

X20PS9502

1 General information

The power supply module is used together with an X20 Compact or Fieldbus CPU. It is equipped with a supply for the Compact or Fieldbus CPU, X2X Link network and internal I/O power supply.

This module is intended as a cost-effective power supply module for small X20 systems. The use of potential groups is possible. Expansion or redundancy of the X2X Link network with power supply module X20PS3300 or X20PS3310 is not possible. Expanding the X20 system with a bus transmitter is also not permitted.

- Supply for Compact or Fieldbus CPU, X2X Link network and internal I/O power supply
- Cost-effective power supply module for small X20 systems
- No electrical isolation of supply and CPU / X2X Link power supply
- Expansion or redundancy of CPU / X2X Link power supply not possible by operating multiple power supply modules simultaneously
- RS232 configurable as an online interface
- CAN bus

4 LED status indicators

For a description of the various operating modes, see section "Additional information - Diagnostic LEDs" of the X20 system user's manual.

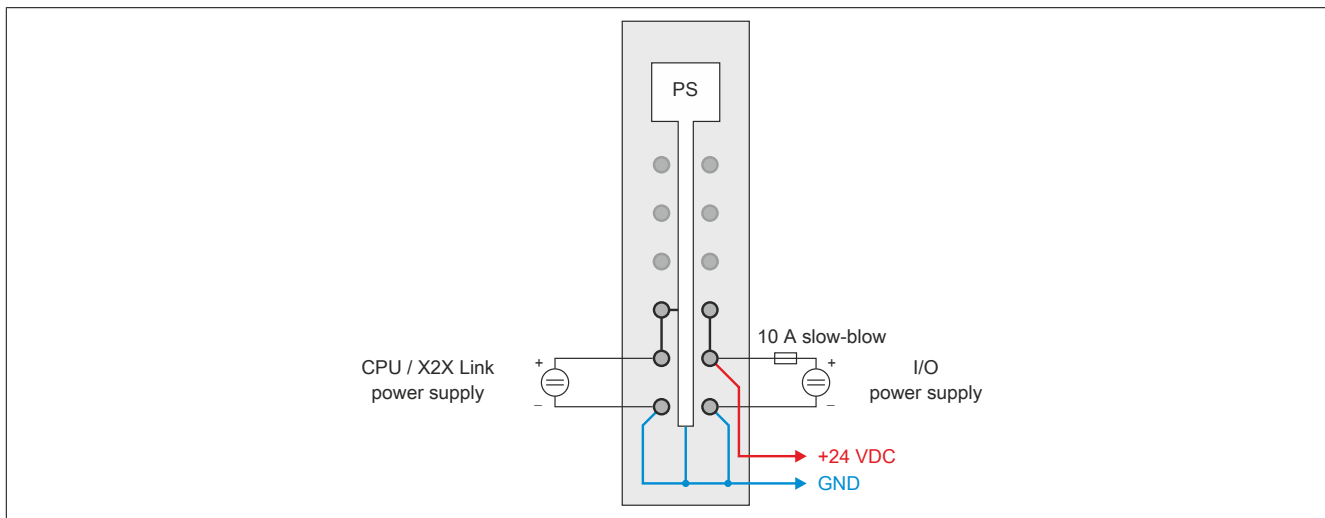

Figure	LED	Color	Status	Description
	r	Green	Off	No power to module
			Single flash	Mode RESET
			Blinking	Mode PREOPERATIONAL
			On	Mode RUN
	e	Red	Off	No power to module or everything OK
			Double flash	LED indicates one of the following states: <ul style="list-style-type: none"> • Power supply for CPU / X2X Link overloaded • I/O power supply too low • Input voltage for CPU / X2X Link power supply too low
	e + r	Solid red / Single green flash		Invalid firmware
	S	Yellow	Off	CPU not transmitting data via the RS232 interface
			On	CPU transmitting data via the RS232 interface
	C	Yellow	Off	CPU not transmitting data via the CAN bus interface
			On	CPU transmitting data via the CAN bus interface
	T	Yellow	Off	Terminating resistor integrated in bus module X20BB27, X20BB37 or X20BB47 switched off
			On	Terminating resistor integrated in bus module X20BB27, X20BB37 or X20BB47 switched on

6 Connection examples

With 2 isolated power supplies

With 1 power supply and jumper

7 Derating for CPU / X2X Link power supply

The nominal output power for the CPU / X2X Link power supply is 7.0 W. Derating may need to be taken into account depending on the mounting orientation.

8 Register description

8.1 General data points

In addition to the registers described in the register description, the module has additional general data points. These are not module-specific but contain general information such as serial number and hardware variant.

General data points are described in section "Additional information - General data points" of the X20 system user's manual.

8.2 Function model 0 - Standard

Register	Fixed offset	Name	Data type	Read		Write	
				Cyclic	Acyclic	Cyclic	Acyclic
0	1	Status of the module	USINT	•			
		StatusInput01	Bit 0				
		StatusInput02	Bit 2				
4	3	SupplyVoltage	USINT	•			

Fixed modules require their data points to be in a specific order in the X2X frame. Cyclic access occurs according to a predefined offset, not based on the register address.

Acyclic access continues to be based on the register numbers.

8.3 Status of the module

Name:

Module status

The following module power supply voltages are monitored in this register:

Bus supply voltage: Bus supply voltage <4.7 V is displayed as a warning.
 24 VDC I/O supply voltage: I/O supply voltage <20.4 V is displayed as a warning.

Data type	Values
USINT	See the bit structure.

Bit structure:

Bit	Name	Value	Information
0	StatusInput01	0	No error
		1	Bus supply warning - Undervoltage (<4.7 V)
1	Reserved	0	
2	StatusInput02	0	I/O power supply above the warning limit of 20.4 V
		1	I/O power supply below the warning limit of 20.4 V
3 - x	Reserved	0	

8.4 Bus supply voltage

Name:

SupplyVoltage

This register displays the bus supply voltage measured at a resolution of 0.1 V.

Function model	Data type
0 - Standard	USINT
254 - Bus controller	UINT

8.5 Minimum cycle time

The minimum cycle time specifies the time up to which the bus cycle can be reduced without communication errors occurring. It is important to note that very fast cycles reduce the idle time available for handling monitoring, diagnostics and acyclic commands.

Minimum cycle time
100 µs

8.6 Minimum I/O update time

The minimum I/O update time specifies how far the bus cycle can be reduced so that an I/O update is performed in each cycle.

Minimum I/O update time
2 ms
