Table 2: 8B0C0160HW00.A01-1 - Technical data

- 1) Continuous power on 42 VDC output
- 2) Valid under the following conditions: 750 VDC DC bus voltage, 55°C ambient temperature, installation elevation <500 m above sea level, no derating due to cooling type.
- 3) Revision H0 and later. The following applies up to revision G0:
42 VDC Out1: Max. 60 VDC (also when the power is switched off)
42 VDC Out2: Max. 60 VDC (also when the power is switched off)
- 4) When switching off, there is no active discharge of the output and the loads connected to it.
- 5) Continuous operation at an installation elevation of 500 m to 4,000 m above sea level is possible taking the specified reduction of continuous power into account. Requirements that go beyond this must be arranged with B&R.
- 6) These dimensions refer to the actual device dimensions including the respective mounting plate. Additional spacing above and below the devices must be taken into account for mounting, connections and air circulation.

4 Status indicators

Status indicators are located on the black cover of each module.

4.1 Auxiliary supply modules with 42 V Out - LED status indicators

Status indicator group	Label	Color	Function	Description
Power supply	42 V	Green	42 V OK	42 VDC power supply is within the permissible tolerance.
Overload	ERR	Red	Overload	The module is not supplied via the DC bus. ¹⁾ The 42 VDC power supply is outside the permissible tolerance (overload, overtemperature, short circuit, etc.).
42 V Out	42 V	Green	42 V Out OK	One of the switchable 42 VDC Out outputs is enabled; the output voltage is within the permissible tolerance.
	ERR	Red	42 V Out error	The 42 VDC power supply is outside the permissible tolerance (overload, overtemperature, short circuit, etc.). At least one of the switchable outputs is enabled and the electronic fuse has tripped for one or more switchable outputs.
