional UPS settings" on page 222) when the battery level is low . The **Low battery shutdown time** will then be ignored.

## Information:

- The low battery shutdown time must be set to at least 60 seconds so that the operating system has enough time to send the shutdown command to the UPS when the battery level is low (normally occurs after approximately 30 seconds).
- The low battery shutdown time can only be set with UPS firmware version 1.10 and higher. UPS firmware version 1.08 always uses a switch-off delay of 180 seconds. UPS firmware versions older than 1.08 do not shut down automatically when the battery level is low.

#### 9.4.7 Changing additional UPS settings

- 1. Open the Control Center in the Control Panel.
- 2. Select the UPS tab.
- 3. Under UPS settings, click on Advanced. This opens the following window:

Figure 130: ADI Control Center - Advanced UPS settings

## Information:

Administrator rights are required in order to display this window.

#### 9.4.7.1 Changing the UPS shutdown time

The **Turn off delay** can be entered under **Windows UPS service** in seconds. This is the length of time that the UPS waits before switching off the power supply. When a critical alarm occurs (e.g. low battery level), the Windows UPS service will send a shutdown command with the turn off delay time to the UPS and shut down the system.

## Information:

This time is evaluated by the Windows UPS Service but cannot be set in the UPS system settings of the power options. This value should only be changed if the system requires longer than the default setting of 180 seconds to shut down.

## Caution!

The time entered must be longer than the time required to shut down the operating system.

## 9.4.7.2 Enabling UPS notifications

Under **B&R UPS driver**, enable the checkbox **Show notifications for UPS status**. Any changes to the UPS status will then trigger a message from the B&R UPS driver.

## Information:

Shutting down the system is only reported by the Windows UPS service. The UPS service also sends other notifications if so enabled in the UPS system settings in the power options. These messages are only displayed when the Windows Messenger service<sup>4)</sup> is active and the PC is connected to a network. In addition, some conditions of the B&R add-on UPS are not detected by the Windows UPS Service and therefore do not trigger messages (e.g. when there are no battery settings on the UPS). Windows services can be found by opening the Control Panel and selecting "Services" under "Administrative tools".

If the checkbox **Show UPS status with UPS monitor** is also enabled, a new message is not displayed for every change. Instead, only a general message and request to start the B&R UPS monitor are shown. As long as the UPS monitor is active, no new messages will be displayed.

## Information:

Regardless of these options, all changes to the UPS status are logged in the Windows event log (under "Application").

<sup>4)</sup> The Windows Messenger service is supported starting with B&R Windows Embedded version 2.20 and higher.

#### 9.4.8 Procedure following power failure

#### 9.4.8.1 Overcurrent shutdown

If overcurrent >8 A is present during battery operation for a duration of 16 seconds, then an overcurrent shutdown takes place. A switch-off time of one minute is available to the system.

If power returns during this time, then the shutdown process is aborted.

## Information:

Overcurrent shutdown has the highest priority.

## 9.4.8.2 Low battery shutdown

If the LowBatteryFlag is set during power failure, then a "low battery" shutdown is performed to prevent the battery from fully discharging. Once the switch-off time expires (3 minutes by default), the UPS shuts down.

If an "overcurrent" shutdown or "standard" shutdown is detected during the shutdown process, the "low battery" shutdown is replaced by the respective process.

#### 9.4.8.3 Standard shutdown

The standard shutdown is in effect whenever the UPS service is active; the switch-off time is 3 minutes by default. If power returns during the switch-off time, then the shutdown procedure is aborted.

If power returns during the shutdown process, then the shutdown timer will run until the B&R Industrial PC enters standby mode, at which point the system will be rebooted.

## 10 B&R Automation Device Interface (ADI) Development Kit

This software can be used to access B&R Automation Device Interface (ADI) functions directly from Windows applications created in one of the following development environments:

- Microsoft Visual C++ 6.0
- Microsoft Visual Basic 6.0
- · Microsoft Embedded Visual C++ 4.0
- Microsoft Visual Studio 2008 (or newer)

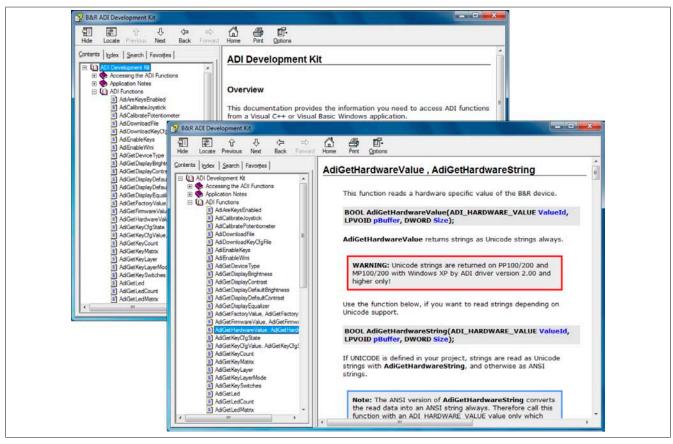

Figure 131: ADI Development Kit Screenshots (Version 3.70)

#### Features:

- One Microsoft Visual Basic module with ADI function declarations
- Header files and import libraries for Microsoft Visual C++
- · Help files for Visual Basic and Visual C++
- Sample projects for Visual Basic and Visual C++
- ADI DLL (for application testing if no ADI driver is installed)

The following systems are supported (version 3.70 and higher):

- · Automation PC 510
- Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Automation PC 910
- Automation PC 2100
- · Panel PC 300
- Panel PC 700
- Panel PC 800
- Panel PC 900
- Panel PC 2100

## Software • B&R Automation Device Interface (ADI) Development Kit

- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500
- Mobile Panel 40/50
- Mobile Panel 100/200

The ADI driver installed on the stated product series must be suitable for that device. The ADI driver is already included in B&R images of embedded operating systems.

A detailed description of how to use ADI functions can be found in the help system.

The B&R Automation Device Interface (ADI) development kit is available at no cost in the Downloads section of the B&R website (<a href="https://www.br-automation.com">www.br-automation.com</a>).

# 11 B&R Automation Device Interface (ADI) .NET SDK

This software can be used to access B&R Automation Device Interface (ADI) functions directly from .NET applications created using Microsoft Visual Studio 2005 or later.

Supported programming languages:

- · Visual Basic
- Visual C++
- Visual C#

#### System requirements

- · Development system: PC with Windows XP/7 and
  - ° Microsoft Visual Studio 2005 (or newer)
  - ° Microsoft .NET Framework 2.0 and/or Microsoft .NET Compact Framework 2.0 (or newer)

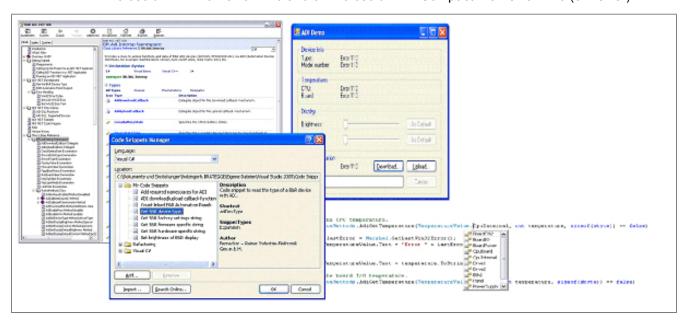

Figure 132: ADI .NET SDK screenshots (version 2.10)

Features (version 2.10 and higher)

- · ADI .NET class library
- Help files in HTML Help 1.0 format (.chm), MS Help 2.0 format (.HxS) and MS Help Viewer format (.MSHC) (help documentation is in English only)
- · Sample projects and code snippets for Visual Basic, Visual C++ and Visual C#
- ADI DLL (for application testing if no ADI driver is installed)

The following systems are supported (version 2.10 and higher):

- Automation PC 510
- · Automation PC 511
- Automation PC 620
- Automation PC 810
- Automation PC 820
- Automation PC 910
- Automation PC 2100
- · Panel PC 300
- Panel PC 700
- Panel PC 800
- Panel PC 900
- Panel PC 2100
- Power Panel 100/200
- Power Panel 300/400

## Software • B&R Automation Device Interface (ADI) .NET SDK

- Power Panel 500
- Mobile Panel 40/50
- Mobile Panel 100/200

The ADI driver installed on the stated product series must be suitable for that device. The ADI driver is already included in B&R images of embedded operating systems.

A detailed description of how to use ADI functions can be found in the help system.

The ADI .NET SDK is available in the Downloads section of the B&R website (www.br-automation.com).

# 12 B&R Key Editor

On display devices, it is often necessary to adapt the function keys and LEDs directly to the application software being used. The B&R Key Editor makes it quick and easy to implement a unique configuration for the application.

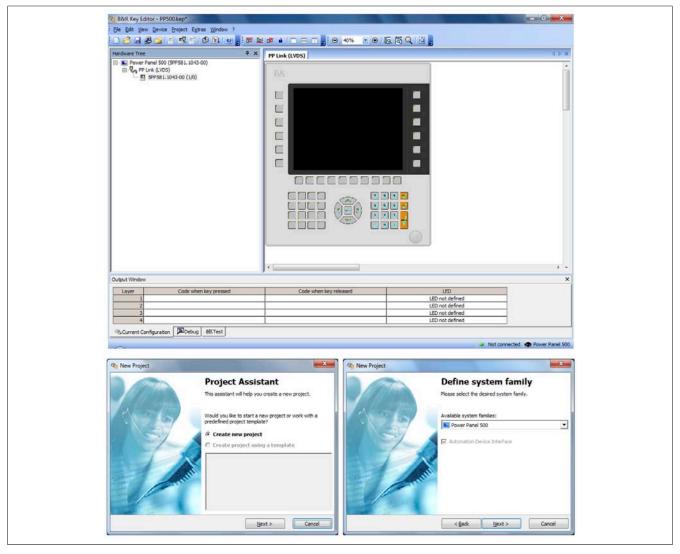

Figure 133: B&R Key Editor screenshots (version 3.50)

#### Features:

- Configuration of normal keyboard keys (A, B, C, etc.)
- Keyboard shortcuts (CTRL+C, SHIFT+DEL, etc.) using only one key
- Special key functions (change brightness, etc.)
- · Assignment of functions to LEDs (HDD access, power, etc.)
- 4 assignments possible per key (using layers)
- Configuration of the panel locking time when multiple Automation Panel 900 devices are connected to Automation PC and Panel PC devices.

The following systems are supported (version 3.50):

- · Automation PC 510
- Automation PC 511
- Automation PC 620
- · Automation PC 810
- Automation PC 820
- Automation PC 910
- Automation PC 2100
- Automation Panel 800
- · Automation Panel 830

## Software • B&R Key Editor

- Automation Panel 900
- · Automation Panel 9x3 / 9xD
- IPC2000, IPC2001, IPC2002
- IPC5000, IPC5600
- IPC5000C, IPC5600C
- Mobile Panel 40/50
- Mobile Panel 100/200
- Panel PC 300
- · Panel PC 700
- Panel PC 800
- · Panel PC 900
- Panel PC 2100
- Power Panel 100/200
- Power Panel 300/400
- Power Panel 500

A detailed guide for configuring keys and LEDs can be found in the B&R Key Editor's help system. The B&R Key Editor is available at no cost in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>). It can also be found on the B&R HMI Drivers & Utilities DVD (model number 5SWHMI.0000-00).

# **Chapter 5 • Standards and certifications**

# 1 Standards and guidelines

#### 1.1 CE mark

Alle für das jeweilige Produkt geltenden Richtlinien und deren harmonisierte EN-Normen werden erfüllt.

#### 1.2 EMC directive

These devices meet the requirements of EC directive "2004/108/EC Electromagnetic compatibility" and are designed for the following areas:

EN 61131-2:2007 Programmable logic controllers - Part 2: Equipment requirements and tests

EN 61000-6-2:2005 Electromagnetic compatibility (EMC) - Part 6-2: Generic standards - Immunity for

industrial environments

EN 61000-6 -4:2007 Electromagnetic compatibility (EMC) - Part 6-4: Generic standards - Emission stan-

dard for industrial environments

## 1.3 Low voltage directive

These devices satisfy the requirements of EC directive "2006/95/EC Low voltage directive" and are designed for the following areas:

EN 61131-2:2007 Programmable logic controllers - Part 2: Equipment requirements and tests

EN 60204-1:2006 + Safety of machinery - Electrical equipment of machines - Part 1: General require-

A1:2009 mer

## 2 Certifications

## Danger!

A complete system can only receive certification if ALL of the individual components it includes have the applicable certifications. If an individual component is being used that DOES NOT have an applicable certification, then the complete system will NOT RECEIVE certification.

B&R products and services comply with applicable standards. This includes international standards from organizations such as ISO, IEC and CENELEC, as well as national standards from organizations such as UL, CSA, FCC, VDE, ÖVE, etc. We are committed to ensuring the reliability of our products in an industrial environment.

Unless otherwise specified, the following certifications apply:

#### **2.1 GOST-R**

Produkte mit dieser Kennzeichnung sind von einem akkreditierten Testlabor geprüft und dürfen in die Russische Föderation eingeführt werden (basierend auf der CEKonformität).

# **Chapter 6 • Accessories**

The following accessories have successfully completed functional testing at B&R and are approved for use with this device. Nevertheless, it is important to observe any limitations that may apply to the complete system when operated with other individual components. When operating the complete system, the specifications for the individual components must be adhered to.

All components listed in this manual have been subjected to extensive system and compatibility testing and are approved for use. B&R can make no guarantee regarding the functionality of non-approved accessories.

## 1 Replacement CMOS batteries

#### 1.1 0AC201.91 / 4A0006.00-000

#### 1.1.1 General information

This lithium battery is needed to back BIOS CMOS data and the real-time clock (RTC).

The battery is subject to wear and must be replaced when the battery power is insufficient ("Bad" status).

#### 1.1.2 Order data

| Model number  | Short description  | Figure |
|---------------|--|--------|
|               | Batteries  |        |
| 0AC201.91     | Lithium batteries 4 pcs., 3 V / 950 mAh button cell We hereby state that the lithium cells contained in this shipment qualify as "partly regulated". Handle with care. If the package is damaged, inspect the cells, repack intact cells and protect the cells against short circuit. For emergency information, call RENATA SA at +41 61 319 28 27. | REFION |
| 4A0006.00-000 | Lithium battery, 3 V / 950 mAh, button cell  |        |

Table 175: 0AC201.91, 4A0006.00-000 - Order data

## 1.1.3 Technical data

# Warning!

The battery must be replaced by a Type CR2477N Renata battery only. The use of another battery may present a risk of fire or explosion.

The battery may explode if handled improperly. Do not recharge, disassemble or dispose of in fire.

## Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

| Product ID                        | 0AC201.91              | 4A0006.00-000 |
|-----------------------------------|------------------------|---------------|

# **5 Clamping blocks**

# 5.1 5AC900.BLOC-00

## 5.1.1 General information

These replacement clamping blocks are used to mount B&R panel devices.

## 5.1.2 Order data

| Model number   | Short description                                       | Figure |
|----------------|---|--------|
|                | Accessories   | _      |
| 5AC900.BLOC-00 | Terminal block with brackets, 10 pcs.; replacement part |        |

Table 182: 5AC900.BLOC-00 - Order data

# 6 Uninterruptible power supply

With an optionally integrated UPS, the B&R Industrial PC makes sure that the PC system completes write operations even when a power failure occurs. When the UPS detects a power failure, it switches to battery operation immediately without interruption. Any running programs will be properly terminated by the UPS. This eliminates the chance of inconsistent data (only works if the UPS has already been configured and the drive is enabled).

## Information:

- The monitor/panel is not buffered by the UPS and will shut off when the power fails.
- More detailed information about uninterruptible power supplies can be found in the user's manual for the external UPS. This can be downloaded from the B&R website.

Because the charging circuit is integrated in the housing of the B&R Industrial PC, installation has been simplified to merely attaching the connection cable to the battery unit mounted next to the PC.

Special emphasis was placed on ease of maintenance when the battery unit was designed. Batteries are easily accessible from the front and can be replaced in just a few moments when servicing.

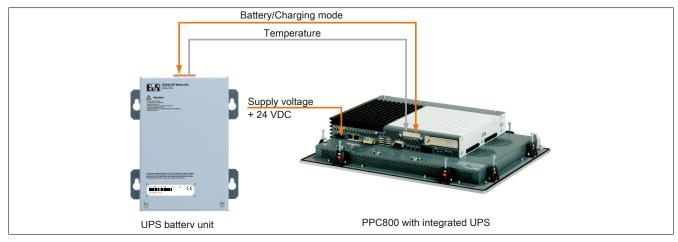

Figure 134: UPS principle

## 6.1 Features

- Long-lasting, maintenance-free rechargeable batteries
- Communication via integrated interfaces
- Temperature sensor
- Driver software
- Deep discharge protection

## 6.2 Requirements

- · A suitable system unit
- Add-on UPS module 5AC600.UPSI-00
- Battery unit 5AC600.UPSB-00
- UPS connection cable 0.5 m (5CAUPS.0005-00) or 3 m (5CAUPS.0030-00)
- · Configuration of the B&R UPS in the ADI Control Center

#### 6.3 5AC600.UPSI-00

## 6.3.1 General information

This add-on UPS module can easily be installed in an appropriate system unit (for a list of required revisions, see section 6.2 "Requirements" on page 239).

#### 6.3.2 Order data

| Model number  | Short description                                   | Figure         |

| Height                     | 87.5 mm              |
| Weight                     | Approx. 3200 a       |

Table 186: 5AC600.UPSB-00, 5AC600.UPSB-00 - Technical data

- 1) Depending on the charging and discharging cycles (up to 80% battery capacity).
- 2) Yes, although applies only if all components installed within the complete system have this certification
- 3) 25 A fuse. Replacement fuses can be ordered separately whenever needed.
- 4) The fuse can be installed later in revisions up to and including D0. More information can be found in the "Maintenance and service" chapter of the APC810 and PPC800 user's manuals.
- 5) Dimensions without mounting clips.

#### 6.4.4 Service life

The following diagram shows the relationship between ambient temperature and service life.

## 6.4.5 Deep discharge cycles

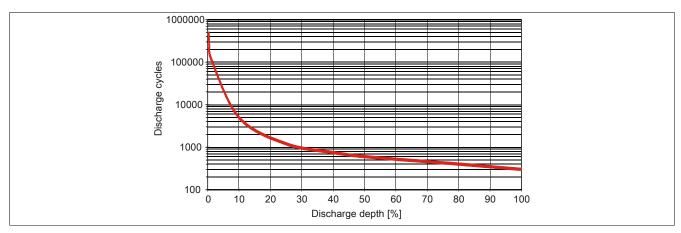

Figure 136: Deep discharge cycles

#### 6.4.6 Dimensions

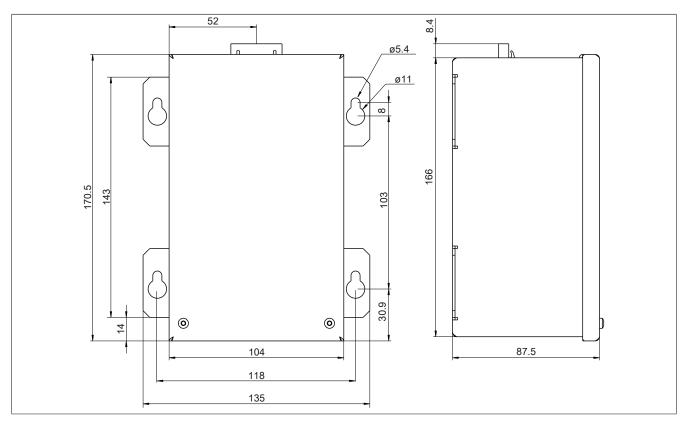

Figure 137: 5PC600.UPSB-00 - Dimensions

## 6.4.7 Drilling template

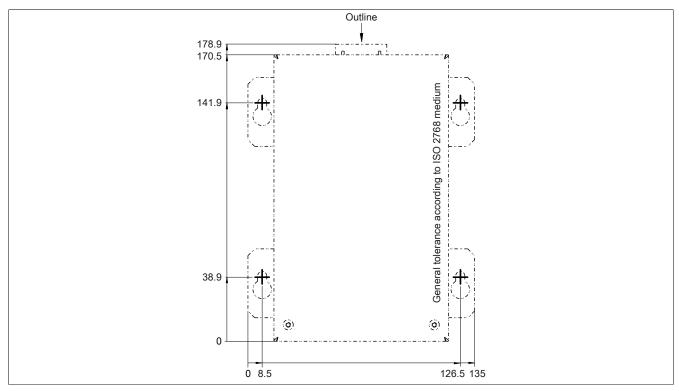

Figure 138: 5PC600.UPSB-00 - Drilling template

## 6.4.8 Installation instructions

Due to the unique construction of these batteries, they can be stored and operated in any position.

#### 6.5 5CAUPS.00xx-00

#### 6.5.1 General information

The UPS connection cable establishes the connection between the add-on UPS module (5AC600.UPSI-00) and the battery unit (5AC600.UPSB-00). It is available in lengths of 0.5 m and 3 m.

#### 6.5.2 Order data

| Model number   | Short description                       | Figure    |
|----------------|---|-----------|

<sup>1)</sup> Yes, although applies only if all components installed within the complete system have this certification

## 6.6 5AC600.UPSF-00

#### 6.6.1 General information

The UPS fuse kit can be used to add a fuse for the 5AC600.UPSB-00 battery unit.

Information about installing the 5AC600.UPSF-00 fuse kit can be found in the section "Installing the UPS fuse kit on the battery unit" on page 296.

## Information:

The 5AC600.UPSF-00 UPS fuse kit is only needed for battery units up to and including revision D0. A 25 A fuse is integrated on the connector circuit board beginning with revision E0.

## 6.6.2 Order data

| Model number   | Short description   | Figure |
|----------------|---|--------|
|                | Uninterruptible power supplies                                  |        |
| 5AC600.UPSF-00 | UPS fuse kit for battery unit 5AC600.UPSB-00 up to revision D0. |        |

Table 190: 5AC600.UPSF-01 - Order data

## 7 External UPS

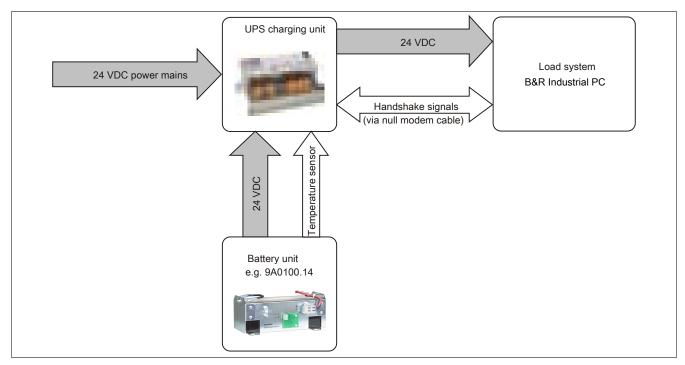

Figure 139: Block diagram of the complete system

## 7.1 General information

A UPS charging unit, battery unit and null modem cable are required to provide power from an external UPS.

In normal operation, the 24 VDC supply voltage is routed directly to the load system. If the mains supply voltage fails, the UPS battery unit powers the load system power so that shutdown can take place properly without losing data.

Data and commands are exchanged between the UPS and the load system via the handshake signals on the RS232 interface.

Additional information about external UPS is available in the UPS user's manual, which can be downloaded from the B&R website (<a href="https://www.br-automation.com">www.br-automation.com</a>).

Table 197: 5ACPCI.ETH3-01 - Technical data

#### 8.2.4 Driver support

A special driver is required in order to operate the Intel 82551ER Ethernet controller. Drivers for approved operating systems (Windows XP Professional, Windows XP Embedded and MS-DOS) are available in the Downloads section of the B&R website (<a href="www.br-automation.com">www.br-automation.com</a>).

### Information:

Required drivers can only be downloaded from the B&R website, not from manufacturer websites.

### 8.2.5 Dimensions

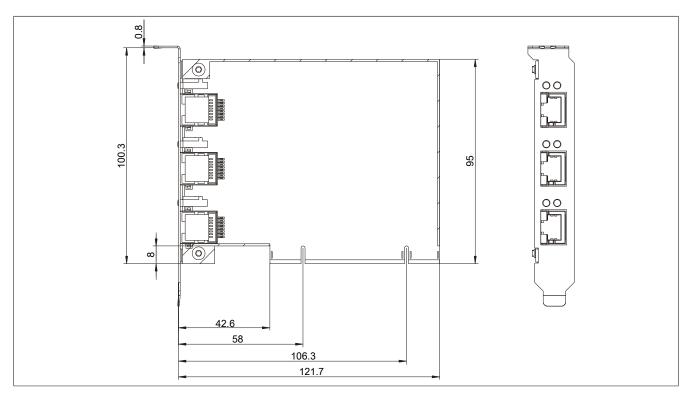

Figure 143: 5ACPCI.ETH3-01 - Dimensions

### 9 CompactFlash cards

#### 9.1 General information

CompactFlash cards are storage media that are easy to replace. Due to their robustness against environmental influences (e.g. temperature, shock, vibration, etc.), CompactFlash cards are ideal for use as storage media in industrial environments.

#### 9.2 General information

In order to be suited for use in industrial automation, CompactFlash cards must be highly reliable. The following items are very important to achieving the necessary level of reliability:

- · The flash technology used
- · An efficient algorithm for maximizing service life
- · Good mechanisms for detecting and fixing errors in the flash memory

#### 9.2.1 Flash technology

Currently, CompactFlash cards are available with MLC (multi-level cell) and SLC (single-level cell) flash blocks. SLC flash memory has a service life 10 times longer than MLC, which is why only CompactFlash cards with SLC flash blocks are suited for industrial applications.

#### 9.2.2 Wear leveling

Wear leveling is an algorithm that can be used to maximize the service life of a CompactFlash card. There are three different algorithms:

- · No wear leveling
- Dynamic wear leveling
- · Static wear leveling

The basic idea behind wear leveling is to distribute data over a broad area of blocks or cells on the disk so that the same areas don't have to be cleared and reprogrammed over and over again.

### 9.2.2.1 No wear leveling

The earliest CompactFlash cards didn't have an algorithm for maximizing service life. The service life of a CompactFlash card was determined only by the guaranteed lifespan of the flash blocks.

### 9.2.2.2 Dynamic wear leveling

Dynamic wear leveling makes it possible to utilize unused flash blocks when writing to a file. If the disk is 80% full with files, then only 20% can be used for wear leveling.

The service life of the CompactFlash card is therefore dependent on the amount of unused flash blocks.

### 9.2.2.3 Static wear leveling

Static wear leveling monitors which data is rarely modified. From time to time, the controller then moves this data to blocks that have already been used frequently in order to prevent further wear on those cells.

### 9.2.3 ECC error correction

Bit errors can be caused by inactivity or when a certain cell is being operated. Error correction coding (ECC) implemented via hardware or software can detect and correct many errors of this type.

### 9.2.4 S.M.A.R.T. support

Self-Monitoring, Analysis and Reporting Technology (S.M.A.R.T.) is an industry standard for mass storage devices that has been introduced to monitor important parameters and quickly detect imminent failures. Critical performance and calibration data is monitored and stored in order to help predict the probability of errors.

### 9.2.5 Maximum reliability

CompactFlash cards used by B&R use SLC flash blocks and static wear leveling together with a powerful ECC algorithm to provide maximum reliability.

#### 9.3 5CFCRD.xxxx-06

### 9.3.1 General information

### Information:

B&R CompactFlash cards 5CFCRD.xxxx-06 and CompactFlash cards from a different manufacturer cannot be used in the same system at the same time. Due to differences in technology (older vs. newer technologies), problems can occur during system startup that are caused by different boot times.

see "Known problems/issues" on page 266

### Information:

5CFCRD.xxxx-06 CompactFlash cards are supported on B&R devices with WinCE version ≥ 6.0.

#### 9.3.2 Order data

#### 9.3.3 Technical data

### Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

### Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

Table 200: 5CFCRD.0512-06, 5CFCRD.1024-06, 5CFCRD.2048-06, 5CFCRD.4096-06, 5CFCRD.8192-06, 5CFCRD.016G-06, 5CFCRD.032G-06 - Technical data

- 1) Yes, although applies only if all components installed within the complete system have this certification
- 2) Endurance of B&R CFs (with linear written block size ≥128 kB).
- 3) Not supported by the B&R Embedded OS Installer.

### Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, the use of a UPS device is recommended.

### Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

<sup>1)</sup> Yes, although applies only if all components installed within the complete system have this certification

Endurance of B&R CFs (with linear written block size ≥128 kB). Not supported by the B&R Embedded OS Installer.

<sup>2)</sup>

#### 9.4 5CFCRD.xxxx-03

#### 9.4.1 General information

### Information:

Western Digital CompactFlash cards 5CFCRD.xxxx and CompactFlash cards from a different manufacturer cannot be used in the same system at the same time. Due to differences in technology (older vs. newer technologies), problems can occur during system startup that are caused by different boot times.

see "Known problems/issues" on page 266

### Information:

On Windows CE 5.0 devices, 5CFCRD.xxxx-03 CompactFlash cards up to 1 GB are supported.

### Information:

On CompactFlash cards 5CFCRD.xxxx-03, only the sticker and the description have changed. The technical data has not been changed.

#### 9.4.3 Technical data

### Caution!

A sudden loss of power may result in data loss! In very rare cases, the mass storage device may also become damaged.

To prevent damage and loss of data, B&R recommends that you use a UPS device.

### Information:

The following characteristics, features and limit values only apply to this accessory and can deviate from those specified for the complete system. The data specifications for the complete system take precedence over those of individual components.

<sup>1)</sup> Yes, although applies only if all components installed within the complete system have this certification

<sup>2)</sup> Not supported by the B&R Embedded OS Installer.

### 9.4.4 Temperature/Humidity diagram

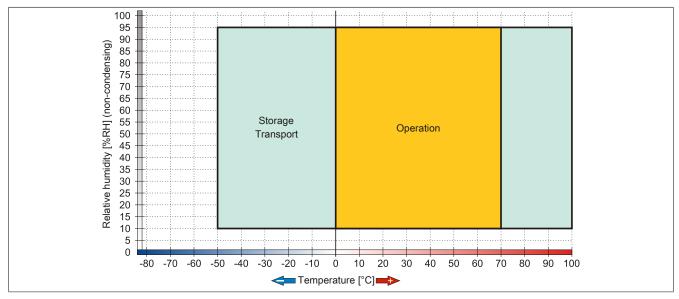

Figure 148: 5CFCRD.xxxx-03 - Temperature/Humidity diagram for CompactFlash cards

### 9.4.5 Dimensions

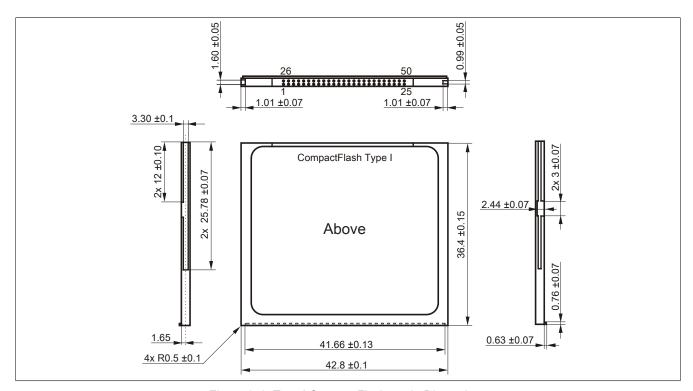

Figure 149: Type I CompactFlash card - Dimensions

### 9.5 Known problems/issues

The following is a known issue for devices with two CompactFlash slots:

• Using two different types of CompactFlash cards can cause problems with Automation PCs and Panel PCs. For example, it is possible that one of the two cards is not detected during system startup. This is caused by different startup speeds. CompactFlash cards with older technology require significantly more time during system startup than CompactFlash cards with newer technology. This behavior occurs near the end of the time frame provided for startup. The problem described can occur because the startup time for the CompactFlash cards fluctuates due to the different components being used. Depending on the CompactFlash card being used, this error might never, sometimes or always occur.

### 10 USB flash drives

### 10.1 5MMUSB.2048-00

#### 10.1.1 General information

USB flash drives are storage media that are easy to replace. Because of their fast data transfer (USB 2.0), USB flash drives are ideal for use as portable data storage. Without requiring additional drivers ("hot plugging", except in the case of Windows 98SE), the USB flash drive can immediately act as an additional drive where data can be read or written.

### Information:

Due to the vast quantity of USB flash drives available on the market as well as their short product life cycle, we reserve the right to supply alternative products at any time. The following measures may therefore be necessary in order to boot from these flash drives as well:

- The flash drive must be reformatted or in some cases even repartitioned (set active partition).
- The flash drive must be the first bootable device in the BIOS boot order; alternatively, the IDE controllers can be disabled in BIOS. This can be avoided in most cases if the "fdisk /mbr" command is additionally executed on the USB flash drive.

#### 10.1.2 Order data

| Model number   | Short description            | Figure       |
|----------------|------------------------------|--------------|
|                | USB accessories              |              |
| 5MMUSB.2048-00 | USB 2.0 flash drive, 2048 MB | Cruzer micro |

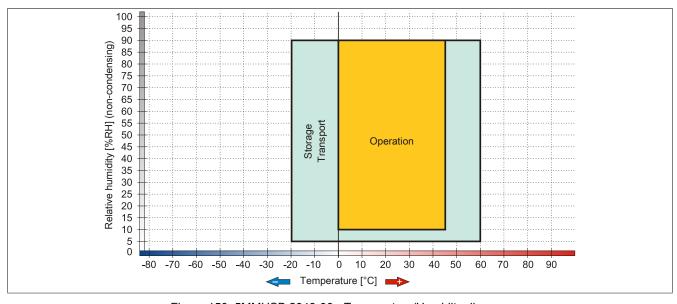

Figure 150: 5MMUSB.2048-00 - Temperature/Humidity diagram

<sup>1)</sup> Indicates data being transferred (sending and receiving).

#### 10.2 5MMUSB.xxxx-01

#### 10.2.1 General information

USB flash drives are storage media that are easy to replace. Because of their fast data transfer (USB 2.0), USB flash drives are ideal for use as portable data storage. Without requiring additional drivers ("hot plugging", except in the case of Windows 98SE), the USB flash drive can immediately act as an additional drive where data can be read or written.

### Information:

Due to the vast quantity of USB flash drives available on the market as well as their short product life cycle, we reserve the right to supply alternative products at any time. The following measures may therefore be necessary in order to boot from these flash drives as well:

- The flash drive must be reformatted or in some cases even repartitioned (set active partition).
- The flash drive must be the first bootable device in the BIOS boot order; alternatively, the IDE controllers can be disabled in BIOS. This can be avoided in most cases if the "fdisk /mbr" command is additionally executed on the USB flash drive.

#### 10.2.2 Order data

| Model number   | Short description                 |     | Figure                   |

### 11 USB media drive

### 11.1 5MD900.USB2-02

### 11.1.1 General information

The USB media drive features a DVD-R/RW DVD+R/RW drive, a CompactFlash slot and one USB port on both the front and back. It is connected to a USB port on the B&R Industrial PC.

- Desktop or rack-mounted operation (mounting rail brackets)
- · Integrated DVD-R/RW DVD+R/RW drive
- Integrated IDE/ATAPI CompactFlash slot (hot pluggable)
- Integrated USB 2.0 connection
- +24 VDC supply (back)
- USB 2.0 connection (back)
- · Optional front cover

### 12 HMI Drivers & Utilities DVD

### 12.1 5SWHMI.0000-00

#### 12.1.1 General information

This DVD contains drivers, utilities, software upgrades and user's manuals for B&R panel system products (see the "Industrial PCs" or "Visualization and operation" section of the B&R website at www.br-automation.com).

When the DVD is created, its contents are identical to the files found in the Downloads section of the B&R website (Service / Material-related downloads).

Table 218: 9A0014.02, 9A0014.05, 9A0014.10 - Technical data

### 13.2.1.4 Cable pinout

# Warning!

If you choose to make a suitable cable yourself, it should be wired according to these specifications. If a self-made cable is used, B&R cannot guarantee that it will function properly. All cables provided by B&R are guaranteed to function properly, however.

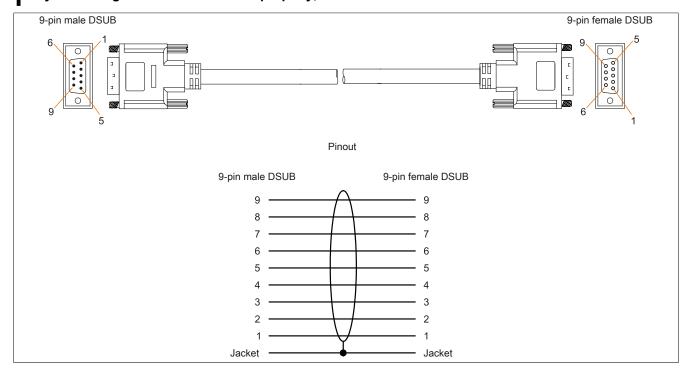

Figure 161: 9A0014.xx RS232 cables - Pinout

### 13.3 Internal supply cable

### 13.3.1 5CAMSC.0001-00

#### 13.3.1.1 General information

This supply cable is used internally, for example to provide power to special PCI cards. It is connected to the mainboard.

For requirements and procedures, see "Connecting an external device to the mainboard" on page 307.

# Caution!

Power must be turned off before plugging in and unplugging cables.

### 13.3.1.2 Order data

| Model number   | Short description     | Figure |
|----------------|-----------------------|--------|
|                | Accessories           |        |
| 5CAMSC.0001-00 | Internal supply cable |        |
|                |                       |        |
|                |                       |        |
|                |                       |        |

Table 219: 5CAMSC.0001-00 - Order data

#### 13.3.1.3 Technical data

| Product ID                 | 5CAMSC.0001-00  |
|----------------------------|---|
| General information        |   |
| Certification              |   |
| CE                         | Yes   |
| GOST-R                     | Yes   |
| Cable construction         |   |
| Wire cross section         | AWG 22  |
| Connector                  |   |

Table 220: 5CAMSC.0001-00 - Technical data

# **Chapter 7 • Maintenance and service**

This chapter describes service/maintenance work that can be carried out by a qualified end user.

# 1 Changing the battery

The lithium battery buffers the internal real-time clock (RTC) and CMOS data.

### Information:

- The product design allows the battery to be changed with the B&R device switched either on or off. In some countries, safety regulations do not allow batteries to be changed while the module is switched on.
- Any BIOS settings that have been made will remain when the battery is changed with the power turned off (stored in non-volatile EEPROM). The date and time must be reset later since this data is lost when the battery is changed.
- The battery should only be changed by qualified personnel.

# Warning!

The battery must be replaced by a Type CR2477N Renata battery only. The use of another battery may present a risk of fire or explosion.

The battery may explode if handled improperly. Do not recharge, disassemble or dispose of in fire.

The following replacement lithium batteries are available: 4A0006.00-000 (1 pc.) and 0AC201.91 (4 pcs.).

### 1.1 Evaluating the battery status

The status of the battery is determined immediately after the device is started and subsequently checked by the system every 24 hours. During this measurement, the battery is subjected to a brief load (approximately 1 second) and then evaluated. Once determined, the battery status is displayed in BIOS (Advanced - OEM features - System board features - Voltage values) and in the B&R Control Center (ADI driver); it can also be read in a customer application using the ADI library.

| Battery status | Function   |
|----------------|--|
| N/A            | The hardware or firmware being used is too old and does not support reading the battery status.                                  |
| GOOD           | Data buffering is intact.  |
| BAD            | From the point when battery capacity is recognized as insufficient (BAD), data buffering is intact for approximately another 500 |
|                | hours.   |

Table 221: Battery status

From the point when battery capacity is recognized as insufficient, data buffering is intact for approximately another 500 hours. When replacing the battery, data is buffered for approximately 10 minutes by a gold leaf capacitor.

#### 1.2 Procedure

- Disconnect the power supply to the B&R Industrial PC.
- · Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- · Remove the cover from the battery compartment and carefully pull out the battery using the removal strip.

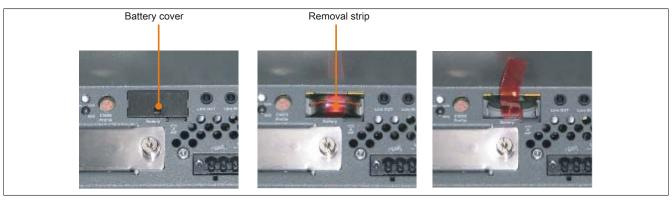

Figure 162: Removing the battery

• The battery should not be held by its edges. Insulated tweezers may also be used to insert the battery.

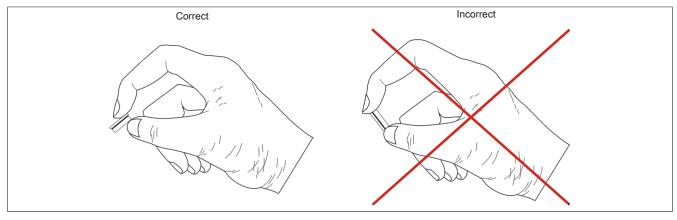

Figure 163: Battery handling

· Insert the new battery with the correct polarity.

Figure 164: Battery polarity

- To make the next battery replacement easier, be sure the removal strip is in place when inserting the battery.
- Reconnect the power supply to the B&R Industrial PC (plug in the power cable).
- · Reset the date and time in BIOS.

# Warning!

Lithium batteries are considered hazardous waste. Used batteries should be disposed of in accordance with applicable local regulations.

# 2 Cleaning

# Danger!

This device can only be cleaned when switched off in order to prevent unintended functions from being triggered when handling the touch screen or pressing keys.

This device should be cleaned with a moist cloth. The cloth should be moistened with water and detergent, a screen cleaning agent or alcohol (ethanol). The cleaning agent should be applied to the cloth beforehand, not sprayed directly on the device! Aggressive solvents, chemicals, scouring agents, pressurized air or steam jets should never be used.

### Information:

Displays with a touch screen should be cleaned regularly.

# 3 Replacing a CompactFlash card

# Caution!

Power must be turned off before replacing CompactFlash cards.

The CompactFlash card can be replaced quickly and easily by pressing the ejector (see image) with a pointed object such as a pen.

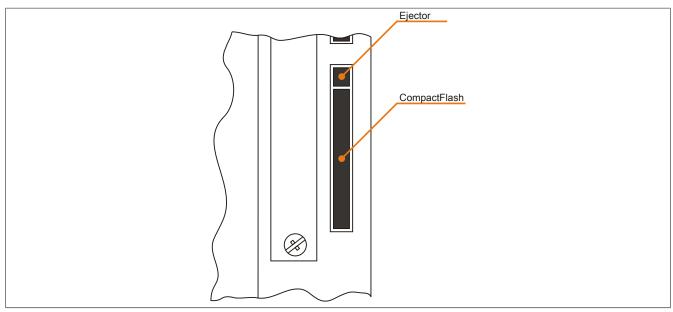

Figure 165: CompactFlash + ejector

# 4 Installing and replacing slide-in compact drives

# Information:

The SATA I interface allows disks to be replaced during operation (hot plugging). In order to take advantage of this capability, this feature must be supported by the operating system.

### 4.1 Procedure

1. Loosen and remove the two quick release screws on the protective cover / slide-in compact drive.

Figure 166: Loosening the quick release screws

2. Insert the compact SATA drive and tighten the quick release screws.

Figure 167: Inserting the compact SATA drive

# 5 Installing and replacing slide-in drives

Slide-in drives can be installed and replaced in system units with 1 card slot or in expansions with 2 card slots.

#### 5.1 Procedure

- 1. Disconnect the power supply to the B&R Industrial PC.
- 2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- 3. Remove the dummy slide-in module or slide-in drive by unscrewing the two quick release screws.

Figure 168: Loosening the quick release screws

4. Insert the slide-in drive and tighten with the two ¼ turn screws.

Figure 169: Installing the slide-in drive

# 6 Installing the slide-in compact adapter

Slide-in compact adapters can be installed and replaced in system units with 1 card slot or in expansions with 2 card slots. A slide-in compact drive (e.g. slide-in compact HDD) can be installed in a slide-in slot using the slide-in compact adapter.

#### 6.1 Procedure

- 1. Disconnect the power supply to the B&R Industrial PC.
- 2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- 3. Remove the dummy slide-in module or slide-in drive by unscrewing the two quick release screws.

Figure 170: Loosening the quick release screws

4. Insert the slide-in compact adapter and tighten the two quick release screws.

Figure 171: Installing the slide-in compact adapter

5. Once the adapter has been installed, the slide-in compact drive can be inserted.

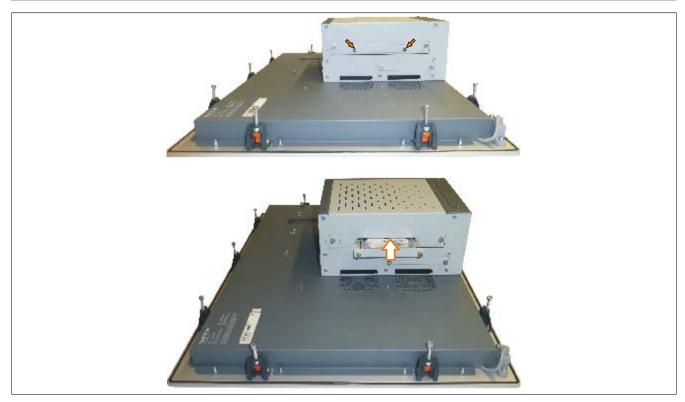

Figure 172: Inserting the slide-in compact drive

# 7 Installing and replacing fan kits

# Information:

The following section illustrates a characteristic example of a PPC800 model without expansion. The only difference in this procedure compared to models with an expansion is the number of combi-Torx screws to loosen

#### 7.1 Procedure

1. Loosen the indicated combi-Torx screws (T10) and remove the fan kit cover.

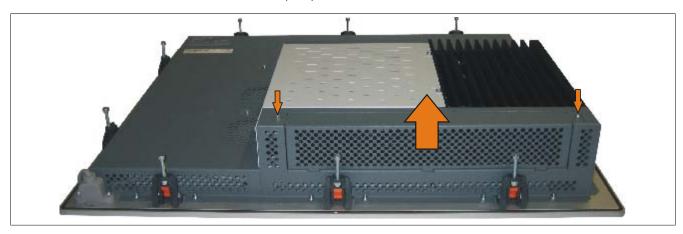

Figure 173: Removing the fan kit cover

2. Insert the fan kit frame and press down until it is fully fastened into the terminal.

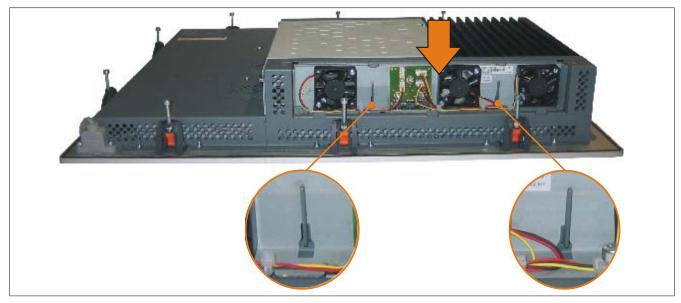

Figure 174: Inserting the fan kit

3. Place the dust filter in the fan kit cover and secure it with the filter clasp.

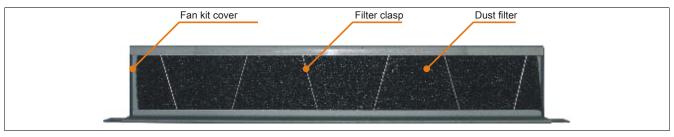

Figure 175: Securing the dust filter with the filter clasp

4. Place the fan kit cover in the housing and fasten using the Torx screws removed earlier.

# Maintenance and service

# Information:

The dust filter should be checked regularly depending on the area of use and degree of contamination.

# 8 Installing the UPS module

This module is installed using the materials included in delivery.

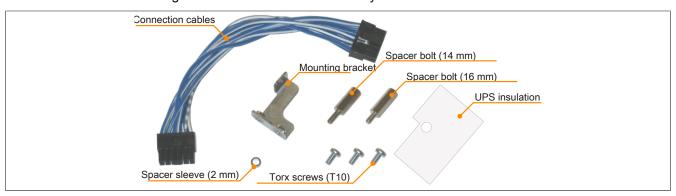

Figure 176: 5AC600.UPSI-00 Add-on UPS module - Installation materials

#### 8.1 Installation guidelines

- 1. Remove the side cover (see "Installing the side cover" on page 302).
- 2. Remove the UPS module cover by removing the 2 marked Torx screws (T10).

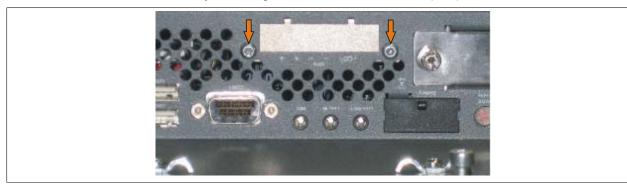

Figure 177: Removing the UPS module cover

3. Attach the UPS isolation to the bottom/rear of the UPS module and install both using 2 Torx screws (T10) on the housing and 1 Torx screw (T10) on the mainboard (spacer bolt). Use the previously removed Torx screws and the Torx screws from the installation material.

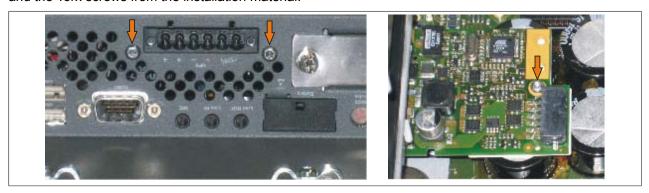

Figure 178: Installing the UPS module

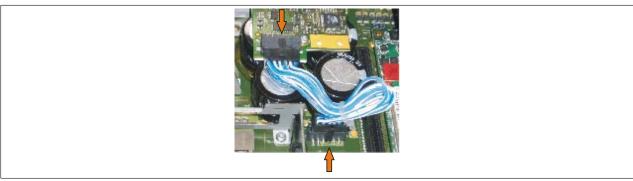

Figure 179: Attaching the connection cable

# Information:

When connecting the cable, make sure that the connector locks into place.

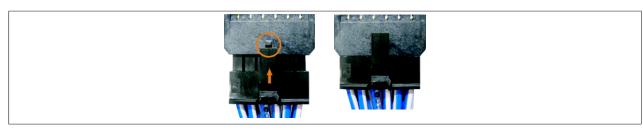

Figure 180: Connector locking mechanism

5. Attach the side cover.

Maintenanc and service

# 9 Installing the UPS fuse kit on the battery unit

# Information:

The 5AC600.UPSF-00 UPS fuse kit is only needed for battery units up to and including revision D0. A 25 A fuse is integrated on the connector circuit board beginning with revision E0.

#### 9.1 Procedure

- 1. Power to the 5AC600.UPSB-00 battery unit must be disconnected by unplugging the UPS connection cable from the B&R Industrial PC.
- 2. Remove the cover on the battery unit. This is done by unscrewing the two Torx screws (T10) so that the cover can be removed by sliding it towards the orange connector.

Figure 181: Removing the cover for the battery unit

3. To install the fuse, the red cable must be disconnected from the battery circuit board.

Figure 182: Disconnecting the cable

4. The male fuse kit connector must be connected to the female connector on the red cable (1). The female fuse kit connector must be connected to the male connector on the battery circuit board (2).

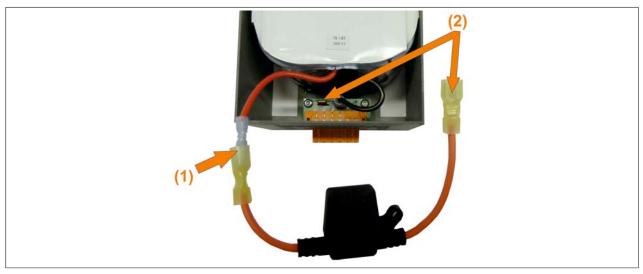

Figure 183: Connecting the fuse

5. The fuse can then be secured in the battery unit.

Figure 184: Securing the fuse

- 6. The cover for the battery unit can now be reattached. Insert the clips on the cover into the notch on the battery unit and tighten down the cover with the Torx screws removed previously.
- 7. Reconnect the 5AC600.UPSB-00 battery unit to the B&R Industrial PC.

# 10 Installing and replacing bus units

Bus units can be installed and replaced in system units with 1 card slot or in expansions with 2 card slots.

#### 10.1 Procedure

- 1. Disconnect the power supply to the Panel PC 800.
- 2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- 3. Remove the side cover (see "Installing the side cover" on page 302).
- 4. Loosen the Torx screws (T10) mounted to the mainboard.

Figure 185: Removing the screws

5. Plug the bus unit into the bus unit slot and fasten it using three Torx screws (T10).

Figure 186: Installing the bus unit

6. Attach the side cover.

- 1. Remove the side cover (see "Installing the side cover" on page 302).
- 2. Remove the 1 card slot or the 2 card slot expansion.

#### 11.1 Procedure for the 5AC803.BC01-00 adapter

1. Loosen the Torx screws (T10) mounted to the mainboard.

Figure 187: Removing the screws

2. Place the adapter and guide rails in the intended positions and fasten them using the Torx screws (T10) removed earlier.

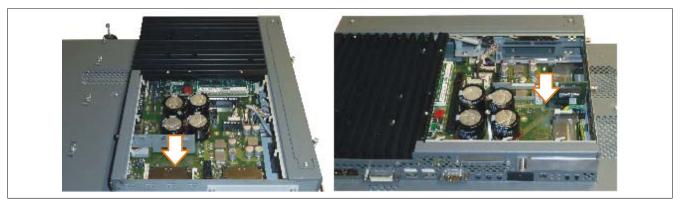

Figure 188: Installing the 5AC803.BC01-00 adapter

3. Attach the side cover.

Chapter 7
Maintenanc

# 11.2 Procedure for the 5AC803.BC02-00 adapter

1. Insert the adapter into the intended slot.

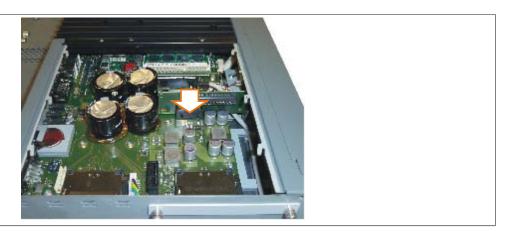

Figure 189: Installing the 5AC803.BC02-00 adapter

2. Attach the side cover.

# 12 Installing and replacing PClec plug-in cards

#### 12.1 Procedure

1. Loosen the quick release screws and remove the PClec module cover.

Figure 190: Removing the PClec module cover

2. Slide the PClec plug-in card into place.

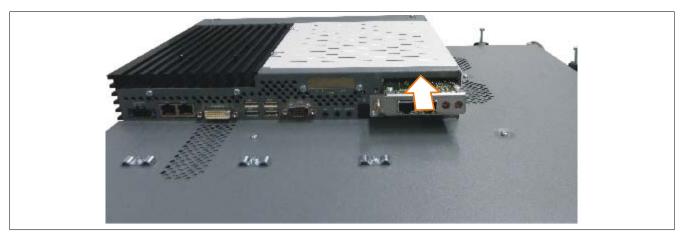

Figure 191: Inserting the PClec plug-in card

3. Fasten the PClec plug-in card using the quick release screws.

# 13 Installing the side cover

The side cover can be easily removed by loosening the Torx (T10) screws. The number of Torx screws can vary depending on the system.

#### 13.1 PPC800 without expansion

- 1. Disconnect the power supply to the Panel PC 800.
- 2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- 3. Loosen the indicated combi-Torx screws (T10).
- 4. After the screws have been removed, the side cover can be removed by sliding it away from the heat sink.

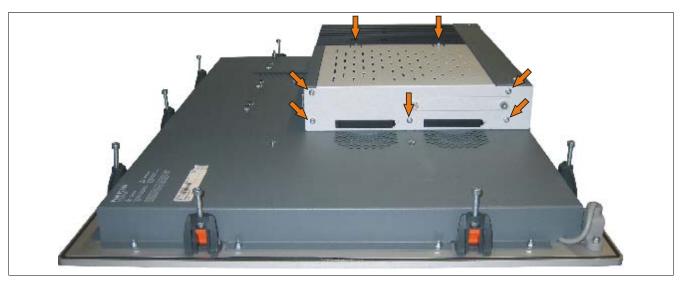

Figure 192: Installing the side cover on a PPC800 without an expansion

#### 13.2 PPC800 with an expansion

- 1. Disconnect the power supply to the Panel PC 800.
- 2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- 3. Loosen the indicated combi-Torx screws (T10).
- 4. After the screws have been removed, the side cover can be removed by sliding it away from the heat sink.

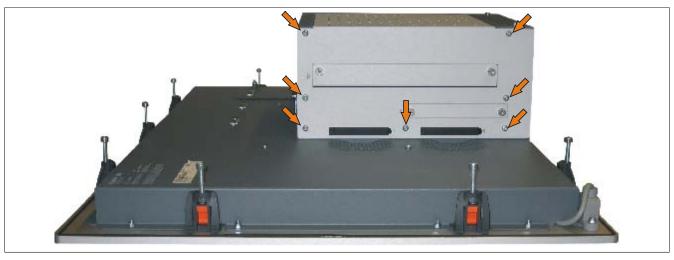

Figure 193: Installing the side cover on a PPC800 with an expansion (1-slot expansion shown in image)

# 14 Replacing a PCI SATA RAID hard disk in a RAID 1 set

This example assumes that the secondary hard disk (HDD1) is defective in a RAID 1 configuration. In such a case, the defective hard disk can be replaced by the replacement drive SATA hard disk.

| Model number of PCI SATA RAID controller | Model number of required replacement SATA HDD | Note             |
|--|---|------------------|
| 5ACPCI.RAIC-01                           | 5ACPCI.RAIC-02                                | 60 GB hard disk  |
| 5ACPCI.RAIC-03                           | 5ACPCI.RAIC-04                                | 160 GB hard disk |
| 5ACPCI.RAIC-05                           | 5MMHDD.0250-00                                | 250 GB hard disk |
| 5ACPCI.RAIC-06                           | 5MMHDD.0500-00                                | 500 GB hard disk |

Table 222: Overview of required replacement SATA HDD for PCI SATA HDD RAID controller

A size 10 Torx screwdriver is needed to replace the hard disk.

#### 14.1 Procedure

- 1. Disconnect the power supply.
- 2. Touch the housing or ground connection in order to discharge any electrostatic charge from your body.
- 3. Remove the side cover.
- 4. Remove the SATA RAID insert.
- 5. Loosen the 4 appropriate fastening screws (M3x5).

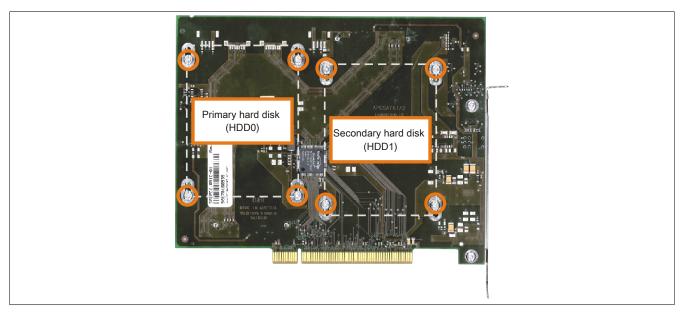

Figure 194: Screw layout on the back side of the 5ACPCI.RAIC-03 SATA RAID controller

- 6. On the front side, slide the hard disk down and away (Replacing the hard disk left image).
- 7. Insert the new hard disk carefully into the connector (Replacing the hard disk right image), being careful to only touch it on the front, not on the top.

#### Maintenance and service • Replacing a PCI SATA RAID hard disk in a RAID 1 set

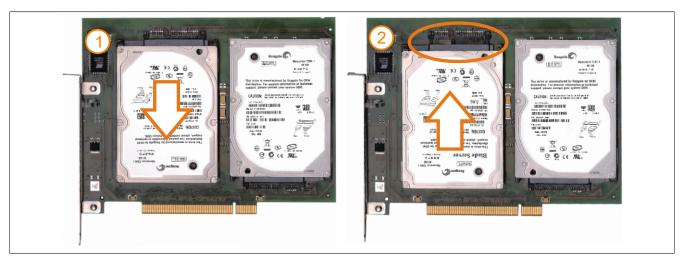

Figure 195: Replacing the hard disk

- 8. Re-secure the hard disk using the 4 fastening screws (M3x5) used earlier.
- 9. Reassemble the device in the reverse order.
- 10.An error message is output by the RAID BIOS after starting the system: "RAID1 set is in Rebuild status. The rebuild will continue after boot sequence is complete".
- 11. A rebuild can be performed immediately in SATA RAID BIOS or once the PC has booted see "Rebuild mirrored set" on page 152.

# Appendix A

# 1 Maintenance Controller Extended (MTCX)

The MTCX controller (FPGA processor) is located on the mainboard (part of every system unit).

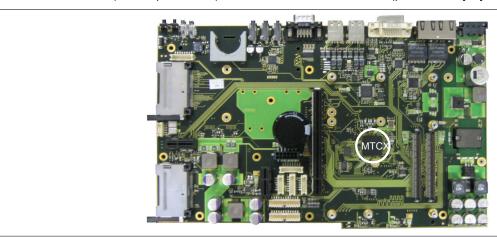

Figure 196: MTCX controller location

The MTCX is responsible for the following monitoring and control functions:

- · Power on (power OK sequencing) and power failure logic
- Watchdog handling (NMI and reset handling)
- · Temperature monitoring
- · Fan control
- Key handling / coordination (matrix keyboard on Automation Panel 900 devices configurable using B&R Key Editor, PS/2 keyboard)
- LED handling (matrix keyboard with LEDs on Automation Panel 900 devices configurable using B&R Key Editor)
- Advanced desktop operation (USB forwarding)
- · Daisy chain display operation (touch screen, USB forwarding)
- Panel locking mechanism (can be configured using B&R Control Center ADI driver)
- Backlight control for connected B&R displays
- Statistical data recording (power cycles records every switch-on, power on and fan hour; each full hour is counted, i.e. not increased at 50 minutes)
- SDL data transfer (display, matrix keyboard, touch screen, service data, USB)
- · LED status indicators (HDD, Link, Run)

Extended MTCX functions are available by upgrading firmware 1)). The version can be read in BIOS ("Advanced" - Baseboard/Panel Features) or in approved Microsoft Windows operating systems with the B&R Control Center.

#### 1.1 Temperature monitoring - Fan control

The MTCX constantly monitors the temperature using temperature sensors, which directly determines how the fans are controlled. The speed depends on the measured temperature. The limit values depend on the MTCX firmware version being used.

#### Appendix A • Maintenance Controller Extended (MTCX)

| Sensor range     | Startup temperature | Max fan speed at: |
|------------------|---------------------|-------------------|
| Board I/O        | 60°C                | 76°C              |
| Board ETH2       | 60°C                | 76°C              |
| Board power      | 60°C                | 76°C              |
| Power supply     | 60°C                | 76°C              |
| Slide-in drive 1 | 44°C                | 60°C              |
| IF slot          | 65°C                | 81°C              |

Table 223: Temperature limits of the fan (MTCX PX32 V1.01)

Once the startup temperature is reached, the device is started at the minimum fan speed. The maximum fan speed is reached at a startup temperature of 16°C. The fan speed in this area is controlled depending on the temperature.

For example, slide-in 1: 44°C + 16°C = 60°C --> Maximum fan speed

The fans will only be shut off again if the evaluation temperature is more than 6°C below the switch-on temperature for a period of 30 minutes (=overshoot time).

# 2 Connecting an external device to the mainboard

A male connector on the mainboard allows +5 VDC and +12 VDC to be rerouted in order to provide power to special PCI cards, for example.

This voltage can be accessed using the "5CAMSC.0001-00" on page 283. The connector is located near the reset or power button (see image). In order to reach the connector, the side cover (see "Installing the side cover" on page 302) of the PPC800 as well as any slide-in drives and PCIec and PCI plug-in cards must be removed.

Figure 197: Connector location for external devices

| Connector for external devices |            |               |                       |  |  |
|--------------------------------|------------|---------------|-----------------------|--|--|
| Pin                            | Assignment | Power         | 4-pin connector, male |  |  |
| 1                              | +12 VDC    | Max. 10 watts |                       |  |  |
| 2                              | GND        |               |                       |  |  |
| 3                              | GND        | Max. 5 watts  |                       |  |  |
| 4                              | +5 VDC     |               |                       |  |  |

Table 224: Connector on the mainboard - Pinout

Connections are protected with a 1 A multi-fuse.

#### 3 5-wire AMT touch screen

#### 3.1 Technical data

# Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system. For the complete system in which this individual component is used, refer to the data given specifically for that device.

| Product ID                        | 5-wire AMT touch screen  |
|-----------------------------------|--|
| General information               |  |
| Certification                     |  |
| CE                                | Yes  |
| c-UL-us                           | Yes  |
| Manufacturer                      | AMT  |

Table 225: 5-wire AMT touch screen - Technical data

#### 3.2 Temperature/Humidity diagram

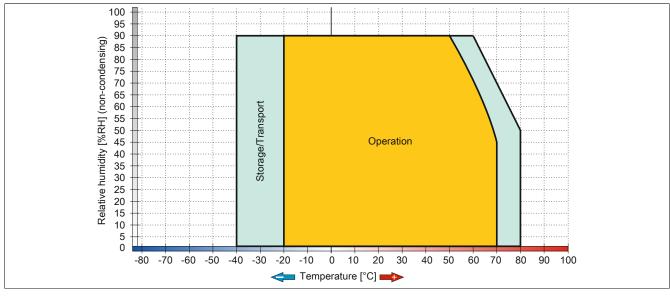

Figure 198: 5-wire AMT touch screen - Temperature/Humidity diagram

#### 3.3 Cleaning

# Danger!

This device can only be cleaned when switched off in order to prevent unintended functions from being triggered when handling the touch screen or pressing keys.

<sup>1)</sup> The active area of the touch screen is resistant to these chemicals for a period of one hour at 25°C.

Appendix A

This device should be cleaned with a moist cloth. The cloth should be moistened with water and detergent, a screen cleaning agent or alcohol (ethanol). The cleaning agent should be applied to the cloth beforehand, not sprayed directly on the device! Aggressive solvents, chemicals, scouring agents, pressurized air or steam jets should never be used.

# Information:

Displays with a touch screen should be cleaned regularly.

# 4 Panel overlay

The panel overlay conforms to DIN 42115 (Part 2). This means it is resistant to exposure to the following chemicals for a 24-hour period with no visible signs of damage:

# Information:

The following characteristics, features and limit values only apply to this individual component and can deviate from those specified for the complete system.

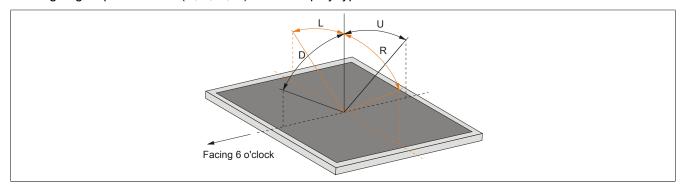

| Ethanol Cyclohexanol Diacetone alcohol Glycol Isopropanol Glycerine Methanol Triacetin Dowandol DRM/PM                    | Formaldehyde 37 to 42%<br>Acetaldehyde<br>Aliphatic hydrocarbons<br>Toluene<br>Xylene<br>White spirits   | Trichloroethane Ethyl acetate Diethyl ether N-Butyl acetate Amyl acetate Butylcellosolve Ether  |
|---|--|---|
| Acetone<br>Methyl ethyl ketone<br>Dioxan<br>Cyclohexanone<br>MIBK<br>Isophorone   | Formic acid < 50% Acetic acid < 50% Abetic acid < 30% Phosphoric acid < 36% Hydrochloric acid < 36% Nitric acid < 10% Trichloracetic acid < 50% Sulphuric acid < 10% | Sodium hypochlorite < 20% Hydrogen peroxide < 25% Potassium carbonate Washing agents Tenside Fabric conditioner Ferrous chloride (FeCl <sub>2</sub> ) |
| Ammonia < 40% Caustic soda < 40% Potassium hydroxide Alkali carbonate Bichromate Potassium Acetonitrile Sodium bisulphate | Cutting oil Diesel oil Linseed oil Paraffin oil Blown castor oil Silicon oil Turpentine oil substitute Brake fluid Aviation fuel Gasoline Water Sea water Decon      | Ferrous chloride (FeCl <sub>3</sub> ) Dibutyl phthalate Dioctyl phthalate Sodium carbonate  |

Table 226: Chemical resistance of the panel overlay

The panel overlay conforms to DIN 42115 section 2 for exposure to glacial acetic acid for less than one hour without visible damage.

# 5 Viewing angles

Viewing angle specifications (R, L, U, D) for the display types are listed in the technical data for each device.

# 6 Mounting compatibility

This section describes the compatibility of the installation dimensions for Power Panel 100/200, Power Panel 300/400, Power Panel 500, Automation Panel 900, Automation Panel 700 and Panel PC 800 devices according to device display size.

The outer dimensions of the device types are identical for the respective display sizes.

The different device types are abbreviated as follows:

| Device type          | Abbreviation |
|----------------------|--------------|
| Power Panel 100/200  | PP100/200    |
| Power Panel 300/400  | PP300/400    |
| Power Panel 500      | PP500        |
| Automation Panel 900 | AP900        |
| Panel PC 700         | PPC700       |
| Panel PC 800         | PPC800       |

Table 227: Product abbreviations

#### 6.1 Compatibility overview

The following table provides an overview of PP100/200, PP300/400, PP500, AP900, PPC700 and PPC800 devices. Detailed information can be found in the section 6.2 "Compatibility details" on page 313.

Compatibility between device types is represented on each line by matching symbols.

| Size  | Format       | Compatible                               | PP100/200 | PP300/400 | PP500    | AP900    | PPC700   | PPC800 |
|-------|--------------|--|-----------|-----------|----------|----------|----------|--------|

Table 228: Overview of device compatibility

#### 6.2.1 Example

The dimensions (all in mm) shown in this image apply to the other figures below.

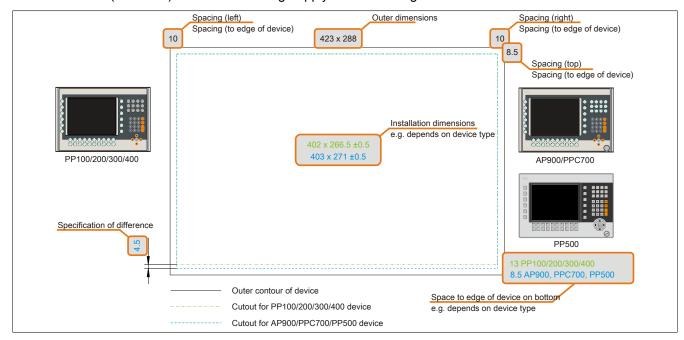

Figure 199: Overview of compatibility figures

# 6.2.2 5.7" devices

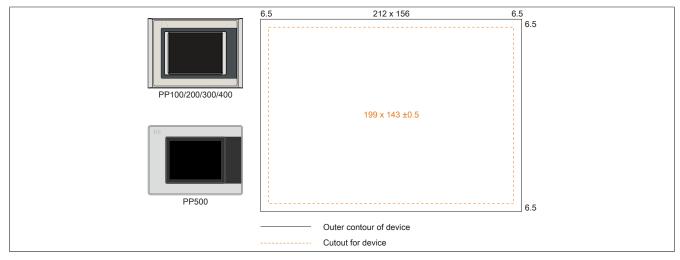

Figure 200: Mounting compatibility - 5.7" device - Horizontal1

5.7" Power Panel 500 devices and Power Panel 100/200/300/400 devices are 100% mounting compatible in the Horizontal1 format.

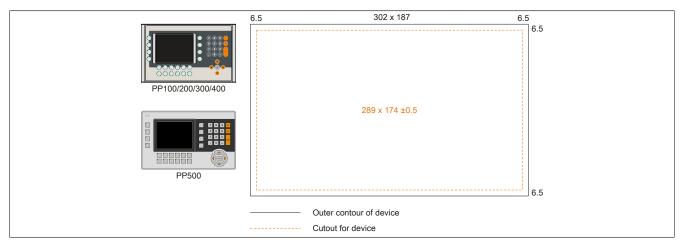

Figure 201: Mounting compatibility - 5.7" device - Horizontal2

5.7" Power Panel 500 devices and Power Panel 100/200300/400 devices are 100% mounting compatible in the Horizontal2 format.

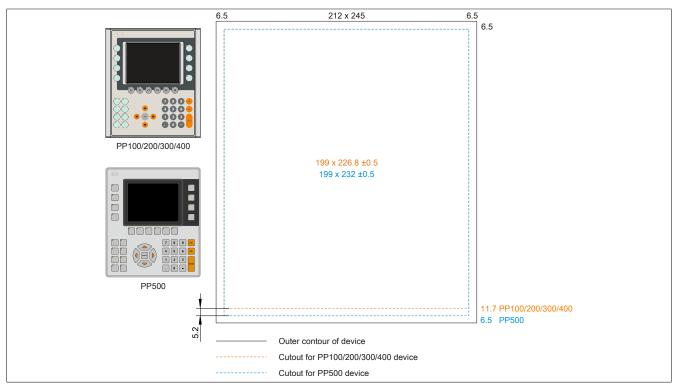

Figure 202: Mounting compatibility - 5.7" device - Vertical1

5.7" Power Panel 500 devices are not 100% mounting compatible with Power Panel 100/200/300/400 devices in the Vertical1 format. Power Panel 500 devices require a cutout that is 5.2 mm higher (bottom edge).

#### The larger cutout can be used for all devices under certain conditions:

When mounting, make sure that the PP100/200/300/400 devices are placed and mounted as close to the
center of the cutout as possible. Failure to do so can prevent the retaining clips from holding firmly, which
means that a firm seal is no longer guaranteed with the gasket (IP65).

#### 6.2.3 10.4" devices

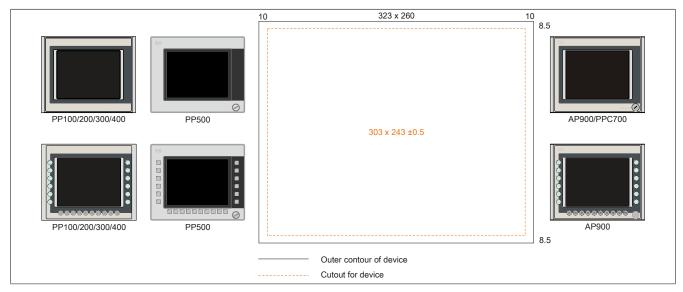

Figure 203: Mounting compatibility - 10.4" device - Horizontal1

10.4" Power Panel 500 devices and Power Panel 100/200/300/400 devices are 100% mounting compatible in the Horizontal1 format.

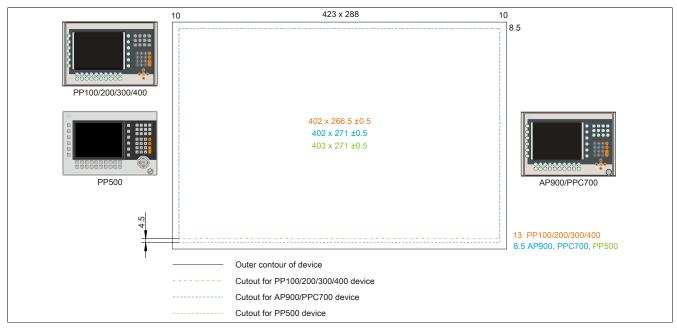

Figure 204: Mounting compatibility - 10.4" device - Horizontal2

10.4" Power Panel 500, Automation Panel 900 and Panel PC 700 devices are not 100% mounting compatible with Power Panel 100/200/300/400 devices in the Horizontal2 format. The Power Panel 500, Automation Panel 900 and Panel PC 700 devices require a cutout that is 4.5 mm higher (bottom edge).

### The larger cutout can be used for all devices under certain conditions:

When mounting, make sure that the PP100/200/300/400 devices are placed and mounted as close to the
center of the cutout as possible. Failure to do so can prevent the retaining clips from holding firmly, which
means that a firm seal is no longer guaranteed with the gasket (IP65).

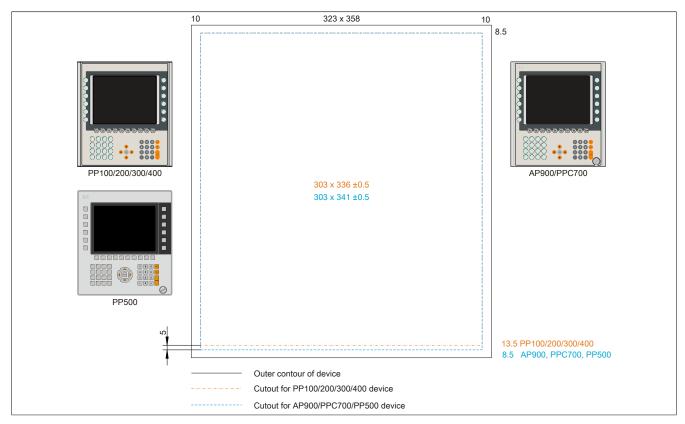

Figure 205: Mounting compatibility - 10.4" device - Vertical1

10.4" Power Panel 500, Automation Panel 900 and Panel PC 700 devices are not 100% mounting compatible with Power Panel 100/200/300/400 devices in Vertical1 format. The Power Panel 500, Automation Panel 900 and Panel PC 700 devices require a cutout that is 5 mm higher (bottom edge).

#### The larger cutout can be used for all devices under certain conditions:

When mounting, make sure that the PP100/200/300/400 devices are placed and mounted as close to the
center of the cutout as possible. Failure to do so can prevent the retaining clips from holding firmly, which
means that a firm seal is no longer guaranteed with the gasket (IP65).

#### 6.2.4 12.1" devices

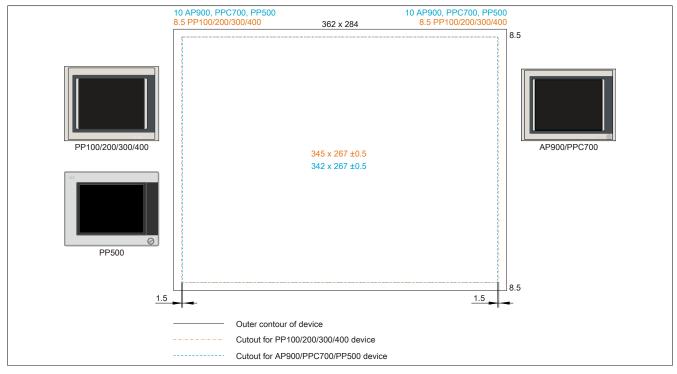

Figure 206: Mounting compatibility - 12.1" device - Horizontal1

12.1" Power Panel 500, Automation Panel 900 and Panel PC 700 devices are not 100% mounting compatible with Power Panel 100/200/300/400 devices in Horizontal1 format. The Power Panel 300/400 and Power Panel 100/200 devices require a cut that is 1.5 mm wider (left and right).

#### The larger cutout can be used for all devices under certain conditions:

• When mounting, make sure that the PP500, AP900 and PPC700 devices are mounted as close to the center of the cutout as possible.

#### 6.2.5 15" devices

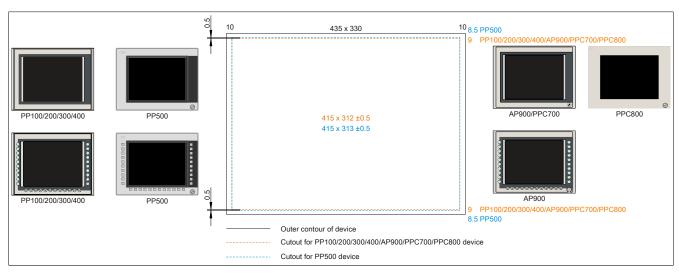

Figure 207: Mounting compatibility - 15" device - Horizontal1

15" Power Panel 500 devices are not 100% mounting compatible with Power Panel 100/200/300/400, Automation Panel 900, Panel PC 700 and Panel PC 800 devices in the Vertical1 format. The Power Panel 500 devices require a cutout that is 0.5 mm higher (top and bottom edge).

#### The larger cutout can be used for all devices under certain conditions:

When mounting, make sure that the PP100/200, PP300/400, AP900, PPC700 and PPC800 devices are
placed and mounted as close to the center of the cutout as possible. Failure to do so can prevent the
retaining clips from holding firmly, which means that a firm seal is no longer guaranteed with the gasket
(IP65).

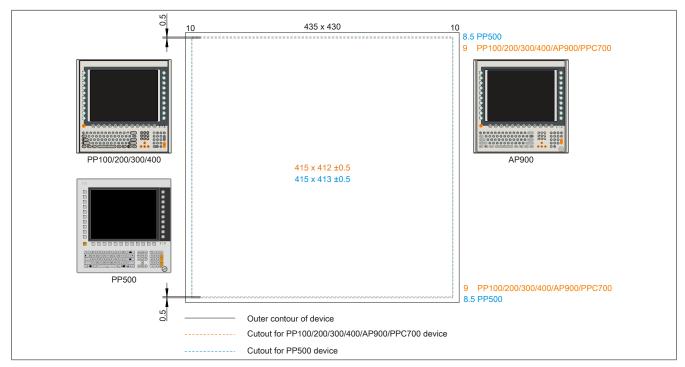

Figure 208: Mounting compatibility - 15" device - Vertical1

#### Appendix A · Mounting compatibility

15" Power Panel 500 devices are not 100% mounting compatible with Power Panel 100/200/300/400, Automation Panel 900 and Panel PC 700 devices in the Vertical1 format. The Power Panel 500 devices require a cutout that is 0.5 mm higher (top and bottom edge).

#### The larger cutout can be used for all devices under certain conditions:

• When mounting, make sure that the PP100/200, PP300/400, AP900 and PPC700 devices are mounted as close to the center of the cutout as possible. Failure to do so can prevent the retaining clips from holding firmly, which means that a firm seal is no longer guaranteed with the gasket (IP65).

#### 6.2.6 17" devices

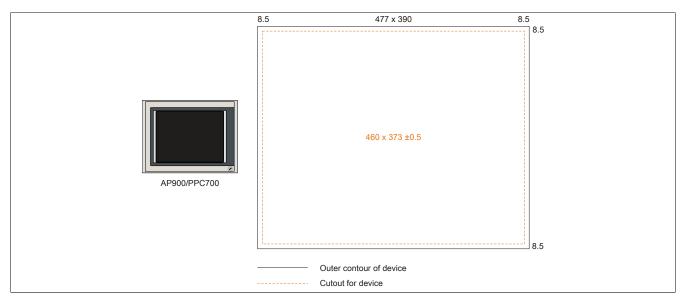

Figure 209: Mounting compatibility - 17" device - Horizontal1

17" Automation Panel 900 devices are 100% mounting compatible with Panel PC 700 devices in the Horizontal1 format.

#### 6.2.7 19" devices

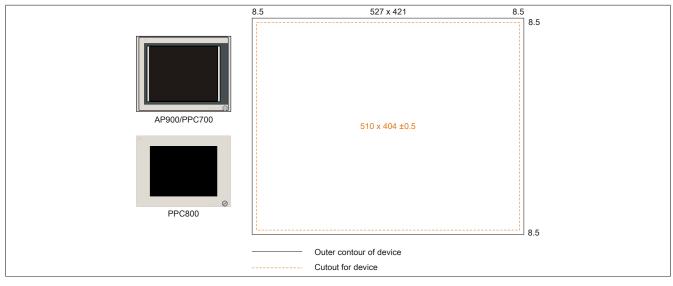

Figure 210: Mounting compatibility - 19" device - Horizontal1

19" Automation Panel 900, Panel PC 700 and Panel PC 800 are 100% mounting compatible in the Horizontal1 format.

#### 6.2.8 21.3" devices

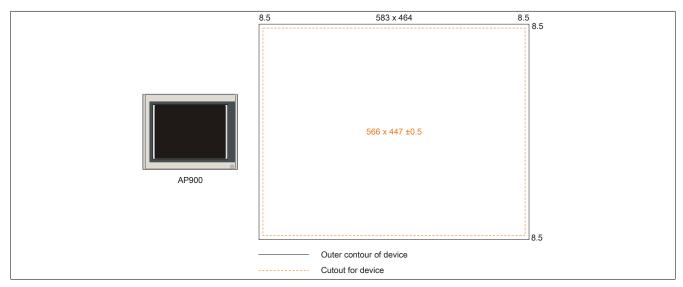

Figure 211: Mounting compatibility - 21.1" device - Horizontal1

# 7 Glossary

| Address              | An address is a character string for identifying a memory location or a memory area, where data is stored and can be retrieved. It is also a symbol (e.g. with numerical controllers) for identifying a function unit for which subsequent geometrical or technological data are determined by the symbol.  |
|----------------------|---|
| Algorithms           | According to DIN 19226: Algorithms are a finite series of well-defined regulations. The desired output quantities are created from permitted system input quantities. It describes how something is to be done. A procedure must at least satisfy the following requirements to be valid as an algorithm in a mathematical context.   |
|                      | Discreteness: An algorithm is made up of a finite series of steps.  |
|                      | Determinacy: Under the same start conditions, it always creates the same end result.  |
|                      | Clearness: The series of steps is clearly defined.  |
|                      | Finiteness: It ends after a finite number of steps.   |
|                      | From a quantity theory perspective, an algorithm is clearly defined by a set of sizes [input, intermediate and output sizes], a set of elementary operations and also by a regulation, which specifies when and in what sequence certain operations should be carried out. From a functional perspective, it transfers a set of input sizes into a set of output sizes. It can be represented in text form in a natural or artificial formal language or using graphic representations [graph, program flow chart, structured chart, Petri Nets etc.].  |
| ANSI                 | American National Standards Institute > this organization promotes and manages American industrial standards.   |
| APC                  | Abbreviation for »Automation PC«  |
| Application software | Software, which is not used for operation by the computer itself, but rather when a computer is used to process a concrete application problem. It sets up the system software and uses this for fulfilling individual tasks. Application software can be accommodated in standard software used by a large number of customers in a wide range of industries. Common examples are Word, Excel, PowerPoint, Paint, Matlab etc. Industrial software tailored to the respective problems of a certain industry and individual software created for solving the particular problems of an individual user. |
| Automation           | According to Brockhaus: The application of technical means, using specific programs that (either partially or totally) do not require human intervention to perform operations.   |
| Automation Runtime   | A uniform runtime system for all B&R automation components.   |
| Failure              | Failure according to IEC 61508: A function unit loses the ability to perform a required function. In regards to safety-oriented systems, a distinction is made between dangerous and safe failures. This depends on whether the status of the system failure is considered dangerous or safe. The cause of the failure may be load related or age-related, and therefore a random failure, or related to a flaw inherent in the system. In this case, it is known as a systematic failure.  |
