2.1 Gearbox type (e)

8G e ff . ggg hh iii k l mm

B&R gearboxes are available as angular planetary gearboxes, planetary gearboxes with a coaxial output shaft and with an output flange.

The gearbox type is specified with a letter (**e**) in the order key.

Gearbox type (e)		
P	F	A
Planetary gearbox with output shaft	Planetary gearbox with output flange	Angular planetary gearbox
		

2.2 Series (ff)

8G e ff . ggg hh iii k l mm

The gearboxes are divided into different series. The series is specified as a two-digit number (**ff**) in the order key.

Series (ff)		
30	40, 45, 50, 55	60, 70, 75
Economy	Standard	Premium
Is a cost-effective alternative. This gearbox is cost-optimized by simplifying the clamping system between motor shaft and gearbox. The output torque and gear ratios have been reduced to a standard market level. The output shaft is only available with a key. The degree of protection corresponds to the IP54 standard.	Offers the perfect solution for most applications with an optimized price/performance ratio. The unique modular system allows a great variety with regard to gear ratio, flange, design and much more.	For applications that demand high precision. In addition to standard spur toothed, helical gearing, which runs even smoother and quieter, is also possible. The angular gearbox is also available with a hollow shaft through which cables, lines or material strands can be fed to save space. This additionally opens up new possibilities in machine design.

2.3 Size (ggg)

8G e ff . ggg hh iii k l mm

B&R gearboxes are available in different sizes.

The different sizes are distinguished by three numbers (**ggg**) in the order number. The larger these numbers, the larger the flange dimensions and power data of the respective gearbox.
